

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### **Usage guidelines**

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### **About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at

## PREFACE.

It has been remarked that "a preface is the history of a book;" it may therefore be expedient to lay before the reader an ingenuous account of the origin and design of the present publication.

In April, 1828, that portion of the work which now forms the introduction, was delivered as one of two lectures,\* before the Warwick and Leamington Literary and Scientific Institution; and the very flattering commendations then bestowed, induced me to pursue the subject further, as a means both of self-instruction and amusement for my leisure hours. From that time to the present, scarcely any other object has engrossed more of my attention than that of obtaining every information relative to PRINTERS AND PRINTING. Not aware of the labours that others had performed, and without an assistant, I had many obstacles to contend with; and soon became well convinced, that the design I had formed was above the bibliographical acquirements of a journeyman printer.† Stimulated, however, to proceed, I continued my researches with increased ardour; and though conscious of not having made the work what it might have been under more favourable circumstances, yet I trust some merit may be thought due for the attempt; and shall feel gratified if placed in the field of literature only as a pioneer, to induce some abler hand to improve the work, and make it more worthy of the literary world, and the profession of which it treats.

Those who are conversant with the history of printing, cannot be unacquainted with the learning, virtue, honourable exertions, and ardent and daring

---

\* LECTURE I.—On the Origin and Progress of Language, with the mode and materials employed by the Ancients in propagating Knowledge before the Invention of Printing.

LECTURE II.—The Origin and early History of Printing, with its progress in the Fifteenth and Sixteenth Centuries; its influence upon the Manners and Customs of the People, as well Civil as Religious.

† I received the rudiments of my education at a day school in my native town, Manchester, and was afterwards removed to the free grammar school, under the rev. Thomas Gaskell. Early attached to a love of reading, I have remained all my life an ardent inquirer after knowledge. From the month of March, 1815, (being then little more than fifteen years of age,) to November 28, 1815, my days were passed in the 33rd regiment of foot, from which I obtained my discharge, in consequence of wounds received at the battle of Waterloo. During those years I had few facilities of self-improvement. Having been apprenticed to an engraver and copper-plate printer, I resumed the latter, on returning from the army; but from a distaste, and other causes, which need not be here stated, in the year 1821, I adopted the profession of a letter-press printer, under indenture, with Messrs. Dacey and Smithson, proprietors of the *Northampton Mercury*; and feel gratified that an opportunity has occurred of publicly recording my gratitude to Mr. Robert Smithson, printer and editor of the *Mercury*, for his uniform kindness during my abode at Northampton; and to whose advice I am solely indebted for a very material change, both in my circumstances and conduct. Adopting the profession of a printer, with the view of affording me that literary information which I so ardently desired, I endeavoured to become acquainted with its history. From this desire arose the *Lectures*, at Warwick; the *Songs of the Press*, at Nottingham; and finally, the *Dictionary of Printers and Printing*, with the *Printers' Manual*, at Manchester.

zeal of most of the early printers, who, by the number of beautiful and correct impressions which they gave of the ancient authors, (and thereby laying the foundation of classical and polite learning,) have secured to their memories the everlasting respect of all lovers of liberal and enlightened education. Who can read the biographies of many of the early printers, without awarding to them that admiration which the most eminent benefactors of mankind deserve?—It is true, that popes, emperors, and kings, bestowed upon many of these men honours and rewards for their personal worth and literary pre-eminence. But, it is also true, that many of the nobles, ecclesiastics, and rulers of the land, endeavoured to cramp the energies of the rising press—by confiscation of life and property—by exclusive privileges—and expurgatory enactments—having a fear, rather than any desire, to foster an art which promised so fair to benefit the mass of the people, by the diffusion of knowledge. “*Sola nobilitas virtus*,” though generally a very improper motto, where it is most commonly placed, is yet true enough to make a maxim, and might very properly have been engraven on the monuments of many learned and noble typographers. Eulogium is often bestowed on beings whose qualities, however splendid in the outward show, are often questionable in their lives, and unworthy of comparison with others whose faculties have been busied in supplying and extending the sources of knowledge. My aim has been to record, with as much fidelity as possible, the names and deeds of ancient and modern typographers, who have benefitted literature by their labours—society by their exertions—and whose conduct it would be easy to adopt, and desirable to emulate. Nor will it, I hope, be deemed presumption for having introduced the names of many of our humbler artists,

‘Who earn’d their bread by labour’s active hand;’

whose meritorious conduct when living obtained the meed of praise; and whose honourable industry deserves to be recorded as a laudable example to the young typographer, who wishes to obtain respect from his fellow-men.

With regard to the origin and progress of newspapers, the various laws by which they have been restricted, the duties imposed to retard their circulation, and other information connected with the periodical press, the reader will find sufficient to engage his attention. Of that “glory of a free country” I need make very little observation; yet it is deplorable to notice the present state of the newspaper press of the British empire. From being a free and independent record of the vicissitudes of politics and power, noticing the moral and physical career of nations, recording all accidents by flood and field, aiding the cause and dissemination of knowledge, which, while it amuses, ought also to instruct,—has descended from this high estate, and become the vehicle of party strife and petty feuds, in the hands of designing men, who make no shame of being bought

and sold like common ware. If in the course of the work I have indulged too freely in quotations on the "liberty of the press," I wish it to be understood that they are meant to convey what the press should be, not what it is.

Without detracting in any degree from the works of those who have preceded me, it will be sufficient to remark, that the expense in the purchase of their valuable works, particularly those highly illustrated ones of Dr. T. F. Dibdin, has been the means of prohibiting their circulation among the greater portion of the community, but more so in the profession; in order, therefore, to render some information on the subject attainable in as cheap a manner as possible, the present work is published. I have been indebted to the works of many British bibliographers; and though I cannot enumerate them, I must mention Dr. Adam Clarke's *Bibliographical Dictionary*, Robert Watt's *Bibliotheca Britannica*, Beloe's *Anecdotes of Literature*, Brydges' *British Bibliographer and Censura Literaria*, Savage's *Librarian*, Ottley's *Enquiry into the Origin and Early History of Engraving*, Singer's *Researches into the History of Playing Cards*, Dibdin's *Bibliographical Decameron* and other works, Horne's *Introduction to Bibliography*, Nichols' *Anecdotes of Literature* and other works, Townley's *Illustrations of Biblical Literature*, Greaswell's *Annals of Parisian Typography*, and his *View of the Early Parisian Greek Press*, D'Israeli's *Curiosities of Literature*; the works of Ames, Herbert, Dibdin, Luckombe, Lemoine, and Stower, on Printing; and, though last, not least, to the pages of *Mr. Urban*, for the notices of modern printers and booksellers. For the account of those curious and interesting subjects, the ancient mysteries and miracle plays, I am indebted to the works of William Hone, and others; and if it be concluded that a compiler is only a literary thief, I must plead guilty to such a charge, and hope for mercy; at the same time trusting to be exonerated from having any wish to print one line of another's as being my own.

In a work which contains such a multiplicity of dates, it is to be expected that numerous errors may be detected, occasioned by the contradictory evidences from which they have been taken, and from those inaccuracies which, with the utmost care, will arise in going through the press; but the most scrutinizing attention has been paid to make the work as perfect as possible, though, it should be taken into consideration, that during the time of compilation and printing, I have not in the least neglected my labours in a printing office; and the only time I have had in collecting the matter, or of correcting the proof sheets, has been taken from the hours of rest or leisure.

For the assistance which I have received from a few individuals during the progress of the work, it becomes me to return my acknowledgments. To the

Rev. James Howarth, of Bury, I am indebted for his kindness and advice, and particularly for his obtaining for me some valuable works from the library of — Hayward, Esq. of Walshaw Hall; to Fenton Robinson Atkinson, Esq. of Oak House, near Manchester, my warmest thanks and gratitude are due, for his assistance, (in the first place unsolicited, but, of course, gladly accepted, for the loan of books from his extensive and well selected library,) and for his friendly advice during the time of the work going through the press, and without which it could not have been, as I hope it will now be found, worthy of the public favour. To J. Holland, jun. Esq. of Atherstone, Warwickshire, for his sending some scarce and valuable books, which have been of much service to me, and which I acknowledge with pleasure. To Mr. J. Cail, of Newcastle-upon-Tyne, for a correct list of newspapers which had been commenced in that town and neighbourhood. It would have been gratifying to me to have extended the list, had aid always been afforded when solicited; but I regret being compelled to state, that in two or three instances, I found that a genuine love of literature is not always the strongest impulse in the breast of those who have appeared before the world as authors, or writers of books.

It was my intention to give a complete list of the works which had been produced upon the *History of Printing*, with short biographical notices of their authors; this I found would have extended the work more than was contemplated; and, indeed, after much labour, I found that I could not for the present give them as complete as would have been desired.

The work is now presented to the profession, and to the literary world, as affording a knowledge of the rise and progress of that art by which the "atmosphere of truth has continually grown brighter, and a strength of mind produced that is under no fear of counteraction." From the critic I beg that indulgence which I have endeavoured to merit; and wherever I may have failed, it is in ability, not from want of perseverance, from first to last, in my desire to add something to the literary history of my country, and to perpetuate a knowledge of that profession of which I am a member.

C. H. TIMPERLEY.

Manchester, June 1, 1839

# INTRODUCTION.

---

ON THE ORIGIN OF LANGUAGE; AND THE MODES AND MATERIALS USED BY THE ANCIENTS FOR TRANSMITTING KNOWLEDGE BEFORE THE INVENTION OF PRINTING.

---

"How grateful is the search! with pride to trace  
Useful inventions, that exalt our race;  
Fixing by various stages from their source,  
In new improvements, the progressive course,  
On nice connexions man's high schemes depend;  
Means must be found proportioned to the end.  
Slow they advance, who seek perfection's prize,  
Or benefactors of the world would rise."

ONE of the most distinguished privileges which Providence has conferred upon mankind, is the power of communicating their thoughts one to another. Destitute of this power, reason would be a solitary, and, in some measure, an unavailable principle. Speech is the great instrument by which man becomes beneficial to man, and it is by the intercourse and transmission of thought, by means of speech, that we are chiefly indebted for the improvement of thought itself. If we carry our thoughts back to the first dawn of language among men, and reflect upon the feeble beginnings from which it must have arisen, and upon the many, and great obstacles which it must have encountered in its progress, we shall find reason for the highest astonishment, on viewing the height which it has attained. We admire several of the inventions of art—we plume ourselves on many discoveries which have been made in latter ages, serving to advance knowledge, and to render life comfortable; we speak of them, as the boast of human reason, but, certainly, no invention is entitled to any such degree of admiration as that of Language;—if, indeed, it can be considered as a human invention at all.

Man is formed, as well internally as externally, for the communication of thoughts and feelings. He is urged to it, by the necessity of receiving, and by the desire of imparting whatever is useful or pleasant. His wants and his wishes cannot be supplied by individual power; his joys and his sorrows cannot be limited to individual sensation. The fountains of his wisdom, and of his love, spontaneously flow, not only to fertilize the neighbouring soil, but to augment the distant ocean. But the mind of man, which is within him, can only be communicated by objects which are without, by gestures, sounds, characters, more or less expressive, and permanent,—instruments, not merely useful, for this particular purpose, but many times pleasing in themselves, or rendered so by the long continued operation of habit. These, reason adopts,—she combines,—she arranges,—and the result is Language.

Speech, or the language of articulate sounds, is the most wonderful, the most delightful of the arts, thus taught by nature and reason. It is also the most perfect, it enables us, as

it were, to express things beyond the reach of expression ;—the infinite range of being—the exquisite fineness of emotion—and the intricate subtleties of thought. Of such effect are those shadows of the soul, those living sounds which we call words ! Compared with these, how poor are all other monuments of human power—of perseverance—or skill—or genius ! They render the mere clown an artist ; nations immortal ; orators poets ; philosophers divine.

As it is evident, that there is no instinctive articulated language, it becomes an inquiry of some importance, how mankind were first induced to fabricate articulate sounds ; and to employ them for the purpose of communicating their thoughts. On this question, only two opinions can be formed. Language must either have been originally revealed from heaven, or the fruit of human invention. The greater part of the Jews, and the Christians, and even some of the wisest Pagans, have embraced the former opinion, which seems so far to be supported by the authority of Moses, that he represents the Supreme Being as teaching our first parents the names of animals. (GEN. ii. 19, 20.) The latter opinion is held by Diodorus Siculus, Lucretius, Horace, and many other Greek and Roman writers, who consider language as one of the arts invented by man. Amongst the moderns, Astle, in his celebrated work on the *Origin and Progress of Writing*, ranks foremost, for his elaborate defence of the human invention of alphabetical characters. The arguments of Mr. Astle, were, however, powerfully combated by an able critic in the *Monthly Review*, (Old Series) vol. lxxi. p. 271 ; Drs. Warburton, Delany, Johnson, Beattie, Blair, Gilbert Wakefield, Gale, in his *Court of the Gentiles* ; Hartley, in his *Observations on Man* ; Winder, in his *History of Knowledge* ; Dr. Adam Clarke, in his *Remarks on the Origin of Language* ; Horne, in his *Introduction to the Study of Bibliography* ; the author of *Conjectural Observations on the Origin and Progress of Alphabetical Writing* ; and Smith, of New Jersey, who think that language was originally from heaven, consider all accounts of its human invention as a series of mere suppositions, hanging loosely together, and the whole depending on no fixed principle.

The opinions of the Greek and Roman writers, frequently quoted in support of the human invention of language, are of no greater authority than the opinions of other men ; for as language was formed, and brought to a great degree of perfection, long before the era of any historian with whom we are acquainted ; their authority, who are comparatively of yesterday, gives them no advantage, in this inquiry, over the philosophers of France and England.

The oldest book extant, contains the only rational cosmogony known to the ancient nations ; and that book represents the first human inhabitants of this earth, not only as reasoning and speaking animals ; but also in a state of high perfection and happiness, of which they were deprived for disobedience to their Creator. Moses, setting aside his claim to inspiration, deserves, from the consistency of his narrative, at least as much credit as Mochus, or Democritus, or Epicurus ; and from his higher antiquity, if antiquity on this subject could have any weight, he would deserve more, as having lived nearer to the period of which they all write. But the question respecting the origin of language may be decided, without resting on authority of any kind, merely by considering the nature of speech, and the mental and corporeal powers of man.

Those who maintain language to be of human invention, suppose men, at first, to have

been solitary animals, afterwards to have herded together without government or subordination, then to have formed political societies, and by their own exertions, to have advanced from the grossest ignorance to the refinements of science. But, say the reasoners, whom I have quoted in its defence, this is a supposition contrary to all history, and all experience. There is not upon record, a single instance, well authenticated, of a people emerging, by their own efforts, from barbarism to civilization. The original savages of Greece, were tamed by the Pelasgi, a foreign tribe, and afterwards further polished by Orpheus, Cecrops, Cadmus, and others, who derived their knowledge from Egypt and the East. The ancient Romans, a ferocious and motley crew, received the blessings of law and religion from a succession of foreign kings—and the conquests of Rome, at a later period, contributed to civilize the rest of Europe. It is said, that before language could be invented, mankind must have existed for ages in large political societies, and have carried on, in concert, some common work; but if inarticulate cries, and the natural visible signs of the passions and affections, were modes of communication sufficiently accurate to keep a large society together for ages, and to direct its members in the execution of some common work, what could be their inducement to the invention of an art so useless and difficult as that of language? Men, who have not learned to articulate in their childhood, never afterwards acquire the faculty of speech, but by such helps as savages cannot obtain; and, therefore, if speech was invented at all, it must either have been invented by children, who seem incapable of invention, or by men who were incapable of speech;—a thousand, nay, a million of children could not think of inventing a language; and, therefore, reason, as well as history intimates that mankind in all ages must have been speaking animals; the young having constantly acquired this art, from imitating those that were older; we may then, in despite of every assertion to the contrary, warrantably conclude, that our first parents received the blessing of language by Divine inspiration.

There are several well authenticated cases on record of children having been found in solitary places, leading a brutish life, incapable of communicating ideas by language, and apparently completely ignorant of all the social usages of mankind. These remarkable instances exhibit how degraded and miserable is the condition of a human being, when its mind has been unformed by the example of others, and no moral or intellectual training has been bestowed upon it. The two most striking examples of this unhappy state are those furnished by the individuals known by the names of *PETER THE WILD BOY*, and *THE SAVAGE OF AVEYRON*. The first was found in July, 1724, in a field belonging to a townsman of Hameln, naked, covered with a brownish black hair, apparently about twelve years of age, and uttering no sound. In October, 1725, he was sent for by George I. to Hanover, from whence he was escorted to London, and finally placed with a farmer in Hertfordshire, with whom he resided till his death in 1785. Peter could not be taught to speak; the plainest of the few articulate sounds he could utter were *Peter ki sho*, and *qui ca*; the two latter being attempts at pronouncing King George and Queen Caroline. He was of middle size, somewhat robust in appearance, and strong, and had a good beard. He was fond of warmth and relished a glass of brandy. Peter was first found in the act of sucking a cow, in the woods of Hanover. Queen Caroline, who greatly interested herself about Peter, was very desirous of having him educated, and employed various masters to teach him to speak. After the Queen's death Government

allowed a pension for him, and he was placed with Thomas Fen, a respectable farmer in Hertfordshire. He was accustomed in the spring of the year to wander away, subsisting on the green buds of trees, &c. His adventure in Norfolk, during one of these excursions, has been related, to which we may add that he was saved from the consequences of his supposed contumacy by some person reading in a newspaper an advertisement describing the missing Wild Boy. To prevent the recurrence of such serious adventures, he was provided with a brass collar, on which was inscribed "Peter the Wild Boy, Broadway Farm, Berkhamstead." When Peter was angry, he never attempted to strike or use his hands in any way, but always endeavoured to bite. Pleasure he expressed by kissing the object that excited his admiration. When pleased he would also often dance about, shaking his brass collar, and making a humming noise which he intended for singing, but in which it was difficult to trace an air. Painting delighted him, and he would immediately kiss any object that was of vivid colours. He was passionately fond of music, and would endeavour to enter the room where any kind of music was performing, jumping and dancing to it. We have already described the extent of his vocabulary, to which he afterwards added "Hom Hen" (Tom Fen), intended for the name of the farmer whom he recognized as his master. Though quite harmless, Peter was sometimes sullen, and would never work if desired to do so; but, if nothing were said to him, he would often assist in the farm and do more work than three other men. He usually had bread and milk for supper, and as soon as he had taken it he always went up to bed; so that if he was wished out of the way, some bread and milk was given to him, and when he had finished it he would immediately go off to bed, even though it were still broad daylight. Peter could live on the simplest fare, but he much liked anything sweet, and any kind of confectionary. There is an anecdote, of his having made his way into a room where all the sweet things were laid out, that were prepared for a grand fête given to Lord Chatham; and when the second course was called for, Peter was discovered, with a large bowl, in which he had mixed pastry, jellies, creams, and other niceties, employed, quite to his own satisfaction, in eating the whole collection with his hands. Peter was capable of very sincere affection; for he became attached in an extraordinary manner to the farmer who succeeded Tom Fen in the charge of him; and when this person died, he went to his bed-side, raised his hands, and endeavoured to awaken him; but when he found his efforts unavailing, he went down stairs and seated himself by the chimney. What his ideas of death were, cannot be known; but he refused his food and pined away, till in a few days he actually died of grief,—for he never had any illness.

The Savage of Aveyron was found in the forest of Cawne in the year 1801, being, it was supposed, about eleven or twelve years of age. He was quite naked, and seeking acorns and roots for food, was met by three huntsmen who laid hold of him at the moment he was climbing a tree to avoid his pursuers. In 1802 he was taken to Paris, where he excited great curiosity, and his actions furnished occasion to observations of the most interesting nature.

Language is the expression of our ideas and their various relations by certain articulate sounds, which are used as the signs of those ideas and relations. By articulate sounds are meant, those modulations of simple voice emitted from the thorax, which are formed by means of the mouth, and its several organs—the teeth—the tongue—the lips—and the

palate. In a more general sense, the word language is sometimes used to denote all sounds by which animals of any kind express their particular feelings and impulses, in a manner that is intelligible to their own species. The Divine author of nature has endowed every animal with powers sufficient to make known all those of its sensations and desires, with which it is necessary for the preservation of the individual, or the continuance of the kind, that others of the same species should be acquainted. It is necessary for animals to know the voices of their enemies, as the voices of their friends, and the roaring of the lion is a sound, of which previous to experience, every beast of the forest is naturally afraid. Between these animal sounds and the language of men, there is however, very little analogy. Human language is capable of expressing ideas and notions, which there is every reason to believe that animal instinct cannot conceive.

Every human language is learned by imitation, and is intelligible only, to those who either inhabit the country where it is venacular, or have been taught by a master, or by books; but the voices of animals are not learned by imitation, and being wholly instinctive, they are intelligible to all the animals of that species by which they are uttered, though brought together from the remotest parts of the world. That the barkings or yelps of a Lapland dog would be instinctively understood by the dogs of Spain, Calabria, India, or any other country,—but there is no reason to imagine, that a man who had never heard any language spoken, would himself speak; and it is well known that the language spoken in one country is unintelligible to the natives of another, where a different language is spoken. Herodotus, indeed, records a fact, which, could it be depended upon, would tend to overturn the above reasoning; as it infers a natural relation between ideas and certain articulate sounds. He tells us, that a King of Egypt, in order to discover which was the oldest language, caused two children newly born of poor parents, to be brought up by a shepherd amongst his cattle, with a strict injunction that they should never hear a human voice, and that at the end of two years, they pronounced, at the same time, the word signifying *bread*. This is one of the many fables of that credulous historian.

The exercise of cultivated reason, and the arts of civil life, have, indeed, eradicated many of our original instincts, but they have not eradicated them all. There are external indications, of the internal feelings and desires which appear in the most polished society, and which are confessedly instinctive. The passions, emotions, sensations, and appetites, are naturally expressed in the countenance, by characters which the savage and the courtier can read with equal readiness. The look serene, the smothered brow, the dimpled smile, and the glistening eye, denote equanimity and good will, in terms which no man mistakes. The contracted brow, the glaring eye, the sullen gloom, and the threatening air, denote rage, indignation, and defiance, as plainly and forcibly, as revilings or imprecations. To teach men to disguise their instinctive indications of their temper, and “to carry smiles and sunshine in their face, when discontent sits heavy at their heart,” constitute a great part of modern and refined education.

The words of language are either proper names, or the signs of ideas or relations; but it cannot be supposed, that the Allwise instructor, would load the memories of men with words to denote things then unknown, or the signs of ideas which they had not then acquired. It was sufficient that a foundation was laid, of such a nature, as would support the largest superstruction which they might ever have occasion to raise upon it.

The first application of names to objects, or the invention of significant words, has often been supposed to have taken its rise from the imitation of the voices of animals, or the sounds produced by various natural causes. The serpent hisses, the bees hum, the thunder peals, the tempest roars, the wind howls among the mountains; the savage listens, and imitates the sound which salutes his ears, and the word which he pronounces, serves afterwards to teach to himself and his companions the idea of the object which first gave occasion to its utterance. To suppose words invented, or names given to things in a manner purely arbitrary, without any ground or reason, is to suppose an effect without a cause. There must always have been some motive which led to the assignment of one name rather than another, and we can conceive no motive which would more generally operate upon men in their first efforts towards language, than a desire to paint by speech, the objects which they named in a manner more or less complete, according as the vocal organs had it in their power to effect this imitation. A certain bird is termed the cuckoo from the sound which it emits. When one sort of wind is said to whistle, and another to roar; a fly to buzz, and falling timber to crash; when a stream is said to flow, and hail to rattle, the analogy between the word and the thing signified is plainly discernable. Thus in all languages a multitude of words are to be found that are evidently constructed, upon this principle.

Having thus briefly stated, and endeavoured to prove, that language was given to man, by Divine inspiration, to communicate our ideas to each other, to express our wants and our wishes, and to praise the Giver. It becomes us, as rational creatures, to make the best possible use of this blessing, and avoid, as far as it is in our power, perverting this inestimable gift to any bad purpose. The best use we can make of this Divine endowment, is the cultivation of our minds, in the practice of virtue,—a thirst after knowledge,—the love of truth,—and, above all, a desire to “search the Scriptures,” that we may “become wise unto salvation.”

Next to speech, writing is, beyond doubt, the most useful art which man possesses. Writing is plainly an improvement upon speech, and therefore, must have been posterior to it in order of time. Mankind, at first, thought of nothing more than by communicating their thoughts one to another when present, by means of words, or sounds which they uttered. Afterwards, they devised this further mode of natural communication when absent, by means of marks, or characters presented to the eye, which is called writing.

The invention of an alphabet, or of a number of arbitrary signs, which by their varied position, should express all the variety of human sentiment and language, seems to be a discovery, of so sublime and complicated a nature, that if not absolutely beyond the possibility of the mental energy of man to elicit, it must necessarily demand the lapse of ages to complete its development, and to advance it to perfection.

Written characters are of two sorts; they are either signs for things, or signs for words. Of the former sort, signs for things are the pictures, hieroglyphics, and symbols employed by the ancients. Of the latter sort, signs for words are the alphabetical characters now employed by all Europeans. Pictures were undoubtedly the first essay towards writing. Imitation is natural to man; in all ages, and among all nations, men have attained some method of copying and tracing the likeness of sensible objects; those methods would soon be employed by mankind, for giving some imperfect information

to others at a distance, of what had happened, or for preserving the memory of facts which they sought to record. Thus, to signify that one man had killed another, they drew the figure of a man stretched upon the ground, and another man standing by with a deadly weapon in his hand. Pictures could do no more than delineate external events. They could neither exhibit the connexions of them, nor describe such qualities as were not visible to the eye, nor convey any idea of the dispositions or words of men. To supply, in some degree, this defect, there arose, in progress of time, the invention of what are called hieroglyphical characters, or sacred sculpture, which are derived from two Greek words, signifying—*SACRED* and *TO CARVE*: which may be considered as the second stage in the art of writing. Hieroglyphics consist in certain symbols, which are made to stand for invisible objects, on account of some analogy, or resemblance, which such symbols are supposed to bear to the object. Thus, an eye was the hieroglyphic symbol of knowledge; a circle, of eternity, which has neither beginning nor end; honour, was denoted by a feather or palm branch; ingratitude, by a viper; impudence, by a fly; wisdom, by an ant; victory, by a hawk; a dutiful child, by a stork; a man universally shunned, by an eel; sometimes, they joined together two or more of the hieroglyphical characters; as a serpent, with a hawk's head, to denote nature, with God presiding over it.

Another remarkable instance, is the style of the Old Testament, which is carried on by constant allusions to sensible objects. Indignity or guilt, is expressed by a spotted garment; misery, by drinking the cup of astonishment; vain pursuits, by feeding on ashes; a sinful life, by a crooked path; prosperity, by the candle of the Lord shining on our head; and the like innumerable instances. But, as many of these properties of objects which they assumed for the foundation of their hieroglyphics, were merely imaginary, and the allusions drawn from them, were forced and ambiguous; this sort of writing could be no other than enigmatical, and confused in the highest degree.

The invention of hieroglyphical writing has been attributed to two causes:—the first of which has the erudite Kircher to support it, namely, "that it was invented by the Egyptian priests to conceal their knowledge of arts, sciences, and religion." The second, which is adopted by Bishop Warburton, in his *Essay on Hieroglyphics*, supposes "that they were invented merely as the first rude system of writing, which was afterwards exchanged for an alphabetical character," and that Kircher is under a general error. Both these origins are disputed.

The advocates of the mere human origin of letters, refer us to the Egyptian and Mexican hieroglyphics as to the rudiments of alphabets, and assure us, that "necessity, convenience, or chance would produce abbreviated marks, and ultimately the alphabetical character and system." But in no instance, do they shew us a nation carrying hieroglyphical signs to their completion in an alphabet. The Egyptians and Mexicans never appear to have deduced letters from the symbolic figures, which they were accustomed to describe, but to have continued the use of them with unvaried similarity, through the whole period of their history. The Greeks and other nations, on the contrary, who made use of alphabetical characters, never spoke of them as derived from hieroglyphical delineations, but as the invention of particular persons, or as communicated to them by their gods.

It cannot be doubted, that the first letters invented by men, were representations of

visible objects of nature; and in proof of this, we find that the characters which form one of the most ancient alphabets now extant, were designed from certain figures made by the stars, and hence it was denominated the *CELESTIAL ALPHABET*. The resemblance of the heavenly bodies will be most perfectly discerned in the alphabets used by the ancient Chaldeans. Gaffarel, in his volume entitled *Unheard of Curiosities*, has been most particular in the history of these singular characters. Most of the Eastern nations supposed the constellations to represent various figures significative of seasons, &c.; but the Hebrews considered them as words, formed not only by those distinguishing characters which they had attached to them, but also made up by the starry courses bringing different letters in contact, and thus forming different words. The reading of the stars, and whatever else is seen in the air, Gaffarel first assumes from Isaiah xxxiv. 4, where it is said, "the heavens shall be rolled together as a scroll;" and from several similar passages of Scripture, that the skies are to be considered as a volume, and in it there must be of consequence, letters, words, and sentences, for the perusal of man. It would seem, that between this "Writing of the Angels," as it was anciently called, and the science of Astrology, there is a near connexion; because the nature and influences of the stars themselves, are to be taken into consideration, when the letters of heaven are read.—Throughout the whole system of this starry writing, a close coincidence with the Hebrew language may be observed; the sentences formed by it are short and abbreviated, and sometimes only the most prominent word is presented to the eye. Thus, a short time before the Babylonish captivity, five stars exactly above Jerusalem, formed the Hebrew word *Nataq*, which signifies, to drive out, break, and cast down. The number of letters as they rank in the Hebrew series, are also to be taken, to discover the time when their prophecies shall be accomplished; they amounted to five hundred and five, which designated the year when the Jewish kingdom was destroyed, counting from Saul to Zedichias. Most of the writers, however, who have touched upon this mysterious subject, have contributed greatly to bring it into disrepute, by connecting it with cabalism; and not unfrequently with magic.

Gilbert Wakefield, a man whose public character as a writer, was only equalled by his virtues as a man, in an admirable tract on *Alphabetical Writing*, has the following trite remarks. "The first five books of Moses, are acknowledged by all to be, not only the most ancient compositions, but also, the most early specimen of alphabetical writing, at present existing in the world: now taking for granted, the authenticity of the Mosaic records, if alphabetical writing be the result of human ingenuity, one great peculiarity distinguished it from all other human inventions whatsoever—the very first effort brought it to perfection. All the sagacity and experience of succeeding generations, illustrated by the vast influx of additional knowledge, beyond the most accomplished of their predecessors, have been unable, to superinduce any real improvement, upon the Hebrew alphabet. If alphabetical writing were a human invention, the natural result of ingenuity and experience, might we not expect that different nations would have fallen upon the same expedient, independently of each other, during the compass of so many ages, when the faculties of the mind are equally capable at all times, and in every corner of the universe; and when the habits of life, and modes of thought internally bear so great a resemblance to each other, in similar stages of society? This were but a reasonable expectation, which

does not correspond to the event, for alphabetical writing as now practised by every people in the universe, may be referred to one common original."

As writing advanced from pictures of visible objects to hieroglyphics, or symbols of things invisible; from these latter, it advanced among some nations to simple arbitrary marks, which stood for objects, though without any resemblance or analogy to the object signified. Of this nature was the method of writing practised by the Chinese, who suppose, that before language was reduced to a written character, the commands of Rulers were made known, and that ideas were communicated by means of knotted cords; and it is further imagined, that when knotted cords came into use for the expression of wishes or commands, that the first writing after the invention, was constructed of the line as before, but broken by the insertion of small outline circles placed at various distances along it. In representing the celestial figures, the ancient Chinese found that knotted cords were excellently adapted for the depicting of the constellations. Thus the circle or knot stood for the star, and the connecting line defined the form of the heavenly sign; nor was this method peculiar to the Chinese, since the Chaldeans formed similar characters, although theirs were assumed from the stars. All traces of these knotted cords are not yet lost in China. The Peruvians, also, made use of small cords of different colours, and by knots upon these cords of various sizes, and differently arranged, they contracted signs for giving information, and communicating their thoughts. Our ciphers, as they are called, of arithmetical figures, which we have derived from the Arabians, are significant marks precisely of the same nature as the Chinese or Peruvian characters.

The next great step, was the invention of an alphabet of syllables, which properly preceded the invention of an alphabet of letters among some of the ancient nations, and which is said to be retained to this day in Ethiopia, and some parts of India. Still, however, the number of characters was great, and must have continued to render both reading, and writing, very laborious arts, till, at last, some happy genius arose, and tracing the sounds made by the human voice, to their most simple elements, reduced them to a very few vowels and consonants, and by affixing to each of these signs which we now call letters, taught mankind how, by their combination of sound they might be employed in speech. By being reduced to this simplicity, the art of writing was brought to the highest state of perfection, and in this state, we now enjoy it in all the countries of Europe.

"The usefulness of alphabetical characters," says Dr. Adam Clarke, "cannot be sufficiently estimated; for without *writing*, the histories of ancient times had never reached us; and the necessary intercourses of friendship and business, must have been greatly retarded in general, and in many cases, wholly obstructed."

The most probable and natural account of the origin of alphabetical characters, is, that they took rise in Egypt,—most probably Moses carried with him the Egyptian letters into the land of Canaan, and then being adopted by the Phœnicians, who inhabited part of that country, they were transmitted into Greece. An invention so useful and simple, was greedily received by mankind, and propagated with speed and facility through many different nations.

To whom we are indebted for this sublime and refined discovery, does not appear. Concealed by the darkness of remote antiquity, the great inventor is deprived of those

honours which would still be paid to his memory by all the lovers of learning. It appears from the books which Moses has written, that amongst the Jews, and probably amongst the Egyptians, letters had been invented prior to his age. The universal tradition among the ancients is, that they were first imported into Greece by Cadmus, the son of Ogenor, a Phœnician, who, according to the common system of chronology, was cotemporary with Joshua, according to Sir Isaac Newton, with King David.

" Say, by what principle divine inspir'd,  
Thou, for a world's instruction, greatly fir'd,  
Rapt in what vision, say, by God possest,  
Dawn'd the first image, in thy lab'ring breast  
The figure of Ideas to display,  
And colour forth the intellectual ray ;  
In speaking silence, the dumb voice impart,  
And sounds embody by creative art ;  
By sight alone, to edify the ear,  
To picture thought, and bid the eyes to hear !"

In this state of uncertainty amidst conflicting opinions, the mode of conduct for us to pursue, at once the most consistent with reason, the most conformable to true science, and the most agreeable to sound religion, is to conclude, that though some sort of characters, as before observed, formed by the ingenuity of man, or founded upon the basis of the ancient hieroglyphic system, was universally used in the early ages of the world, that so divine an art—an art apparently so far surpassing human invention, as alphabetical writing, in the perfection in which it has been handed down to us from an Asiatic source, through the medium of the Greeks, and Romans, could have its origin in inspiration only, and was at first revealed to men amid the awful promulgations at Horeb—amid the thunder which shook the basis of Mount Sinai—WRITTEN WITH THE FINGER OF GOD.

The letters were originally written from the right hand towards the left, that is to say in a contrary order to what we now practice. This manner of writing prevailed among the Assyrians, Phœnicians, Arabians, and Hebrews; and from some very old inscriptions appear to have prevailed also amongst the Greeks. Afterwards the Greeks adopted a new writing, alternately, from the right to the left, and from the left to the right, after the manner in which oxen plough the ground. Of this, specimens still remain, particularly the inscription of the famous Sigeian monument. At length the motion from the left hand to the right being found more natural and commodious, the practice of writing in this direction prevailed throughout all the countries of Europe.

Ancient languages may be classed in the following order, the Hebrew, Samaritan, and Chinese tongues have each laid claim to originality, but the latter may be considered rather as a figure or emblematical writing than a regular system of letters and words. Of the other two it is generally supposed, that, they, together with the Assyrian and Chaldaic are the same in effect, but differing in the form of their characters. The Hebrew may be considered as the first great source whence the other tongues of the earth have been derived. The immediate descendant of the Hebrew, the Chaldaic, the Arabic, the Syriac, the Egyptian, the Ethiopian, and the Syro-Galilean, and its collateral issue were the Phœnician, and the Palmyrian. From the Phœnicians the Greeks acknowledged to have received their letters, and from them the discovery was communicated to the Romans, and so to all European nations.

The alphabet of every language consists of a number of letters, which ought each to have a different sound, figure, and use. As the difference of articulate sounds, was intended to express the different ideas of the mind, so one letter was originally intended to signify only one sound, and not, as at present, to express sometimes one sound and sometimes another, which practice has brought confusion into the languages, and rendered the acquisition of modern tongues a more difficult task than it would otherwise have been. As the number of sounds and articulations differ in various languages, so the number of letters differ in the alphabets of different nations, although, not in proportion to their respective copiousness. The English alphabet contains twenty-six letters; French, twenty-five; Hebrew, Chaldee, Syriac, and Samaritan, twenty-two; Arabic, twenty-eight; Persian, thirty-one; Turkish, thirty-three; Georgian, thirty-six; Coptic, thirty-two; Muscovite, forty-three; Greek, twenty-four; Latin, twenty-five; Slavonic, twenty-seven; Dutch, twenty-six; Spanish, twenty-seven; Italian, twenty; Ethiopic and Tartarian, two hundred and two; Sancrist, fifty; Indians of Bengal, twenty-one; Burmese, nineteen; The Chinese, properly speaking, have no alphabet, except we call their whole language their alphabet.

As my limits will not allow me to enter more fully into the origin of language, I shall briefly show that every language, has ideas and terms, expressly their own—for instance, our terms in polite literature, prove that these came from Greece: our terms in music and painting, that these came from Italy; our phrases in cookery and war, that we learnt these from the French; our phrases in navigation, that we were taught them by the Flemings, and low Dutch. These, many and different sources, of our language, may be the cause why it is so deficient in regularity and analogy;—yet we have this advantage to compensate the defect, that, what we want in elegance, we gain in copiousness, in which last respect few languages will be found superior to our own.

And from what has been said, it appears that language was at first barren in words, but descriptive by the sound of these words; and expressive in the manner of uttering them, by the aid of significant tones, and gestures. It appears that in all successive changes which language has undergone as the world advanced, the understanding has gained ground, on the fancy and imagination. The progress of language in this respect resembles the age of man:—the imagination is most vigorous and predominant in youth—with advancing years the imagination cools, and the understanding ripens. Thus, language proceeded from sterility to copiousness, and, at the same time, proceeded from uncertainty to accuracy, from fire and enthusiasm, to coolness and precision; in its ancient state, more favourable to poetry and oratory; in its present, to reason and philosophy.

In Dr. Armstrong's *Gælic Dictionary* the word *sack*, meaning a bag, is found to be the same in meaning and pronunciation, in twenty-three languages; and he is of opinion that this is one of the few words which have come down to us from the original language of man. The Gælic, Hebrew, Chaldaic, *sac*; Arabic, *sagu*; Coptic, *pisok*, meaning a pannier; Latin, *saceus*; Italian, *sacco*; Spanish, *saco* and *saca*; Belgic, *sack*; French, *sac*; Dutch, *zak*; Swedish, *sack*; Gothic, *sack*; German, *sack*; Danish and Norse, *sack*; Hungarian, *sack*; Turkish, *sak*; Georgian, *sack*; Anglo Saxon, *sacce* and *sace*; Irish, *sac*; Welsh, *sach*; Cornish, *zak*.

From the above statements which have been adduced on the origin of writing, and

the perpetual controversy which still engages the learned, whether alphabetical writing be of human or divine origin, the matter receives considerable light from the details published by Mr. Knapp, in his *Lectures on American Literature*, who records one of the most extraordinary events which has occurred since the original invention of letters. It appears that an Indian, of the name of See-quah-yah, is the inventor of a Cherokee alphabet, under such disadvantageous circumstances, as render him one of the most extraordinary men that the world has produced.

Mr. Knapp has given to the public the history of this invention nearly in the words of See-quah-yah, the inventor himself, then (1828) about sixty-five years of age. At the termination of a campaign, towards the close of the war, it appears a letter was found on the person of a prisoner, which was wrongly read by him to the Indians. In some of their deliberations on this subject, the questions arose among them whether the mysterious power of "the talking leaf" was the gift of the Great Spirit to the white man, or a discovery of the white man himself. Most of his companions were of the former opinion, while he as strenuously maintained the latter. This frequently became a subject of contemplation with him afterwards, but he never sat down seriously to reflect on it, until a swelling in his knee confined him to his cabin, and at length made him a cripple for life. In the long night of his confinement, his mind was again directed to the mystery of speaking by letters, the very name of which, of course, was not to be found in his language. From the cries of wild beasts, from the sounds of the mocking-bird, from the voices of his children and his companions, he knew that feelings and passions were conveyed by direct sound, from one intelligent being, to another. The thought struck him to try to ascertain all the sounds, in the Cherokee language. His own ear was not particularly discriminating, and he called to his aid the more acute ears of his wife and children. When he thought that he had distinguished all the different sounds in their languages, he attempted to use pictorial signs, images of birds and beasts, to convey these sounds to others, or to mark them in his own mind. He soon dropped this method as difficult or impossible, and tried arbitrary signs, without any regard to appearances, except such as might assist in recollecting them, and distinguishing them from each other. At first these signs were very numerous; and when he had got so far as to think his invention was nearly accomplished, he had about 200 characters in his alphabet. By the aid of his daughter, who seemed to enter into the genius of his labours, he reduced them at last to eighty-six, the number he now uses. He then set to work to make these characters more comely to the eye, and succeeded—as yet he had not the knowledge of the pen as an instrument, but made his characters on a piece of bark, with a knife or nail. At this time he sent to the Indian agent, or some trader in the nation, for paper and pen. His ink was easily made from some of the bark of the forest trees, whose colouring properties he had previously known—and after seeing the construction of the pen, he soon made one. His next difficulty was to make his invention known. At length he summoned some of the most distinguished of his nation, in order to make his communication to them—and after giving the best explanation of his discovery that he could, stripping it of all supernatural influence, he proceeded to demonstrate to them in good earnest that he had a discovery. His daughter, who was his only pupil, was ordered to go out of hearing, while he requested his friends to name a word or sentiment, which he put down, and then she was called in and

read it to them; then the father retired, and the daughter wrote; the Indians were wonder-struck, but entirely satisfied. See-quah-yah then proposed that the tribe should select several youths, from among their brightest young men, that he might communicate the mystery to them. This was at length agreed to, and several were elected for this purpose. The tribes watched the youths for several months with anxiety, and when they offered themselves for examination, the feelings of all were wrought up to the highest pitch. The youths were separated from their master, and from each other, and watched with the greatest care. The uninitiated directed what master and pupil should write to each other, and the tests were viewed in such a manner as not only to destroy their infidelity, but most firmly to fix their faith. The Indians on this, ordered a great feast, and made See-quah-yah conspicuous at it. He became at once schoolmaster, professor, philosopher, and chief.

He did not stop here, but carried his discoveries to numbers. He, of course, knew nothing of Arabic digits, nor the power of Roman letters in the science. The Cherokees had mental numerals to one hundred, and had words for all numbers up to that; but they had no signs nor characters to assist them in enumerating or adding, subtracting, multiplying, or dividing. He reflected upon this, until he had created their elementary principles in his mind, but he was at first obliged to make words to express his meaning, and then signs to explain it. By this process he soon had a clear perception of numbers up to a million. His great difficulty was the threshold—to fix the powers of his signs according to their places. When this was overcome, his next step was in adding his different numbers, in order to put down the fraction of the decimal, and give the whole number to the next place; but when Mr. Knapp knew him he had overcome all these difficulties, and was quite a ready arithmetician in the fundamental rules.

This ingenious Indian was not only an admirable mechanic, but Mr. Knapp states, that he had also a great taste for paintings. He mixed his colours with skill. For his drawings he had no model but what nature furnished, and he often copied them with astonishing faithfulness. His resemblances of the human form, it is true, were coarse, but often spirited and correct; and he gave action and sometimes grace, to his representations of animals. He had never seen a camel-hair pencil, when he made use of the hair of wild animals for his brushes. "The government of the United States," continues Mr. Knapp, "had a fount of type cut for this alphabet; and a Newspaper, called the *Cherokee Phoenix*, printed partly in the Cherokee language, and partly in the English, was established at New Echota, and characterised by decency and good sense. Many of the Cherokees were able to read both languages." The Paper is about nineteen inches long, and twelve inches wide, in five columns. No. 34 is dated October 22, 1828. See Horne's *Introduction to Bibliography*, for a curious representation of a North American Indian Gazette.

Having assigned, as I hope, a rational origin of the invention of language, I proceed to shew, that mankind had industriously invented other means of communicating their ideas, than merely by their voice, and their writing; not only that they might with freedom converse at a distance, but also, to enable them to preserve and transmit to posterity, the most valuable deeds and useful discoveries, made in the world; and before treating upon books generally, we must carry our thoughts back to a period, far more remote than that at which the art of printing became applicable to the making of books. The early inhabitants of the earth would naturally desire to perpetuate their useful discoveries, as

well as the important events of their time, and it may therefore, be fairly presumed that they had some mode of communicating their ideas to succeeding generations, before the invention of alphabetical writing. The scanty traditions recorded concerning the Antediluvians, do not enable us to come to any determination relative to their proficiency in communicating the transactions of their time; whether, therefore, they employed stamps of any kind, or any means whatever of transmitting knowledge, except by oral tradition, we have neither history nor relics to inform us, but that period which immediately followed the deluge, and which some chronologers have termed the second age of the world, afford convincing proofs of the art of forming impressions, being then practised, and most probably with a view to propagate science—to inculcate special facts—and as a general means of preserving to posterity certain useful memorials.

Purposes such as these it is reasonable to conclude were contemplated by the ancient Chaldeans, when they stamped or printed their tiles or bricks, with various figures, hieroglyphics, or inscriptions. In some instances, these ancient specimens seem to have been sun-baked, yet for the most part they appear kiln-burnt, to a surprising degree of hardness, even to partial vitrification. Of such materials was built the original City and celebrated tower of Babylon, and although a period of 4,000 years has rolled away since the construction of the superb metropolis, whose name they bear, still, even to the present day, do the Babylonian bricks, which have supplied the antiquary and orientalist, continue to be found. It is nevertheless made probable, that the Babylonians were accustomed to imprint on their bricks, allusions to astronomical phenomena, having some signal astronomical import. Particular configurations of the heavens, which distinguished the several seasons, as they related to the business of the husbandman, might also be registered in this way, to serve as a sort of calendar, and some impressions are imagined to contain historical details, relative to the founders of those stupendous structures, originally composed of the bricks in question; for every furnace-baked-brick, found amidst these vast ruins, is imprinted with some emblematical design.

In the library of Trinity College, Cambridge, there is an article composed of a like substance to that of which the bricks just mentioned are manufactured, it is impressed with characters, corresponding with those on the building bricks, except that they are much smaller, and may be considered more beautifully executed. (*See Engraving.*)

The shape, however, of this curiosity, is very unlike the bricks before alluded to. It is about seven inches high, and three inches in diameter at each end, increasing gradually in circumference from the ends towards the middle, like a wine cask. The greatest possible care is taken of this precious relic of antiquity, now probably not less than 4,000 years old. This rare piece of ancient learning and art, together with three bricks before described, was presented to the college by General Sir John Malcolm. It is mounted on a marble pedestal, covered with a glass-case secured by an iron bracket; and so contrived, that the curious inspector may cause it to revolve upon its marble base.

All attempts to explain the signification of these characters of antiquity, have as yet, been vainly exerted by the most skilful orientalists; nor has it been satisfactorily determined whether they really are alphabetic characters, as the European,—syllabic, as many known Orientals—hieroglyphic, as the Egyptian—or arbitrary signs, expressive of complete ideas, as the Chinese.

It may be asked of what possible use could a barrel-shaped substance, such as is here shewn, be in building? Of what service could it be, being a solid, for domestic or other purposes? Rendered, as it seems, by the peculiarity of its shape, and by all its other characteristics, useless for any common purpose—if we take into consideration the pains used to produce the impression neatly and regularly as it is—and if, at the same time, we consider the abundance of its contents, I think we may reasonably contemplate it, as having been a work, of great public importance at the time it was executed.

It is scarcely possible to pursue the reflections caused by traces of human genius so venerable, without expressions of regret that the characters in which they would speak to us are too obsolete to be comprehended; and that the language they employ has become so totally extinct, that the interesting story it contains is thus likely to be lost for ever.

The most ancient literal specimen known to be extant, is the Sigeian inscription, which is contained in a tablet, that was disinterred near to ancient Troy. It is engraven on a pillar of beautiful white marble, nine feet high, two feet broad, and eight inches thick, which, as appears by an excavation in the top, and the tenor of the inscription, supported a bust or statue of HERMOCRATES,\* whose name it bears. This tablet may be considered to include a specimen of writing, or rather letters engraven on stone, at least 3,000 years old. It is supposed to have been engraven and erected about 500 years before the birth of Christ, and not many years after the publishing of the laws of Solon.

It has been contended by some writers, that the art of impression was well known to the ancients: in confirmation of this, they instance the stamps of iron and other metals, with which their cattle,† bales of goods, and various articles of their manufactures were marked: throughout Italy, and other parts of Europe, during the low ages; one instance has been adduced; this is a Roman Sigillum, a signet ring, or stamp, resembling those stamps now used by the Post Office on letters. This is the very earliest specimen we possess of the art of printing by means of ink, or a similar substance. It is nearly two inches long, and one in breadth; on the back is a ring, for the purpose of holding it when the impression is made. The letters are raised, as well as the rim, after the manner of our printing types. The inscription is in two lines, and the letters are in Roman capitals, reversed. The impression given is as follows:—

HERMIAE. S. N.

C. I. CAECILI.

which signifies *Caius Julius Cecilius Hermias*, a person not mentioned in Roman history, and, therefore, supposed to have been a steward of some Roman officer, or private

\* I am Hermocrates, the Son of Phanodocus, of this promontory; and I have presented in the Prytaneum, a cup with a stand and wine-strainer, as a monument to the Sigeans; if then I endure care on any account I go to the sigeans, and Æopos, and my brethren have erected a monument for me. The Prytaneum was a common Hall, in which the Grecian senators feasted together, and entertained, at the public charge, such as deserved well of their country.

† "Distinguish all betimes with branding fire,  
To note the tribe, the lineage, and the sire;  
Whom to reserve for husband of the herd,  
Or who shall be to sacrifice prefer'd."

VIRGIL, *Georgics*, Book III.

functionary. This signet was found near Rome, and is allowed to be the most ancient specimen of printing known. A not very dissimilar stamp, in the Greek character, is in the possession of the Antiquarian Society of Newcastle-upon-Tyne.

Strutt mentions an engraving, in the British Museum, upon the sheath of a sword, representing five figures in outline, impressions of which might be taken if the metal would bear the pressure.

The signets used by the ancient Jews, were sometimes set in rings and worn upon the fingers, and at others, they were affixed to the bracelet, and carried upon the arm. Thus in Solomon's Songs, Chap. viii. v. 6. it is said, "Set me as a seal upon thine heart, as a seal upon thine arm;" and it is well known that these seals contained the name or monogram of the wearer, for in the directions given to Moses concerning the holy breast-plate, Exod. chap. xxviii. v. 9, 11. it is said, "And thou shalt take two onyx stones, and grave on them the names of the children of Israel. With the work of an engraver in stone, like the engravings of a signet, shalt thou engrave the two stones with the names of the children of Israel: thou shalt make them to be set in ouches of gold." Again, there is supposed to be an allusion to these engraved bracelet-seals in Genesis xxxv. v. 4, which from the description of them, must have borne a strong resemblance to the Egyptian *Name-banners*. In Greece, these Name-banners were formed of lead, and were of a circular shape; but in Rome, they were made of stone, of an oblong square, and upon them were inscribed the names of two parties between whom a firm friendship had been established. They were then divided into two parts, and interchanged, so that each one possessed that piece which contained the name of the other, and the production of this, to either party on a journey, ensured a hospitable reception, and kind treatment to the traveller.

The few and simple laws, necessary in the early stages of society, seem at first among the Greeks, to have been set to music and chaunted or sung. Afterwards, they were engraven on a hard and solid substance, as stone, metal, or wood; according to some authors, the laws of Solon, were engraven on tablets of wood, so constructed that they might be turned round in wooden cases: some of his laws, however, were certainly engraven on stone. Josephus, speaks of two columns, the one of stone, the other of brick, on which the children of Seth wrote their inventions, and astronomical discoveries. On the entrance of the Israelites into the land of Canaan, the *Law* was commanded to be engraven on stones, that a genuine exemplar might be transmitted even to the latest generations.

The Arundelian marbles, preserved in the University of Oxford, sufficiently prove for what a variety of purposes inscriptions on stone were used amongst the ancients. Some of the inscriptions on them, record treaties, others the victories or good qualities and deeds of distinguished persons, others, miscellaneous events; most of them, however, are sepulchral. By far the most important and celebrated, is the Parian chronicle, which, when entire, contained a chronology of Greece, particularly of Athens, for a period of 1318 years, namely, from the reign of Cecrops, A. C. 1582, to the archonship of Diognetus, A. C. 264.

The next specimen of antiquity deserving of notice, is the Rosetta stone, now in the British Museum. In the year 1801, during the memorable campaign in Egypt,

the scavans attached to the French army, discovered in the fort St. Julian, which stands near the mouth of the Nile, on the Rosetta branch, a large broken stone of black basalt, having an inscription engraved upon it, in three different kinds of characters; namely, the sacred hieroglyphics, the usual letters of the country, or the Enchorial, and the Greek,—from this stone, a large portion of the Egyptian learning of England has been acquired; inasmuch, as the Greek inscription, not only details its history, and translates the other two, but it also serves as a key for the identifying of various hieroglyphics, as well as the Enchorial characters. Although, a considerable portion of the hieroglyphic inscription, and a part of the Enchorial, and the Greek, are broken, enough remains, for them to enlighten each other. The Rosetta stone, as it is called, has not been the only guide to Egyptian literature; but the discoveries made by it, have been considerably assisted by the Egyptian monuments in general; although more particularly, by the green sarcophagus of Alexander, the zodiac from the temple of Dendora, and many other ancient curiosities, which were ceded to the British after the battle of Alexandria.\*

In order to give the Athenians an opportunity of judging deliberately on a proposed law, it was engraven on a tablet, which was hung up for some days at the statue of the heroes, the most public and frequented place in the city of Athens. And that no man might plead ignorance of his duty, the laws, when passed, were engraven on the walls of the royal portico; and persons were appointed to transcribe such as were worn or defaced, and enter the new ones.

The Romans engraven on brass, even so late as the reign of the emperors. The Roman soldiers, were allowed in the field of battle, to write their wills, on their bucklers or scabbards; and in many cabinets are preserved the discharges of soldiers, written on copper-plates. Tablets of brass of a cubical form, were also used for the writing of public documents; as Plutarch mentions, the finding of a brass plate, with Egyptian characters, at Thebes, in Bœotia; and Pollux states, that the laws of Solon were inscribed upon brass, as well as wood. Polybius mentions, that the treaty made between the Romans and the Carthaginians, at the end of the first Punic war, (B. C. 241) was engraven on brazen tablets; but, Dionysius remarks, that the Roman laws were preserved on tablets of oak, because they were not then accustomed to recording on brass. Some account of two brazen books will be found in the *Archæologia*, vol. 12, and the *Gentleman's Magazine*, vol. 72. The Rev. Claudius Buchanan, in 1807, found the same in India, in possession of several tablets of brass.

Lead was employed as well as brass, for preserving treaties and laws. In 1699, *Montfaucon* purchased at Rome, a book of eight leaden leaves, including two which formed the cover, four inches long, and three inches wide; leaden rings were fastened on the

\* A great acquisition of Egyptian knowledge is to be acquired, from the researches of Belzoni, the celebrated traveller, since he not only brought many specimens of Hieroglyphic Paintings and Egyptian antiquities to England, but he also produced the most perfect resemblance in large coloured models, of parts which he was unable to bring away. To show the labour, the patience, and perseverance, which this indefatigable traveller had to encounter in removing one of the antiquities, now in the British museum; though it was only two miles from the River Nile, it took him six months to accomplish, by the assistance solely of the native peasantry, without the aid of any machine. This splendid monument of antiquity, is a bust, of the little or young Memnon, at Thebes, it is composed of a single block of Syenite, it weighs twelve tons, and measures ten feet, in height from the breast to the top of the head. John Baptist Belzoni, died at Gato, near Benin, in Guinea, on the third of December, 1823.

back, through which a small leaden rod ran to keep the leaves together. Hesiod's works, it is said, were originally written upon tablets of lead, and deposited in the temple of the muses, at Boeotia. Aeneas Poliorceticus, who flourished about seven hundred and twenty years before the Christian era, relates, that the women conveyed secret intelligence, by means of small leaden volumes, or rolls of very thin metal, which they wore as ear-rings. He adds further, that they were beaten with a hammer until they were so pliable, that they were sewed up between the soles of the shoes, and that even the messenger who carried them, was unconscious of the circumstance. Whilst he slept, they were taken out by the person to whom they were addressed, and others replaced without exciting suspicion. In the book of Job, chap. xix. v. 23, 24, is the following text, "Oh that my words were now written! oh that they were printed in a book! that they were graven with an iron pen and lead in the rock for ever." Now, the true meaning of the passage is, according to Parkhurst, that Job wished his words to be cut out of the rock, and the interstices to be filled up with thin plates of metal, in the manner of mosaic.

The celebrated Laws of the twelve tables,\* among the Romans, were so called from being written or engraved on *twelve* slabs, or tablets of brass, or ivory, or oak; and hung up for public inspection. The laws penal, civil, and ceremonial, among the Greeks, were engraven on triangular tables of brass, which were called *Cyrbes*. Trithemius asserts, that the public monuments of France were anciently inscribed on silver.

By a law among the Romans, the edicts of the senate were directed to be written on tablets of ivory, thence denominated *Libri Elephantini*; and Pliny says, that from want of the teeth of the elephant, which are alone of ivory, they had lately begun to saw the bones of that animal. And the same author informs us, that table-books of wood were in use before the time of Homer. The Chinese, before the invention of paper, engraved with an iron tool upon thin boards, or upon bamboo. In the Sloanian library, at Oxford, there are six specimens of *Kufic*, or ancient Arabic writing, on boards about two feet in length, and six inches in depth.

The laws on these wooden tablets, as well as those on stone, were inscribed after the manner called *Boustrophedon*, that is, the first line beginning from right to left, or from left to right, and the second in an opposite direction, as ploughmen plough their furrows. The Boustrophedon writing, is said to have been disused by the Greeks, about four hundred years before the Christian era; but it was in use among the Irish, at a much later period, by whom it was denominated *Ciom fa eite*.

It is highly propable, that several of the prophets wrote upon tablets of wood, or some similar substance. (See Isaiah xxx. 8., Habakkuk ii. 2.) Zacharias, the father of John the Baptist, when required to name his son, "asked for a writing table, and wrote, saying his name is John," (Luke i. 63.) These table books, the Romans denominated *Pugillares*.

Even in the fourth century, the laws of the emperors were written upon wooden tables, painted with white wax, occasionally, both the Greeks and Romans, used a

---

\* The first *Decemvirate* began at Rome before Christ 452. During this year of their authority, they compiled ten of the twelve tables; the remaining two were added in the following year. Respecting their famous code of laws, it was the decisive sentence of Cicero, that they were justly to be preferred to whole libraries of the philosophers!

substance called *Maltha*, which signified mortar, plaster, or clay. The Sweeds, also inscribed or engraved their laws on wood; hence the term *balkar*, which signify *laws*, from *balkan*, a balk or beam. Wooden boards, either plain or covered with wax, were used long before the time of Homer; the former were called *schedæ*, whence our word *schedule*. These tablets, or slices of wood when fastened together, formed a book, *codex*, so called from its resemblance to the trunk of a tree, cut into planks, hence our word *code*. The ancients generally used box, or citron wood; in the middle ages, beech was principally employed. The rich Romans used thin pieces of ivory, instead of wooden tablets.

Wood, however, was most generally used both for public and private purposes, in various forms and modes. Thus, in Ezekiel, "Moreover, thou son of man, take thee one stick, and write upon it, for Judah, and for the children of Israel his companions: then take another stick, and write upon it, for Joseph, the stick of Ephraim, and for all the house of Israel his companions." And again, in Deuteronomy, speaking of the obedience to the laws of God, "And thou shalt write them (the laws) upon the posts of thy house, and on thy gates." The Scythians conveyed their ideas by marking or cutting certain figures, and a variety of lines, upon splinters or billets of wood.

Dionysius of Helicarnassus writes, that an ancient treaty between the Romans and the Gabini, was written on wooden shield, which had previously been covered with the skin of an ox, that had been sacrificed when the parties concluded the terms of agreement.

The original manner of writing among the ancient Britons, was by cutting the letters with a knife upon sticks, which were most commonly squared, and sometimes formed into three sides; consequently a single stick contained either four or three lines. The squares were used for general subjects, and for stanzas of four lines in poetry. Several sticks, with writing upon them, were put together, forming a kind of frame, which was called *Peithynen* or *Elucidator*, and was so constructed, that each stick might be turned for the facility of reading, the end of each running out alternately on both sides of the frame.

The following is a correct translation of one of these *Elucidators* :—

The weapon of the wise is reason.  
 Let the exile be moving.  
 Commerce with generous ones.  
 Let the very feeble run away; let the very powerful proceed.  
 The swineherd is proud of his swine.  
 A gale is almost ice in a narrow place.  
 Long penance to slander.  
 The frail Indeg has many living relations.

The alphabet of the primitive Welch letters contains sixteen radical characters, which have twenty-four secondary ones, modifications, or inflexions, making forty in all; and it went under the name of *Coelbren y Beirz*, the billet of signs of the Bards, or the Bardic Alphabet. The curious reader may be desirous of knowing in what manner this curious relic was preserved to the present time; in reply to which, in the obscure and mountainous parts of Wales, the system of bardism is to be found entire, but more known to the world by the name of druidism, which was properly that branch of bardism relating to religion and education. Bardism was universal, and comprehended all the knowledge or philosophy of the ancient times; druidism was its religious code, and *ovatism*, its arts and sciences. The preservation of the character may be principally

attributed to its provision and means, whereby tradition is reduced to a science. A continuation of this mode of writing may be found in the *Runic*, or log almanack of the Northern States of Europe, in which the engraving on square pieces of wood, has been continued to the present time. The boors of *Æsel*, and other islands of the Baltic, continue the practice of making these rude calendars for themselves. Two curious specimens of the *Runic* or log almanacks, are in the collegiate library, at Manchester. A fac simile of an *Æsel* almanack is in the *Gentleman's Magazine*, vol. 82, p. 625.

In the *Gentleman's Magazine*, vol. 80, p. 308, there is a notice of a singular custom which still prevails at Pamber, near Basingstone, in Hampshire. The court-leet holden annually for that manor, is opened *sub dio*, in a small piece of ground called Lady-mead, which belongs to the tithing-man for the year. Thence an adjournment is made to a neighbouring public house. The proceedings of the court are recorded on a piece of wood, called a *tally*, about three feet long, and an inch and a half square, furnished every year by the steward. One of these singular records, was once produced in evidence in a law-suit at Winchester. Shakspeare, refers to the *score* and the *tally*, (*Henry VI.* pt. ii.) The mode of keeping accounts by *tallies*, or cleft pieces of wood, in which the notches are cut on one piece conformably to the other, one part being kept by the creditor, the other by the debtor, is still kept practised in many parts of England, especially among the bakers in Warwickshire. A tally continues to be given by the Exchequer, to those who pay money there upon loans; hence the origin of the *teller*, or tally-writer of the Exchequer; and also, of the phrase *to tally*, to fit, to suit, or answer exactly.

Bishop Nicholson, in his *English Historical Library*, remarks, the Danes, as all other ancient people in the world, registered their more considerable transactions upon rocks, or on parts of them, hewn into various shapes and figures. On these they engraved such inscriptions as were proper for their heathen altars, triumphal arches, sepulchral monuments, and genealogical histories of their ancestors. Their writing of less concern, as letters, almanacks, &c. were engraven upon wood.

In Blenkingia, a Swedish province, there is a road cut out of the solid rock, which contains an inscription in Runic characters, that is said to have been engraven there by order of King Harold Hyltetand, in honour of his father, about the commencement of the seventh century. There are a great number of ancient Runic monuments yet extant, consisting of large fragments of rocks, bearing inscriptions upon them, dispersed through the fields of Norway and Sweden; although they are sometimes found in churches, and other buildings. It is deserving of remark, that the more ancient these inscriptions are, the better they are sculptured.

Diogenes Laertius tells us, concerning the Greek philosopher, Cleanthes, that being poor, and wanting money to buy paper, he was accustomed to write the lectures and discourses of his master Zeno, on small shells, or bones of oxen. The poorer sort of people of Sweden and Norway, besides the use of bark, had recourse to the horns of the rein-deer and elks, which they finely polished, and shaped into books of several leaves. Many of their old calendars, are likewise, upon the bones of beasts and fishes; and the inscriptions on tapestry, bells, parchment, and paper, are of later use.

Diodorus Siculus affirms, that the Persians of old wrote all their records on skins; and Herodotus, who flourished more than five hundred and fifty years before the Christian

ery informs us, that sheep skins and goat skins were made use of in writing, by the ancient Ionians. Mr. Yeates even thinks it exceedingly probable, that the very autograph of the Law, written by the hand of Moses, was upon prepared skins. In Exodus, xxi. v. 14, we read, that ram's skins, dyed red, made part of the covering for the tabernacle; and it is a singular circumstance, that in 1806, Dr. Claudius Buchanan, obtained from one of the synagogues of the black Jews, in the interior of Malayala, in India, a very ancient manuscript roll, containing the major part of the Hebrew scriptures, written upon goat's skins, mostly dyed red; and the Cabul Jews, who travel annually into the interior of China, remarked, that in some synagogues, the Law is still found written on a roll of leather; not on vellum, but on a soft flexible leather, made of goat's skins, and dyed red. Of the six synagogue copies of the Pentateuch in roll, which are all at present known in England, exclusive of those in the possession of the Jews, five are upon skins or leather, and the other upon vellum. One of these is in the collegiate library, at Manchester, and has never been collated. It is written upon basil, or brown African skins, and measures in length one hundred and six feet, and is about twenty inches in breadth. The letters are black, and well preserved, and the whole text is without points, accents, or marginal additions.—See Yeates' *Collation*. There are also, books made from the skins of sheep, goats, and asses, in the Vatican, at Rome; the royal library of Paris; and other public libraries. The poems of Homer were written on the intestines of a serpent, in letters of gold, and was one hundred and twenty feet long. +

Linen cloth, on which letters were drawn, or painted with a pencil, was employed by the Egyptians when, it is supposed, they wished to transmit such things, as they wished to last very long. In the British museum, there is a piece of writing, of this nature, taken out of a mummy. The Romans, likewise, employed linen, *libri lintei*; not merely for what related to private subjects and persons, but as to enter the names of magistrates, treaties, or public documents. In the book of Job, we find the following text, "Oh that one would hear me, behold my desire is, that the Almighty would answer me, and that mine adversary had written a book." Parkhurst supposes, that Job probably alludes to the writing on linen, and wearing the record as a *tiara* on the head. We find, from Eusebius, that the emperor Aurelian, wrote his journal or diary in linen books.

In India, it has been the custom, from time immemorial, to teach children to read writing in sand; and from thence, some parts of the Madras and Lancasterian systems of instruction, practised by Bell and Lancaster.

The employment of leaves, for the transmission of ideas, is of great antiquity. Pliny says, one of the most ancient methods of writing, was upon the leaves of the palm tree; and afterwards upon the inner bark of trees. a mode of writing still common in different parts of the East. Hence the word *folio*, from the Latin *folium*, a *leaf*, and the meaning of *leaf*, when applied to a book. The Koran of Mahomet, was recorded at first by his disciples, on palm leaves, and the shoulder-bones of mutton, and kept in a domestic chest by one of his wives. In Tanjore, and other parts of India, the palmyra leaf is still used, on which they engrave with an iron style or pen; and so expert are the natives, that they can write fluently what is spoken deliberately. Virgil describes the sibyl writing her prophecies in detached sentences, upon dry leaves, which were scattered by the wind when the door was opened.

The Ceylonese sometimes make use of the palm leaf, and sometimes of a kind of paper, made of bark, but most generally employ the leaf of the talipot tree. From these leaves, which are of an immense size, they cut out slips, from a foot to a foot and a half long, and about a couple of inches broad. A fine pointed steel pencil, like a bodkin, and set in a wooden or ivory handle, is employed to write or rather to engrave their letters; and in order to render the writing distinct and permanent, they rub them over with oil, mixed with pulverized charcoal. They afterwards, string several slips together, by a piece of twine passed through them, and attach them to a board, in the same way as we file newspapers. Dr. Francis Buchanan, in his *Essay on the Religion and Literature of the Burmese*, informs us, that in their more elegant books, the Burmese write on sheets of ivory, or on a very fine white palm-leaf.

Captain Percival, in his *Account of Ceylon*, states, that in those letters, which were sent by the King of Candy to the Dutch government, the writing was inclosed in leaves of beaten gold, in the shape of a cocoa-tree leaf. This was rolled up in a cover richly ornamented, and almost hid in a profusion of pearls, and other precious stones. The whole was inclosed in a box of silver or ivory, which was sealed with the King's great seal. The Arabs, and other Oriental nations, are used to wrap up their sacred books, in rich cases of brocaded silk, or some such other rich material.

The mode of writing on leaves, seems to have been superseded by the use of the bark, a material employed in every age and country. The outer bark was seldom used, being too coarse, and rough. The inner bark was preferred, especially that of the lime tree. The bark of this tree was called by the Romans, *liber*, hence *liber*, the Latin name for a book. In order that these bark books might be conveniently carried, they were rolled up, and in that form called *volumen*, this name was afterwards applied to rolls of paper and parchment, hence, the word *volume*, applied to modern books, though of a different shape.

To the various modes of writing, and the materials employed by the ancients, the etymology of many words now in use may be traced. Besides the papyrus, the Egyptians often used, for the same purpose, the white rind between the bark and wood of the maple, beech, elm, and linden trees; hence bark and book, in Latin, is signified by one word. The very word *Bible*, which means by way of eminence, [THE BOOK] is derived from the Greek word *Byblos*, (a city in Syria) a book, but which originally signified the inner bark of a tree.

Ancient manuscripts in bark are very scarce, but the use of bark for books, still prevails among the nations of the East. The custom of making books from bark, prevailed amongst our Scandinavian and Saxon ancestors: the bark of the beech tree was most commonly used. The primitive meaning of the Anglo-Saxon word *boc* is the beech tree; its secondary meaning, a book—and hence, our word, *book*. There are still extant some letters, and even love-letters, written by the ancient Scandinavians on pieces of bark. A very curious library of the kind, was discovered some time ago among the Calmucs; the books were very long and narrow; the leaves of thick bark, varnished over; the writing white, on a black ground. In the early part of the first American war, our trans-atlantic brethren were advocates of returning to this among other primitive customs. They suggested, says Dr. Franklin, the use of bark, for the drawing

up of deeds and contracts, to avoid the duty and stamp upon paper. Their countrymen preferred a bolder mode of settling the question. Copies of the Malay gospels, and other books, are frequently brought from the East, written on long slips of reed or bark, fastened by strings at each end.

The Egyptian papyrus was applied to the purpose of writing upon before the preparation of parchment and its application to the same use were known. The particular species of the papyrus, till lately, was not known; but it is now ascertained to be the *Cyperus papyrus* of Linnæus, growing on the banks of different rivers in the east, and, likewise, it is believed, in Trinidad. It is impossible to ascertain, with any degree of certainty, when the papyrus was manufactured into paper, but there were, no doubt, manufactories of it at Memphis, at least three hundred years before the time of Alexander. Afterwards, and at the time of the conquest of Egypt, by the Romans, it was made chiefly at Alexandria. Till this conquest, however, the paper was of inferior quality. The Roman artists paid great attention to its improvement, and at length, made it of considerable thickness, perfectly white and smooth. Even in this state, however, it was so friable and weak, that, when great durability was requisite, leaves of parchment were intermixed with those of papyrus. "Thus the firmness of the one substance defended the brittleness of the other, and great numbers of books, so constituted, have resisted the accidents and decays of twelve centuries."

A great number of manuscripts, written upon papyrus, have been found in the ruins of Herculaneum, which was destroyed by an eruption of Vesuvius. The manuscripts thus obtained are completely calcined, though, by incredible labour and patience, fragments of some of them have been unrolled and copied.

This famous town originally stood in Campania or Italy, but it was swallowed up by an earthquake, produced by an eruption of Mount Vesuvius, August 24, A. D. 79, together with the city of Pompeii; and after having been buried under the lava for more than 1600 years, Herculaneum was discovered twenty-four feet beneath the surface of the earth, by labourers digging for a well in the year 1713, and Pompeii about forty years subsequently, twelve feet below the surface. The houses and streets, in a great measure, remained entire, and from them, at different times, have been recovered busts, statues, paintings, utensils, and ancient manuscripts written on papyrus, both in Greek and Latin. In the space of a year or two, about two hundred and fifty Greek and Latin rolls were found; and the library near which they were contained, appeared to belong to a large palace. These volumes were all rendered brittle by the fire, but there were likewise eighteen larger rolls in Latin, lying separately, and more injured than the Greek. The first papyrus was at length unrolled, and proved to be a Treatise on Music, by Philodemus, the Epicurean, whilst another, was on the subject of that class of Philosophy. These papyri, were at first so firmly connected together, that every roll was almost as hard as if it had consisted but of one piece; and all attempts to open them seemed to be in vain, and it was only by slitting them that some words were discovered. Such was the laborious and slow operations in unrolling them, that a whole year was consumed in opening about half a roll; and some of the papyri was so fine, that unrolled they would have extended to nearly one hundred feet. In 1802, the Rev. John Hayter was sent to Naples, under the patronage of His Royal Highness the Prince of Wales, who had proposed to the

Neapolitan government, to defray the expenses of unrolling, decyphering, and publishing the Herculaneum manuscripts; which being accepted, many papyri were unrolled under the superintendence of that Reverend gentleman, of which an account will be found in his very interesting *Report upon the Herculaneum manuscripts, in two Letters, addressed by permission, to His Royal Highness the Prince Regent, Lond. 1811. Quarto.*

The papyrus-rush is supposed to be alluded to in Isaiah, chap. xix. v. 6, 7. "And they shall turn the rivers far away; and the brooks of defence shall be emptied and dried up: the reeds and flags shall wither. The paper reeds by the brooks, by the mouth of the brooks, and every thing sown by the brooks, shall wither, be driven away, and be no more." For further information, see the articles, book, paper, parchment, and roll, in Dr. Rees' *Encyclopædia*. Also, Townley's *Biblical Literature*, vol. I.

The most probable opinion, according to Pliny and Varo, is, that Eumenes, son of Attalus I. King of Pergamus, was the inventor of parchment; there is, however, reason to believe, that parchment was in use long before his reign, and that Eumenes only introduced it into more general use, when he was about making collections for a library equal to the Alexandrian; he being forced to have recourse to the skins of animals, properly dressed, whereon to transcribe his manuscripts, through the envy of Ptolemy Epiphanes, King of Egypt, who interdicted the exportation of the papyrus for that service. Parchment is usually made of the skins of sheep and goats; vellum, which is a finer kind of parchment, is made of the skins of abortive, or at least of sucking calves.

"Happy days, when letters first were taught  
To act as faithful messengers of thought;  
When yellow parchment, with its polish'd grain,  
And snowy paper, first receiv'd a stain."

From the city of Pergamus,\* parchment received the name of *Pergamenum*, and *Charta Pergamena*, as it did that of *Membrana*, from being made of the skins of animals. The term parchment, is a corruption of the word *Pergamenum*. Vellum is derived from the Latin *Vitulus*, a calf. A coarser kind of parchment or vellum, is also made from the skins of asses. St. Paul, in his address to Timothy, says, "The cloak that I left at Troas, with Carpus, when thou comest, bring with thee, and the books but especially the parchments."

The Greeks and Romans, and all the eastern nations adopted the manner of rolls which must have been very inconvenient to manage while reading. There were two rollers, one at each end of the roll, round one of which the whole manuscript was folded; the reader unrolled one end, and as he proceeded, he rolled it upon the empty roller until the whole was transferred from one roller to the other. The ancient offices of the church were sometimes written upon long slips of parchment, pasted together, forming a very narrow roll of considerable length. This was fastened at one end to a very long staff, and rolled upon it. Such rolls were termed *kontakia*, or *contacia*. Rolls are mentioned by Isaiah, chap. xxxiv. v. 4; by Jeremiah, chap. xxxvi. v. 2; and by Ezra, chap. vi. v. 2, who wrote in the seventh, sixth, and fifth centuries before the birth of our Saviour. Pens of iron are mentioned by Job, chap. xix. v. 24, and Jeremiah, chap. xvii.

\* Pergamus, now Bergamo, was the capital of the kingdom of that name, in Asia Minor. This city is mentioned in the Revelation of St. John, ii. 11. It was the birth-place of the celebrated physician Galen, who died in 193.

v. 1; but perhaps reeds were also used, for in Judges, chap. v. v. 14, mention is made of some of the tribe of Zabulon, who "handle the pen of the writer;" David in Psalm, xlv. v. 1, speaks of "the pen of the ready writer;" and Jeremiah, in the passage referred to above, states, that Baruch wrote down all his words with ink in a book; in Ezekiel, chap. ix. v. 11. "And, behold, the man clothed with linen, which had the inkhorn by his side, reported the matter, saying, I have done as thou commandest me;" in the Book of Numbers, chap. xxi. v. 14, "Wherefore it is said in the book of the wars of the Lord, what he did in the Red sea, and in the brooks of Arnon."

The above statements prove very strongly and clearly the obstacles and impediments in the way of the communication and transmission of knowledge among the ancients, and in the dark and middle ages, in so far as the nature of the materials employed for those purposes is concerned. Masses of stone or marble, metal, or blocks or planks of wood, were too heavy and cumbrous to circulate: in order to learn what the inscriptions on them related to, it was necessary that they should be consulted on the spot. Even after better materials were used, such as tablets, parchment, and the papyrus paper, the difficulties and disadvantages were great. Wax tablets might answer for notes, letters, or very short treatises, but scarcely for writings of any great length. Besides, it appears, that wax tablets were chiefly intended and applied for private use, and never circulated. Parchment never could have been abundant and cheap; and being, at least, during the Greek and Roman period, manufactured exclusively or principally, in one place, other parts of the world must have been dependant for their supply upon it. Papyrus paper was cheaper, and in much greater abundance; but for a supply of it, the world was indebted to Egypt alone; and when the Saracens obtained possession of that country, the supply was cut off, or very much diminished.

We find in Signior Castagnattai's account of the asbestos, a scheme for making books, which from the imperishable nature of their materials, he is for calling them the *Books of Eternity*. The leaves he proposes to be of the asbestos paper; the covers, of a thicker sort of work, of the same material, and the whole sewed together with thread spun from the same substance. The things to be commemorated in them, were to be written in letters of gold; so that the whole matter, being incombustible and everlastingly permanent, against the forces of all the elements, and subject to no changes from fire, water, or air, must remain for ever, and always preserve the writings committed to them. He carried his project so far as to make paper from the asbestos, quite soft and tractable, and capable of being thickened or thinned at pleasure, yet in either state, equally resisting fire.

The instruments employed to write with by the ancients, and in the dark and middle ages, of course, varied according to the nature of the materials on which they wrote. They may be divided into two kinds, those which acted immediately, and those which acted by the assistance of fluids; of the first kind, were the wedge and chisel, for inscriptions on stone, wood, and metal, and the style for wax tablets. At first, the bare wood was engraven with an iron style; the overlaying them with wax was a subsequent invention. The style was sometimes made of iron, sometimes of gold, silver, brass, ivory, or even of wood. The iron styles were dangerous weapons, and were, therefore, prohibited by the Romans. Seutonius relates, that Julius Cæsar seized the arm of Cassius, one of his murderers, and pierced it with his style. He also tells us, Caligula

excited the people to massacre a Roman senator with their style; and the emperor Claudius was so afraid of being assassinated, that he would scarcely permit the librarians, or public writers, to enter his presence, without the cases which contained their style being first taken from them. The stylus was pointed at one end to form the letters, the other end being flat, for the purpose of erasing them, by flattening the wax. Hence, Horace uses the phrase, "to turn the stylus," for correcting what had been written. Our word *style*, is derived from the same source, which is used metaphorically, to signify the choice and arrangement of words employed by an author to express his thoughts.

"I will go get a leaf of brass,  
And, with a gad of steel, will write these words."—SHAKESPEARE.

As the style was too sharp for writing on parchment, and Egyptian paper, and moreover, was not adapted for holding or conveying a fluid; a species of reed was employed. Persons of rank and fortune, often wrote with a calamus of silver, something, probably, like our silver pens.

Our Saxon ancestors appear to have sometimes used the style without ink, when writing upon parchment or vellum. But, for writing with ink, or coloured liquids, reeds or canes, and afterwards quills were employed, and sometime pencils made of hair. Pencils made of hair, are used by the Chinese for their writing. The curious large capital letters used in Italy, in the decline of the Roman empire, and until the sixteenth century, were made with hair pencils. The exact date of the introduction of quills of geese, swans, pelicans, peacocks, crows, and other birds, for the use of writing, is uncertain. Mabillon states, that he saw a manuscript of the gospels, which had been written in letters of gold, in the ninth century; in which the four Evangelists were represented with quills in their hands. St. Isidore of Seville, who died about the middle of the seventh century, describes a pen as in use in his time. "The instruments necessary for a scribe, are the *reed* and the *pen*." In the same century, Adhelm, bishop of Sherborn, wrote a short poem on a writing pen. Many proofs of their use occur so frequently in the eighth century, as to place the matter beyond all doubt.

From ancient authors, as well as from figures from manuscripts, we learn that they used a sponge to cleanse the reed, and to rub out such letters as were written by mistake; a knife for mending the reed; pumice, for a similar purpose, or to smoothe the parchment; compasses for measuring the distances of the lines; scissors, for cutting the paper; a puncher, to point out the beginning and end of each line; a rule, to draw lines, and divide the sheets into columns; a glass, containing sand, and another glass filled with water, probably to mix with the ink.

Neither the particular species of calamus, used as pens by the ancients, nor the manner in which they prepared them for this purpose, is known. This is remarkable, since all the places, where these reeds grow wild, have been ascertained, and explored by botanists: with so little success, however, that after a variety of learned as well as scientific conjectures, the calamus of the ancients has not yet found a place in the botanical system of Linnæus. This is yet more remarkable, as reeds are still employed by many eastern nations to write with. Ranwolf, who travelled in the sixteenth century, informs us, that canes for pens were sold in the shops of Turkey, small, hollow within,

smooth without, and of a brownish colour. Tavernier, Chardin, Turnefort, and other travellers, give a similar account, adding, that the reeds are about the size of large swan quills, and are cut and split in the same manner that we do quills, except that the nib is much larger. The best grow near the Persian Gulph. The mode of preparing them is still practised in the east, was followed by the ancients. Pens made from reeds were discovered during the excavation at Pompeii; they are cut like a quill-pen, except that the nib is much broader.

The composition, and colour of the ink used by the ancients, were various. Lamp black, or the black taken from burnt ivory, and soot, from baths and furnaces, according to Pliny, and other eminent ancient authors, formed the basis of it; the black liquor of the cuttle fish, is also said, to have been used as ink, principally, in a metaphorical expression of the poet Persius; but of whatever ingredient it was made, it is certain, from chemical analysis, from the solidity and blackness, in the most ancient manuscripts, and from an inkstand found at Herculaneum, in which the ink appears like a thick oil; that the ink then made, was much more opaque, as well as encaustic, than that used at present. Black ink was evidently the first in use; yet, afterwards, inks of different colours were occasionally used. Golden ink was used by various nations, as may be seen in several libraries, and the archives of churches; and was more used by the Greeks than by the Romans. The manufacture, both of gold and silver ink, was a distinct, as well as lucrative business in the middle ages. Silver ink was also common in most countries. Red, blue, green, and yellow inks, were not uncommon. The red was made from vermilion, cinnabar, and carmine; the purple from the *murex*, or purple fish; Blue, yellow, and green, were made from pulverized gold and silver, sulphuretted, and submitted to the action of fire. The term (*deev*) used by Baruch, the sacred writer, signifies blackness; as does also the word *ater*, from whence *atramentum*, the Latin term for ink. One kind of this coloured ink, was called the sacred encauster, was set apart for the sole use of the emperors. Another distinct business, in the middle ages, was that of inscribing the titles, capitals, or emphatic words, in coloured, gold, and silver inks; and the subscriptions at the end of the Greek and other manuscripts, containing the name of the copyist, and the year, month, day, and sometimes the hour, when he finished his labour, were generally written in purple ink.

Puricellus, in his work on the *antiquities of the Church of St. Ambrose, at Milan*, informs us, that the originals of the charters of the kings Hugo and Lotharius were written in golden letters; and that these, as well as other charters of different kings and emperors, executed in characters of gold, upon the skins of fishes, are still extant amongst the archives of the church.—*Mabillon*.

It has been conjectured, that the celebrated Argonautic expedition was undertaken to obtain a work written on skins, containing a treatise on the art of writing in gold letters.

Such is a very general representation of the state and means of literary communication amongst the ancients, and before the art of printing was discovered; whoever reflects upon it, will not be surprised that the progress of mankind, in every thing useful and valuable, was extremely slow and difficult. Individual and uncommunicated knowledge cannot purify itself from error, and till printing was discovered, how much knowledge must necessarily have been individual, and uncommunicated. In these circumstances,

error gained strength ; important and valuable truths died at their very birth, or struggled useless and unproductive till the art of printing nourished them to maturity, and enabled them like plants to strike their roots deeply, and spread their branches widely, to produce their natural and genuine fruits of practical good to the human race. From the facts already stated, and also from those in the dark and middle ages, till the art of printing was discovered, I feel confident, that every reader will be disposed to prize at a high rate the advantages derived from the art of typography, and to form some notion of what the state of knowledge must have been, when all the books in the world were written out by the hand.

It has been contended, that the Romans were well acquainted with the art of printing, and that they only wanted the blessings of peace to bring it to perfection. Cicero, in his *De Naturâ Deorum*, has a passage from which Toland supposes the moderns took the hint of printing. That author orders the types to be made of metal, and calls them *formæ literarum*, the very words used by the first printers to express them. We have shewn that Virgil mentions brands for marking cattle, with the owner's name. In the second book, Cicero gives a hint of separate cut letters, when he speaks of "some ingenious man's throwing the twenty-four letters of the alphabet,\* (either made of gold or other metal) by chance together, and thus producing THE ANNALS OF ENNIUS. He makes this observation, in opposition to the atheistical argument of the creation of the world by chance.

Chevillier cites the apophthegms of Plutarch, an anecdote of Agesilaus, king of Sparta. Willing by a stratagem to animate his soldiers to battle, he wrote upon his hand the word νικη (or victory) ; and thence by pressure imprinted the same word upon the liver of the slain victim ; and the letters thus impressed became in the eye and imagination of the superstitious multitude, a sure pledge of success. We are told of a sultan, who on signing an edict, dipped his hand in blood, and then impressed the paper.

Mr. Ottley differs from those writers, who contend that the ancients were convinced of the advantages to be derived from the practice of the art, though they did not think proper to use it. Upon this subject, Lanci justly remarks, "That the stamps of the ancients, and the impressions from seals of metal, found on deeds and conveyances of the low ages, prove nothing more, than that mankind walked for many centuries upon the borders of the two great inventions of typography and chalcography, without having the luck to discover either of them ; and appear neither to have had any influence upon the origin of those arts, nor to merit any place in their history."

Having treated upon these interesting subjects, as far as my limits will allow, but to those who wish to know further, may consult the authors already quoted, at greater length : and shall conclude this Introduction, with a concise review of the state of literature among our Saxon ancestors.

There is not, perhaps, any language in the world, which has experienced so many changes as the English ; and like the political constitution of the country, it seems to have gained both strength and energy by every change. We may conclude, from Cæsar's

\* The able mathematician Jacquet, calculates that the various combinations of the twenty four letters of the alphabet, without any repetition amount to 629,448,401,733,239,439,360,000.—See *Astle on the Origin and Progress of Writing*. London, 1804, folio.

account of this island and its inhabitants, that about the beginning of the Christian era, the language of the ancient Britons was the same, or very similar to that of Gaul, or France at that time, and which is now believed to have been the parent language of the Celtic, Erse, Gaelic,\* or Welsh; for the intercourse between this island and Gaul, in Cæsar's time, as well as their relative situations, renders it more than probable, that Britain was peopled from that part of the continent, as both Cæsar and Tacitus affirm and prove, by many strong and conclusive arguments.

Though England might be peopled several centuries before the first account we have of it, yet the barbarous condition in which we perceive it to have been, is no more than might rationally be expected. At the time when Julius Cæsar invaded the island, about forty-five years before the Christian era, even husbandry does not seem to have been universally followed. Cattle constituted the chief wealth of numbers of the natives; their towns, were only woods surrounded with a ditch, and barricadoed with trees, where they enclosed their wives, their children, their domestics, and their flocks, in order to preserve them from the attacks of their enemies. The low state of knowledge and refinement to which they had arrived, may be collected from the practice said to be so prevalent, of several brothers and friends having their wives in common. If this practice really existed, it may be considered as a sure test of their barbarity; for though the British lady, in her smart reply to the empress Julia, made as good a defence of it, as could be done, yet it is certain, that no such custom would be allowed in any nation, that had advanced to the least degree of civilization.

But the objects which most excite our attention, in a survey of the state of knowledge among us, before the conquest by the Romans, are the druids. They have been highly spoken of by several writers; so that our conception of these men is attended with a peculiar veneration, and we are ready to look upon them as having been persons of very extraordinary accomplishments. This deception has been heightened by our poets, who have spread a glory round them, and have painted them in a manner, that disposes us to regard them as almost divine. But if we reduce our ideas to the test of sober reason, we shall not find much in the druids, that was peculiarly excellent and valuable. They were the priests of the time, and, like other priests, had address and subtilty enough to keep the people in absolute subjection. They were, likewise, magistrates as well as priests, and had the determination of civil causes; a circumstance which was the natural result, both of their superior quality, and superior knowledge; for what knowledge then prevailed, was principally confined to them. However, the remains we have of the druids, do not give us a very high opinion of the progress they had made, though, no doubt, they went far beyond the rest of their countrymen, and it is probable, that some few among them might be men of great wisdom. It has been contended by many of the learned, that the druids much resembled the Persian magi, and that their knowledge was originally derived from the east. The best principles advanced by the druids, were, that the Deity is one, and infinite, and that his worship ought not to be confined within walls; that all things derive their origin from heaven; that the soul is immortal; and

\* The Gaelic, or Erse tongue, is the name of that dialect of the ancient Celtic, which is spoken in the Scottish highlands: the Galatians or Gauls were so called from the redness of their hair; and the Celtes is supposed to have been taken from the Greek word *keistai*, used by Homer and Pindar to signify Horsemen.

that children should be educated with the utmost care. But their prodigious veneration for the mistletoe, and the great effects they attributed to it; their opinion that the moon is a sovereign remedy for diseases, with others of their sentiments and customs, shewed a strong superstition; at their prohibiting an intercourse with strangers, if not merely a political law, testified a savageness of manners; and their allowance, nay command, of human sacrifices, carries in it the evidence of the most shocking cruelty. In truth, they were little more than the barbarous priests of a barbarous and unlettered people. Their knowledge is said to have reached to physics, the mathematics, to astronomy, and to medicine; but as it was never committed to writing, it could not be very extensive. Indeed, it chiefly consisted of the arcana of their doctrines and worship, and had a special relation to magic.

About forty-five years after Christ, Aulus Plautius was sent over with some Roman forces, who overcame the two kings of the Britons, Togodumnus and Caractacus, when the southern parts of the island were reduced to the form of a Roman province, after which, Agricola subdued the country, as far as Scotland; whereupon, a great number of the Britons retired into the mountains of Wales, into Cornwall, and into the isles and highlands of Scotland, carrying their language with them; and of which only corrupted fragments remain in the Gaelic or Erse tongue, the Irish, and the Welsh.

Whoever has a strong regard to the cause of freedom, can scarcely avoid being filled with indignation, when he beholds the Romans spreading desolation and slaughter around them; wantonly subduing the nations of the earth, and unjustly depriving them of their liberty. It was their sole intention to obtain power, wealth, and renown, and to subject the world to their yoke. But all this time, they were working the will of heaven, polishing and adorning the places with arts, which they conquered by their arms, diffusing knowledge in general, and paving the way for the Christian knowledge in particular. During the warm contests that subsisted between the Romans and the Britons, when the latter so gloriously, so bravely, though so unsuccessfully, struggled to maintain their independence, little progress could be made in literature. But when the country was peaceably settled into a province, then civility began to spread itself, the sciences to be cultivated, and taste to be refined. Tacitus has informed us, that under the dominion of Agricola, the British nobles studied the Roman learning, and valued themselves on their magnificence and politeness; becoming pleased with what were, in fact, their badges of their slavery.

Britain being thus become a Roman province, the legions who resided in the island above two hundred years, undoubtedly disseminated the Latin tongue; and the people being afterwards governed by laws written in Latin, must necessarily create a mixture of languages. During this interval, there were, no doubt, schools of philosophy, what men were celebrated, we are not able to say; no traces of them being now to be found. The confusions that succeeded, destroyed all the remains of learning, and left a blank in this period which cannot be filled up.

There is an event belonging to this era, which, besides its own immense importance in other views, deserves to be mentioned as a grand circumstance in the history of knowledge; and that is, the propagation of Christianity in the island. Supposing we reject all idea of its being promulgated by the apostles, or their immediate disciples, it

is probable that it was very soon communicated to the Britons. It might be gaining ground, and spreading widely, before it received a civil establishment, as we are informed of many martyrs, who witnessed to the truth under the persecution raised by the emperor Dioclesian.\* From the days of Constantine, the gospel would, no doubt, be much diffused, and generally embraced; for, we are assured, that three British bishops assisted at the council of Arles, A. D. 314, and subscribed the acts of that council. We read, also, that some of them were present at the council of Ariminum, in 359.

Now so illustrious an event, as the propagation of Christianity in this country, could not take place without bringing along with it a mighty change in the state of knowledge. All those who embraced our holy religion, were turned from gross idolatry and absurd superstitions, to the belief and worship of one God; obtained a clear acquaintance with their duty; and had their understandings enlarged with the persuasion and hopes of eternal life. Independently of the glorious spiritual consequences derived from the revelation of Jesus, the reception of it was a vast accession of wisdom; as it contributed, in other respects, to expand the minds, and soften the manners of our ancestors. What the particular state of religious knowledge was, it is difficult to ascertain: but we find that doctrinal disputes agitated men in those days, as well as in succeeding times.

The Roman legions being called home, the Scots and Picts took the opportunity to attack and harass England; upon which Vortigern, about the year 440, called the Saxons to his assistance, for which he rewarded them with the Isle of Thanet, and the whole county of Kent; but they growing powerful and discontented, distressed the inhabitants of all the country eastward of the Severn. Whatever the state of knowledge might be, before the introduction of the Saxons, it certainly received a great change for the worse, at that period. The repeated invasions of those barbarians, the wars they raised, and the desolations they occasioned, spread a general confusion, dispersed the Britons to the remotest parts of the country, destroyed the monuments of learning, and left no room for the improvement of the mind. They were in the lowest condition of ignorance, rudeness, and barbarity; their religious worship consisted of the grossest idolatry; and they sacrificed prisoners of war to their gods.

Mr. Astle considers that the Saxons arrived in Britain wholly ignorant of letters; and that they adopted the Roman characters which they found in this island, which had already been barbarised from their original Italian form by the British Romans and the Britons. Dr. Whittaker, in his *History of Manchester*, London, 1775, also supports this argument against Humphrey Wanley and Dr. Hicks, who maintained that the Anglo-Saxon alphabet arose out of the gothic. Dr. Johnson thinks, that the Saxons on their arrival in Britain, were so illiterate as, most probably, to have been without any alphabet. Perhaps, however, an unison of the two was really the original; and the letters which the Saxons formerly possessed in their own lands, were altered, amended or improved by the Latin ones which they found in England. Mr. Astle further supposes

\* 309, P. 23. The soldiers of Diocletian, in the morning of this day, demolish the principal church of Nicodemus, and commit the sacred volumes to the flames. Upon the next day was published the first general edict of persecution against the Christians, by which all their religious assemblies in the empire were to be levelled to their foundations, and the church property confiscated and sold to the highest bidder, or granted to rapacious courtiers. This vile and abominable decree was instantly torn from its column by a Christian of rank; he was burnt, or rather roasted by a slow fire, and suffered with the patience of a martyr.

that writing was very little practised by the Britons previous to the coming of St. Augustine; for, although suppositious alphabets of the aboriginal Britons have been produced, yet there is not extant a single manuscript that is written in them.

General Valancy, in his *Grammar of the Irish tongue*, considers the Irish language, to have been a Punic Celtic compound; and that Ireland was once inhabited by a colony of Scythians, which had originally emigrated from the borders of the Euxine and Caspian seas to Spain; that they were instructed in the letters and arts of the Phœnicians, and that finally, they settled in Ireland, about one thousand, or perhaps, only six hundred years before the birth of Christ, carrying with them their own elementary characters. As the ancient Irish alphabet, however, differs from that of any other nation, the general further supposes, that it might have been derived from a colony of Carthagenians, which also settled in their country, about six hundred years previous to the Christian era. Some of the native Irish historians have adopted hypotheses concerning the origin of their nation, language, and letters, which are extravagant in the extreme. Thus, the antiquity of the former has been endeavoured to be magnified by a quotation from a volume, entitled *Leabhuir Dromnasnachta*, or the book with the white cover; which states, that the three daughters of Cain took possession of Ireland, and that the eldest, who was called Bamba, gave her name to it.

In the beginning of the ninth century, the Danes invaded England, and became sole masters of it in about two hundred years, whereby the British language obtained a tincture of the Danish, but this did not make so great an alteration in the Anglo-Saxon,\* as the revolution of William I. who has a monument of the Norman conquest,† and in imitation of other conquerors, endeavoured to make the language of his own country as generally received as his commands; thus the ancient English became an entire medley of Celtic, Latin, Saxon, Danish, and Norman-French. Since the restoration of learning, innumerable terms have been borrowed from that inexhaustible source the Greek. Italy, Spain, Holland, and Germany, have contributed something, so that the present English may be considered as a selection from all the languages of Europe.

\* The name Saxon originally signified upon the continent, that of a single state; although it subsequently denoted an association of nations; and Ptolemy mentions, that antecedent to 141, a people called Saxones inhabited the territory now called Jutland, and three small islands at the mouth of the Elbe; at present denominated North Strönd, Bosen, and Helligöland.

The Saxon tongue, as it was anciently spoken in Britain, is divided into three periods; namely, first, the British Saxon, which extended from the entry of the Saxons, on the invitation of Vortigern, in 449, until the invasion of the Danes under Ivar, in 867; secondly the Danish Saxon, which extended from the Danish invasion till that by the Normans, in 1066; and thirdly, the Norman Saxon, which commencing at the Norman accession, was very rude and irregular, and which continued till near the close of the twelfth century. After this, the French tongue prevailed in England. Of the pure Anglo-Saxon, as it was spoken during the first period, there is but one fragment now extant, which occurs in King Alfred's version of Venerable Bede's *Ecclesiastical History*. There are several specimens of the Danish Saxon still preserved, especially some translations of the scriptures, finely illuminated; and of the third, there are also many manuscripts scattered through the kingdom. The first Saxon types were cut by John Daye, under the patronage of archbishop Parker, about the year 1567.

† The Normans, Northmans, or People from the North, emigrated from Denmark, Sweden, Norway, &c. and spread themselves over Gaul, but particularly Neustria, which name they soon changed to Normandy.

# STATE OF LITERATURE

FROM THE

## EARLIEST PERIOD TO THE INVENTION OF PRINTING.

### BEFORE THE CHRISTIAN ERA.

"The ancient Roman and Greek orators could only speak to the number of citizens capable of being assembled within the reach of their voice; their writings had little effect, because the bulk of the people could not read. Now by the press we can speak to nations; and good books, and well written pamphlets, have great and general influence."—FRANKLIN.

THE most ancient library on record was formed by Osymandyas, King of Egypt, at Memphis. He was a cotemporary of David, King of Israel.

At a very early date, the Jews attached collections of books to most of their synagogues; and we are told that Nehemiah founded a public library at Jerusalem.

Pisistratus, of Athens, was the first who instituted a public library at Greece; and is supposed to have been the collector of the scattered works which passed under the name of Homer.

When we reflect that copies of books were made by the pen alone, and that their circulation, which seems to have been extensive, could not proceed unless the pen supplied copies. From this single fact, we shall be prepared to expect that the copyists of books must, at all times before the invention of printing, have been very numerous; following a regular business, that afforded full employment, and required experience and skill, as well as legible and expeditious writing.

At Athens copyists by profession were numerous, and gained a steady and considerable livelihood. The booksellers of Athens employed them principally to copy books of amusement, most of which were exported to the adjoining countries on the shores of the Mediterranean, and even to the Greek colonies on the Euxine. In many of these places the business of copying was carried on, and libraries formed. Individuals also employed themselves, occasionally, in copying; and there are instances recorded of some forming their own libraries by copying every book they wished to put into them. Not long after the death of Alexander, (323) the love of science and literature passed from Athens and Greece generally, to Alexandria, where, patronised by the Ptolemies, they flourished vigorously, and, for a considerable period, seemed to have concentrated themselves.

972. In speaking of Irish manuscripts, Dr. Keating states, the *Psalter of Tara* was written about this period; and there is an ancient alphabet, called an Irish one, now extant, which is said to have derived its title *Babeloth*, from the names of certain persons who assisted in forming the Japhethian language.

606, Nov. 6. The 6th day of the Hebrew month *Cislew*, was observed as a fast, in memory of the Book of Jeremiah, torn and burnt by king Jehoiakim.—JEREMIAH XXXVI. 23.

322, Oct. 2. Died Aristotle. He is the first person, on record, who was possessed of a private library.

300. We possess few facts respecting the price of manuscript books among the ancients. Plato, who seems to have spared no trouble or money in order to enrich his library, especially with philosophical works, paid 100 minæ, equal to £375. for three small treatises by Philolaus, the Pythagorean; and after the death of Speusippus, Plato's disciple, his books were purchased by Aristotle; they were few in number; he paid for them three talents, about £675.

300. The Alexandrian library founded by Ptolemy Soter, who reigned about this period. His successors enlarged it; one of them seized all books imported into Egypt, giving copies of them, made by his orders, and at his expense, to the proprietors.

285, Nov. 2. Ptolemy Philadelphus of Egypt, so memorable as a patron of learning, commenced his reign upon this Julian day. Galen says, in his commentary upon the third of the *Epidemics*, and upon the first book of the *Nature of Man*, that Ptolemy Philadelphus gave to the Athenians fifteen talents, with exception from all tribute, and a great convoy of provisions, for the autographs and originals of the tragedies of Eschylus, Sophocles, and Euripedes.

The first national library founded in Egypt seemed to have been placed under the protection of the divinities, for their statues magnificently adorned this temple, dedicated at once to religion and to literature. It was still further embellished by a well-known inscription, for ever grateful to the votary of literature; on the front was engraven "The nourishment of the soul;" or, according to Diodorus, "The medicine of the mind."

The Egyptian Ptolemies founded the vast library of Alexandria, which was afterwards the emulative labour of rival monarchs. Under the same roof with this celebrated library, were exten-

sive offices, regularly and completely fitted up for the business of transcribing books: and it was the practice of foreign princes, who wished for copies of books, to maintain copyists in this city. Some of the libraries of Rome, having been destroyed by fire, the emperor Domitian sent copyists to Alexandria, that he might be able to replace them. This practice continued for some centuries after Domitian, probably till the conquest of Egypt by the Saracens in the middle of the seventh century.

280. The Greek Septuagint was formed about this period. Some say by seventy or seventy-two translators; but Hewlett says in seventy or seventy-two days. This translation was made by order of Ptolemy Philadelphus, King of Egypt, for the Alexandrian library.—Justin Martyr says, that the seventy-two were shut up in thirty-six cells, and that each pair translated the whole; but that, on subsequent comparison, it was found that the thirty-six did not vary by a word or letter.

Much learned controversy has taken place in all ages about the Septuagint and its origin; one party, sustained by Aristæas, Philo, Josephus, Eusebius, &c. maintaining the embassy from Ptolemy Philadelphus, and the miraculous uniformity of the 70; and the other asserting the falsehood of this story, and alleging that it was a translation made for the use of the Hellenist Jews of Alexandria, before the Christian Era.

The Septuagint is in the idiom of Alexandria, generated in two centuries by those Grecian colonists. The peculiar Greek of the New Testament had the same character, and their extensive use vitiated the Greek language. Many words in both are in new senses, or new to the language; in fact, Colonial Greek.—*Villoison*.

Josephus states, that the copy of the law presented by the 70 elders to Ptolemy Philadelphus, was written upon parchment or vellum, and excited the astonishment of the king by its extraordinary fineness, as well by the artful manner in which the different skins were sewed together, and the exquisite execution of the writing, in letters of gold.

168, June 22. The battle of *Pydna*\* and defeat of Perseus, the last king of Macedonia, by the Romans, under Æmilius Paulus, who brought to Rome a great number of books and manuscripts, which he had amassed in Greece, and which he now distributed among his sons, or presented to the Roman people. Sylla followed his example. After the siege of Athens, he discovered an entire library in the temple of Apollo, which having carried to Rome, he appears to have been the founder of the first Roman public library.

After the taking of Carthage, the Roman senate rewarded the family of Regulus with the books found in that city.

The Romans, after six centuries of gradual dominion, must have possessed the vast and diversified collections of the nations they conquered: among the most valued spoils of their victories, we know that manuscripts were considered as more

precious than vases of gold. A library was a national gift, and the most honourable they could bestow. From the intercourse of the Romans with the Greeks, the passion for forming libraries rapidly increased, and individuals began to pride themselves on their private collections. Of many illustrious Romans, their magnificent taste in their libraries has been recorded. Assinus Pollio, Crassus, Cæsar, Lucullus, and Cicero, have among others, been celebrated for their literary splendour.

The emperors were ambitious to give their names to the libraries they formed; they did not consider the purple as their chief ornament.—Augustus was himself an author; and to one of those sumptuous buildings called *Thermæ*, ornamented with porticos, galleries, and statues, with shady walks, and refreshing baths, testified his love of literature by adding a magnificent library. One of these libraries he fondly called by the name of his sister Octavia; and the other, the temple of Apollo, became the haunt of the poets, as Horace, Juvenal, and Persius, have commemorated.

59. When Julius Cæsar entered upon his first consulate, he introduced a new regulation, of committing to writing and publishing daily, all the Acts or state occurrences both of the senate and the people. It is true that newspapers were not unknown to the Romans. In the galleries which Cicero constructed at his villa at Tusculum, in imitation of the schools of Athens, among the amusements of those who frequented them, was that of a daily newspaper, which recorded the chief occurrences of public note and general interest, with the more private intelligence of births, deaths, and marriages, and of fashionable arrivals, in much the same manner as those of more modern date. It was not, indeed, issued for circulation, being merely hung up in some place of usual resort, and published under the sanction of government, for general information; but we may presume that it was copied for the private accommodation of the wealthy.

The Roman newspaper was entitled the *Acta Diurna*, and was a sort of gazette, containing an authorized narrative of the transactions worthy of notice, which happened at Rome. Petronius has given us a specimen of the *Acta Diurna*, in his account of Trimalchis; and it is curious to see how nearly a Roman newspaper runs in the style of an English one: the following are three articles of intelligence out of it. Whatever information it contained, was supplied as are the London papers at the present day, by reporters, who were termed *actuarii*.

"On the 26th of July, thirty boys and forty girls were born at Trimalchis's estate at Cuma."

"At the same time, a slave was put to death for uttering disrespectful words against his lord."

"The same day, a fire broke out in Pompey's gardens, which began in the night, in the steward's apartment."

Plutarch notes that the country people were very busy inquiring into their neighbour's affairs. The inhabitants of cities thronged the Court and other public places, as the exchange and quays, to hear the news. Juvenal notices the keenness of

\* This date is settled by the eclipse, which happened the preceding night.

the Roman women for deluges, earthquakes, &c. Merchants and purveyors of corn, used to invent false news for interested purposes. It was not uncommon to put the bearers of bad news to death.

We gather, from references made to the *Acta Diurna* by Seneca and other writers of antiquity, that it contained abstracts of the proceedings in courts of law and at public assemblies; also accounts of public works or buildings in progress; a recital of the various punishments inflicted upon offenders; and a list of births, deaths, marriages, &c. We are told that one article of news in which it particularly abounded, was that of reports of trials for divorces, which were remarkably prevalent among the Roman citizens.

The history of the lives which have come down to us show, that in the Roman Republic, with all its boasted equality and freedom, the Senate frequently contrived to exercise a power as arbitrary as that of the sternest despot. Like the proceedings of all arbitrary bodies, those of the Roman Senate would not bear the test of publicity; and, therefore, all mention of their acts or discussions were prohibited in the *Acta Diurna*; until Julius Cæsar (as we are informed by Suetonius, in his life of that great man), upon obtaining the first-consulship, made provision for giving the same publicity to all the proceedings of the senate, which already existed for the more popular assemblies. In the time of Augustus, however, the government had again so far assumed a despotic character, that an institution of this nature was considered inconvenient, and therefore repealed; while, at the same time, the utility of this daily record was still further narrowed by the extinction of popular assemblies; and by the sanguinary laws promulgated against "libels;" under which head was probably classed the publication of any circumstance unpalatable to those in power. By way of further restraining the liberty of the pen, in the reign of the emperor Augustus, it was ordained that the authors of all lampoons and satirical writings should be punished with death; and succeeding tyrants frequently availed themselves of this blood-thirsty enactment to wreak their vengeance on those they hated, or had occasion to dread,—a course, not wholly dissimilar from that pursued by vindictive men in our own day, when they avail themselves of the anomalous state of the English law of libel, to inflict deep and often total ruin upon those who may have unconsciously brought themselves within the operation of that law. We have said, that the Roman gazettes contained merely an abstract of public events,—and a very meagre abstract it must necessarily have been, in the absence of the art of printing, and with the awkward writing-materials then in use; but it appears that the art of the short-hand writer, whereby a speech or debate might be preserved verbatim, was not unknown to the Romans; for we read, that persons of this description were employed by Cicero to take down the speech of Cato, in the celebrated debate of the Roman Senate, upon the punishment of those who had been concerned in the Catiline conspiracy.

The classical ancients had white walls on purpose for inscriptions in red chalk, like our hand-bills, of which the gates of Pompeii shew instances. Plutarch mentions expedients similar to our hand-bills used by tradesmen for custom. Houses were let by a writing over the door. Auctioneering bills ran thus: "To be sold, a good and well-built house," and "Julius Proculus will have an auction of his superfluous goods to pay his debts."\*

50. According to Chinese chronology, the art of printing was discovered in China at this period, under the reign of Ming Tsong the First, the second emperor of the Tartarian dynasty. Paper was first written upon by Tsaolun, at the end of the first century, previous to which the people of China had been accustomed to transcribe, or print their writings, in volumes of silk or cloth, cut in the form of leaves; they also wrote upon thin wooden boards or bamboos, with a pointed stick and liquid ink. Fung Taou, a minister of state, in the 10th century, introduced printing from stone, having white characters upon a black ground.

In order to establish the great antiquity of the art in China, Father du Halde cites the following, as given by an old author, from the pen of the celebrated emperor Van Vong, who flourished 1,120 years before Christ:

"As the stone 'Me,' (a word signifying ink in the Chinese language) which used to blacken the engraved characters, can never become white; so a heart blackened by vice will always retain its blackness."

The above passage has led several writers to conclude, that printing was known in the East more than 3,000 years ago.

The severest penalties are denounced by the Chinese code of laws against all publications unfriendly to decency and good order: the purchasers of them are held in detestation by the greater part of the community; and, with the publishers, are alike obnoxious to the laws, which no rank or station, however exalted, can violate with impunity. The greatest encouragement is given by this extraordinary people to the cultivation of letters. The literati rank above the military, are eligible to the highest stations, and receive the most profound homage from all ranks.

"The paper, ink, pencil, and marble, are called '*Pau-tsee*,' or, the four precious things."—Mason.

47. The Alexandrian library, containing near 700,000 volumes, burnt by order of Julius Cæsar.

44, March 15. Julius Cæsar, assassinated in the senate house, constructed by Pompey. He perished at five o'clock in the afternoon, by 23 wounds. His character as a citizen is variously stated by different factions.

—18. The interview between Cicero and Cleopatra took place about the present day, in the gardens of Cæsar on the Tiber, with whom she was living at the moment of his death. The object of this singular meeting was the acknowledgment of her son (by Julius Cæsar) as king of Egypt, which the orator, no doubt, promised

\* Ben Jonson, somewhere says, "he will not have the titles of his works affixed to the walls, or stuck upon a cleft stick."

to use his influence to effect: but in return for this obligation he was to receive *books of grammarians* and probably *statues* from the Alexandrian library to embellish his own. Cicero now retires from Rome to his *Tusculanum*, and composes, as a means of amusing his sorrows, the treatises on *Old Age*, on *Friendship*, and on *Fate*, beside a history of the time, called his *Anecdote*, which, to all lovers of literature, have perished.

43, Dec. 7. Marcus Tullius Cicero murdered near Formium, aged 64 years. The odious murder of this unrivalled orator and statesman, by a blood-stained and violent faction, was the signal for a most unfeigned sorrow throughout Rome, loud, and deep, and universal.

Books were held in such estimation, that the learned thought it worthy the chief labour of their lives, either to compile, or collect those valuable tracts, and they imagined themselves more or less distinguished above mankind, as they excelled in the bulk or goodness of their libraries, of which a stronger instance can not be produced than that given by Dr. Conyers Middleton, in his *Life of Cicero*: "Nor was he (speaking of Cicero) less eager in making a collection of Greek books, and forming a library, by the same opportunity of Atticus's help. This was Atticus's own passion, who, having free access to all the Athenian libraries, was employing his slaves in copying the works of their best writers, not only for his own use, but for sale also, and the common profit both of the slave and the master: for Atticus was remarkable, above all men of his rank, for a family of learned slaves; having scarce a foot-boy in his house, who was not trained both to read and write for him. By this advantage he had made a very large collection of choice and curious books, and signified to Cicero his design of selling them; yet seems to have intimated withal, that he expected a larger sum for them than Cicero would easily spare; which gave occasion to Cicero to beg of him in several letters to reserve the whole number for him, till he could raise money enough for the purchase. "Pray keep your books," says he, "for me, and do not despair of my being able to make them mine; which if I can compass, I shall think myself richer than Crassus, and despise the fine villas and gardens of them all." Again, "Take care that you do not part with your library to any man, how eager soever he may be to buy it; for I am setting apart all my little rents to purchase that relief for my old age." In a third letter, he says, "That he placed all his hopes of comfort and pleasure, whenever he should retire from business, on Atticus's reserving these books for him." Atticus lent him two of his librarians to assist his own, in taking catalogues, and placing the books in order; which he calls "the infusion of the soul into the body of his house."

Amidst his public occupations and private studies, either of them sufficient to have immortalised one man, we are astonished at the minute attention Cicero paid to the formation of his libraries, and his cabinet of antiquities.—*D'Israeli*.

"Cicero" speaking of books, says, "These studies nourish youth, delight old age; are the orna-

ment of prosperity, the solace and the refuge of adversity; they are delectable at home, and not burthensome abroad; they gladden us at nights, and on our journeys, and in the country."

We have unequivocal attestation of the use of glue\* in the making of books, at this time. Cicero, in a letter to Atticus, tells him, "to send him some two of his librarians, who, among other things, might conglutinate his books."

13, March 6. The emperor Augustus assumes the office of *Pontifex Maximus*, or high priest, upon the death of Lepidus; and immediately after destroys 2,000 books of prophecy, the writers of which were either unknown or of no authority.

8, Nov. 7. Died Caius Cilnius Mæcenas, the friend and counsellor of Augustus. Mæcenas was the first person to whom a book was dedicated.—After the battle of Actium, (31) Augustus, in passing home, tarried four days at Atella, where Mæcenas was with the poet Virgil, who, assisted by his patron, read to him his *Georgics*, then newly completed.

The Romans, of rank and consequence, seldom wrote their works, speeches, or even letters themselves;—it was customary for them to dictate to such of their slaves or freedmen, as had been liberally educated, who wrote the manuscript in a kind of short hand, or rather in contractions and signs. This kind of short hand is said to have been invented by Xenophon: it was certainly much extended and improved by the Romans.

The Greek and Roman authors adopted rather a singular custom, either to make their works sell after they were actually published, or, more probably, to create a disposition to purchase them when they should come into the hands of the booksellers. We learn from Theophrastus, Juvenal, Pliny, and Tacitus, (particularly from the last) that a person who wished to bring his writings into notice, hired or borrowed a house, fitted up a room in it, hired forms, and circulated prospectuses, and read his productions before an audience, there and thus collected. Giraldus Cambrensis did the same in the middle ages, in order to make his works known.

It is generally believed that there were no public schools in Rome till 300 years after its foundation; parents teaching their children the little they knew. Even after the establishment of schools, private education at home was common. The teachers were generally slaves or freedmen; and a slave always accompanied the boys of rank to school, carrying a box, containing books, paper, tablets, and instruments for writing. In learning their letters they were instructed by another boy, or usher.† Homer was taught to the

\* The inventor of making books, by means of glue, was an Athenian of the name of PHILATUS and to him must the homage be paid of being considered as the FATHER OF BOOKBINDING; and we learn from Troitzius, that the Athenians positively erected a statue to the memory of that man who bound books by means of glue.—DIADIN.

Thus, upwards of 2,000 years ago, the embryo seeds of modern bookbinding may be said to have been sown; but it must be understood, that it has reference exclusively to sheets or rolls, whether of the papyrus, vellum, or cotton.

† St. Augustine, Archbishop of Canterbury and Apostle of the English, who died May 26, 604, had been an usher at Rome.

Greek boys, and Virgil to the Roman. They were moved to different schools, according to their proficiency. The porticos of temples were common places for schools.\* In an ancient bas-relief, published by Winkelman, the education of two children of rank is represented; one about twelve years old holds a double tablet, long, and fastened by a hinge. The master, half naked, like the ancient philosophers, holds a roll, (volumen) and is addressing the child. Some of the table-books† must have been large; for in Plautus, a school-boy, seventeen years old, is represented as breaking his master's head.

There was one particular street in Rome, or rather part of a street, in which the booksellers chiefly lived. In the porticos of the Greek and Roman temples, goods were sold, and business transacted, and, for the same reason, we may suppose, that books were sold there also.

That which is now understood by the term "the learning of antiquity," prevailed in the states of Greece and Rome, from a period of about six hundred years before the Christian era, till about four hundred years after it. During this thousand years there lived many distinguished moralists, reasoners on the nature and destiny of man, orators, sculptors, and historians, with others remarkable for the refinement of their ideas and a certain degree of knowledge of the arts. But during this period learning was confined entirely to the higher classes; those in a humble condition being generally slaves, and an employment in war and rapine their principal occupation.

This era of learned antiquity ceased at the fall of the Roman empire and the incursion of the barbarians. All that it has bequeathed to modern times consists in some Greek and Latin (Roman) writers, chiefly poets and historians, which were collected together, with great difficulty; during the twelfth, thirteenth, and fourteenth centuries. Besides these literary remnants, little more is left to betoken the existence of a former age of refinement, than the ruins of temples, theatres, aqueducts, houses, and sculptured figures, in modern Greece and Turkey and some parts of Italy.

"One cannot but reflect on that grand revolution which took place when language, till then limited to its proper organ, had its representation in the work of the hand. Now that a man of mean estate can have a library of more intrinsic value than that of Cicero, when the sentiments of past ages are as familiar as those of the present, and the knowledge of different empires is transmitted and common to all, we cannot expect to have our sages followed, as of old, by their five thousand scholars. Nations will not now record their acts by building pyramids, or consecrating temples and raising statues, once the only means of perpetuating great deeds or extraordinary virtues. It is in vain that our artists complain that patronage is withheld; for the ingenuity of the hand has at length subdued the arts of design—printing has made all other records barbarous, and great men build for themselves a 'living monument.'"—*Bell on the Hand.*

## STATE OF LITERATURE SINCE THE CHRISTIAN ERA.

"The admirable invention of printing enables the artist to make a thousand copies from the original manuscript in far less time and with less expense, than it would cost to make half a dozen such copies with the pen. From the period of this glorious discovery, knowledge of every kind might be said to be brought out of the cloisters and universities, where it was known only to a few scholars, into the broad light of day, where its treasures were accessible to all men."—*SIR WALTER SCOTT.*

110. The most extensive and splendid of the libraries at Rome, was the Ulpian, founded by Trajan: it is believed that, at the suggestion of Pliny the younger, this emperor commanded all the books that were found in the conquered cities to be placed in its library. Most of the principal cities throughout the Roman empire, at this time, had public libraries.

190. The Capitoline library at Rome, was destroyed by lightning, in the reign of Commodus. Lucius Aurelius Commodus, was strangled at Rome, Dec. 31, 192.

250. Of the extent and value of the manufac-

turers in Alexandria, and of the wealth derived from them, we may form some idea from an anecdote of Firmus. This person, the friend and ally of Zenobis, Queen of Palmyra, a wealthy merchant, or rather manufacturer of paper and glue, in Alexandria, broke into that city about this period, at the head of a furious multitude, "assumed the imperial purple, coined money, published edicts, and raised an army, which he boasted he could maintain from the sole profits of his manufactures."

For at least 300 years before Christ, papyrus was exported in large quantities from Egypt; but the time when the manufacture of it was lost, or superseded, is not known.

275, Sep. 25. The emperor Tacitus is elected after an interregnum of eight months. He ordered that ten copies of his kinsman's History should be placed in the Roman libraries. The manuscript was discovered in Westphalia.

The history of the third century mentions the library of the younger Gordian, consisting of

\* Shakespeare mentions the custom of parish schools being held in the porch, or in a room above the church.

† Table books continued in use so late as the fourteenth century, and even later, as Chaucer evidently describes one in the Summoner's Tale.

His fellow had a staf tippid with horn,  
A pair of tables, all of ivory,  
And a pointed (style) ypollished fetidly (neatly),  
And wrote always the names, as he stood,  
Of all folk that yave hem any good. (v. 33 37.)

62,000 volumes, which had been presented to him by his tutor.

300. The first public library in Constantinople, appears to have been founded by the emperor Constantius Chlorus. Julian added to it all the manuscripts he could collect. It amounted by degrees to 120,000 volumes, and seven Greek and Roman transcribers were attached to it, paid by the emperor, to write new copies and correct the old. Constantius died at York, July 25, 306.

309, Feb. 16. Died St. Pamphilus, presbyter of Cæsarea. He was of an eminent family, of great wealth, extensive learning, and was ardently devoted to the scriptures, copies of which he lent to some, and gave to others, several of them having been transcribed with his own hand. In him were united the philosopher and the Christian; he withdrew himself from the glare of temporal grandeur, and spent his life in the most disinterested benevolence. He erected a library at Cæsarea, which contained 30,000 volumes. This collection was made only for the promotion of religion, and to lend out to religiously disposed people. Jerome particularly mentions his collecting books for the purpose of lending them to be read. "This," says Dr. Adam Clarke, "is, if I mistake not, the first notice we have of a circulating library." Some traces of this library remain to this day, at Paris and elsewhere. The death of this eminent, holy, and useful man did not discredit his life. For when a persecution was raised against the Christians, and Urbanus, the Roman president of Cæsarea, an unfeeling and brutal man, required him to renounce his religion or his life; Pamphilus made the latter choice, and cheerfully submitted to imprisonment, to torture, and to death.

325, July. The first œcumenical council, i. e. a council of the whole habitable earth, assembled at Nice, (now Isniék) in Bythinia, where 318 fathers of the church subscribed the ordinances regulating the festival of Easter, and establishing the godhead in opposition to the dogmas of Arius. At this council the writings of Arius were condemned to the flames, and Constantine the Great threatened with the punishment of death those who should conceal them. There were 200 varied versions of the adopted Evangelists, and fifty-four several Gospels preserved in various Christian communities; but so scarce, that no Roman historian or writer appeared ever to have seen any of them.

360. The most ancient specimen of illuminated manuscripts, is the celebrated *Codex Argenteus* of Ulphilas. It is written on vellum, and has received the name of *Argenteus* from its silver letters: it is of a 4to size, and the vellum leaves are stained with a violet colour; and on this ground the letters, which are all *uncial* or capitals, were afterwards painted in silver, excepting the initial characters and a few other passages, which are all in gold. From the deep impression of the strokes, Michaelis has conjectured that the letters were either imprinted with a warm iron, or cut with a graver, and afterwards coloured; but Mr. Coxe, after a very minute examination, was con-

vinced that each letter was painted, and not formed in the manner supposed by Michaelis. The translation by Ulphilas, of the scriptures was made from the Greek text, although from its frequent coincidence with the Latin, it has been suspected of having been interpolated since his time from the Vulgate; but, notwithstanding, its unquestionable antiquity and general fidelity, have procured for it a very high degree of estimation with biblical critics, and is deserving of particular notice, for two reasons: first, it is the only specimen extant of the parent tongue, from which our own language, and the languages of Sweden, Denmark, Iceland, Norway, the Netherlands, and Germany, are derived; and, secondly, it was long supposed by many to exhibit a very near approach to printing, nearly 1,000 years before the art was invented.

This Codex was originally discovered in the year 1587, in the library of the Benedictine abbey of Werden in Westphalia, whence it was brought to Prague; and at the capture of that city in 1648, was sent as a valuable present to Christina, Queen of Sweden. It subsequently came into the possession of Isaac Vossius, at whose decease it was bought by Count Magnus Gabriel de la Gardie for £250, and was by him presented to the University of Upsal. Three editions of it have been printed.

Bishop Ulphilas received his education in Greece, was held in high estimation by the emperor Constantine the Great, who called him the Moses of his time. In the year 350, he assisted in the council of Constantinople, and in 378 he was dispatched on an embassy to the emperor Valens, to solicit a settlement for the Goth in Thrace, after they had been expelled by the Huns. To accomplish this purpose, he is said to have embraced Arianism; and to have propagated Arian doctrines in his own country. In his translation he left out the *Book of Kings*, lest they should have excited his savage countrymen to war.

361. Julian the apostate, was advanced to the empire, and immediately commanded that the writings of Christian authors should be destroyed, but that those of the profane authors should be preserved, in order to overthrow Christianity, and return to paganism.

362. In Antioch, there was a large public library in the temple of Trajan, which was destroyed during the reign of the emperor Jovian. Jovian died Feb. 17, 364.

373. Died St. Athanasius patriarch of Alexandria. In the British Museum there is preserved a celebrated manuscript of the Old and New Testament in Greek, called the *Alexandrian Codex*; in which is a passage that has thus been translated: "This book is dedicated to the patriarchal chamber in the fortified city of Alexandria. Whoso take thence, be he excommunicated, torn forcibly from the church and communion. Athanasius the Humble."

400. Vulgate edition of the Bible.

The Vulgate is a Latin translation of the Greek copies of all the Books of the Old Testament by Jerome; and of the New Testament, as approved

by the Council of Trent.\* The councils of Chalcedon, &c. recognized this translation as canonical, but, at the Reformation, the Protestant divines finding that certain books were in no Hebrew copies, pronounced them apocryphal, and they constitute the apocrypha of Protestant bibles.

410. At this period there were twenty-nine public libraries in Rome. The fine one belonging to the bishop Hippo, in North Africa, was destroyed by the Vandals.

420, Sep. 30. St. Jerome, who died on this day, states that he had ruined himself in buying the works of Origin.

Origin, surnamed Adamantinus, from his indefatigable assiduity and labour, was born at Alexandria in the year 185, and died at Tyre, in the 69th year of his age. Eusebius gives a curious picture of Origin's mode of composition: he had several *notarii*, or short-hand writers, who succeeded each other, as they became weary with writing: he had also a regular establishment of men and young women, who wrote beautifully, to copy his works. Montfaucon supposes that his *Hexapla*† must have made fifty large folio vols.

449. The dawn of knowledge which spread over Britain from the conquest of the Romans, quickly faded after the fall of that extraordinary empire, and was almost wholly extinguished upon the arrival of the Saxons in this year. For a century and a half after this, England may be said to have been equally destitute of learning, and of the means of obtaining it. There is not the name of any learned man of that period handed down to us; nor does it appear there was such a thing as a book in the whole kingdom. The only remnants of knowledge and learning that were preserved in what is now called Great Britain, existed amongst the clergy of Scotland and Wales; and the extent of their acquirements may be imagined, when a little Latin, a talent for polemical controversy, and some knowledge of church music, was sufficient to entitle an individual to the character of a very learned man. The conversion of the Anglo-Saxons to Christianity in the course of the seventh century, had its usual effect in enlightening their minds, and promoting the interests of learning. Before this period they had no intercourse with any other nation except in the way of hostility; but the communication then opened with Rome, and the necessity of studying in order to qualify themselves for the high offices in the church, occasioned a pretty general application to learning amongst the nobles. Public seminaries were then for the first time established, one of the most noted of which was that at Canterbury. The laity, however, remained generally as ignorant as ever; one cause of which was the con-

tinued scarcity of books. If we look for persons who were particularly eminent in the annals of literature, during the period from the desertion of the Romans, to the introduction of the Saxons, we shall find very few whose names have reached us; but some still continue to be mentioned with respect. Pelegius, a native of Britain, and some of whose works are still extant. Celestinus, a Scotchman, who was famous as a scholar both in his own country and abroad. Dutricius and Illutus, founded schools at Bangor, in North Wales, which produced several men whose names have been transmitted with honour to posterity. Among the rest, Gildas, who wrote a treatise on the destruction of Britain, and from whom we principally derive our information concerning the state of things, during the latter end of the fifth, and beginning of the sixth century.

460. Died, at an advanced age, St. Patrick. We remark an event which, from its influence upon Christian literature, deserves to be recorded; this was the instruction of the Irish in the use of the Roman letters, by St. Patrick, the apostle of Ireland. Patrick was born in Scotland, near Dunbarton. In his sixteenth year he was carried into captivity by certain barbarians, together with many of his father's vassals and slaves, taken upon his estate, they took him to Ireland, then called Scotia, where he was obliged to keep cattle on the mountains, and in the forests, in hunger and nakedness, amidst snows, rains, and ice. Here he learnt the language and customs of the country, from whence he was afterwards, by some pirates, conveyed into Gaul; and, after various adventures, returned a volunteer into Ireland, with a view to undertake the conversion of the barbarous natives, among whom the worship of idols still generally reigned. To effect his benevolent purposes, he travelled over the whole island, and not only preached frequently but maintained and instructed the natives in the use of the Roman letter, for before their conversion the Irish were utterly unacquainted with the Latin language. The labours of St. Patrick proved eminently successful, and Christianity was very generally embraced throughout the island.

During the interval between their conversion to Christianity, and their subjection to England, the Irish were considered as the most learned nation in Europe. Their learning, however, consisted in the discussion of subtle metaphysical questions, a scanty stock of Grecian literature, a very slight acquaintance with Hebrew, and a knowledge of the more simple and elementary parts of geometry. Among the Irish literati, the highest place is due to John Scatus Erigena, the ornament of the court of Charles the Bald, an eminent philosopher and learned divine, whose erudition was accompanied with uncommon marks of sagacity and genius, and whose various performances, as well as his translations from the Greek, gained him a shining and lasting reputation.

475. Hebrew points first introduced in reading.

476. By order of the emperor Leo I, 200,000 books were burnt at Constantinople.

\* The Council of Trent commenced Dec. 15, 1545, terminated Dec. 4, 1562.

† The name *Hexapla*, or *Scriptura* was derived from the six principal Greek versions employed in the collation. Some fragments excepted, this work has been long irrecoverably lost. All that could be gathered from the works of the ancients, was collected and published in 1713, by Montfaucon, in two volumes folio.

In this century a dreadful fire happened at Constantinople, which destroyed the whole city, together with the library, containing 20,000 vols. Zenoras relates, that the *Illiad* and *Odyssey* of Homer, written upon the intestines of a serpent, in characters of gold, and forming a roll 100 feet in length, were consumed in this fire.

485. During the reign of the emperor Zeno the remains of St. Barnabas are said to have been found near Salamis, with a copy of the gospel of St. Matthew, in Hebrew, laid upon his breast, written with his hand, upon leaves of thyme-wood; a kind of wood particularly odoriferous.

524. About this period Boethius had his head cut off by order of Theodoric the Goth. Boethius was descended from two of the noblest families in Rome. He was consul in 487 and again in 510. Theodoric having murdered Odoacer, became King of Italy, and made Boethius his minister. His great abilities excited the envy and malice of the worthless and the wicked; the consequence was, he was denounced as an enemy to the state, and the senate, without giving him a hearing, condemned him to death. The king changed the sentence into banishment. He was accordingly exiled to Pavia, and there imprisoned; and in about six months after it pleased this barbarous king to cut off his head. It was during his imprisonment that he wrote his celebrated book, *The Consolation of Philosophy*, which has been highly esteemed in all ages. With the death of Boethius the purity of the Latin tongue may be said to have ceased in the western world. Alfred the Great translated his treatise into Saxon, and Queen Elizabeth, during the time she was confined by her sister Mary, is said to have translated it into very elegant English. The two sons of Boethius were chosen consuls in their non-age, in testimony of the public virtues of that distinguished senator, who was crowned *King of Eloquence* in 521.

527. *Died* the Emperor Justin I. It is recorded of him that he could not write, in consequence, a similar expedient to the printing of cards was resorted to; namely, a smooth piece of board with holes cut through it, in the form of the letters of his name; and when he had occasion to sign anything, this was laid on the paper, and he marked the letters with a pen, or stylus dipped with red ink, and directed through the holes.

The method adopted by the Grand Sultan, in the signing of the edicts, appears analogous to the taking impressions from seals: when he had occasion to sanction one of these instruments, he dipped his whole hand in the ink, and then made an impression with it.

533. Dec. 16. Tribonian began upon this day the *Digest* or *Pandects*, that astonishing labour which condensed within fifty books a body of three million sentences from dead civilians, and which he finished, by the aid of seventeen associates, in exactly three years, 16th Dec. 536.

The destructive inroads of the barbarian nations; the fault of seldom transcribing the best works of antiquity; and the dearness, owing to taxes, of the most general and almost indispen-

sable materials, namely, the Egyptian papyrus, and other circumstances, were highly prejudicial to the collecting of books in this century.

604, March 12. *Died* Gregory I. surnamed the Great, who had been called to the papal chair in the year 590, in defiance of his wishes and most determined opposition. On his elevation he adopted the title of *Servant of the Servants of Jesus Christ*; and in him the Christian church witnessed the rare instance of a Roman pontiff sedulously endeavouring to promote an acquaintance with the sacred scriptures among all ranks of persons under his influence. It was this great and good man, who, zealous for the conversion of the inhabitants of Britain, sent over the monk Augustine or Austin, with forty companions on a mission to the Anglo-Saxons. That the missionaries might perform the public duties of religion with decency and propriety, Gregory sent over a number of vestments, sacred utensils, and relics, accompanied by a valuable present of books; a present peculiarly wanted, from the impossibility of procuring books in Britain; it being doubtful whether the pagan conquerors had not utterly destroyed every thing of the sort, and by the time of the arrival of Austin, not left one book in the whole island.

Gregory's decided opposition to persecution was scarcely less remarkable than his love of the scriptures. It was a maxim with him, that men should be won over to the Christian religion by gentleness, kindness, and diligent instruction, and not by menaces and terror. Happy had it been for mankind, if the successors of Gregory had possessed the same attachment to the scriptures, and adopted the same views of persecution.

Austin and the other missionaries were favourably received by Ethelbert, King of Kent, who had married Bértha, a Christian princess of great virtue and merit, she was niece to Chilperic King of Paris, and had, together with Lindhard, a bishop, it is said, of piety and learning, who attended her from France, prepared the way for this great event, by converting several persons, and by producing a favourable disposition in the mind of her husband. But the grand work was carried on by Austin and his companions; an audience was granted them in the open air; and afterwards, permission given them to use their best endeavours to convert the people from the worship of idols, and turn them to the true and living God.

636. *Died* Isidorus. He is the first author who uses the word *penna* for a writing-pen, *instrumenta scribæ calamini et penna*. In the latter part of this century a Latin sonnet for a pen was written by an Anglo-Saxon author. There is, indeed, in the Medicean library, a manuscript of Virgil, written in the beginning of the fifth century, evidently from the gradual and regular fineness of the hair-strokes, by some instrument as elastic as a quill; but there is no proof that it was really written with a quill.

640. The capture of Alexandria from the Greeks under Amri the Saracen. "I have taken," he addressed the Caliph Omar, "the great city of the west. It is impossible for me

to enumerate the variety of its riches and beauty; and I shall content myself with observing that it contains 4000 palaces, 4000 baths, 400 theatres or places of amusement, 12,000 shops for the sale of vegetable food, and 40,000 tributary Jews. It is well known that the second Alexandrian library (established by Cleopatra) was then destroyed to feed the baths. That collection consisted of the treasures in the Serapion of 300,000 volumes, and those 200,000 rolls brought by Marc Anthony from Pergamus, with the accumulation of seven centuries. The first was principally formed by the two Ptolemies and contained at the period of the fire in Cæsar's time 700,000 volumes. The temple of Serapis escaped.

Amri, who was fond of literature, became acquainted with Philoponus, whose conversation pleased him much. One day, Philoponus said to him, "You have examined the public repositories in Alexandria, and put your seal upon all the effects you found in them. With respect to such things as may be useful to you, I presume to say nothing; but among those which you think of no value, there may be some, perhaps, very serviceable to me." "And what," answered Amri, "are the things that you want?" "The philosophical books," replied Philoponus, "that are preserved in the public libraries." "This," returned Amri, "is a request upon which I cannot decide, till I have received orders from the Caliph Omar, the commander of the Faithful." He wrote immediately to Omar, to lay before him the request of Philoponus; and the Caliph returned this answer: "If there be nothing in the books, concerning which you write, contrary to the book of God (meaning the Koran), they are utterly useless, the book of God being sufficient for our instruction. But if they contain anything repugnant to that book, they ought to be suppressed. I command you, therefore, to destroy them all." Amri distributed all the books immediately, among the baths of Alexandria, that they might be employed in heating them; and by this method, in the space of six months, they were all consumed. Such was then the triumph of ignorance and fanaticism over learning and philosophy.

About the time of the first publication of the Koran in Arabia, some Persian romances were introduced into that country by a travelling merchant, and the inhabitants openly professed that they found them considerably more amusing than the moral lessons of Mahomet. To oppose this feeling, a portion of a chapter was immediately written, in which the merchant was condemned, and his tales treated as the most pernicious fables, hateful to God and his prophet, whilst the Caliph Omar, acting upon the same principle, commanded all foreign books to be destroyed, and made it one plea for burning the Alexandrian library.

The literary treasures of antiquity have suffered from the malice of men, as well as that of time. It is remarkable that conquerors, in the moment

of victory, or in the unsparing devastation of their rage, have not been satisfied with destroying men, but have even carried their vengeance to books. The Persians, from hatred of the religion of the Phœnicians and the Egyptians, destroyed their books, of which Eusebius notices a great number. A Grecian library at Gnidus was burnt by the sect of Hippocrates, because the Gnidians refused to follow the doctrines of their master. The Romans burnt the books of the Jews, of the Christians, and the philosophers; the Jews burnt the books of the Christians and the Pagans; and the Christians, burnt the books of the Pagans and the Jews. The greater part of the books of Origin and other writers, were continually burnt by the orthodox party. Gibbon pathetically describes the empty library of Alexandria, after the Christians had destroyed it. Conquerors at first destroy with the rashest zeal the national records of the conquered people; hence it is that we have to deplore the irreparable losses of the most ancient national memorials. It must be confessed, however, that before the Christian era, and even among barbarians, the veneration for distinguished philosophers and poets, was such, that in cases of war, they were generally exempted from the common fate of the vanquished. Alexander spared the house of Pindar, though he razed the city of Thebes to the ground. Marcellus, though repeatedly baffled and repulsed by Archimedes, yet commanded his soldiers to save him unhurt at the final conquest of Syracuse. In our own times, the same homage has been paid to genius. The French have received the same generous treatment from the English, and the English from the French.

642, Sept. 27. Died Sigebert King of East Anglia. The times of the Heptarchy produced a number of sovereigns that were distinguished as warriors, as politicians, and devotees; there are only two, who deserve to be mentioned as patrons of literature, and even these two would scarcely deserve to be mentioned, if they had lived in more enlightened ages. The first is Sigebert, who, in consequence of his having been an exile in France, had acquired an understanding and taste superior to his cotemporaries. Accordingly, when he was settled on the throne, he did not merely endeavour, to convert his subjects to Christianity, but instituted seminaries, for instruction in the languages, and such other literature as was then known. He has sometimes been considered, though without sufficient reason, as the founder of the university of Cambridge. The schools appointed by him were erected in several places, but can by no means be regarded as the establishment of an university. His knowledge was not so enlarged as to preserve him from the superstitious weakness of the times; for we read that he closed his reign by retiring into a monastery.

670. The famous Wilford, among other donations for decorating the church at Ripon, ordered a copy of the Four Gospels to be written for it, in letters of the purest gold, upon leaves of parchment, *purpled* in the ground, and coloured variously upon the surface: but that such copies

were extremely rare, especially in England, is evident from Bede speaking of it as a kind of prodigy, unheard of before in these days.—*Whitaker's Cathedral of Cornwall.*

679. In an extraordinary council, held at Rome, about British affairs, it was ordained "That lessons out of the divine oracles should be always read for the edification of the churches, during the time of their meals, that the minds of the hearers might be fed with the divine word, even at the very time of their bodily repasts.

690. Nothing more completely proves the scarcity of books at this period than the bargain which Benedict Biscop, a monk and founder of the Monastery of Wearmouth, concluded a little before his death, in this year, with Ælfrid, King of Northumberland, by which the king agrees to give an estate of eight hides of land, or as much as eight ploughs could labour, which is said to have been 800 acres for one volume on *Cosmography, or the History of the World!* Biscop was obliged to make five journeys to Rome, principally to purchase books for his monastery. This book was given, and the estate received by Benedict's successor, the Abbot Ceolfred. King Ælfrid died 24th of December, 705, and was buried at Drifeld.

For the erection of the church, he procured workmen from France, who constructed it of stone, after the Roman fashion; for before that time stone buildings were very rare in Britain. Benedict also brought over glaziers from France, the art of glass-making being then unknown in Britain. The walls and roof of the church he adorned with pictures, which he purchased at Rome; and also added a noble library of rare Greek and Latin works.

692. Ducarel, in his *Anglo-Norman Antiquities*, informs us, that in the cloisters of St. Owen, at Rouen, which appeared to be a more ancient building than the church, he "observed some old stone desks stuck to the pillars, and designed to place books upon;" and adds, "In the Benedictine convents it was anciently a custom for all the monks to assemble together in the cloisters, at stated times in the day, and there cultivate their studies in common; some being employed in reading, whilst others were engaged in transcribing books; and for this purpose it was that these desks were placed in the abbey-cloisters." It may also be remarked, that the ancients, prior to the discovery of desks, wrote upon scrolls, placed upon their knees, and it is very questionable whether desks were at all in use before the latter end of this century. See also "*Fosbrooke's British Monachism.*"

693. Withred, King of Kent, in a charter whereby he granted lands to the church or convent of St. Mary, at Liminge (that county, acknowledges that being illiterate (*pro ignorantia literarum*) he had marked it with the sign of the holy cross. Archbishops and bishops were frequently too illiterate to write their own names, and only made their marks to the acts of councils. Crosses instead of seals, were used by the ecclesiastics, who introduced the practice of conveying

property by written instruments, and this custom prevailed invariably till the conquest, and for near a century afterwards. In the acts of the councils of Ephesus and Chalcedon, many examples occur where the subscriptions are to be found in this form: I, such an one, have subscribed by the hands of such an one, because I cannot write. And such a bishop having said he could not write, I, whose name is under-written, have subscribed for him. A celebrated ecclesiastical historian remarks, "Nothing can equal the ignorance and darkness that reigned in this century; the most impartial and accurate account of which will appear incredible to those who are unacquainted with the history of this barbarous period." Towards the close of this century, the number of books was so inconsiderable, even in the Papal library at Rome, that Pope Martin requested Sanctamond, bishop of Maestricht, if possible to supply this defect from the remotest parts of Germany.

705. It is a singular fact, that England was regarded as so excellent a mart for books, that at this early period, many were brought hither for sale. Pepin, king of France, requested some books from the Pontiff, Paul I. and the libraries of Rome could supply nothing more valuable than a few Greek books.

725, August 1. The old English tax, called *Peter's pence*, was first laudably imposed by Ina, King of the West Saxons, for the support of an *English College* at Rome, but afterwards appropriated by the church for very different purposes. It was collected upon this day. Ina published a code of seventy-nine laws.

Ina was King of Wessex; he is the other King of the heptarchy, who sustains a character superior to that of Sigebert, even the character of a law-giver. He cannot, indeed, be compared with the celebrated legislators of Grecian antiquity; he was not so profound as Lycurgus, nor so wise as Solon, but surely the first Saxon monarch who composed a body of written laws, is an object worthy of our attention. This work he executed by the advice and with the concurrence of his nobles, bishops, and other eminent persons. Some of his institutes related to the church, and some to the state. They continued in force a long time, and at length became the foundation of the code established by Alfred.

The immense donations of Ina, King of the West Saxons, to the church of Glastonbury, deserves also to be mentioned, as affording a proof of the veneration for the Holy Gospels. He caused a chapel or case, modelled in the form of a chapel, to be formed of silver and gold, with ornaments and vases equally gold and silver; and placed it within the great church of Glastonbury, delivering two thousand six hundred and forty pounds of gold; for the chalice and paten, ten pounds of gold; for the censer twenty-eight mancuses of gold; for the candlesticks twelve pounds and a half of silver; for the Books of the Gospels, twenty pounds, and sixty mancuses of gold; for the water vessels, and other vases of the altar, seventeen pounds of gold; for

the basins for the offertory, eight pounds of gold; for the vessels for the holy water, twenty pounds of silver; for images of our Lord, and the Virgin Mary, and the Twelve Apostles, a hundred and seventy-five pounds of silver, and thirty-eight pounds of gold, the twelve apostles being in silver, but our Lord and the Virgin Mary in gold; the pall for the altar, and the vestments for the priests were also artfully interwoven on both sides with gold and precious stones.—*Whitaker*.

735, May 26. Died the venerable Bede, or Bede, a monk of Wearmouth, in the bishopric of Durham, who was a sort of universal genius, wrote upon all subjects, and whose works, still in existence, are supposed to contain all of learning, science, and art, then known in the world. He translated the *psalter* and the *gospel* into the Anglo-Saxon, and is said to have finished the last chapter of the *gospel* as he expired.

"He was called the *Wise Saxon* by his contemporaries," says Dr. Henry, "and Venerable Bede by his posterity; and as long as great modesty, piety, and learning, united in one character, are the objects of veneration amongst mankind, the memory of Bede must be revered." Several other eminent men, chiefly Englishmen, distinguished for their zeal and love of learning and the scriptures, flourished about the same period. There was a Saxon poet in this era, *Cædman*,\* on whom Bede bestows the highest praises. A fragment of him is preserved by Alfred. Next to Bede in reputation was Aldhelm† who was something before him in point of time, and as Bede was the luminary of the north, so Aldhelm was the chief ornament of the south of England. It was universally agreed that he was the first Englishman who composed in Latin; none having heretofore done it in this island, but such as were either foreigners from the continent, or Irish, or Scotch, or Britons. He has, likewise, himself assured us, that he was the first who introduced poetry among the Saxons, and who wrote upon the measure of verses. After Bede, and his contemporaries, what little of literature there was in England declined apace, and became almost annihilated. Instead of growing more and more enlightened, the nation was plunged into deeper ignorance and error; and such was the state of things when Egbert put an end to the seven kingdoms, and united them under one sovereign. Bede complains again and again, in his writings, that the monasteries in his time, were little else than the arcades of wickedness, and were in so corrupt a state, that such persons as desired to be sincerely pious, were obliged to go abroad for education. But

the grand circumstances which destroyed the very traces of knowledge, and cut it up by the roots were the invasions of the Danes; which so soon succeeded the abolition of the heptarchy, that there was no time to bring the kingdom into order. In consequence of the numerous and repeated attacks of that people, who were more barbarous than the Saxons, an universal ruin was spread through the island, and the monks were totally dispersed.

741, June 18. The emperor Leo III. in order to destroy all the monuments that might be quoted, in proof against his opposition to the worship of images, commanded the library, which had been founded by order of Constantine the Great, at Constantinople, to be destroyed. In this library was deposited the only authentic copy of the council of Nice, which was unfortunately consumed, together with a magnificent copy of the Four Gospels, bound in plates of gold, to the weight of 15lbs. and enriched with precious stones, which had been given by Pope Gregory III. to the church dedicated to our Saviour.

755. One of the most distinguished characters of this age was Winfrid, afterwards called Boniface. He was an Englishman, born at Kirton, in Devonshire, about the year 680, and was educated in the monastery of Escancester or Exeter, under the abbot Walphard. At the age of thirty he was ordained priest, and about the year 716 he went, with two other monks, over into Friesland, as a missionary in the conversion of pagans, where he did not remain long, but returned with his companions to England to his monastery. Paying a visit to Rome, he obtained from Pope Gregory II. an unlimited commission to promote the conversion of infidels. With this commission he went into Bavaria and Thuringia. In 732 he received the title of archbishop from Gregory III., who supported his mission with the same spirit as his predecessor Gregory II. In 746, he laid the foundation of the great abbey of Fulda or Fulden, which continued long the most renowned seminary of piety and learning in all that part of the world. His principal residence he fixed at Mentz, from which he has usually been called the archbishop of that city. On the eve of Whit-sunday, in the year 755, he pitched a tent on the bank of the Bordue, a river which then divided east and west Friesland, for the purpose of baptizing some converts; and whilst waiting in prayer the arrival of the friends he expected, a band of enraged Pagans, armed with shields and lances, rushed furiously upon them, and slew Boniface and his companions, fifty-two in number. This was in the 75th year of his age. The barbarians, instead of the valuable booty of gold and silver which they expected, found nothing of any value but a few books, which they scattered about the fields and marshes.

A collection of Boniface's letters has been preserved and published. In one of them to Nithardus, he writes, "Nothing can you search after more honourable in youth, or enjoy more comfortably in old age, than the knowledge of

\* Cædman a pious monk of Streanshalch or Whitby, who employed his poetical genius in the composition of a paraphrased and metrical version of some of the most remarkable portions of the sacred History. His works were published by Junius, at Amsterdam, 1655, 4to.

† Adhelm was a near relation to King Ina, and for thirty years abbot of Malmesbury, in Wiltshire; in 704 he was appointed bishop of Sherborn, in Dorsetshire. He died May 25, 799. The principal prose work of Adhelm is his treatise on the *Praise of Virginity*. One of his poems was on a writing pen. A portion of his works were published by the Rev. H. J. Todd, in 1812.

the holy scriptures." To Daniel, bishop of Winchester, he addresses a request to send him the *Book of the Prophets*, "for," says he, "I can find no book like it in this country." In other letters also, he begs for books, especially those of Bede, whom he styles the Lamp of the Church.—*Milner's Hist. of the Church of Christ*.

Boniface, in one of his epistles, observes, "that drunkenness was so common in his time, that even the bishops, instead of preventing, were themselves partakers in it: and not content with this, compelled others to drink from large cups till they also became inebriated."

Boniface gives this intimation in his epistle to the abess Eadburga: "I entreat you," says he, "to send me the *Epistles of the Apostle of St. Peter*, written in letters of gold, that by exhibiting them, in preaching, to the eyes of the carnal, I may procure the greater honour and reverence for the holy scriptures."

This expensive and magnificent mode of writing in gold, was appropriated chiefly to those copies designed for princes or nobles; hence Theonas admonishes Lucian, the grand chamberlain, not to permit copies to be written upon purple vellum, in gold or silver letters, unless especially required by the prince. It was also principally confined to the transcription of the sacred books, which were thus executed to induce the greater reverence for them. Princes sometimes caused their usual books of prayer to be written in this manner; such, for instance, is the beautiful one written in letters of gold, upon purple vellum, bound in ivory, studded with gems, preserved in the celebrated Colbertine library, formerly belonging to Charles the Bald. It was not only by the *chrysographic* mode of writing, that the ancient Christians ornamented their manuscript copies of the scriptures, they also frequently embellished them, at an immense expense, with *miniatures* and other paintings, collectively termed illuminations.

768. Ambrosius Autpert, a Benedictine monk, sent his *Exposition of the Book of Revelation* to Pope Stephen III., and begged that he would publish the work and make it known. On this occasion, he says expressly, that he is the first writer whoever requested such a favour; that liberty to write belongs to every one who does not wish to depart from the doctrine of the fathers of the church; and he hopes that this freedom will not be lessened on account of his voluntary submission.

781. The *Commandments, Apostles' Creed*, and *Lord's Prayer*, translated into the Saxon language.

790. There is a curious charter of Charlemagne's, to the abbots and monks of Sithen, by which he grants them an unlimited right of hunting, on condition that the skins of the deer they killed should be used in making them gloves and girdles, and covers for their books. In the middle ages books were usually bound by monks. There were also trading binders, called *ligatores*, and persons whose sole business it was to sell covers. White sheep-skin, pasted on a wooden board, sometimes overlapping the leaves, and fastened

with a metal cross, was the common kind of binding. It was deemed the duty of the sacrist, in particular, to bind and clasp the books.

791. Two Irishmen, going into France, were there admired for their incomparable learning, and gave birth to the two first universities in the world, namely, those of Paris, and Pavia.

794, June 29. The death of Offa, a powerful English king. He corresponded in flattering terms with Charlemagne, and fixed a *seal* to his charters.

The origin of the *Sacred Comedy*, may be traced to this century, when, it is known, that trade was principally carried on by means of fairs, which lasted several days. Charlemagne established many great marts of this sort in France, as did William I. and his Norman successors in England. The merchants who frequented these fairs, in numerous caravans or companies, employed every art to draw the people together. They were, therefore, accompanied by jugglers, minstrels, and buffoons, who were no less interested in giving their attendance, and exerting all their skill on these occasions. As, at this time, but few large towns existed, no public spectacles or popular amusements were established; and as the sedentary pleasures of domestic life and private society were yet unknown, the fair time was the season for diversion. In proportion as these shows were attended and encouraged, they began to be set off with new decorations and improvements; and the arts of buffoonery being rendered still more attractive, by extending their circle of exhibition, acquired an importance in the eyes of the people. By degrees the clergy observing that the entertainments of dancing, music, and mimicry, exhibited at the protracted annual fairs made the people less religious by promoting idleness and a love of festivity, proscribed these sports and excommunicated the performers. But finding that no regard was paid to their censures, they changed their plan, and determined to take these recreations into their own hands. They turned actors; and instead of profane mummeries presented stories taken from legends or the bible.—The death of St. Catherine, acted by the monks of St. Dennis, rivalled the popularity of the professed players. Music was admitted into the churches, which served as theatres for the representation of these religious farces. The festivals among the French, called the *Feast of Fools*,—of the *Ass*,—and of *Innocents*, at length became greater favourites, and they certainly were more capricious and absurd, than the interludes of the buffoons at the fairs.—*Warton's Hist. of Poetry*.

Butler, in his *Lives of the Saints*, observes, that in the beginning of the ninth century, no fewer than seven thousand students visited the schools of Armagh, in Ireland, while there were three more rival colleges in other cities, with many private seminaries in the remoter provinces." And Camden conjectures, that the Anglo-Saxons borrowed their letters from the Irish, because they used the same, or nearly the same which the Irish at this day, still make use of, in writing their own language.

The schools of Ireland, long maintained a high reputation. Camden observes *Brit. de Hibern.* "that the English Saxons anciently flocked to Ireland, as to the mart of sacred learning; and this is frequently mentioned in the lives of eminent men among them." Thus, in the life of Fulgenius, in this century, we read—

"With love of learning and example fir'd,  
To Ireland, famed for wisdom, he retir'd."

800, Dec. 25. Charles Augustus, or Charlemagne, crowned emperor of the West. It will surprise the reader to know that the great Charlemagne, unquestionably the wisest man of the age in which he lived, *could not write*, and that he was 45 years of age before he began his studies. From this fact some judgment may be formed of the education and learning, or rather the ignorance, of the other princes and nobles of Europe at this period. Even at Rome, formerly the great seat of learning as of empire, the lamp of science was all but extinguished. Some idea may be conceived of the ignorance that prevailed in France and Spain, when the Pope was obliged to make laws against ordaining men priests and bishops who could not read or sing *psalms*! The latter science was then, in fact, almost the only study to which the clergy applied themselves, and the best singer was esteemed the most learned man.

801, Dec. 1. It may flatter an Englishman to identify an illustrious *Yorkshire* scholar, as the favourite preceptor of Charlemagne; this was Alcuin, librarian to Egbert archbishop of York. On this day, he presented his illustrious pupil with a magnificent folio bible, bound in velvet, the leaves of vellum, and the writing in double columns, and containing 449 leaves. Prefixed is a richly ornamented frontispiece, in gold and colours. It is enriched with four large paintings exhibiting the state of the art at this early period: there are moreover, thirty-four large initial letters, painted in gold and colours, and containing seals, historical allusions, and emblematical devices, besides some smaller painted capitals.\*

804. Charlemagne confirmed the practice of reading the scriptures publicly. "Let the lessons," says he, "be distinctly read in the churches." In his *Admonition to the Presbyters*, he charges the priests to acquaint themselves with the scriptures, to gain right views of the doctrine of the Trinity, to commit the whole of the *psalms* and the *baptismal office* to memory, to be ready to teach others; and to fulfil the duties of their station to the utmost of their power. He also discovered a just discrimination of merit in the ecclesiastics of his kingdom, and a disposition to reward it, as is demonstrated by the following anecdote:—Having received intelligence of the death of a bishop, he inquired how much of his property he had bequeathed to the poor, the answer was two pounds of silver; upon which a young clerk exclaimed, "that is but a small portion for so long a journey." Charlemagne, pleased with the obser-

vation, instantly said to him, "Be thou his successor; but never forget that expression."—*Card.*

The abby Velley states, that when Charlemagne issued the instrument by which the Romish liturgy was ordained through France, he confirmed it by *making his mark*. To which Mezeria adds, that below the figure was commonly inserted, "I have signed it with the pomel of my sword, and I promise to maintain it with the other."

804, May 19. Died at Tours, in France, Flaccus Alcuin, the preceptor of Charlemagne, and librarian to Egbert, archbishop of York.—He acquired a distinguished name in the literary world. Being sent abroad, he became the favourite of Charlemagne, instructed him in rhetoric, logic, mathematics, and divinity, and was called the Universalist, and secretary to the liberal arts. He contributed greatly to the revival of learning in France; and his fame shines with distinguished lustre in the literary history of this age. His works were published by Frobenius, in 1777, in 4 vols. 4to.

The following poetical catalogue of the authors of the celebrated library of Egbert, is, perhaps, the oldest catalogue in all the regions of literature, certainly the oldest in England, and was written by Alcuinus.

HERE, duly placed on consecrated ground,  
The studied works of many an age are found;  
The ancient *FATHERS*'s revered remains;  
The *ROMAN LAWS*, which freed a world from chains,  
Whate'er of lore passed from immortal Greece  
To *Latin* lands, and gained a rich increase.  
All that *Moss Tarnet* drank in showers from heaven,  
Or *Afric* sheds soft as the dew of even,  
From the father, 'mong a thousand sons,  
And *Bishop*—whose sense profusely runs;  
*Ambrose*, who nobly guides both church and state;  
*Augustin*—good and eminently great;  
And holy *Athanasi*—sacred name!  
All that proclaims *Orosius*' learned fame.  
Whate'er the lofty *Gregory* hath taught,  
Or *Leo* pontiff—good without a fault,  
With all that shines illustrious in the page;  
Or *Basil* eloquent—*Fulgentius* sage;  
And *Cassiodorus* with a consul's power,  
Yet eager to improve the studious hour;  
And *Chrysostom*, whose fame immortal flies,  
Whose style, whose sentiment, demand the prize.  
All that *Adhelmus* wrote, and all that flows  
From *Beda*'s fruitful mind in verse and prose.  
Lo! *Victorinus*, and *Boetius*, hold  
A place for sage philosophy of old.  
Here sober *history* tells her ancient tale,  
*Pompey* to charm, and *Pliny* never fail;  
The *Stagyrte* unfolds his searching page,  
And *Tully* flames, the glory of his age.  
Here you may listen to *Sedulius* strains,  
And sweet *Juvenius*' lays delight the plains.  
*Alcuin*, *Paulinus*, *Prosper*, sing or show  
With *Clement* and *Arsator*, all they know;  
What *Fortunatus* and *Lactantius* wrote;  
What *Virgil* pours in many a pleasing note;  
*Statius*, and *Lucan* and the polished sage,  
Whose *Art of Grammar* guides a barbarous age.  
In fine, whate'er the immortal masters taught,  
In all their rich variety of thought.  
And as the names sound from the roll of fame,  
*Donatus*, *Focas*, *Priscian*, *Probas* claim  
An honoured place—and *Servius* joins the band,  
While also move, with men formed to command,  
*Euticius*, *Pompey*, and *Commenian*, wise  
In all the lore antiquity supplies.  
Here the pleased reader cannot fail to find  
Other famed masters of the arts refined,  
Whose numerous works penned in a beauteous style,  
Delight the student, and all care beguile;  
Whose names, a lengthened and illustrious throng,  
I wave at present, and conclude my song.

D. M'NICOLL.

\* This celebrated Bible was sold by Mr. Evans, of Pall Mall, London, on the 27th of April, 1835, for £1500. It was in a good state of preservation.

813. Cyphers, digests, or figures in arithmetic invented by the Arabic moors.

813. The second council of Rheims, held under the auspices of Charlemagne, in which it was enjoined, "that the bishops and abbots should have the poor and indigent with them at their tables; there read aloud the scriptures; and take their food with thanksgiving and praise.

814, January 28. Died the Emperor Charlemagne, after a reign of forty-seven or forty-eight years, in the seventy-third year of his age. He was interred at Aix-la-Chapelle, with all the pomp of imperial magnificence. His body was embalmed, and deposited in a vault, where it was seated on a throne of gold, and clothed in imperial habits, over the sackcloth which he usually wore. By his side hung a sword, of which the hilt and the ornaments of the scabbard were of gold, and a pilgrim's purse, that he used to carry in his journeys to Rome. In his hands he held the *books of the Gospels*, written in letters of gold; his head was ornamented with a chain of gold in the form of a diadem, in which was enclosed a piece of the wood of the true cross; and his face was wound with a winding sheet. His sceptre and buckler, formed entirely of gold, and which had been consecrated by Pope Leo III. were suspended before him, and his sepulchre was closed and sealed, after being filled with various treasures and perfumes. A gilded arcade was erected over the place with the following translation in Latin.

"Beneath this tomb, is placed the body of the orthodox Emperor CHARLES THE GREAT, who valourously extended the kingdom of the Franks, and happily governed it xlvii. years. He died a Septuagenarian, January 28, 814." Pope Otho III. ordered the tomb to be opened, when the body was stripped of its royal ornaments, which had not been in the least injured by the hand of time. The *Book of the Gospels*, written on purple vellum, in characters of gold, found in the sepulchre, continues to be kept at Aix-la-Chapelle. With this volume, the imperial sword and hunting horn were also found. The copy of the *Gospels* interred with this "illustrious" sovereign of the Franks, appears to have been one of those executed by his order, and corrected according to the Greek and Syriac. In the library of the Church of St. Germain-des-Prez, at Paris, a Latin bible, in 2 vols. folio, is still kept, written on vellum, which bears the date of 814.

820. The writing, and many of the pictures and illuminations in our Saxon manuscripts were executed by the priests. A book of the *Gospels*, preserved in the Cotton library, is a fine specimen of Saxon calligraphy and decorations. It was written by Eadfrid, bishop of Durham, in the most exquisite manner. Ethelwold, his successor, did the illuminations, the capital letters, the picture of the cross, and the evangelists, with infinite labour and elegance; and Bilfrid, the anchorite, covered the book, thus written and adorned, with gold and silver plates, and precious stones. All this is related by Aldred, the Saxon glossator, at the end of St. John's gospel.

The Jews practised the business of copying, and greatly excelled in fine and regular writing. But they confined their labours chiefly to the Old Testament, and their own religious books. In some of the Hebrew manuscripts, executed by them, the letters are so equal, that they seem to have been printed. Even at present, as Mr. Butler remarks, "those who have not seen the rolls used in the synagogues, can have no conception of the exquisite beauty, correctness, and equality of the writing."

824. Louis the Meek, the son and successor of Charlemagne, was, like his father, studious in the scriptures and the patron of biblical scholars. Louis died this year, and, when dying, bequeathed to his son Lothaire, his crown, his sword, and a book of the gospels, richly ornamented with gold and precious stones.—*Nosserii Hist. Dugmeat.*

850. A supreme judge of the Roman empire could not subscribe his name. It was usual for persons who could not write to make the sign of the cross, in confirmation of a charter. Several of these remain where kings and persons of great eminence affix "*Signum crucis manu pro pira pro ignoratione liberarum.*" From this is derived the phrase of signing instead of subscribing a paper.

858. Nicholas I. was consecrated Pope. Until his time, the Greek and Latin churches were united, but in consequence of his excommunicating Photius, Patriarch of Constantinople, that schism took place between the two churches which endures to the present day.

880. Pope John VIII. first granted to the Slavonians the privilege of performing divine service in their own tongue.

887. Books, in the present form, were invented by Attalus, King of Pergamus.

890. The bible first translated into the Saxon language by order of Alfred the Great. He undertook the versions of the psalms himself, but did not live to complete it.

853. The following curious instances given by Lupus, abbot of Ferrieris, of the extreme scarcity of classical manuscripts in the middle of the ninth century: he was much devoted to literature; and, from his letters, appears to have been indefatigable in his endeavours to find out such manuscripts, in order to borrow and copy them. In a letter to the Pope, he earnestly requests of him a copy of *Cicero de Oratore* and *Quintilian's Institutes*, for, he adds, though we have some fragments of them, a complete copy is not to be found in France. In two other of his letters, he requests of a brother abbot the loan of several manuscripts, which he assures him shall be copied and returned as soon as possible by a faithful messenger. Another time he sent a special messenger to borrow a manuscript, promising they would take very great care of it, and return it by a safe opportunity, and requesting the person who lent it to him, if he were asked to whom he had lent it, to reply, to some near relations of his own, who had been very urgent to borrow it. Another manuscript, which he seems to have prized much, and a loan of which had been so frequently re-

quested, that he thought of *banishing* it somewhere that it might not be destroyed or lost, he tells a friend he may perhaps lend him, when he comes to see him, but he will not trust it to the messenger who had been sent for it, though a monk, and trustworthy, because he was travelling on foot. Again, he requests a friend to apply in his own name to an abbot of a monastery, to have a copy made of *Suetonius*; for, he adds, "in this part of the world, the work is no where to be found."

In this century, in the famous monastery of Iona, there seems to have been no other work, even of the fathers, than one of the writings of Chrysostom. Of all the schools or seminaries of the sixth century, none excelled, in the study of the Scripture, the monastery of Iona, or *Icolmkill*, an island of the Hebrides, "once the *luminary* of the Caledonian regions," (as Dr. Johnson calls it) "whence savage clans, and roving barbarians derived the benefits of knowledge, and the blessings of religion." Iona continued to be the seat of learning for ages. Columba, the founder of this monastery, was of royal extraction, and born at Gartan, in the county of Tyrconnel, in Ireland, in the year 521. He died on the 9th of June, 597, in the 77th year of his age.

900, Oct. 28. *Died* Alfred the Great. "This Mirror of Princes," and darling of the English, was not inferior to Charlemagne, and infinitely his superior in piety and suavity of manners, ascended the throne in 872. Born when his country was involved in the most profound darkness, and deplorable confusion; and when learning was considered rather as a reproach, than an honour, to a prince; he was not taught to know one letter from another till he was above twelve years of age, when a book was put into his hand by a kind of accident, more than by previous design. Judith, his stepmother, was sitting one day, surrounded by her family, with a book of Saxon poetry in her hands. With a happy judgment, she proposed it as a gift to him who would soonest learn to read it. The elder princes thought the reward inadequate to the task, and retired from the field of emulation. But the mind of Alfred, captivated by the prospect of information, and pleased with the beauty of the writing, and the splendour of the illuminations, inquired if she actually intended to give it to the person who would soonest learn it. His mother repeating the promise with a smile of joy at the question, he took the book, found out an instructor, and learned to read it; recited it to her, and received it for his reward. It is said, that he imbibed such a passion for reading, that he never stirred abroad without a book in his bosom. He founded and endowed schools (among others Oxford) and brought teachers of learning from all parts of the world, purchased books, ordered the bible to be translated into the Anglo-Saxon, undertaking the version of the psalms himself, but did not live to complete it, and in short, encouraged education and learning equally by precept and example. No sovereign ever studied the public interest more than Alfred. He seems to have considered his life but

as a trust to be used for the benefit of his people; and his plans for their welfare, were intelligent and great. He fought their battles, regulated the administration of justice, compiled a body of laws, corrected the abuses of the realm, extended their commerce, relations, and knowledge, by an embassy to India. To him Englishmen are indebted for the TRIAL BY JURY, for the foundation of the COMMON LAW, for the division of the kingdom into HUNDREDS and TITHINGS; and the sentiments expressed by him in his will, will never be forgotten: "IT IS JUST THAT THE ENGLISH SHOULD FOR EVER REMAIN FREE AS THEIR OWN THOUGHTS." Alfred reigned twenty-nine years, and was buried at Winchester.

After the death of Alfred, England again relapsed into its former, or rather a worse, state of ignorance and barbarism, and so continued the remainder of the century, including clergy as well as laity; then followed an invasion and conquest of the Danes, accompanied, like that of the Saxons, with the destructions of the monasteries, seminaries, and libraries, and a total suspension of the study of every art or science but that of war. It is really painful to reflect, that, in the course of two or three hundred years, we meet with very little worthy of being recorded. Like travellers in the deserts of Arabia, we often see nothing for a long time together, but barren sands; and if we now and then come to a verdant spot, though that spot is extremely beautiful, compared with the dreary prospect around it, yet it partakes of the sterility of the soil by which it is encompassed.

During his reign, and under his influence and encouragement, there flourished several learned men, who assisted him in his noble undertakings, and deserve to be mentioned with honour. He is said to have founded the university of Oxford at the request of St. Neot, who, together with Grimbold, was appointed professor of divinity. Grimbold had been invited from abroad, in consequence of his great reputation for literature; and is spoken of by all writers as a person of very illustrious character and merit.

In Alfred we may behold what amazing effects may be produced, by the genius and abilities of one man. Such was the influence he had upon the nation, that, in a few years, it was transformed into quite another people. The English, from being cowardly, poor, despicable, and ignorant, became brave, rich, respectable, and comparatively speaking, knowing and polite; but they were governed by a prince who was almost a prodigy in every respect; and we must travel through several centuries, before we shall find a character on which we can expatiate with equal pleasure, and which does so much honour to human nature.

940, Oct. 17. *Died* Athelston, the grandchild of Alfred, and the first King of the English. He was a prince of uncommon learning for the age in which he lived, *bountiful, wise, and affable*, was distinguished by the titles of "conqueror" and "faithful," and left behind him a name of great renown, respected and beloved both at home and

abroad. During his reign a law was passed, which enacted, "that if anyman made such proficiency in learning as to obtain priests orders, he should enjoy all the honours of a thane or nobleman. His bailiffs were ordered, under severe penalties, to support a *pauper* of English extraction, on every two of his farms. There is a catalogue of his books extant. It is in Saxon characters, in the Cottonian library.

There was also a regulation made, during this reign, that shews an enlargement of mind much above the times, and which even more civilized ages have not been able to reach: it was that a merchant, who had effected three voyages to the Straights, on his own account, should be put upon the footing with a thane. We are confidently told, by several modern writers, that he ordered the bible to be translated out of th. Hebrew into the Saxon language, for the benefit of his subjects, and which, if sufficiently authenticated, would appear of peculiar importance in a survey of literature. Athelstan is, on all hands, confessed to have been a very illustrious and accomplished prince, and who is justly ranked among the lawgivers of England. His eloquence is likewise highly extolled by historians, who have been pleased to assert that he was equal in this respect to the Roman orators. Athelston reigned from 925 to 940, and was buried at Gloucester.

953. Germadius, a Spanish bishop, by his will, bequeathed about sixteen volumes of books to certain religious houses, with the express condition, that no abbot should be permitted to transfer them to any other place, but that they shall be kept for the monks of the monasteries specified in the will, who should accommodate each other as much as possible in the use of them. The will is subscribed by the king and queen, as well as by the bishops and other persons of rank.

The tenth century, which presents one of the darkest periods of the Christian era, was an age of the profoundest ignorance, and of the most degrading superstition. Some who filled the highest situations in the church, could not so much as read; while others, who pretended to be better scholars, and attempted to perform the public offices, committed the most egregious blunders. In Spain, books were so scarce, that one, and the same copy of the Bible, St. Jerome's Epistles, and some volumes of ecclesiastical offices, and martyrologies, served several monasteries.

966. In England, the art of writing in gold seems to have been but imperfectly understood. The only remarkable specimen that occurs of it is the charter of King Edgar to the new minster at Winchester, in this year. This volume is written throughout in gold.

This taste for gold and purple manuscripts seems only to have reached England at the close of the seventh century, when Wilfred, archbishop of York, enriched his church with a copy of the gospels thus adorned. Many MSS. was executed at Winchester.

980. Ervne, one of the teachers of Wolston,

and bishop of Worcester, was famous for calligraphy and skill in colours. To invite his pupils to read, he made use of a psalter, and a sacramentary, whose capital letters he had richly illuminated with gold.

999. Silvester II. before he became pope, which was in this year, had been indefatigable in acquiring and communicating learning, and these qualities distinguished him during his whole life. In order to obtain a knowledge of the sciences and manuscripts, he visited Spain, and caused Italy, and the countries beyond the Alps, to be diligently explored for books and manuscripts.

1020. Died the celebrated poet Ferdosi. He is called the Homer of Persia, and flourished at this time, at the court of Mahmoud, in the city of Gazna. His principal work was a noble and elegant epic poem, on the history of Persia, written by him thirty years, but for which his only reward was as many small pieces of money as the work contained couplets. He wrote, in retaliation, an animated invective against the Sultan, and leaving Gazna in the night, fled to Bagdad, where the Caliph protected him till his death. It is said, that Mahmoud was persuaded by envious rivals to diminish the reward he had promised him; but sensible too late of his error, he tried to retrieve his fame, by sending an immense sum to the poet; but the rich present reached the gates of Bagdad, as the body of Ferdosi was being carried to its last mansion; and it was rejected by his virtuous daughter, who scorned to accept that wealth which had been once denied to the merit of her illustrious father.

1050. The most ancient manuscript in cotton paper, with a date, is in the royal library at Paris, No. 2,889; another in the emperor's library, at Vienna, that bears the date of 1095; but as the manuscripts without a date are incomparably more numerous than those which are dated, Father Montfaucon, who on these subjects, is great authority, on account of his diligence and the extent of his researches, by comparing the writing, discovered some of the tenth century.

In the sixth volume of the royal academy of inscriptions and belle-lettres, there is a dissertation of Montfaucon, which proves, that *charta bonaby-cine*, or cotton paper, was discovered in the empire of the east towards the end of the ninth or early in the tenth century. There are several Greek manuscripts, both in parchment, on vellum, and cotton paper, that bear the date of the year they were written in, but the greater part are without date. From the dated manuscripts, a surer judgment may be formed by comparing the writings of that age with those that are not dated.

1066, Oct. 14. The accession of William Duke of Normandy to the throne of England, (on this day) contributed greatly to the revival of literature and science in this country, being himself a well-educated prince, and a munificent patron of learning. His influence had excited extraordinary ardour for literary pursuits among the Norman clergy, and afterwards had the same effect amongst the English; besides which, many of the most

learned men on the continent followed him to England. The circle of the sciences was much enlarged beyond any former age. It was in this reign that we find the distinction drawn, betwixt physicians, surgeons, and apothecaries. The best contemporary writers agree, that learning was in a more flourishing state in England and Normandy in the reign of Henry I. (1100 to 1135) than it was in Italy.

The following is a translation of an old charter, originally written in the Saxon language, and granted by William I. to the inhabitants of London:—"WILLIAM, king, greets William, bishop, and Godfrey portgrave (*the same in office as lord mayor*) and all the borough of London, French and English, friendly. And I now make known to you, that you are worthy to enjoy all those laws and privileges which you did before the decease of King Edward. And it is my will that every child be his father's heir after his father's decease. And I will not suffer any man to do you wrong. God you keep."

1070. An instance of the high estimation in which books were held at this time, is to be seen in the front of the manuscript gospels belonging to the public library, of the university of Cambridge, written in an old hand in Latin and Anglo-Saxonic, given to the university by the learned Theodore Beza. This book was presented by Leofric, bishop of the church of St. Peter's at Exeter, for the use of his successors. This Leofric was chancellor of England, in the reign of Edward the Confessor, and died in 1072.

Theodore Beza was a celebrated reformer, and a man of very extensive and critical learning. He was born at Vezlay, in Burgundy, in 1519, and died at Geneva, in 1605. The above manuscript is called from him *Codex Beza*, but sometimes, *Codex Cantabrigienis*.

Theodore Beza dedicated his *Aristotle on Animals* to pope Sixtus IV. and received from his holiness the cost of the binding.

1070. Lanfranc, archbishop of Canterbury, by his Constitutions, ordered his librarian to deliver a book to each of the religious, at the beginning of Lent: a whole year was allowed for the perusal of the book; and at the returning Lent, those monks who had neglected to read the books they had respectively received, were commanded to prostrate themselves before the abbot, and to supplicate his indulgence. Lanfranc died May 28, 1089, and was buried at Canterbury.

In this century, Robert, abbot of Jumiege, and successively bishop of London, and archbishop of Canterbury, presented to his monastery, during the time he held the bishopric of London, a book called a *Sacramentary*, containing all the prayers and ceremonies practised at the celebration of the sacraments. At the close of the book, the following anathema was denounced against any one who should steal the book, or any of the ornaments of the monastery:—"If any one take away this book from this place by force, or fraud, or any other way, let him suffer the loss of his soul for what he has done; let him be blotted out of the book of life, and not be written among the

just; and let him be condemned to the severest excommunication, who shall take away any of the vestments which I have given to this place, or the other ornaments, the silver candlesticks, or the gold from the table. AMEN."—*Mabillon*.

In the above monastery, prayers were appointed to be offered on the 6th of March, for those "who had made and given books on the first day of Lent," the day on which books were distributed to the monks according to rule.

1080. Herman, one of the Norman bishops of Salisbury, condescended to write, bind, and illuminate books, for the use of the church.

1072. In the library of the monastery of Mount Cassino, is a manuscript, containing the lessons for the vigils, to which the following note is prefixed: "I, brother John of *Marricana*, long since arch-priest of the church, but now the meanest servant of that holy place, did cause to be composed, at my own proper charge, for the salvation of me and mine; and devoutly offered it to the most holy Father Benedict, on his holy altar; on the day when I took his habit upon me. Farther praying, that if any man shall, on any pretence whatsoever, presume to take it from this holy place, he may have his eternal mansion with those to whom Christ at the last judgment shall say: Depart from me into everlasting fire, prepared for the devil and his angels. But whosoever you are that read these lines, fail not also to read the distich underneath:—"

"Blest Saviour! in thy book of life divine,  
May Leo's\* favoured name illustrious shine."

Father Montfaucon, in his *Diarium Italicum*, or travels through Italy, notices several works written or transcribed in this century, and deposited in the different libraries, some of which have curious inscriptions. In the Duke of Modena's library, is a *psalter* most elegantly written, on the front of which is inserted in Greek:—"This book is deposited in the holy monastery, for the remission of the sins of the monk Theodosius Xylata. Let him who reads it through the Lord, praise him, and pray for his soul."

1080. It was a fixed rule in religious houses that all their inmates should devote a portion of the day to labour. Such as were unable to work at employments requiring toil and strength, or particular skill, discharged their duty by copying manuscripts, and as it was another rule, that every vacancy should be filled up, as soon as ever it took place, there was always a considerable number of copyists. In every great abbey, an apartment, called the *scriptorium*, was expressly fitted up, as a writing-room. That of St. Alban's abbey was built about this time, by a noble Norman, who ordered many volumes to be written there, and who conferred upon the abbey two parts of the tithes of Hatfield, and certain tithes in Redburn, and appointed a daily provision

\* The name of the transcriber.

† St. Alban was the first person who suffered Martyrdom for Christianity in England, he was beheaded at Verulam, in Hertfordshire, June 23, 303, since called St. Alban, from the Abbey founded in memory of that Martyr, 794, by Offa, King of the Mercians.

of meat for the writers, the exemplars were furnished by Archbishop Lanfranc. Estates and legacies were often bequeathed for the support of the scriptorium, and tithes appropriated for the express purpose of copying books. The transcription of the service books for the choir, was intrusted to boys and novices; but the missals and bibles were ordered to be written by monks of mature age and discretion. Persons qualified by experience, and superior learning, were appointed to revise every manuscript that came from the scriptorium. The copying of books, was executed in other places besides monasteries; sometimes by individuals, from their attachment to literature; but generally by persons who made it their professed employment. Where there were no fixed revenues for defraying the expenses of procuring books for the library, the abbot, with the consent of the chapter, commonly imposed an annual tax, on every member of the community for that purpose. The monks of some monasteries were bitterly reproached for the extravagant sums they expended on their libraries.

To the care and curiosity of the religious houses, it is principally owing, that the old chronicles of our country were preserved till the invention of printing. Besides the monks who were employed in the monasteries, in copying manuscripts; there were others, who were engaged in illuminating and binding them when written. Gold and azure were the favourite colours of the illuminators. In binding their books, some were adorned with gold, silver, ivory, precious stones, or coloured velvet; but for common binding, they frequently used rough white sheep-skin, with or without immense bosses of brass, pasted upon a wooden board, carved in scroll and similar work.

The monks, in these conventual writing rooms, were enjoined to pursue their occupation in silence, and cautiously to avoid mistakes in grammar, spelling, or pointing; and, in certain instances, authors prefixed to their works, a solemn adjuration to the transcribers, to copy them correctly; the following ancient one, by Irenæus, has been preserved: "I adjure thee, who shalt transcribe this book, by our Lord Jesus Christ, and by his glorious coming to judge the quick and the dead, that thou compare what thou transcribest, and correct it carefully, according to the copy from which thou transcribest; and that thou also annex a copy of this adjuration to what thou hast written."—*Eusebius's Eccles. Hist.*

The monastic writers, or copiers of manuscripts, have been thought by some, to be the last relics of the Jewish scribes, or the Roman *librarii*.—*Dibdin*.

Turner, in his *History of England*, gives the following account of Osmund, who came over with the Conqueror, and who had been created Earl of Dorset, and borne the highest offices in the state, having embraced a religious life, and been chosen bishop of Sherborn, or Salisbury, collected a noble library; and not only received with great liberality, every ecclesiastic that was distinguished for learning, and persuaded them to reside with him, but copied and bound books with his own hand.

1085, May 24. Died Pope Gregory VII. This pope from a bigotted zeal, or a principle of policy, endeavoured to destroy the works of all the most eminent heathen authors; and, among many others that perished by his means, he is said to have burned above one hundred copies of *Livy's History*, all the decads of which were entire before his time.

The *Dictates of Hildebrand*, sufficiently demonstrate the fierce impetuosity and boundless ambition of his character. One of these *Dictates* affirm, "that no book is to be deemed canonical without his authority."

Inflamed with the blindest zeal against every thing Pagan, this pope ordered that the library of the Palatine Apollo, a treasury of literature formed by successive emperors, should be committed to the flames! He issued this order under the notion of confining the attention of the clergy to the holy scriptures! From that time all ancient learning which was not sanctioned by the authority of the church, has been emphatically distinguished as *profane*—in opposition to *sacred*. This Pope also is said to have burnt the works of Varro, the learned Roman, that St. Austin should escape from the charge of plagiarism, being deeply indebted to Varro for much of his great work *the City of God*. The works of the ancients were frequently destroyed at the instigation of the monks. They appear sometimes to have mutilated them, for passages have not come down to us which once evidently existed.

"Science now dreads on books no holy war,  
Thus multiply'd, and thus dispers'd so far,  
She smiles exulting, doom'd no more to dwell  
'Midst moths and cobwebs, in a friar's cell:  
To see her *Livy*, and most favour'd sons,  
The prey of worms and popes, of Goths and Huns;  
To mourn, half-eaten Tacitus, thy fate,  
The dread of lawless sway, and craft of state,  
Her bold *machine* redeem't the patriot's fame  
From royal malice, and the bigot's flame;  
To bounded thrones displays the legal plan,  
And vindicates the dignity of man.  
Tyrants and time, in her, lose half their pow'r,—  
And Reason shall subsist, tho' both devour.  
Her sovereign empire, Britons, O! maintain  
While demons yell, and monks blaspheme in vain.  
Her's is the regimen of civil good;  
And her's, religion, truly understood."

Until this century, musical notes were expressed only by letters of the alphabet, and till the fourteenth century they were expressed by large lozenge-shaped black dots or points placed on different lines, one above another, and these first named *ut, re, mi, fa, sol, la*, to which *si* was afterwards added; and they were all expressed without any distinction as to length of time, and without any such thing as breves, semibreves, minims, crotchets, or quavers. The old psalters, in many cathedral churches, are found thus written. In the library at Worcester, there is a copy of St. Matthew's gospel, set to music throughout, with these sorts of notes. Reeds were commonly used for writing the text and initials, and quills for the smaller writing.

From the origin of monasteries, till the close of the tenth century, there were no schools in Europe, except those belonging to monasteries, or episcopal churches. At the beginning of the eleventh cen-

tary, they were opened in most of the cities of Italy and France, by qualified persons among both the laity and clergy. But though their general introduction and establishment, must be assigned to this period, yet it is certain that Charlemagne founded several in his dominions; and long before his reign, St. Augustine was an usher in a school. His business was to preside over the dress, morals, gait, &c. of his pupils, and sit with them in a kind of anti-school, separated from the principal school by a curtain. Here they said their lessons to the usher, before they went to the master; when the curtain was drawn back. In the middle ages, there were distinct schools for clerks, for laymen, and for girls; and two hundred children at a time are represented as learning their letters. Itinerant schoolmasters were also common. The whole of the education, however, even of those of the highest ranks, seldom went beyond reading and writing, and the more simple rules of arithmetic. —It is generally the fate of discoveries that are made prematurely, and under unfavourable circumstances, either to be strangled in their birth, or to struggle through a very short and useless existence. Had the art of printing been invented during the deepest ignorance and gloom of the dark ages, its value and importance would not have been appreciated, and it might gradually have sunk into neglect and total oblivion. Books were indeed, excessively rare, and dear; but very few sought for them, for few had the curiosity or ability to read, and fewer, the money to purchase them. After the tenth century, literature began to revive; paper from linen rags was invented; and a tendency to commerce appeared. This caused a gradual accumulation of capital, and rendered necessary some attention to learning.

1086. The peaceable state of William's affairs gave him leisure to finish an undertaking which proves his great and extensive genius, and does honour to his memory. It was a general survey of all England; their extent in each district, their proprietors, tenures, value, the quantity of meadow, pasture, wood, and arable land, and of all denominations who lived upon them. This valuable piece of antiquity, was called *Doomsday Book*.

The name of *Dom Boc*, or *Doomsday Book*, has most commonly been derived from the Saxon *Dom-doom*, or judgment, alluding by metaphor, to those books, out of which the world shall be judged at the last day. But although its wonderful minuteness in the survey of British property might have made this the original of its title, yet its Latin names do not support it, since they signify only the Winchester Rolls, the Writings of the King's Treasury, the King's Book, the Judicial Book, the Assessment of England, &c. The design of the work was to serve as a register of the possessions of every English freeman, although it is still doubted whether it were done to record the names and divisions of England, in imitation of the Winchester Roll of Alfred; to ascertain what quantity of military service was owed by King William's chief tenants; to affix the homage

due to the sovereign; or to record by what tenure the various estates of Britain were held. The survey was, however, undertaken by the advice and consent of a great council of the kingdom, which met immediately after the false rumour of the Danes' intended attack upon England, in the year 1085, as it is stated in the Saxon chronicle, and it did not occupy long in the execution, since all the historians who speak of it vary but from the year 1083 until 1087. There is a memorandum at the end of the second volume, stating that it was finished in 1086. The manner of performing this survey was expeditious;—certain commissioners, called the King's Justiciars, were appointed to travel throughout England, and to register upon the oaths of the sheriffs, the lords of each manor, the priests of every church, the stewards of every hundred, the bailiffs and six villeins,\* or husbandmen of every village, the names of the various places, the holders of them in the time of King Edward the Confessor, forty years previous; the names of the possessors, the quantity of land, the nature of the tenants, and the several kinds of property contained in them. All the estates were to be then triply rated; namely, as they stood in the reign of the Confessor; as they were first bestowed by King William I. and as they were at the time of the survey.

The manuscript itself, consists of two volumes, a greater and a less. The first of these is a large folio, containing the description of thirty-one counties, upon 382 double pages of vellum, numbered on one side only, and written in a small but plain character, each page having a double column. Some of the capital letters, and principal passages, are touched with red ink, and others have red lines run through them, as if they were intended to be obliterated. The smaller volume is of a 4to size, and is written upon 450 double pages of vellum, but in a single column, and in a very large and fair character; it contains three counties, and a part of two others. A perfect idea of the appearance of the *Doomsday Book* may be had on reference to the facsimiles engraved for the *Reports of the Commissioners of the Public Records*, whence the foregoing account has been abstracted; to *Registrum Honoris de Richmond*; to the *History and Antiquities of the County of Leicester*, by John Nichols, to *Collections for the History of Worcestershire*, by the Rev. Thredway Nash, D. D., and to *The History and Antiquities of the County of Surrey*, by the Rev. Owen Manning, and William Bray.†

There are, however, other manuscripts known by the name of *Doomsday*; as a third survey was also made by the Conqueror, and a

\* Villeins were those, who were sold with the land, but could not be removed, like the slaves, who could be sold from one person to another.

† The *Doomsday Book*, was, until 1695, kept under three locks, the keys of which were in the custody of the treasurer and the two chamberlains of the Exchequer; but it is now deposited in the Chapter-house, at Westminster, where the fee for consulting it is 6s. 8d. and for transcripts from it, 4d. per line. For an account of the printing of the *Doomsday Book*, see 1767 *post*.

fourth is preserved in the Exchequer, which, although it be an abridgement of the former, consists of a very large volume.

There is preserved in the archives of Exeter cathedral, another *Doomsday Book*, usually called from that circumstance, the *Exon Doomsday*; which consists of five counties in the western parts of the kingdom, copied from King William's survey. Its size is a small folio, having 532 double pages of vellum.

Other manuscripts called *Doomsday*, or those of a similar nature, are the *Inquisitio Eliensis*, a register of the property of the monastery of Ely, preserved in the Cottonian library. The *Winton Doomsday*, a survey made in the reign of Henry I. to ascertain the demesnes of Edward the Confessor, in Winchester. The *Boldon Book*, an inquisition into the rents and tenures due in the bishopric of Durham, the name of which was derived from the village of Boldon, near Sunderland, by whose inhabitants its contents were furnished.

1091. The celebrated abbey of Croyland destroyed by fire: the library contained 700 volumes.

When Joffred, abbot of Croyland, resolved to rebuild the church of his monastery in a most magnificent manner in the next century, he obtained a bull, dispensing with the third part of all penances for sin, to those who contributed any thing towards the building of the church, and sent monks into every country to publish the conditions. "By this means," says the historian, "the wonderful benefits granted to all the contributors towards the building, were published to the very ends of the earth, and great heaps of treasure, and masses of yellow gold, flowed in from all countries, upon the venerable Abbot Joffred, and encouraged him to lay the foundation of his church." Nor was this all; for, upon the day of performing that ceremony, an immense concourse of earls, barons, knights, &c., with their ladies and families, attended, each of whom laid a stone and deposited upon it a sum of money, a grant of lands, tithes, or patronages, or a promise of materials and labour in erecting the church; and it is said that more was that day raised in money and grants, than was sufficient to complete the extended building, in the most costly style.

Such were the extraordinary means by which the clergy of those days overcame the minds, and taxed the purses of the credulous laymen. But as there is no earthly good without some alloy, so neither is there any evil without some concomitant good. The very avarice of the clergy, and their disposition to munificence and splendour in their monasteries and churches, were the great means of promoting the cultivation of architecture, weaving, embroidery, painting, working in metals, and all the other fine arts. And it is curious to reflect, that the superstition of the people, was the direct means of diffusing a taste for sculpture. The sway which the churchmen also possessed over the minds of the rich, operated towards the foundation of many seminaries of learning, and the collection of many valuable libraries.

1096. The first army of the Crusaders marched from Europe, for the recovery of Jerusalem.

"What judgment," inquires Mr. Berrington, in his *Literary History of the Middle Ages*, "shall we form of the Crusaders, which were more extravagant in their origin, more contagious in their progress, more destructive in their consequences, than all the follies which had hitherto infuriated or depressed the human mind, and which towards the close of this century, took forcible possession of the western world. The scheme originated in the cultivated mind of Gerbert, in the first year of his pontificate; was nourished by Gregory VII.; and carried into execution by the activity of Urban II. and the eloquence of Peter the Hermit. Jerusalem was taken in 1098." Ignorance and barbarism marked the progress of the Crusaders, and literature in every form was the object of indifference. Schools and convents felt the general contagion; and if a few employed the remonstrances of wisdom, they were unheeded, or despised.

Cassiodorus, to use the words of Gibbon, "after passing thirty years in the honours of the world, was blessed with an equal term of repose in the devout and studious solitude of Squillace." To this place, (the monastery of Mount Cassino, in Calabria) he carried his own extensive library, which he greatly enlarged by manuscripts bought at a considerable expense in various parts of Italy. His fondness for literature spread among the monks; he encouraged them to copy manuscripts; and even wrote a treatise, giving minute directions, for copying with correctness and facility. What he did there seems to have been imitated in the other monasteries of that part of Italy; for fifty religious houses there are mentioned, which afterwards principally supplied the libraries of Rome, Venice, Florence, and Milan, with manuscripts.

1101. Died, Bruno, the celebrated founder of the Carthusian monks, and one of the active promoters of knowledge, by the attention which he paid to the multiplication of books by transcription. He was born at Cologne, about the year 1030, and was descended from an ancient and honorable family. Such was his reputation, that he was considered the ornament of the age in which he lived, and the model of good men. After the legal deposition of Manases, archbishop of Cologne, for simony, Bruno was offered the vacant archbishopric, but preferred a state of solitude. He, with six companions, withdrew into the desert of Chartreuse,\* in the diocese of Grenoble, and selecting a barren plain, in a narrow valley, between two cliffs, near a rapid torrent; surrounded with high craggy rocks, almost all the year covered with snow; there, he and his companions built an oratory, and very small cells, at a little distance from each other, similar to the ancient Lauras of Palestine. Such was the original of the order of Carthusians, which took its name from this desert.

\* The name *Chartreuse* is given to all other convents of this order, which by some has been corruptly called *Charter House*, the term now constantly applied to their ancient residence in London.

The Carthusians practised uncommon austerities; but their chief employment was that of copying books, by which they endeavoured to earn their subsistence, that they might not be burdensome to others. This order, notwithstanding its excessive austerities, was at one period so extensive, that it possessed one hundred and seventy-two convents, and five nunneries; the nunneries were all situate in the Catholic Netherlands. By the rules of the Carthusians, the sacrist was ordered at a certain hour of the day, "to deliver out to the monks, inks, parchment, pens, chalk, and books, to read or transcribe."

1102. The general manners of the age, and the too frequently depraved habits of the monks and priests, proved greatly injurious both to the cause of religion and literature, at this period. The crusades, were every where preached, pilgrimages were undertaken; ceremonies were multiplied; and appeals were made to the decisions of councils, in preference to the scriptures. The canons of synods and provincials, exhibited the lamentable state of monkish and clerical morality. Of these canons, some of which refer to crimes, "obstinately and profligately" practised, of a nature unfit to meet the public eye, the following are selected from Anselm's canons, passed at Westminster, in this year.

Can. 9. "That priests go not to drinking bouts, nor drink to pegs."

Can. 27. "That none exercise that wicked trade, which has hitherto been practised in England, of selling men like beasts."

1102. Roger, King of Sicily, says, in a diploma written in 1115, and quoted by Roccus Pyrrhus, that he had renewed on parchment a charter that

had been written on cotton paper, "in *charta cultume*," in the year 1102, and another in 1112.

1109. *Died* Ingulph, the abbot of Croyland, an Englishman, and who is chiefly celebrated for his *History of the Abbey of Croyland*, in which the reader is interested by the simple and ingenious air of his narrative. From this history, it does not appear, that any distinct period was allotted to study, by the monks of the abbey; but an account is given of a present of forty large original volumes, of divers doctors, to the common library, and of more than a hundred smaller copies of books, on various subjects. Sometimes, also, the names are mentioned of men, said to have been "deeply versed in every branch of literature." As the transcripts of books multiplied, the permission to inspect them, was more liberally conceded than formerly. The historian gives a specimen of their rule on this point: "We forbade," says he, "under the penalty of excommunication, the lending of our books, as well the smaller without pictures, as the larger with pictures, to distant schools, without the abbot's leave, and his certain knowledge within what time they would be restored. As to the smaller books, adapted to the boys, and the relations of the monks, &c. we forbade to be lent more than one day without leave of the prior."

1109, April 21. *Died* Anselm, archbishop of Canterbury, in the 76th year of his age. In 1060, he commenced monk, at the age of twenty-seven, at Bea, in Normandy, under Lanfranc. His progress in religious knowledge was great; but mildness and charity seem to have predominated in all his views of piety. Lanfranc dying in 1089, William II. usurped the revenues of the see of Canterbury, and treated the monks of the place in a most barbarous manner. On the death of his royal persecutor, (August 5, 1100) he was invited to England by Henry I. and although he became the strenuous defender of the papal authority, he seems to have been influenced more by the popular prejudices of his day, than by a spirit of ambition, which certainly formed no part of his character. Besides the canon which he framed at Westminster, *forbidding men to be sold as cattle*, which had till then been practised, another instance of his humane and pious disposition, is given, which is, that one day as he was riding to the manor of Herse, a hare, pursued by the hounds, ran under his horse for refuge; he stopped, and turning to the hunters, said, "This hare reminds me of a sinner upon the point of departing this life, surrounded with devils, waiting for their prey. The hare starting off, he forbade her to be pursued, and was obeyed. The works of Anselm are partly scholastic, partly devotional, and demonstrate him to have been a man of genius, as well as piety.—*Butler's History of the Church of Christ.*

1110. It has been strongly contended by many writers, that Cambridge had no existence as a school of learning, until this year, in the reign of Henry II. Others, have contended, that it was founded either by Sigebert, or Alfred; and some even go back to the fabulous ages. The fact, however, like other ancient facts, is not so clear

\* Such great drinkers were the Danes, who were in England in the time of Edgar, and so much did their bad examples prevail with the English, that he, by the advice of Dunstan, archbishop of Canterbury, put down many ale-houses, suffering only one to be in a village, or small town; and he also further ordained, that pins or nails should be fastened into the drinking-cups, or horns, at stated distances, and whosoever should drink beyond those marks at one draught, should be obnoxious to a severe punishment.—Strutt, in Brand's *Observations on Popular Antiquities.*

Our ancestors were formerly famous for comotation; their liquor was ale, and one method of amusing themselves in this way was with the peg-tankard. I had lately one of them in my hand. It had on the inside a row of eight pins, one above another, from top to bottom. It held two quarts, and was a noble piece of plate, so that there was a gill of ale, half a pint Winchester measure, between each peg. The law was, that every person that drank was to empty the space between pin and pin, so that the pins were so many measures to make the company all drink alike, and to swallow the same quantity of liquor. This was a pretty sure method of making all the company drunk, especially if it be considered that the rule was, that whoever drank short of his pin, or beyond it, was obliged to drink again, and even as deep as to the next pin. And it was for this reason, that in Archbishop Anselm's canons, made in the council of London, A. D. 1102, priests are enjoined not to go to drinking bouts, nor drink to pegs.

William of Malmesbury, speaking of Dunstan, Archbishop of Canterbury, says, "So extremely anxious was he to preserve peace even in trivial matters, that, as his countrymen used to assemble in taverns, and when a little elevated, quarrel as to the proportions of their liquor, he ordered gold or silver pegs to be fastened in the pots, that whilst every man knew his just measure, shame would compel each, neither to take more himself, nor oblige others to drink beyond their proportional share.—*Sharpe's History of the Kings of England.*

as to be wholly free from dispute. But without entering into these controversies, it may be observed that, from small beginnings, Cambridge is become, in the course of time, exceedingly illustrious, and, in rank, the second university in the world. Inferior to Oxford in magnitude, or the number of its colleges, professors, and students, it is, notwithstanding, capable of boasting many noble edifices and foundations. But, though Cambridge must yield the palm, in these respects, to her sister, we suppose she will be unwilling to do it in the valuable attainments of science and literature. She as well as Oxford, hath produced a number of eminent men; not, indeed, as members of a single seminary, but as the ornaments of their country, and the glory of human nature. It has often been said, that Oxford has excelled in the knowledge of the classics, belles-lettres, and the languages; while Cambridge hath made superior progress in philosophy, mathematics, and the severer studies. It is, however, to be sincerely hoped, that prosperity may reign over both; and not only them, but also every other institution, that hath for its aim, the promotion of religion and literature, and that their only contention will be, who shall form the greatest number of characters, that will be an honour to their native land.

1110, *April 19, Died*, St. Robert, abbot of Molesme, founder of the Cistercians. Among the founders, was an Englishman of the name of Stephen Harding, of an honourable and wealthy family. He received his education in the monastery of Sherborn, in Dorchester, and he there laid a very solid foundation of literature, and sincere piety. He travelled into Scotland, and from thence to Paris, and Rome. In 1098, he, with twenty companions, retired to Cîteaux, a marshy wilderness, five leagues from Dijon, where they founded the Cistercian order. In 1109, he was chosen the third abbot of Cîteaux, and with the assistance of his monks, wrote during the same year, a very correct copy of the Latin Bible, for the use of the monastery. The Cistercian monks allotted several hours in the day to manual labour, *copying books* or sacred studies. This most valuable manuscript copy of the Bible is preserved at Cîteaux, in four volumes in folio, written on vellum. He *Died March 28, 1134*.

1110. The *first Mystery*, or Sacred Drama, that was ever attempted in England, at least with which we are acquainted, was exhibited under the direction of Geoffrey, a learned Norman, who had been invited from the university of Paris, to superintend the direction of the school of the priory of Dunstable, where he composed the play of *S. Catharine*, which was acted by his scholars, during this year. Matthew Paris, who first records this anecdote, says, that Geoffrey borrowed copes from the sacrist of the neighbouring abbey of St. Alban's, to dress his characters. He was afterwards elected abbot of that opulent monastery.—*Warton*.

The composers of the Mysteries did not think, that the plain and probable events of the Holy Scriptures, sufficiently marvellous for an audience

who wanted only to be surprised. They frequently selected their materials from books which had more the air of romance, particularly the legends, and pseudo gospels. They also introduced into them the most ludicrous and licentious conversations, and actions.

1112. About this year, the empress Irene, consort of Alexis Comnenes, says, in her rule drawn up for the nuns in a convent she had founded at Constantinople, that she leaves them three copies of the rule, two on parchment, and one on cotton.

1116. So rare and expensive were transcripts of the Sacred Writings, that when any person made a present of a copy to a church or monastery, it was deemed a donative of such value, that he offered it on the altar *pro remedio anime sue*, in order to obtain the forgiveness of his sins. In the collegiate church of Dreux, in France, a Latin bible, fairly written in two vols. folio, is preserved, at the close of which is a Latin deed of gift. The following is a translation:

"Let all the sons of the church, whether present or future, know that Thomas, Seneschall of St. Gervase, hath of his own free will, given this LIBRARY\* to God and the holy protomartyr Stephen, for the remission of his own sins, and those of his wife Ermilina, of his son Herbert, and of his daughters Margaret and Fredeburga; the canons of the said church of the protomartyr, have, therefore, conceded to them the benefits and prayers of the said church, for ever. Offered by the hand of Thomas himself, and by the hand of his wife, on the altar of the protomartyr Stephen, on the day of the Nativity of our Lord, in the year of the Incarnation, one thousand one hundred and sixteen, in the reign of the most pious and sincere worshipper of God, King Louis the sixth, son of King Philip the first."—*Le Long*.

1120. Martin Hugh, a monk, being appointed by the convent of St. Edmund's Bury, to write and illuminate a grand copy of the bible for their library, could procure no parchment for that purpose in England.

Most of the ancient manuscripts now extant are written on parchment. From their appearance, the parchment has evidently been polished; according to ancient authors, by the pumice stone.

They used three kinds,—that of the natural colour; the yellow, bicolor membrana of Persius, which seems to have been so called because one side of the leaf was white, the other yellow; and the purple; the parchment being tinged with that colour, when silver or gold letters were to be used. Vellum, a finer kind of parchment, made from the skins of very young calves, was also prepared and used by the ancients, and in the dark and middle ages, for writing upon. The side of the parchment, which was written upon, was called *Pagina*, or page, from *pango*, to write, or compose; and as only one side of the parchment was, in general, written upon, the written side was termed the *Recto*, and the blank side *Verso*. The blank side of manuscripts, written on single paper, was sometimes used for rough drafts, or

\* The term *Bibliotheca*, or library, was frequently applied to the Bible.—*Townley*.

given to children for copy-books—hence the Latin term, *adversaria*, a note book, loose papers.

The writers of the *Codices Rescripti*, or as they were sometimes called *Codices Palimpsesti*, employed various methods to obliterate the ancient writings; sometimes they pared off the surface of the parchment or vellum manuscripts; sometimes they boiled them in water; at other times discharged the ink by some chemical process, particularly by the use of quick lime; and sometimes only partially defaced the writing with a sponge; or where it was already faded through age, pursued their transcription without further erasure. These processes, so destructive to literature, were commenced at a very early period, for in the canons of the council of truth, held in the seventh century, we find one made expressly against this, and similar practices. "They that tear, or cut the books of the *Old or New Testament*, or of the holy doctors, or sell them to the *depravators of books*, or apothecaries, or any one who will make away with them, unless they be worn out and useless, is excommunicated for a year;—they that buy them, except to keep, or sell again for the benefit of themselves or others, or corrupt them, let them be excommunicated!"

By this barbarous operation, religion and science were equally outraged, and the very words of God obliterated, to make way for such writings, as have yielded but little to the instruction or amelioration of posterity. Nor was the practice confined to the obliteration of the sacred records only; many classical works of high reputation were also sacrificed to gain or superstition. Thus, in the place probably, of some of the finest writers of antiquity, philosophers, poets, historians, and grammarians, we have missals, confessionals, monkish rhymes, and execrable and puerile legends. In the fourteenth and fifteenth centuries the erasure of writing became so common in Germany, that fearing the use of *erased* parchment in public instruments might prove injurious to the public, efficacious measures were adopted to prevent this disorder. Accordingly the patents, by which the emperors elevated persons to the dignity of a count, with power to promote imperial notaries, usually contained the following clause:—"On condition that they shall not employ *old and erased* parchment, but it shall be *virgin*, (i. e. made of abortive skins) and quite new." These literary depredations were occasioned by that extraordinary scarcity and dearth of materials for writing upon, which existed during several ages, in most parts of Europe. Great estates were often transferred from one to another by a mere verbal agreement, and the delivery of earth and stone before witnesses, without any written deed.

Cicero, writing to his friend Trebatius, who had written to him on parchment, which had been before used, betrays a fear that Trebatius had erased his letter, to save the expense of buying new parchment. Angelo Mai, succeeded in deciphering a part of Cicero's *Treatise on Republics*, which had been partially erased, in order to substitute St. Augustine's *Commentary on the Psalms*.

1135. At this time, the manner of publishing the works of authors, was to have them read over for three days successively, before one of the universities, or other judges appointed by the public; and if they met with approbation, copies of them were then permitted to be taken, which was usually done by monks, scribes, illuminators, and readers, who were brought up, or trained to that purpose, for their sole maintenance and support.

1153. Petrus Mauritius, called the venerable, a cotemporary of St. Bernard, who died on this day, has the following express passage on linen rag paper:—"The books we read every day," says he, in his *Treatise against the Jews*, "are made of sheep, goat, or calf skin; or of oriental plants, that is the papyrus of Egypt: or of rags: *ex rasuris veterum pannorum*." These last words signify undoubtedly the paper, such as is now used.

There is no country which has not had its learned and elaborate inquirers as to the means through which Europe became acquainted, sometime in this century, with the article of paper. Casiri, however, whilst employed in translating Arabic writers, has discovered the real place from which paper came. It has been known in China, where its constituent part is silk, from time immemorial. In the thirtieth year of the Hegira, (in the middle of the seventh century) a manufactory of similar paper at Samarcand; and in 706, fifty-eight years afterwards, one Youzef Amrû, of Mecca, discovered the art of making it with cotton, an article more commonly used in Arabia, than silk. This is proved by the following passage from Muhamad Al Gazeli's "*De Arabicarum Antiquitatum Eruditione*:"—"In the ninety-eighth year of the Hegira," says he, "a certain Joseph Amrû first of all invented paper in the city of Mecca, and taught the Arabs the use of it." And as additional proof, that the Arabians, and not the Greeks of the lower empire, as it has long been affirmed, were the inventors of cotton paper, it may be observed, that a Greek of great learning, whom Montfaucon mentions as having been employed in forming a catalogue of the old MSS. in the king's library, at Paris, in the reign of Henry II. always calls the article "*Damascus Paper*." The subsequent invention of paper, made from *hemp or flax*, has given rise to equal controversy. Maffei and Tiraboschi have claimed the honour in behalf of Italy, and Scaliger and Meerman, for Germany; but none of these writers adduce any instance of its use anterior to the 14th century. By far the oldest in France is a letter from Joinville to St. Louis, which was written a short time before the decease of that monarch in 1270. Examples of the use of modern paper in Spain, date from a century before that time: and it may be sufficient to quote, numerous instances, cited by Gregorio Mayans, namely, a treaty of peace concluded between Alfonso II. of Aragon, and Alfonso IX. of Castile, which is preserved in the archives at Barcelona, and bears date in the year 1178; to this we may add, the *fueros* (privileges) granted to Valencia by James the Conqueror, in 1251.

The paper in question came from the Arabs, who, on their arrival in Spain, where both silk and cotton were both equally rare, made it of hemp and flax. Their first manufactories were established at Xativa, the San Felipe of the present day; a town of high repute in ancient times, as Pliny and Strabo report, for its fabrication of cloth. Edrisi observes, when speaking of Xativa, "Excellent and incomparable paper is likewise made here." Valencia too, the plains of which produce an abundance of flax, possessed manufactories a short time afterwards; and Catalonia was not long in following the example. Indeed the two latter provinces at this moment furnish the best paper in Spain. The use of the article, made from flax, did not reach Castile until the reign of Alfonso X. in the middle of this century, and thence it cannot be questioned that it spread to France, and afterwards to Italy, England, and Germany. The Arabic manuscripts, which are of much older date than the Spanish, were most of them written on satin paper, and embellished with a quantity of ornamental work, painted in such gay and resplendent colours, that the reader might behold his face reflected as if from a mirror.

Dr. Robertson, remarks, "that the invention of paper from linen rags, preceded the dawning of letters, and improvement in knowledge, towards the close of the eleventh century, and that by means of it, not only the number of manuscripts increased, but the study of the sciences was wonderfully facilitated." So far, indeed, as respects material, after this period the European world was as nearly as well off for the means of circulating and transmitting knowledge, as we are of the present day. But we must never lose sight of this fact, that all books were manuscript.

"As to the origin of the paper we now use, nothing can, with certainty," says Father Montfaucon, "be affirmed concerning it." Thomas Demster, in his *Glossary, or the Institutes of Justinian*, says, that it was invented before the time of Accursius, who lived in the beginning of the thirteenth century. Notwithstanding he there speaks of bombycine paper, there is reason to believe he also comprehends under that name, the linen-rag paper, which is much like cotton paper. In some countries both were equally used; as in Sicily, the state of Venice, and perhaps others. Several editions of Aldus Manutius, made at Venice, are on cotton paper: the proximity of Greece had, no doubt, introduced the use of it there.

Paper, fabricated from linen rags, is now used throughout Europe, and almost every part of the world where Europeans have penetrated; and is a much more valuable material for writing upon, than the cotton paper. We are ignorant both of the invention and of the date of this important discovery. Dr. Prideaux delivers it as his opinion, that linen paper was brought from the East, because many of the oriental manuscripts are written upon it. Mabillon believes its invention to have been in the twelfth century.

The inventor of the linen rag paper, whoever he was, is entitled to the gratitude of posterity,

who are enjoying the advantages of the discovery. The art of printing would have been comparatively of little importance without having the means of procuring a proper material to receive the impressions; while the papyrus was the only kind of paper, it was impossible to have procured it in sufficient quantities to have made large editions of books, without which the great bulk of mankind would for ever have retained the ignorant barbarity of the dark ages; the cotton paper, though an improvement, was but a rude and coarse article, unfit for any of the nice purposes, to which paper is now applied. The perfection of the art of paper-making consisted in finding a material which could be procured in sufficient quantities, and would be easy of preparation.

A more common, or economical substance could not be conceived, than the tattered remnants of our clothes, linen worn out and otherwise incapable of being applied to the least use, and of which the quantity every day increases. Nor could a more simple labour be imagined than a few hours trituration by mills. The dispatch is so great, that it has been observed by a French writer, that five workmen in a mill may furnish sufficient paper for the continued labour of 3,900 transcribers. This was on the supposition of the process being conducted upon the old system of hand labour, but by the improved system of our modern mills, when the paper is produced in a constant and regular sheet by a curious machine, instead of the workman making sheet by sheet separately, the quantity produced is infinitely greater.

The paper which had been for a long time used by the Romans and Greeks, was made of the bark of an Egyptian aquatic plant. According to the description Pliny after Theophrastus, gives of it, its stalk is triangular, and of a thickness that may be grasped in the hand; its root crooked; and it terminates by fibrous bunches composed of long and weak pedicles. It has been observed in Egypt by Guilandinus, an author of the 15th century, who has given a learned commentary on the passages of Pliny, where mention is made of it; and it is also described in Prosper Alpinus and in Lobel. The Egyptians call it *berd*, and they eat that part of the plant which is near the roots. A plant named *papero*, much resembling papyrus of Egypt, grows likewise in Sicily; it is described in Lobel's *Adversaria*. Ray, and several others after him, believed it was of the same species; however, it does not seem that the ancients made any use of that of Sicily; and M. de Juffieu thinks they ought not to be confounded, especially by reading, in Strabo, that the papyrus grew only in Egypt, or in the Indies. Pliny, Guilandinus, Montfaucon, and the Count de Caylus, are of his opinion.

Paper made of bark, is said to have been anciently used for the imperial protocols, in order to render the forging of false diplomas more difficult. Montfaucon notices a diploma, or charter, written on bark, in the Longobardic character, about the beginning of the eighth

century, preserved in the library of Antony Capello, a senator of Florence. It is a judgment given at Reate, about guardianship. The parties contending are either Goths, or, as is more likely, Lombards; the judges are Romans. It is remarkable, that the date was originally inserted in it; but has been defaced by a mouse gnawing it, as it lay rolled up; it is, however, one of the first charters in which the Christian computation has been used.

The Egyptian papyrus was applied to the purpose of writing upon, before the preparation of parchment, and its application to the same use was known. The common opinion, derived from the authority of Varro and Pliny, that the preparation of parchment from skins, owes its origin to a dispute between Eumenes, King of Pergamus, and one of the Ptolemies, concerning their respective libraries, in consequence of which the Egyptian King prohibited the exportation of papyrus, and Eumenes inventing parchment, is certainly unfounded. Its manufacture and use, are mentioned by Josephus, Diodorus Siculus, and other authors, as having been known long before the age of the Ptolemies: the name given to it by the ancients, however, *Charta Pergamena* (paper of Pergamus) renders it highly probable that its mode of preparation was improved, or its manufacture and use, was more general there, than in other places.

It is not known when the papyrus was first manufactured into paper, but there were certainly, at a very early period, at least 300 years before the time of Alexander, manufactories of it at Memphis. It was highly useful to the ancient Egyptians on many accounts, besides that of supplying them with paper, from the pith, they extracted a sweet nutritive juice; from the harder, and lower parts, they formed cups, staves, and ribs of boats; from the upper, and more flexible parts, were manufactured icloth, sails, ropes, shoes, wicks for lamps, &c. Pliny says, that the leaves of the papyrus were suffered to dry in the sun, and afterwards distributed according to their different qualities fit for different kinds of paper; scarce more than twenty strips could be separated from each stalk: and Bruce, who succeeded in making it, both in Abyssinia and Egypt, has offered several very curious observations on the nature's history of the papyrus, in the seventh volume of his *Travels*, 8vo edition, page 117, &c. In one point, he differs from the account given by Pliny, of the mode of manufacturing paper from it.

The internal parts of the bark of this plant were made into paper; and the manner of the manufacture was as follows:—Strips, or leaves of every length that could be obtained, being laid upon a table, other strips were placed across, and pasted to them by the means of water and a press; so that this paper was a texture of several strips; and, it even appears that, in the time of the Emperor Claudius, the Romans made paper of three lays.

The paper of the Romans never exceeded thirteen fingers-breadth, and this was the finest and

most beautiful, as that of Fannius. In order to be deemed perfect, it was to be thin, compact, white, and smooth; which is much the same with what we require in our rag paper. It was sleeked with a tooth or shell; and this kept it from soaking the ink, and made it glisten. The Roman paper received an agglutination as well as ours; which was prepared with flour of wheat, diluted with boiling water, on which were thrown some drops of vinegar; or with crumbs of leavened bread, diluted with boiling water, and passed through a bolting cloth. Being afterwards beaten with a hammer, it was sized a second time, put to the press, and extended with the hammer. This account of Pliny is confirmed by Cassiodorus, who, speaking of the leaves of the Papyrus used, in his time, says, that they were white as snow, and composed of a great number of small pieces without any junction appearing in them, which seems to suppose necessarily the use of size. The Egyptian papyrus seems even to have been known in the time of Homer; but it was not, according to the testimony of Varro, until about the time of the conquest of Alexandria, that it began to be manufactured with that perfection, which art always adds to nature.

For a fuller account of the early use of paper, see Massey, upon the *Origin of Writing*; Robertson's *History of Charles V.* in the notes to vol. 2, and *Rees's Encyclopædia*, article paper.

1154. Another Anglo-Saxon record, which in national importance may almost claim an equality with the *Doomday Book*, is the celebrated Saxon Chronicle, or, as it might be more properly denominated, from the extensive nature of its contents, the Saxon Annals, is an original and authentic record of the most important transactions of our Saxon ancestors, from their first arrival in Britain down to the year 1154; but the register commences with an introduction, containing a memoranda of the great events and periods, from A. D. 1. compiled from various sources.

The names of the writers of these Annals can be little more than conjectured: but Professor Ingram appears to imagine that the Kent and Wessex Chronicles, might have been commenced under the direction of the archbishops of Canterbury, or perhaps beneath the superintendence of archbishop Plegmund, until his decease in 923; whilst he also seems to conceive it not impossible that King Alfred himself might have written the genealogy of the West-Saxon Kings, and a separate chronicle of Wessex. From their time, he considers, until a few years subsequent to the Norman Invasion, the Saxon Annals were carried on by various hands under the patronage of such characters as archbishops Dunstar, Ælfric, &c. down to the election of William de Waltham to be abbot of Peterborough, in A. D. 1154. There are several authentic manuscript copies of the Saxon Chronicle, which are preserved in the British Museum, the Bodleian, and the Dublin Libraries, and one of great authority, written about the eighth or ninth century, which is kept at Corpus Christi College, Cambridge,

Of all these, a particular description, with fac-similes, will be found in Professor Ingram's translation of the Saxon Annals, where also further references, upon this particular subject are given.

1157. *Died*, Peter de Clugny, who by scholastic writers is called the *venerable*; he once wrote to a friend, exhorting him to assume the *Pen*, instead of the plough, and *transcribe the Scriptures*, instead of tilling the land. Aldhelm, who died May 25, 709, wrote a short poem on a writing pen. Writing pens are mentioned by Alcuin.

1159, *Sept. 1. Died*, Pope Adrian the Fourth, (*Nicholas Brakespere*) an Englishman, who by a train of singular adventures, had risen from the lowest condition to the papal dignity; to which he was elected on the third of December, 1154. He is the first and only Englishman who has worn the triple diadem. In 1155 he sent from Rome for the use of the English people, who were directed to commit them to memory, metrical versions of the *Creed* and *Lord's prayer*. These curious proofs of the high regard of the Roman pontiff for his countrymen, are here copied from *Stow's Chronicle*.

#### THE CREED.

I beleue in God Fadir almighty shipper of heuen and earth,  
And in Jhesus Crist his onlethi son vre Louerd,  
That is iuange thurch the holy ghost: bore of Mary malden,  
Thodele pine vnder Pounce Pilat, picht on rode tree, dead  
and yburild,  
Licht into helle, the thridde day from death arose,  
Steich into heauen, sit on his fadir richt honde God almighty  
Then is comide to deme the quikke and the dede,  
I beleue in the holy ghost,  
All holy chirche,  
Mone of alle halilwen: forgiuenis of sioe,  
Fleisa vprising,  
Lif withuteo end, Amen.

#### THE LORD'S PRAYER.

Vre fadir in heuene riche,  
Thi name be halied euerliche,  
Thou bring vs to thi micheil bliscce,  
Thi will to wirche thu vs wisse,  
Als hit is in heuene idon,  
Euer in earth ben hit also,  
Thatholi bred thet iasteth ay,  
Thou sendhit ous this like day,  
Forgiue ous all that we hauid don,  
Als we forgiuet vch other mon,  
He let us falle in no founding,  
Ak scilde us fro the foule thing, Amen.

This singular instance of a pope of Rome deeming it necessary to transmit to England, a vernacular version of the *Creed* and *Pater Noster*, sufficiently indicates the low state of religious information among the inferior classes of the people.—*Townley*, vol. 1. p. 406.

1160. Henry II. by the evil council of Roger de Mowbray, desiezed the monks of Kirkstall, near Leeds, in Yorkshire, of their best estate, the Grange of Micklethwaite. Ralph Hogeth, the abbot, in order to conciliate the king's favour, presented him with a *gold chalice*, and a *manuscript of the Gospels*. This caused a violent dispute between the abbot and his monks; and may be adduced as an instance of the extreme scarcity of manuscripts in the middle ages. A *copy of the Gospels* here accompanied a *gold chalice*, as a propitiatory offering to a king. If it was their *only copy* which is far from being im-

probable, then was it indeed, to be deplored.—*Whitaker's History of Craven*.

1161. Two churches were given to the monks of Ely, for the use of the *scriptorium*, by Niger. R. de Paston, gave a grant to Bromholm abbey, in Norfolk, of 1s. per annum, a rent charge on his lands, to keep their books in repair.

1164. Henry II. sent a splendid embassy to the Pope in this year, consisting of one archbishop, four bishops, three of his own chaplains, the Earl of Arundel, and other three of the greatest barons of the kingdom. When these ambassadors were admitted to an audience, and four of the prelates had harangued the pope and cardinals in Latin, the Earl of Arundel stood up and made a speech in Latin, which he began in this manner—"We, who are illiterate laymen, do not understand one word of what the bishops have said to your holiness!" Could Henry, who was himself a learned prince, have found men of any learning whatever amongst his nobility, we may be sure he would have employed them upon such an occasion. The truth is, that the general ignorance of the laity of all ranks was so well known, that the historians of the period distinguished them and the clergy by the respective epithets of *laici* and *literati*. All the learned men, in short, belonged either to the secular or regular clergy. They were the only lawyers, the only physicians, the only scholars in the kingdom. The great bulk of the nation, rich and poor, were ignorant of every science but that of shedding blood—upon more refined and scientific principles certainly, than formerly, but no way different in the result.

1170. The tithes of a rectory were appropriated to the cathedral convent of St. Swithin, at Winchester, for the use of the *scriptorium*. The *scriptorium* at St. Edmund's-Bury, was endowed with two mills.

1171. In the records of the exchequer we find an entry purporting that on the 17th year of the reign of Henry II. the sheriffs of London, paid by the King's order, "xxijs. for gold to gild the Gospel used in the King's chapel."—*Madox's History of the Antiquities of the Exchequer*.

1174. Walter, prior of St. Swithin's at Winchester, afterwards elected abbot of Westminster, purchased of the canons of Dorchester in Oxfordshire, the homilies of St. Bede and St. Augustine's psalter, for twelve measures of barley, and a pall, on which was embroidered in silver, the history of St. Birinus converting a Saxon king.—*Warton*.

1179. *Died*, Peter Waldo, one of the earliest reformers of the church. He was an opulent merchant, and citizen of the city of Lyons; and although, he was not the founder, as has been supposed, of the Waldensian churches, he became one of their most considerable friends and benefactors; and, by his writings, his preachings, and his sufferings, defended their cause, and extended their influence. It is certain, that to Waldo, with the assistance of others, the Christian world in the West, is indebted for the first translation of the bible into the popular language, or French.

1198. The Festival of Fools was instituted at Paris on *de jour de l'an* 1198, and continued prosperously for 240 years. The merits of this rich solemnity originally belonged to St. Nicholas, and the "Lords of Misrule," in our inns of court, with the "Abbots of Unreason," seem to have acquired their dignity from the same motive, that of exploding by a just ridicule the Saturnalian mummery, and the priestcraft of the Druids.

1203. In the summer of this year, the Crusaders appeared before Constantinople; and spent the following winter in the suburbs of Galata. The city was taken by storm, and suffered all the horrors of pillage and devastation. "In order to insult the fallen city, the manners, the dress, the customs of the Greeks were exposed to ridicule or scorn, in ludicrous exhibitions; and *pens, inkstands and paper, were displayed in the streets, as the ignoble arms or contemptible instruments of a race of students and of scribes.* Paper or parchment held out no temptation to avarice; and the pilgrims feeling no predilection for science, particularly when locked up in an unknown tongue, would not be solicitous to seize or purloin the works of the learned; but we cannot doubt that many perished in the three fires which raged in that city; for some writings of antiquity, which, are known to have existed in the twelfth century, are now lost. The effects of these *Holy Wars*, as they were called, became visible in a variety of forms, and the crusades may be regarded as the date, when *Chivalry* first assumed a systematic appearance; knighthood was then invested with extraordinary splendours; and the science of heraldry may be traced to Palestine. In every country of Europe, the Christian knight drew his sword during the celebration of mass, and held it out naked, in testimony of his readiness to defend the faith of Christ.

1205, April 29. King John, at the end of an order for the transmission of various quantities of wine, to Northampton and Windsor, adds, "send us immediately, upon the receipt of these letters, the *Romance of the History of England.*"

1205. Francis of Assize, who founded the order of Franciscans,\* in this year, says of himself, that he was tempted to have a *book*; but as this seemed contrary to his vow, which allowed him nothing but *roats, a cord, and hose, and in case of necessity only, shoes*; he, after prayer, resorted to the gospel, and meeting with that sentence, "It is given unto you to know the mysteries of the kingdom of heaven, but to them it is not given;" (MATTHEW xiii. 11.) concluded that he should do well enough without books, and suffered none of his followers to have so much as a bible, or breviary, or psalter. —Gataker, *on the Nature and Use of Lots.*

1208, March 29. Immediately after the publication of the interdict against King John, we find that monarch, giving a receipt to the sacrist of Reading, for various books which had been in the custody of the abbot of that monastery. The

books were "six books of the bible, in which were contained all the *Old Testament*; the first part of the Bible, and the Sacraments of Master Hugh de St. Victor; the Sentences of Peter Lombard; the *Epistola de Civitate Dei* of St. Augustine; Augustine upon the third part of the psalter; the books of Valerian de Moribus; the treatise of Origin, upon the Old Testament; and the book of Cardidus Arianus ad Marium. A few days afterwards, the King acknowledged to have received at Waverley, from Simon, his chamberlain, his book called Pliny, which had also been in the custody of the abbot of Reading.

1214. The first obscure mention of academical degrees, in the university of Paris, from which the other universities in Europe have borrowed most of their customs and institutions. In 1231, academical degrees were completely established.

1215, June 29, (*Trinity Friday*) King John subscribes *MAGNA CHARTA*, or the great Charter of Liberties, which is the basis and palladium of British freedom, upon this day, at Runmeade, a meadow so named on the banks of the Thames, between Staines and Windsor, (now the Egham race course.) "On the one side, stood Fitz Walter, and the majority of the barons and nobility of England: on the other, sate the King, accompanied by eight bishops, Pandulf, the papal envoy, and fifteen gentlemen; these attended as his majesty's advisers." It is a curious fact, and one which marks the state of literary knowledge, even amongst the nobility, in those days, that out of the twenty-six barons who subscribed this important bill of rights, only *three* could write their own names, the signatures of the remainder, according to the term, only made their marks. Most of the provisions expired with that system, for which they were calculated; but at the same time, they were highly useful. They checked the most galling abuses of feudal superiority, and they gave a new tone to English legislation.

It is to the English barons, remarks the illustrious Chatham, that we are indebted for the laws and constitution we possess; their virtues were rude and uncultivated, but they were great and sincere; their understandings were as little polished as their manners; but they had hearts to distinguish the rights of humanity, and they had the spirit to maintain them.

This memorable instrument was *ratified* four times by Henry III. the son and successor of John; twice by Edward I.; fifteen times by Edward III.; seven times by Richard II.; six times by Henry IV.; and once by Henry V.\*

Until the reign of King John, markets and fairs were always held in the church-yard, and on a Sunday. Newark-upon-Trent, in Nottinghamshire, was the first place whose inhabitants petitioned that monarch to change the market-days from Sunday to Wednesday, on which day

\* Sir Robert Cottin, one day at his tailor's, discovered that the man was holding in his hand, ready to cut up for measures, an original *Magna Charta*, with all its appendages of seals and signatures. This anecdote is told by Colomies, who long resided in this country; and an original *Magna Charta* is preserved in the Cottonian library, in the British Museum, exhibiting marks of dilapidation.

\* The Dominicans, from the colour of their upper garments were called *Black Friars*; and the Franciscans were called *Grey Friars*.

it is yet held. King John, upon whose head a pile of crimes, crowned by pusillanimity, died Oct. 19, 1216, at Newark Castle, aged 57 years, and was buried in Worcester cathedral.

From the time of the Conquest, to this period, upwards of five hundred monasteries were built, in each of which a school was kept; thus increasing both the number of teachers and students, multiplying the inducements to pursue knowledge, and more than all, making books much more common and attainable, than at any former period. The circle of the sciences was, of course, much enlarged beyond the *trivium* and *quadrivium*, of former ages, and each was reduced to a more distinct purpose and method.

1216. Henry, in his *History of England*, states that the following parts of learning were cultivated in some degree in Britain, during the period from 1066 to 1216:—grammar, rhetoric, logic, metaphysics, physics, ethics, scholastic divinity, the canon law, arithmetic, geometry, astronomy, astrology, and medicine. He also gives the following anecdote, to shew the trifling questions that were agitated by the loquacious of this period. "When a hog is carried to market with a rope tied about its neck, which is held at the other end by a man, whether is the hog carried to market by the rope or the man."

1220. At this period, there were seventy public libraries in Arabian Spain, which contained 250,000 volumes. The Jews of Spain also, were much devoted to literature: Leo Africanus speaking of booksellers, alludes to one Jewish philosopher of Cordova, who, having fallen in love, turned poet: his verses, he adds, were publicly sold in a street in that city, which he calls the bookseller's street. Mr. Hallam says, booksellers appear in the latter part of this century; and quotes Peter of Blois, who mentions a law book which he had bought from a public seller of books.

1225. Roger de Insula, dean of York, gave several Latin bibles to the university of Oxford, with a condition, that the students who perused them, should deposit a cautionary pledge. The library of that university, before 1300, consisted only of a few tracts, chained or kept in chests in St. Mary's church.—*Warton*.

1226. In the great revenue-roll of John Gervys, bishop of Winchester, there is an item of *five shillings*, expended for parchment in one year. Wheat was from two to three shillings a quarter, or eight bushels.

1228, July 9. Died Stephen Langton, archbishop of Canterbury, to which he was nominated by Innocent III. in 1207, vacant by the death of Hubert Walter, and was consecrated by the pope himself at Viterbo. This nomination being regarded as an usurpation of the rights of the king of England, and by the monks and bishops of his province, met with a violent resistance from the king. The pope enraged at the disappointment, laid both the king and kingdom under an interdict, which was pronounced by the bishops of London, Ely, and Worcester, March 28th, 1208. At length, dispirited by opposition from the pope and foreign princes from abroad, and from the

barons, and many of the clergy and people at home, the king submitted to the election of Stephen, and purchased his peace with the Roman pontiff, by a charter granted to certain prelates, and the payment of 40,000 marks. In 1222, the archbishop called a council at Oxford, at which a number of constitutions were framed, from which a few are extracted, as illustrating the practice and manners of the age.\*

On various occasions the archbishop discovered a haughty independence, particularly in his conduct towards his sovereign and the pope. The irritated pope excommunicated and suspended him, and reversed the election of his brother Simon Langton, who had been chosen to the see of York. Prior, however, to the calling of the council at Oxford, these violent measures appear to have been relinquished.

Stephen Langton was by birth an Englishman. He received his education at Paris, and became so eminent for scholastic learning, that he was created chancellor of the university of Paris, canon of Paris, and dean of Rheims; and on his being called to Rome, he was placed among the cardinals, by Innocent III. He was author of Commentaries on many of the books of the Old and New Testament, and many other works. He died at Slindon, in Sussex, and was buried in the cathedral at Canterbury.

1229. The council of Toulouse held in this year, by Romanus, cardinal of St. Angelo, and the pope's legate, formed the *first court of Inquisition*, and published the first canon which forbade the scriptures to the laity.

1229, Dec. 7. On this day, the Boy Bishop, in the chapel at Heton, near Newcastle-upon-Tyne, said vespers before Edward I. on his way to Scotland, who made a considerable present to him and the other boys who sang with him. In the reign of Edward III. he received nineteen shillings and sixpence, for singing before the king, in his private chamber on Innocents' day.

The ceremony of the Boy Bishop, is supposed to have existed not only in collegiate churches, but in almost every parish. A statue of the collegiate church of St. Mary Offrey, in 1337, retained one of them within the limits of its own parish. Dean Colet† in the statutes of the school founded by him in 1510, at St. Pauls, expressly orders that his scholars shall, every Childermas (Innocents') day, come to Paul's Church, and hear the Chylde-Byshop's sermon: and after be

\* Constit. 21. We forbid with the terror of anathema any one to retain robbers in his service, for committing robberies: or knowingly to let them dwell on his lands.

31. Let not clergymen, that are beneficed, or in holy orders, publicly keep concubines in their manse, (or parsonage houses,) or have public access to them with scandal, any where else.

36. We decree that nuns, and other religious women, wear no silk veils, nor needles of silver or gold in their veils; that neither monks nor canons regular, have girdles of silk, or garnished with gold or silver; nor use burnet, (artificial brown) or any irregular cloth. Let the dimensions of their clothes be commensurate to their bodies, not longer than to cover their feet, like Joseph's coat, which came down to the ankles. Only the nuns may wear a ring, and but one.

† John Colet, Dean of St. Paul's, died Sept. 16, 1519, and was buried in St. Paul's.

at the high mass, and each of them offer a penny to the Chylde-Bishop: and with them the maisters and surveyors of the scole! By a proclamation of Henry VIII. dated July 22, 1542, the show of the Child Bishop was abrogated, but in the reign of Mary it was revived. One of the flattering songs sung before that queen by the Boy Bishop and printed, was a panegyric on her devotion, and compared her to Judith, Esther, the queen of Sheba, and the Virgin Mary. The accounts of St. Mary at Hill, London, in the 10th Henry VI. and for 1549 and 1550, contain charges for the Boy Bishops of those years. At this period his estimation seems to have been undiminished; for on November 13, 1554, the Bishop of London issued an order to all the clergy of his diocese to have a Boy Bishop in procession; and in the same year he went about St. Andrew's, Holborn, and St. Nicholas Olaves, in Bread-street, and other parishes. In 1556, the Boy Bishop again went abroad singing in the old fashion, and was received by many ignorant but well-disposed persons into their houses, and had much good cheer. Warton affirms that the practice of electing a Boy Bishop subsisted in common grammar schools; for St. Nicholas, as the patron of scholars has a double feast at Eton College, where, in the papal times, the scholars (to avoid interfering as it should seem with the Boy Bishop of the college on St. Nicholas' day) elected their Boy Bishop on St. Hugh's day, in the month of November. Brand is of opinion that the anniversary montem at Eton, is only a corruption of the ceremony of the Boy Bishop and his companions, who by the edict of Henry VIII. being prevented from mimicking any longer their religious superiors, gave a new face to their festivity, and began their present play at soldiers, and electing a captain. Even within the memory of persons alive when Brand wrote, the montem was kept in the winter time a little before Christmas, although it is now kept on Whit-Tuesday. A former provost of the school remembered when the scholars were accustomed to cut a passage through the snow from Eton to the hill, called Salt-hill. After the procession had arrived, the chaplain with his clerk used to read prayers, and then, at the conclusion, the chaplain kicked the clerk down the hill.

The procession of the boy bishop took place at Nicholas tide, and according to Strype, "made the people so fond of keeping this holiday, that every parish almost had its St. Nicholas."\* For a full and interesting account of the boy bishop, see Hone on *Mysteries and Religious Shows*. Lond. 1823, 8vo.

1239. One of the earliest specimens of paper

from linen rags, which has yet been discovered, is a document, with the seals preserved, with this date, and signed by Adolphus, count of Schaumburg. It is preserved in the university of Rintelu in Germany. But Cassiri, positively affirms, that there are manuscripts in the palace of the Escorial, near Madrid, both upon cotton and linen paper, written prior to the thirteenth century.

1240. The numeral figures which we now employ, began to be made use of in Europe, for the first time, in the Alphonsean tables, made by the order of Alphonso, son of Ferdinand, King of Castile; who employed for this purpose, Isaac Hagen, a Jew singer, of the synagogue of Toledo, and Abel Ragel, an Arabian. About the year 900, the Arabs took them from the Indians; and the other Eastern nations received them through the Spaniards, a short time after their invasions.

These ciphers, in the indexes to French books, are frequently called *Arabic-ciphers*, to distinguish them from *Roman numerals*.

1246. In a synod held at Leige, by Hugo de S. Caro, or according to his French name, Hugues de St. Cher, the feast of *Corpus Christi*\* was first ordered to be celebrated. Hugo deserves to be placed in the first rank of sacred critics, and patrons of literature. To him we are indebted for the celebrated *Correctorium Bibliorum* of the Dominicans; the *first Concordance* of the Holy Scriptures, that is of the Vulgar Latin bible; a *Comment on the Old and New Testament*; and, according to dean Prideaux, for the division of the bible into chapters. He was born at Vienne, in Dauphiny, studied at Paris, where he became a Dominican friar in 1225. Gregory IV. sent him to Constantinople, to procure, if possible, an union of the Greek and Roman churches. On his return, he was chosen provincial of France, and in 1245, he received the dignity of a cardinal from Innocent IV. being the first of the Dominicans who obtained that honour. He died March 14, 1262, and was buried at Lyons.

1250. A manuscript containing the Proverbs of Solomon, Ecclesiastes, Canticles, and Wisdom, and the prologues, has the following anathema at the beginning: "This book belongs to the monastery of Rochester, given by the prior John; if any one remove it, or conceal it when taken away, or fraudulently deface this inscription, let him be anathema. Amen."

The prior and convent of Rochester, declare, that they will every year, pronounce the irrevocable sentence of damnation on him who shall purloin or conceal a Latin translation of *Aristotle's Physics*, or even obliterate the title.

\* The design of the annual feast of *Corpus Christi* was to impress upon the minds of the people a belief of the reality of transubstantiation. Besides a superb procession through the streets on the day of the celebration, there was commonly a *Mystery*, or interlude, which sometimes lasted eight days. It was confirmed by different popes, and various privileges and indulgences were granted to those who honoured it by their devotions. Thus Pope Urban, in his bull of 1364, "To encourage the faithful to honour and celebrate this great feast, we grant to all that do confess their sins, and are truly penitent, who shall be found in the church, at the *Matins* (midnight) of the said feast, one hundred days' pardon, and as many to those who shall devoutly assist at mass."—*Butler's Moveable Feasts*.

\* The procession of the boy bishop was instituted in honour of St. Nicholas, the patron of scholars and of children, the invocative saint of mariners, and likewise the patron of the parish clerks of London. It is said of St. Nicholas, that, "being present at the council of Nice, among 318 bishops, he shone among them all with so much clarity, and opinion of sanctity, that he appeared like a sun among so many stars." He was an eminent Grecian archbishop, died December 6, 342.

1250. A close roll of Henry III. commands brother R. de Sanford, master of the knights of the Temple in England, to allow Henry of the wardrobe, the bearer, to have for the queen's use, a certain great book which was in their house in London, written in the French dialect, containing the *Exploits of Antiocha*, and of the *Kings*, and others. This work was probably a French translation of a Latin heroic poem, entitled the *War of Antioch*; or the third *Crusade of Richard I.* written by Joseph of Exeter, otherwise called Josephus Iscanus; and was perhaps wanted for the queen to elucidate the paintings in the Antioch chamber. It is observable, that all the books mentioned in these Close Rolls, are either in the Latin or French language. Indeed no English literature of that time, existed, if we except metrical chronicles and romances, chiefly translations of a very marvellous character, a few of which have of late years, been printed from manuscripts still extant.

1253. Henry III. orders Edward, the son of Otho of Westminster, to cause to be purchased certain church-service books, and to give them to the constable of Windsor castle, that he might deliver them by his own hand, to the officiating chaplains in the new chapel at Windsor, to be used by them; and they were then to be held responsible to the constable for this "library," consisting of eight books.

1253, Oct. 4. Died Robert Grosseteste, or Grosthead, bishop of Lincoln, to which he was called in 1235. He seems to have been a person of obscure parentage, and born about the year 1175, at Stradbroke, in Suffolk. He received his education at Oxford, and afterwards went to Paris, where he acquired those stores of learning, which subjected him, like his friend Roger Bacon, to the calumny of some of his contemporaries, who accused him of necromancy, or magic. After his election, to the see of Lincoln, he religiously devoted himself to the duties of his high office, and adopted vigorous measures for the reformation of abuses, and for the instruction of the clergy and people of his diocese, who were lamentably deficient in the first rudiments of Christian knowledge; and, it is said, that he was a decided friend to vernacular translations of the scriptures. He was an universal scholar, and no less conversant in polite letters, than in the most abstruse sciences. He abolished the *Feast of Asses*, which used to be annually celebrated in Lincoln cathedral on the feast of the circumcision; also miracle plays, and other games and pastimes on holidays.

Bishop Grosseteste, and Roger Bacon, in particular, merited the gratitude of the age in which they lived, by their decided opposition to every encroachment in church or state, and their ardent desire to promote biblical and scientific acquisitions among all classes.

A list of the bishop's works is given in Cave's *Historia Litterarum*, Lond. 1688.

1259, Oct. 13. The parliament assembles, in which a project of reform was proposed, approved, and ordered to be enforced by the judges in their circuits. Its principal objects were to secure the

inferior tenants from the oppression of their lords, and to purify the administration of justice.—Henry III. reigned from Oct. 19, 1216, to Nov. 16, 1272, and was buried at Westminster.

1260. Elizabeth, the wife of Charles Robert King of Hungary, mentions two *Breviaries* in her will, one of which she bequeathed to her daughter in law, and the other to Clara von Puker, but with this stipulation, that after her death, it should belong to a monastery at Buda.

1263. The revenues of Baliol college, Oxford, founded at this period, were so small, as to yield only eight-pence per week to each scholar, but were afterwards so increased, by the benefaction of Sir P. Somerville, as to raise the weekly allowance of the fellows and scholars to eleven-pence, and in case of dearth, to fifteen-pence.

1264. According to the statutes of Merton college, Oxford, founded in this year, the allowance to the scholars, was only fifty shillings per annum, for all necessities.

1270, March 22. Died Louis IX. King of France. He displayed the magnanimity of the hero, the integrity of the patriot, and the humanity of the philosopher. His biographer, who had been eighteen years confessor to queen Margaret, wife of Louis, tells us, that his library consisted of the bible, accompanied with a *gloss*,\* the originals of the works of St Augustine, and a few other works concerning the scriptures. These he either himself read, or caused others to read to him, every day after dinner. By his order a translation was made of the whole bible, into French.—*Le Long*.

1272, Nov. 16. Edward I. commenced his reign, and immediately expelled the Jews from the kingdom, their libraries were dispersed, their goods seized, and many of them barbarously murdered. At Huntingdon and Stamford, all their furniture came under the hammer for sale, together with their *treasures of books*. These Hebrew manuscripts were immediately purchased

\* By *gloss* is meant a commentary or exposition, generally taken out of the Latin Fathers, St. Hieronymus, St. Augustine, &c. It is originally a Greek word, and at first meant a single word put to explain another, as appears from the ancient Greek and Latin *glossaries*, but afterwards it came to signify any exposition or larger commentary. From hence are derived our English expressions, *to put a gloss upon a thing*, that is, a favourable interpretation or construction; *gloss*, a fair shining outside; and *to gloss*, to flatter.

There are few who are ignorant of the sense and meaning of the word *text*, but how it grew to signify the word of God, many, perhaps, would be glad to know. We have from the Romans, who from the similitude subsisting between spinning and weaving, and the art of composing, both in verse and prose, applied to the latter several expressions proper to the former; hence Horace,

"That fine spun thread with which our poem's wrought."—*Ep. 21. l. 225.*

and Cicero, *texere orationem*, and *contexere carmen*. Among the later Roman writers, *Textus* occurs often in the sense of a piece or composition, and by excellence came to denote the Word of God, just as the general word also *Scriptura* did. Before the art of printing was invented, the Text, or the Word of God, was written in the centre of the parchment, in a larger hand; the gloss in a smaller hand and written at each side of the Text; and because the text was usually written in a very large and masterly hand, a large and strong hand of that sort, came to be called *Text-hand*.—See Townley's *Biblical Literature*, vol. 1. page 391

by Gregory of Huntingdon, prior of the abbey of Ramsey, who bequeathed them to his monastery. At Oxford great multitudes of books, which had belonged to the Jews, fell into the hands of Roger Bacon, or were bought by the Franciscan friars, of that university.

In this year a statute was enacted against *libels*, under the title, "Against slanderous reports, or tales to cause discord betwixt king and people."

1274. Stow, informs us, that the abbot W. de Howton, bequeathed to the abbey of Croxton, a bible, fairly written, with a gloss or comment, sold for fifty marks, £33 6s. 8d.: and Madox, in his *History of the Exchequer*, says, that in 1274, the building of two arches of London bridge cost only £25. About this time, the price of wheat averaged about 3s. 4d. a quarter; a labourer's wages were 1½d. a day; a man-servant, with meat and clothing, were from three to five shillings per annum; a harvest-man was paid twopence a day; a sheep sold for a shilling; and thirty quarters of fossil-coal, for 17s. 6d.

1275, Dec. 8. The booksellers of this period were called *STATIONARII*, from their stations, or shops, a term still in use in the English word stationer.\* They not only sold books, but many of them acquired considerable property by lending out books to be read, at exorbitant prices, not in volumes, but in detached parts, according to the estimation in which the author was held. In Paris, the limited trade of these booksellers, consisted principally in selling books for those who wished to dispose of them, and furnishing a depository for them, whilst on sale. To prevent frauds being practised by these stationaries, as they were called, the university framed a law, or regulation of the above date, by which the booksellers were obliged to take an oath every year, or at the farthest, every two years, or oftener if required, that they would act loyally, and with fidelity in their employment. By the same statute, which was the first ever passed in the university respecting booksellers, they were forbidden to purchase, on their own account, the books placed in their hands, until they had been offered to sale for a month; and were enjoined to expose them publicly, immediately on being lodged in their hands, with a label affixed, containing the title and price of the book; it was also further ordered, that this price should be received on behalf of the owner of the books, who should allow a certain commission to the vender, which was fixed by the university at four deniers per livre, according to the price of the book: and if any bookseller committed fraud, he was dismissed from his office, and the masters and scholars were prohibited trading with such persons, under pain of being deprived of all the rights and privileges of the community. The sorbonne or university of Paris, possessed by various royal "diplomata" an extensive jurisdiction and controul over every thing connected with the profession; as also scribes, booksellers,

binders, and illuminators. It claimed, and on many occasions, seems to have made a tenacious and frequently a severe and inquisitorial use of this right of censure. The university also exercised the right of visiting, and of inspecting books sent from other countries. Their stalls, or portable shops, were erected only near the public schools and churches, and other places of general resort. Hence Chevallier takes occasion to notice the great antiquity of book-stalls. Matthew Paris informs us, that book-stalls were sometimes placed in the Parvis, or church porch, where schools were also occasionally kept; and that in the year 1250 a poor clerk of France, was forced to drag on "a starving life in the Parvis, keeping a school, and selling petty books;" and the portal at the north end of the cross aisle, in Rouen cathedral, is to this day called *Le Portail des Libraires*, or the porch of the booksellers.

1276, July 27. Died at Xativa, James I. King of Arragon. In 1274, he attended the fourteenth general council and the second of Lyons; there were present five hundred bishops, seventy abbots, and divers ambassadors. St. Thomas Aquino expired on the way. King James passed a law, in his dominions, that whoever possessed any of the books of the Old and New Testament, in the Romance\* or vulgar tongue, and did not bring them to the bishop of the place to be burned, should be considered as suspected of heresy, whether of the clergy or the laity, and suffer accordingly.

1280, March 30. Hugh Balsam, bishop of Ely, endows his foundation of Peterhouse, the first college in the university of Cambridge.

1283. In the annals of the priory of Dunstable, for this year, we find the following short entry, "This year, in the month of July, we sold our slave William Pyke, and received one mark, (13s. 4d.) from the buyer."—*Henry*.

1284. The Harleian manuscript, No. 647, in the British Museum, gives precise information concerning the weekly as well as annual expenditure of the abbey of St. Edmondbury, in the 14th year of Edward I. It presents an account of the necessities required to support eighty monks, eleven hundred and one serving-men, eleven chaplains, the nuns of Thetford, and visitors to the monastery. It opens with an account of the weekly charges of the bakehouse and brewery:—sixteen and a half seams (that is, quarters) and two bushels of wheat, at 5s. the seam, £4 3s. 9d.; twelve and a half seams of barley malt, at 4s. per seam, £2. 10s.; thirty-two seams of oats malt, at 3s. the seam, £4. 16s.; wages of the servants in the brewery and bake-

\* The Latin term *statio*, sometimes means a place of public resort; sometimes also a depository.

\* The modern term Romance, is derived from the name given to the corrupted Latin spoken, chiefly, by the Franks after their settlement in Gaul or France. This new language varied in different provinces, for want of a regular standard of pronunciation and grammar; so that the different dialects are at this day often not intelligible to those who speak pure French. As fictitious narratives of imaginary adventures were the first compositions committed to writing in the vernacular dialect of France, whilst other writings still continued to be published in Latin, this species of historic fiction became distinguished by the term Romance.—Du Cange, *Glossarium*. All the Eastern tales may be properly stiled *Romances*.

house, each week, 4s. 4½d.; fuel, £1 6s. 8d. The total of weekly charge, £13 0s. 9½d. giving an annual total of £678 1s. 2d.

Exclusive of this charge for the monastery, there is a separate account in the bakehouse and brewery for the abbot; the revenues of the abbot and convent, in all the greater monasteries, being kept separate, and the estates for the support of each detached from each other. The weekly expenditure in the abbot's department comes so near in amount (£11 5s. 9d.) to that for the convent generally, that it seems necessary to add the remark that, as a parliamentary baron, the abbot was obliged to maintain a large retinue; he had his town residence and his country seats, and all the monastery who held rank in society were necessarily his guests.

In the kitchen of the monastery, £10 per week was expended on flesh, fish, eggs, cheese and other minor articles, making a total annual expenditure under this head of £520, besides the purveyance of the cellarer, which consisted chiefly in the provision for Lent, during the continuance of which his expenditure was for herrings, £25; for four seams of pulse for gruel, £1 12s.; for six seams of beans, £1 10s.; honey, 6s. 8d.; nuts, 13s. 4d.; salt, £3 6s. 8d.; forty-two seams of peas, for pottage through the year, £11; total annual expense in the cellarer's department, £43 8s. 8d. Here the abbots' portion comes in again; the weekly expenditure of which was, six carcases and three quarters of oxen, at 4s. the ox, £1 7s.; fifteen porkers and a half, at 3s. the porker, £2 6s. 6d.; thirty-one geese, at 2d. each, 5s. 2d.; one hundred and fifty-five hens, at 1d. each, 12s. 11d. The weekly expenditure in the abbot's kitchen amounted to £4 15s. 7d., making an annual total, exclusive of fuel, of £568 4s. 3d. The annual cost of fuel for the kitchen, to both the abbot and the convent, was £30. A charge of £60 then comes for the provender of the horses of the prior, cellarer, and hospitaller; and another £60 is charged for pittances, misericordias, robes, horses, and other necessary expenses of the cellarer. All these various accounts make the gross annual expenditure of the abbey, as far as its affairs in the kitchen, the refectory, and the convent stables are concerned, amount to £147 11s. 2d. This sum seems to have covered the maintenance as well as the hospitality of the convent in ordinary times; but, on particular occasions, a royal visit broke much deeper into the abbey revenues. The entertainment of King Richard II. and his queen at this abbey in 1383, alone cost the monastery eight hundred marks: and King Henry VI., in 1433, stayed there from Christmas to St. George's day.

The large sums expended upon oaten malt may appear not very intelligible; particularly as the beer brewed from it was not likely to be made a drink of choice by the convent. But the immense number of servants and retainers who came with visitors of rank, the constant access of the poor to the convent, and the recollection that travellers in former times resorted to monas-

teries instead of inns, will easily account for this branch of the expenditure.

From the above account may be seen the cost of various articles of food, and from which may be estimated the value of books at this period; and it is rather singular, that no mention is made either of manuscripts or books of any description.

1284-5. The earliest specimen of the art of engraving on wood, in Europe, is supposed to have been executed in the course of these two years.

"The origin of engraving on wood," says Mr. Ottley, "like that of many other useful arts, is obscured by clouds, which the learned have in vain laboured to dispel. The want of evidence cotemporaneous, or nearly cotemporaneous, with the truth sought, has hitherto rendered every attempt for its attainment unavailable; and conjecture must still be employed to fill the chasm which proofs cannot be found to occupy. That it is of Asiatic origin, appears to be the best founded opinion; and if the name of its inventor is destined ever to be known, it is most probable, that it will be found among the records of Eastern nations. China seems to have the best claim to the invention. It is well known that the Chinese, in writing their language, do not describe words by means of a combination of letters, each expressive of a particular sound, as is the case in European languages; but that they represent each word of their endless vocabulary by one distinct character, serving to indicate it alone; if indeed, those characters can properly be termed the representations of words, which are often individually expressive of a sentiment that could not, in speaking, be expressed without the assistance of many words. The prodigious number of these characters, amounting, according to some accounts, to 80,000, renders it impracticable for them to print their books with moveable types. To cast them separately would be an endless undertaking; and were it done, by far the greater part of them would be of very rare occurrence.

The earliest document concerning wood engraving in Europe, is given by Papillon; but this authority has given rise to much controversy among the critics, led by Heineken on one side, and Zani on the other, of which latter Mr. Ottley speaks in terms of much respect. Papillon gives the glory of the Two Cunio. They were twin brother and sister, the first son of the count di Cunio, which he had by a noble and beautiful Veronese lady, allied to the family of Pope Honorius IV. Their works were a representation, in eight pieces, of the actions of Alexander the Great, with Latin verses. Mr. Ottley gives a statement of the argument on both sides of the question, as to the authenticity of these non-existing documents, and concludes, "Thus much for Papillon's entertaining narrative respecting the two Cunio; a document—for so, I think, I may now term it, from which we learn, that engraving in wood was practiced as early as the thirteenth century, in those parts of Italy at least, which border upon the Gulph of Venice. It is here inserted, for the gratification of the curious.

*The Heroic Actions, represented in Figures.* Of the great and magnanimous Macedonian King, the bold and valiant Alexander; dedicated, presented, and humbly offered to the most holy father Pope Honorius IV. the glory and support of the Church, and to our illustrious and generous father and mother by us, *Alessandro Alberico Cunio*, Cavaliers, and *Isabella Cunio*, twin brother and sister: first reduced, imagined, and attempted to be executed in relief, with a small knife, on blocks of wood, made even and polished by this learned and dear sister, continued and finished by us together, at Ravenna, from the eight pictures of our invention, painted six times larger than here represented; engraved, explained by verses, and thus marked upon the paper to perpetuate the number of them, and to enable us to present them to our relations and friends, in testimony of gratitude, friendship, and affection. All this was done and finished by us when only sixteen years of age.

'This precious book was given to my grandfather, Jan. Jac. Turine, a native of Berne, by the illustrious Count di Cunio, magistrate (podestà) of Imola, who honoured him with his liberal friendship. Of all the books I possess, I esteem it most on account of the quarter from whence it came into our family; and on account of the science, the valour, the beauty of the amiable twins Cunio, and their noble and generous intention of thus gratifying their relatives and friends. Behold their singular and curious history, in the manner in which it was several times related to me by my venerable father, and according to which I have caused it to be written more legibly than I myself could have done it.

'The young and amiable Cunio, twin brother and sister, were the first children of the son of Count di Cunio, which he had by a beautiful Veronese lady, allied to the family of Pope Honorius IV. when he was only a cardinal. This young nobleman had espoused this young lady clandestinely, without the knowledge of the relations of either of them; who, when they discovered the affair of her pregnancy, caused the marriage to be annulled, and the priest, who had married the two lovers to be banished. The noble lady, fearing equally the anger of her father and that of Count di Cunio, took refuge in the house of one of her aunts, where she was delivered of these two twins. Nevertheless the Count di Cunio, out of regard for his son, whom he obliged to espouse another lady, permitted him to bring up these children in his house, which was done with every instruction and tenderness possible, as well on the part of the Count, as on that of his son's wife, who conceived such an affection for Isabella Cunio, that she loved and cherished her as if she had been her own daughter; loving equally Alessandro Alberico Cunio her brother, who, like his sister, was full of talent, and of a most amiable disposition. Both of them made rapid advances in various sciences, profiting by the instruction of their masters; but especially Isabella, who, at thirteen years of age, was already considered

as a prodigy; for she perfectly understood and wrote Latin, composed verses, had acquired a knowledge of geometry, was skilful in music, and played upon several instruments; moreover, she was practised in drawing, and painted with taste and delicacy. Her brother, urged on by emulation endeavoured to equal her; often, however, acknowledging that he felt he could never attain to so high a degree of perfection. He himself was, nevertheless, one of the finest young men of Italy; he equalled his sister in beauty of person, and possessed great courage, elevation of soul, and an uncommon degree of facility in acquiring and perfecting himself in whatever he applied to. Both of them constituted the delight of their parents, and they loved each other so perfectly, that the pleasure or chagrin of the one, or the other, was divided between them. At fourteen years of age, this young gentleman could manage a horse, was practised in the use of arms, and in all exercises proper for a young man of quality; he also understood Latin, and had considerable skill in painting.

'His father having, in consequence of the troubles of Italy, taken up arms, was induced, by his repeated solicitations, to take him with him in the same year, (at the age of fourteen) that under the eye of his father he might make his first campaign. He was entrusted with the command of a squadron of twenty-five horse; with which, for his first essay, he attacked, routed, and put to flight, after a vigorous resistance almost two hundred of the enemy; but his courage having carried him too far, he unexpectedly found himself surrounded by many of the fugitives; from whom, nevertheless, with a valour not to be equalled, he succeeded in disengaging himself without sustaining any other injury than that of a wound in his left arm. His father, who had flown to his succour, found him returning with one of the standards of the enemy, with which he had bound up his wound: he embraced him, full of delight at his glorious achievements, and at the same time, as his son's wound was not considerable, and as he was desirous to reward such great bravery upon the spot, he solemnly made him a knight, (*i. e.* a knight-banneret,) although he was already one by his birth; dubbing him in the same place where he had given such proofs of his extraordinary valour. The young man was so transported with joy at this honour, conferred on him in the presence of the troops commanded by his father, (who, in consequence of the death of his father, which had recently happened, was now become the Count di Cunio,) that, wounded as he was, he instantly demanded permission to go and see his mother, that he might inform her of the glory, and of the honour he had just acquired; which was granted by the Count the more readily, as he was glad to have an opportunity of testifying to that noble and afflicted lady, (who had always remained with her aunt a few miles from Ravenna) the love and esteem which he ever continued to entertain for her; of which he

K

certainly would have given more solid proofs, by re-establishing their marriage, and by publicly espousing her, had he not felt it his duty to cherish the wife his father had obliged him to marry, by whom he had several children.

The young knight, therefore, immediately set out, escorted by the remains of his troop, out of which he had eight or ten men killed or wounded. With this equipage, and these attendants, who bore testimony to his valour wherever he passed, he arrived at the residence of his mother, with whom he staid two days; after which he repaired to Ravenna, to shew a similar mark of respect to the wife of his father, who was so charmed by his noble actions, as well as by his attentions towards her, that she herself led him by the hand to the apartment of the amiable Isabella, who, seeing him with his arm bound up, was alarmed. He remained a few days in that city; but impatient to return to his father, that he might have an opportunity of distinguishing himself by new exploits, he set off before his wound was yet healed. The Count reprimanded him for not having sent back his troop, and for not remaining at Ravenna until he was cured, and would not permit him to serve again during the rest of the campaign: shortly after, when his arm was perfectly healed, he sent him home, saying to him pleasantly, that he did not choose to be outdone by him all the remaining time the troops would continue in action that year. It was soon after this, that Isabella and he began to compose and execute the pictures of the actions of Alexander. He made a second campaign with his father, after which he again worked upon these pictures, conjointly with Isabella, who applied herself to reduce them, and to engrave them on blocks of wood. After they had finished and printed these pieces, and presented them to Pope Honorius, and to their other relations and friends, the cavalier joined the army for the fourth time, accompanied by a young nobleman, one of his friends, called Pandulfo who, enamoured of the lovely Isabella, was desirous to signalize himself, that he might become more worthy of her hand before he espoused her. But this last campaign was fatal to the cavalier Cunio: he fell, covered with wounds, by the side of his friend, who, whilst attempting to defend him, was also dangerously wounded. Isabella was so much affected by the death of her brother, which happened when he was not yet nineteen, that she determined never to marry; she languished and died, when she had scarcely completed her twentieth year. The death of this beautiful and learned young lady was followed by that of her lover, who had always hoped that his attentions and affections towards her would be rewarded by her consent, at length to become his, and also by that of her mother, who could not survive the loss of her beloved children. The Count di Cunio, who who had been deeply afflicted by the death of his son, could scarcely support that of his daughter. Even the Countess di Cunio, who loved Isabella with great tenderness, fell ill of

grief for her loss; and would have sunk under it, had she not been supported by the manly fortitude of the Count. Happily, the health of the Countess was, by degrees re-established. Some years afterwards, the generous Count di Cunio gave this copy of the actions of Alexander, bound, as it now is, to my grandfather; and I have caused the leaves of paper to be inserted, upon which, by my orders, this history is written.\*

Most authors, on the subject of early engraving, have omitted to notice this account of the two Cunio, it being considered by them as spurious; indeed, so well satisfied are some of the German authors, that they deem the refutation of it unnecessary. Probably they consider it enough for Italy to claim a priority to the invention of copper engraving, without endeavouring to obtain the merit of wood engraving also.

From the name of pope Honorius IV. engraved on the frontispiece of these ancient prints, of the actions of Alexander, it is most certain, remarks Papillon, that this precious monument of engraving in wood, and of the art of taking impressions, was executed between the years 1284 and 1285, because that pope, to whom it was dedicated, governed the church only for the space of two years; that is from the second of April, 1285, to the third day of the same month in the year 1287, the epoch, therefore, of this ancient specimen of engraving, is anterior to all the books printed in Europe, that have hitherto been known. Mr. Sperchtel, a Swiss officer (the possessor of it, and the friend of Mr. de Greder) was one of the descendants of Jan. Jacq. Turine, by the mother's side. He regrets the death of de Greder before he published this account, being unable to trace into whose hands this treasure had fallen.

It is true, we have only the evidence of Papillon as to this circumstance; still his character stands unimpeached: and Heineken, the opposer of all Italian pretensions, bears testimony to the probity of the man, though he questions part of his book, for the errors of which every allowance ought to be made; because, when he wrote, little had been done towards investigating the subject, and his love for the art induced him to give credit to most of the circumstances related by the French writers. We have no reason to believe that either De Greder or Papillon invented this history; the former received it from the Swiss officer,—and what interest could he have to deceive his friend? No account was given to the world by them; and had it not been for Papillon's curiosity while at De Greder's where he was first shewn the engravings, it most probably might have remained in oblivion to this day.

If we can depend upon the correctness of M. Thierry, the library of the academy of Lyons, pos-

\* Those who wish to see the account of Papillon more amply discussed, we refer them to the following Work: "An Inquiry into the Origin and Early History of Engraving upon Copper and in Wood, with an Account of Engravers and their Works, from the invention of Chalcography by Maso Finiguerra to the time of Marc Antonio Rannodi." By William Young Ottley, F. S. A. London, 1816, etc. That gentleman justifies Papillon, and ably confutes his accusers.

sees a print pasted into a folio volume entitled *La Legende Dorée*, at the bottom of which is inscribed "Schoting, of Nuremberg, 1384." He also adds, that an engraving still more ancient, is preserved in the library of the Vatican.

1290 or 1299. Godefridus de Croyland, who was elected abbot of Peterborough, during his abbacy entertained Edward I. and also two cardinals, to one of whom, named Gaucelinus, he presented a Psalter, curiously written with gold letters, but the time when it was transcribed is uncertain.

Tedious as was the process of transcription, several of the public libraries of Europe contain copies of the whole or parts of the Scriptures, especially the Psalter, written in this century. In a copy of the whole *Latin Bible*, in the British museum, the name of the transcriber, and the date of the transcript, are preserved in Latin, with the year 1254.

1292, June 11. Died Roger Bacon, whose extraordinary abilities gained him the appellation of the *wonderful doctor*, whilst the stupid admiration of the multitude, ascribed his inventions to the *black art*, and his knowledge of the Greek and Hebrew languages, was regarded as the medium of intercourse with infernal spirits. He was born at Ilchester, in Somersetshire, in the year 1214. After finishing the elementary studies of grammar and logic, at Oxford, he visited Paris, where he sedulously applied himself to the study of languages, history, jurisprudence, the mathematics, medicine, and theology. About the year 1240, having been admitted to the degree of doctor, he returned to England, and assumed the Franciscan habit, and in the retirement of his cell, prosecuted his studies with increasing ardour. Being chosen to deliver lectures to the university of Oxford, he expended immense sums in books, and other means of perfecting his knowledge and discoveries. "In twenty years," says he, "during which time I have been particularly engaged in the study of wisdom, neglecting all vulgar attention to money, I have expended more than two thousand pounds in books of secrets, in a variety of experiments, and in languages, and instruments and tables, and other means of obtaining the friendship of the wise and the good, and instructing the minds of my hearers." Two thousand pounds seems an incredible sum to expend in books, when the income of a curate was but £3 6s. 8d.; and the salary of a judge but £40! and consequently equal in efficacy to £30,000 of our money at present. We are, indeed, at a loss which to applaud most, his generous friends and patrons, who enabled him to spend so large a sum; or the disinterestedness of the lecturer himself, who lost sight of his own emolument in the desire for the improvement of others.

Among the discoveries of this luminary of his age, may be enumerated,—the discovery of the exact length of the solar year, and a method of correcting all the errors in the calendar; of the art of making reading glasses, the camera obscura, microscopes, telescopes, and various other ma-

thematical and astronomical instruments; of the composition of gunpowder, and the nature of phosphorus; of the method of making elixirs, tinctures, solutions, and of performing many other chemical operations; of the art of combining and employing the mechanical powers in the construction of machines capable of producing the most extraordinary effects; and of various remedies in the science of medicine. Such was the prejudice against him by the brethren of his order, that they refused to admit his works into their libraries, and the general of his order confined him to his cell, and prohibited him from sending any of his writings out of his monastery, except to the pope. He languished in confinement for several years, till Clement IV. to whom he had sent a copy of his *Apus Majus*, in the year 1266, obtained some mitigation of his sufferings, if not his entire liberty. In 1278, on pretence of some suspicious novelties, in his works, he was again imprisoned by Jerome d'Arcole, which continued for about eleven or twelve years; when Jerome, being raised to the pontifical chair, by the name of Nicholas IV. was prevailed upon by several noblemen to release him from his confinement. Though old and infirm, his love of science and literature was unabated, and he continued to prosecute his studies, by polishing his former works, and composing new ones, until death terminated his sufferings and his labours, in the eighty-first year of his age.

1292. *The Lives of the Saints*, were denominated *Legends*\* from being statedly read in the churches; and this computation received the epithet *GOLDEN*, from its extraordinary popularity; or the supposed value of its contents. The library of no monastery was without it. Every private person who was able, purchased it; and for a long time after the invention of printing, no work more frequently issued from the press. It was written by Jacobus de Voragine, a dominican friar, and archbishop of Genoa, who died in the year 1298.

1294. In an inventory of the goods of John de Pontissara, bishop of Winchester, contained in his capital palace of Wulvesey, all the books which appear, are nothing more than "*Septendecim pecie libram de diversis Scienciis*."

1299. Pontissara, bishop of Winchester, borrowed from the convent of St. Swithin, near that city, *Bibulum bene Glossatum*, that is, the Bible, with marginal annotations, in two large folio volumes; but gave a bond for the due return of the loan, drawn up with great solemnity. This bible had been bequeathed to the convent the same year, by Pontissara's predecessor, bishop Nicholas de Ely; and in consideration of so

\* Concerning legend-makers, there is a curious story. Gilbert de Stone, a learned ecclesiastic, who flourished about the year 1380, was solicited by the monks of Holywell, in Flintshire, to write the life of their patron saint. Stone applying to these monks for materials, was answered, that they had none in their monastery. Upon which he declared, that he could execute the work just as easily without any materials at all; and that he would write them a most excellent legend, after the manner of Thomas à Becket. He has the character of an elegant writer.

important a bequest, and one hundred marks in money, the monks founded a daily mass for the soul of the donor. A copy of the bond may be seen in the Dissertation on Learning, prefixed to Warton's *History of English Poetry*.

1300. About this period, some books were bequeathed to Merton college, Oxford, of which the following are names and valuation: A Scholastic History, twenty shillings; a Concordantia, ten shillings; the four great Prophets, with glosses, five shillings; a Psalter, with glosses, ten shillings; St. Augustine, on Genesis, ten shillings.

1301. The following extracts are from a valuation in the Parliament Rolls of the moveable property in the borough of Colchester, in order to levy a fifteenth, and are highly illustrative of the domestic economy of the inhabitants. It appears that a blacksmith's tools were valued from 2s. to 5s.; a cobbler's stock at 7s. 5d.; another at 10s. 6d.; another at 12s. 4d.; a tanner's stock, with cloths, &c. at £9. 17s. 10d. This is comparatively with the others, a great sum; but it must be recollected that the trade was one of the first in ancient times. Leather was not only used for various military purposes, but formed a considerable part of the common dress of the people, before the introduction, and during the infancy of the woollen manufacture.

1305. In the compotus of Bolton priory, in Yorkshire, is the following entry: "MCCCV. Pro quondam Libro Sententiarum empt. xxxs." The *Book of Sentences*, by Peter Lombard, one of the most fashionable books of school divinity in the middle age. The price of this volume was nearly that of two fat oxen; how expensive must it have been to furnish a library with manuscripts! but the canons of Bolton did not exhaust themselves in this way, for, says Whitaker, in his *History of Craven*, I can only discover that they purchased three books in forty years.

The Sentences of Peter Lombard are from the writings of the Fathers; and for this he is called "The Master of Sentences." These Sentences, on which we have so many commentaries, are a collection of passages from the Fathers, the real or apparent contradictions of whom he endeavours to reconcile. "He who lectures on the Sentences of Lombard," says the illustrious Roger Bacon, "is every where honoured, and preferred to him who adopts the sacred text as the subject of his lectures; for, who reads the Sentences, chooses the most convenient hour, according to his pleasure, and obtains a companion and an apartment among the religious."

1307. There is remaining in the abbey of St. Germaine des-prez, at Paris, a waxen tablet recording the expenses of Philip le Bel, during a journey that he made in this year, on a visit to Pope Clement V; a single leaf of this table book is exhibited in the *Nouveau Traite de Diplomatique*.

1308, Nov. 8. *Died* at Cologne, John Duns, commonly called Duns Scotus, a famous Franciscan divine, and one of the most learned men of the age in which he lived. He was born at Dunstancc, in Northumberland, and educated at

Oxford, from whence he went to Paris, where he acquired a great reputation as a disputant, and was called the "Subtile Doctor." His works were printed at Lyons, 1639, in 10 vols. folio.

1310. Montfaucon in his *Journey through Italy*, says, that at Bologna he was shewn a very ancient Hebrew Bible, with this inscription prefixed:—"This Hebrew Bible was given by brother William, of Paris, of the order of brother preachers, confessor to the most illustrious king of France, to the monastery of Bologna for the common library of the brethren, in honour of St. Dominic, a.d. 1310, the day before the ides of February. Whosoever reads in it is desired to pray for him. Amen."

1320. The first public library in the university of Oxford, was commenced at this period by Thomas Cobham, bishop of Worcester, but dying soon after little progress was made in the work until 1367, when his books were deposited in it, and the scholars permitted to consult them on certain conditions. A dispute arising between the university and Oriel college, it was not finally completed till about the year 1411. It was at first called Cobham's library, but in 1480, the books were added to duke Humphrey's collection. —Chalmer's *History of the Colleges, &c. attached to the University of Oxford*.

1320. The invention of linen paper appears to have been very early introduced into England; for Dr. Prideaux assures us he had seen a register of some acts of John Crauden, prior of Ely, made on linen paper, which bears date in the 14th year of Edward II. a.d. 1320; and that in the bishop's registry at Norwich, there is a register book of wills, all made of paper, wherein entries are made which bear date so far back as 1370, just one hundred years before the time that Ray said the use of it began in Germany. In the Cottonian library in the British museum, are said to be several writings on this kind of paper, as early as the year 1335.

1321, Sept. 14. *Died* Alighieri Dante the most powerful of the Italian poets, was born at Florence, May 27, 1265. In 1300 he was chosen chief magistrate of his native city, and became very popular, but during the reaction of parties, in January, 1302, while ambassador to the pope, was by an iniquitous decree, mulct eight thousand lire, and condemned, by a faction, to two years banishment. To satisfy the fine, his house was immediately entered and pillaged; and scarcely seven weeks had elapsed, when a second decree was issued, that he and his associates in exile, should be burned if they fell into the hands of the Neri, their enemies. After his death, which took place at Ravenna, all Italy contended to do honour to his memory.

During his banishment from his native city of Florence, he obtained an asylum at Verona, and had for his patron, Can della Scalla, or the prince of that country. There were in the same Court several strolling players, gamblers, and other persons of that description, one of whom, distinguished for his ribaldry and buffoonery, was much caressed beyond the others. The

Prince one day, when this man and Dante were both present, highly extolled the former, and, turning to the poet, said, "I wonder that this foolish fellow should have found out the secret of pleasing us all, and making himself admired, while you, who are a man of great sense, are in little esteem." To which, Dante freely replied, "You would cease to wonder at this, if you knew how much conformity of character is the real source of friendship."

Dante wrote before we began to be at all refined; and, of course, his celebrated poem is a sort of Gothic work. He is very singular and very beautiful in his similes, and more like Homer than any of the Italian poets. He was prodigiously learned for the times that he lived in, and knew all that a man could then know. Homer, in his time, was unknown in Italy; and Petrarch boasts of being the first poet that had heard him explained. Indeed, in Dante's time, there were not above three or four people in all Italy that could read Greek (one, in particular, at Viterbo, and two or three elsewhere.) But, although he had never seen Homer, he had conversed much with the works of Virgil. His poem got the name of *Comedia*, after his death. He somewhere calls Virgil's Work *Tragedia* (or sublime poetry;) and, in deference to him, called his own *Comedia* (or low;) and hence was that word used afterwards, by mistake, for the title of his poem.—*Spence*.

1322. April 15. Fitz-Simeon, and Hugh the illuminator, two friars of Dublin, commenced their pilgrimage to the holy sepulchre. Hugh died at Cairo, on the 22nd of October following.

1326. The first appearance of *Arabic numerals* in England, was in a large folio entitled *Albion*, written by Richard of Wallingford, a monk, and afterwards abbot of St. Albans, it consisted of astronomical canons, or rules and tables.

1327. The scholars and citizens of Oxford assaulted and entirely pillaged the opulent benedictine abbey of the neighbouring town of Abingdon. Among the books they found there, were one hundred psalters, as many grayles, and forty-six missals, which undoubtedly belonged to the choir of the church, and twenty-two books on common subjects.

1328. The Chester Mysteries, being plays of the *Old and New Testament*, are ascribed to Ranulph Higden, compiler of the *Polychronicon*, and a benedictine monk of that city, where they were performed at the expense of the incorporated trades, with a thousand days of pardon from the pope, and forty days of pardon from the bishop of Chester, to all who attended the representation.

In the Harleian manuscripts, in the British museum, it is related of these Chester Mysteries that the author "was thrice at Rome before he could obtain leave of the pope to have them in the English tongue," from which fact, Mr. Warton thinks, a presumptive proof arises that all our *mysteries* before that period were in Latin; these plays will, therefore, have the merit of being the first English interludes. Hone, in his work on *Mysteries and Religious Shows*, however, says,

"After the well known fondness of our ancestors for shows, it is too much, perhaps, to say, that on their church festivals and occasions of public rejoicing, they had no interludes in English; seeing too that Fitzstephen writing in 1174, says, that 'London, for its theatrical exhibitions, has religious plays, either the representations of miracles wrought by holy-confessors, or the sufferings of martyrs;' these must have been in English to have been understood; and so must the miracle play of St. Catherine, in 1110, if, as was probably the case, it was publicly performed on some feast day." During the celebration of the festival of the boy bishop, moralities were presented, and shows of miracles, with farces and other sports; it is reasonable to suppose that *English* interludes of some kind, if not coeval with the boy bishop, were at least cotemporaneous with him for a long time before Edward I.

"What could occasion the author of the Chester plays," asks Mr. Hone, "to take a journey thrice to Rome, before he could obtain leave of the pope to have them in the English tongue? The subjects of these plays 'from the Old and New Testament,' seems to me to supply the reasons for the difficulty in obtaining the pope's consent. Scripture in English had been scrupulously withheld from the people, and the pope probably anticipated that if they were made acquainted with a portion of it, the remainder would be demanded." The Chester Mysteries were performed for the last time in 1574.\*

1330. About this period Lewis Beaumont was bishop of Durham. He was a very lame and illiterate French nobleman, so incapable of reading and spelling, that he could not, although he had studied them, read the bulls announced to the people at his consecration. This, amongst many other instances, induced the king (Edward III.) to address a strong remonstrance to the pope, against his enactments, in which he represented that "the encouragement of religion were bestowed upon unqualified, mercenary foreigners, who neither resided in the country, nor understood its language; and that the treasures of the kingdom were carried off by strangers, and the jurisdiction of the courts baffled by constant appeals to a foreign authority, &c.—*Andrews*."

At his coronation the word "Metropolitica" occurred, the bishop paused, tried in vain to repeat it, and at last said, "Soit pour dit," (suppose that said.) Then he came to "In Enigmati;" this puzzled him again. "Par St. Lewis," said he, "il n'est pas courtois qui a escrit cette parole ici," (by St. Lewis, it could be no gentleman who wrote this stuff.)

An instance of the state of literary acquirements of many of the clergy, at this period, and for a long time afterwards, may be proved by the following fact:—At an entertainment given at Rome, to the pope and cardinals, by Andrew

\* Abundantly curious and useful information concerning Mysteries in general, will be found in Dugdale's *Warrickshire*; Ormerod's *History of Cheshire*; Drake's *History of York*; Hone on *Mysteries and Religious Shows*; Warton's *History of English Poetry*; and also a very able article in the *Retrospective Review*, vol. 1.

Forman, bishop of Murray, and papal legate for Scotland, he blundered so in his Latinity, when he said grace, that his holiness and the cardinals lost their gravity; the disconcerted bishop testily concluded the blessing, by giving "*all the false carles to the de'il*," to which the company, not understanding his Scots-Latinity, said, Amen.

1332. Manuscripts, or rather books, were so scarce at this time, that they were not sold but by contract, upon as good conditions and securities as those of an estate, among many other instances of the like kind, the following is still preserved in the library of the college of Laon, in the city of Paris, cited by Brenil, and made in the presence of two notaries, which beareth, that "Jeffry of St. Liger, one of the clergymen booksellers, and so qualified, acknowledges and confesses to have sold, cedel, quitted, and transported; and sells, cedes, quits, and transports, upon mortgage of all and sundry his goods, and the custody of his own body, a book entitled *Speculum Historiale in Consuetudines Parisienses*, divided and bound up in four volumes, covered with red leather, to a nobleman, Messire Girard of Montague, advocate to the King in the parliament, for the sum of forty livres of Paris; whereof the said bookseller holds himself well content and paid."—*Watson's Hist. of Printing.*

1332. Dec. 22. In the library of St. Mary, at Florence, is the whole New Testament on silk, with the liturgy, and short martyrology; at the end of it there is written in Greek, "*By the hand of the sinner and most unworthy Mark; in the year of the world 7840*, (that is, of Christ 1332), Monday, December the 22nd," and on the next page are several Greek alphabets. Montfaucon mentions many works written on silk, which are preserved in different libraries in Italy executed chiefly in the thirteenth and fourteenth centuries.

1338. Sept. 2. Edward III. is invested by the emperor at Coblenz, with the title of his *vicar*.—He refused, to kiss the imperial foot.

1338-41. There is a kind of negative proof that cards were not known very long antecedent to this period from a French manuscript, highly illuminated with representations of every game and sport of that age, but which gives no representation of any thing like playing cards; but, in a French romance finished in 1341, a familiar mention is made of cards, which has given rise to a conjecture that they were manufactured in France, early in the fourteenth century.

1341. April 8, (*Easter Day*.) The inauguration of Petrarch, in the Roman capital, with a crown of laurel, as *poet laureate*. He received by diploma, the perpetual privilege of wearing, at his choice, a crown of laurel, ivy, or myrtle, of assuming the poetic habit, and of teaching, disputing, interpreting, and composing, in all places whatsoever, and on all subjects of literature.

Petrarch was less desirous of the laurel for the honour, than for the hope of being sheltered by it from the thunder of the priests, by whom both he and his brother poets were continually

threatened. They could not imagine a poet without supposing him to hold an intercourse with some demon. This was, as Abbé Resnet observes, having a most exalted idea of poetry, though a very bad one of poets. An anti-poetic Dominican was notorious for prosecuting all verse-makers, whose power he attributed to the effect of *heresy and magic*.

The custom of crowning poets is as ancient as poetry itself. It has, indeed, frequently varied; it existed, however, as late as the reign of Theodosius, when it was abolished as a remains of Paganism. When the barbarians overspread Europe, few appeared to merit this honour, and fewer who could read their works. It was at this period that poetry resumed its ancient lustre; for Petrarch was certainly honoured with the laurel crown. It was in this century that the establishment of bachelor and doctor was fixed in the universities: those who were found worthy of the honour, obtained the laurel of bachelor or the laurel of doctor; *laurea bacca laureates; laurea doctoratus*. At their reception they not only assumed this title, but they also had a crown of laurel placed on their heads. In Germany, the laureate honours flourished under the reign of Maximilian I. He founded in 1504, a poetical college at Vienna, reserving to himself and the Regent the power of bestowing the laurel. The Emperor of Germany retains the laureateship in all its splendour. The selected bard is called *Il Poeta Cesario*. Apostolo Zeno, as celebrated for his erudition as for his poetic powers, was succeeded by that most enchanting poet, Metastasio. The French never had a poet-laureate, though they had regal poets; for none were ever solemnly crowned. The Spanish nation, always desirous of titles of honour, seem to have known the laureate; but little information concerning it can be gathered from their authors. Respecting our own country see 1506.

Petrarch roused his countrymen from their slumber—inspired a general love of literature—nourished and rewarded it by his own productions; and rescued the classics from the dungeons, where they had been hitherto shut up from the light and instruction of mankind. 'He never passed an old convent, without searching its library, or knew of a friend travelling into those quarters, where he supposed books to be concealed, without entreaties to procure for him some classical manuscripts.' Had not such a man appeared at this time, it is probable that most of the classical manuscripts would have been totally lost; so that in this case, he might have excited among his countrymen the love of literature, without being able to gratify or nourish it. Boccaccio, who shares with Petrarch the glory of having enriched the Italian language with its most perfect beauties, at the very moment when it may be said to have begun to exist, shares also with him the glory of being a zealous and successful restorer of classical manuscripts and literature.

Several persons having written to Petrarch several apologies for not visiting him, in which they declaimed against his love of solitude, as

unnatural to a human being, and reproached him for his unsocial mode of life. Petrarch smiled at their messages, and scorned their reproaches, and made the following excellent remarks:—"These people consider the pleasures of the world as their supreme good, and not to be renounced. But I have friends of a very different description, whose society is far more agreeable to me; they are of all countries, and of all ages; they are distinguished in war, in politics, and in the sciences. It is very easy to see them; they are always at my service. I call for their company, or send them away whenever I please; they are never troublesome, and immediately answer all my questions. Some relate the events of ages past, others reveal the secrets of nature; these teach me how to live in comfort, those to die in quiet. In return for all these services, they only require a chamber of me in one corner of my mansion, where they may repose in peace."

An anecdote of Petrarch is mentioned by two authors, that he wrote occasionally his thoughts, in gilt letters, upon a cloak of leather, which he wore, and not being lined, was so contrived that he might be able to write on both sides of it his verses, which appeared full of corrections and notes. It is said, that La Casa, Sadolet, and Bucecallo, who were in possession of this precious relic, when they returned to the country-house of the latter to take refuge from the plague, which in this year, was desolating Italy, took this cloak with them, to consider it at their leisure, and to attempt to decipher what it contained.

Petrarch died of apoplexy, at Argua. He was found dead in his library, July 18th, 1374, with one arm leaning on a book. Petrarch, Lord Woodhouselee observes, composed 318 sonnets, 59 canzoni or songs, and six trionfi, a large volume of poetry, entirely on the subject of his passion for Laura; not to include a variety of passages in prose works. Laura died in 1348, and was buried at Avignon. Her grave was opened by Francis I. of France, wherein was found a small box, containing a medal and a few verses, written by Petrarch. On one side of the medal was impressed the figure of a woman; on the reverse, the characters of M. L. M. J., signifying *Madona Laura morte jacet*. The gallant and enthusiastic monarch returned every thing into the tomb, and wrote an epitaph in honour of her memory.

"Arise, O Petrarch, from th' Elysian bowers,  
With never-fading myrtles twind,  
And fragrant with ambrosial flowers,  
Where to thy Laura thou again art join'd;  
Arise, and hither bring the silver lyre,  
Tun'd by thy skillful hand,  
To the soft notes of elegant desire,  
With which o'er many a land  
Was spread the fame of thy disastrous love."

Lord Lyttleton.

Petrarch is wonderfully accurate and precise about Laura. These are his words:—"Laura, illustrious by the virtues she possessed, and celebrated, during many years, by my verses, appeared to my eyes, for the first time, on the 6th day of April, in the year 1327, at Avignon,

in the Church of Saint Clare, at six o'clock in the morning. I was then in my early youth. In the same town, on the same day, and at the same hour, in the year 1348, this light, this sun, withdrew from the world."

The works of this illustrious poet form four folio volumes, and more than twenty-five persons have written his life.

Tuscan, one of the preceptors of Petrarch, provided for the payment of his debts, by pledging two small manuscript volumes of certain works of Cicero.

1345, April 14. Died Richard Aungerville, commonly known by the name of Richard de Bury, from the place of his nativity, Bury St. Edmund's, in Suffolk, where he was born in the year 1287. He was the son of Sir Richard Aungerville. Having distinguished himself by his learning at Oxford, he became tutor to the Prince of Wales, afterwards Edward III. In 1333 he was appointed dean of Wells and bishop of Durham; and in the following year, he was appointed lord high chancellor and treasurer of England. He was much celebrated for his piety and munificence, but still more for his remarkable love of learning and patronage of distinguished scholars, by whom he was held as the Mæneas of those times. In 1341, he purchased thirty or forty volumes of the abbot of St. Albans, for which he gave fifty pounds weight of silver; and so enamoured was he of his large collection that in 1344 he expressly composed a treatise entitled *Philobiblion, or the Love of Books*.<sup>\*</sup> Richard de Bury may be fairly classed as the first bibliomaniac upon record, in the best and wisest sense of the word, not only in the North of England, but in England at large. Describing the process by which manuscripts were published in his days, he says "Because every thing that is serviceable to mortals, suffers the waste of mortality through the lapse of time, it is necessary for volumes corroded by age to be restored or renovated by successors, that perpetuity, repugnant to the nature of the individual, may be conceded to the species." in another place he says, "the study of the monks, now a days, dispenses with emptying bowls, not with amending books." Speaking of his books, he uses the following excellent and impressive words, "these are teachers, whose instructions are unaccompanied with blows or harsh words; who demand neither food nor wages: you visit them, they are alert; if you want them, they secrete not themselves; should you mistake their meaning, they complain not; nor ridicule your ignorance, be it ever so gross." Again, he says, "books ought to be purchased at any price, the wisdom which they contain renders them invaluable, they cannot be bought too dear." He bought books at any price, but never sold them

<sup>\*</sup> Hearne has undertaken to deprive Richard de Bury of the honour of composing this work, and says it was written by Robert Holket, a domoican, under his name.

Robert Holket was born at Northampton, became a dominican and professor of divinity at Oxford. He died in 1349, and left many valuable works, which were printed at Paris by Gering and Rembolt.

The *Philobiblion* was reprinted at Oxford from a collation of manuscripts, and with an Appendix, 1690, 4to.

again, alleging the sentence, "Buy the truth, and sell it not; also wisdom, and instruction, and understanding." Prov. xxiii. 22. It is stated that he preferred taking the fees of office in books rather than in money. In 1334, on his being appointed high treasurer of England, he entertained at his palace at Durham, Edward III.\* his queen, and her mother, the king of Scotland, the two metropolitans, five bishops, seven earls, with their consorts, and all the nobility on this side Trent, besides a great number of knights and esquires; also many abbots, priors, and other ecclesiastics.

Some idea may be formed of the perseverance and literary attainments of this great man, and his enthusiastic ardour in the promulgation of learning, when we are informed that he alone possessed more books than all the bishops of England together, and besides the fixed libraries which he had formed in his several palaces; the floor of his common apartment was so covered with books, that those who entered could not with due reverence approach him; he also kept binders, illuminators, and writers, in his palaces. He selected his chaplains on account of their piety and erudition, and many of them rose to the episcopal bench. To his nurture of genius and learning, we are indebted for some of the most eminent prelates and writers this country can boast; among them may be mentioned, Thomas Bradwardine, archbishop of Canterbury; Richard Fitz-Ralph, archbishop of Armagh; Richard Benworth, bishop of London; and Walter Segriffe, bishop of Chester; also Walter Burley, John Maudy, Robert Holket, Richard de Killington, and several others, all doctors of theology. His generosity is recorded to have been as uniform as it was extensive, and we are told that he weekly bestowed eight quarters of wheat made into bread, exclusive of the accustomed fragments from his table, and pecuniary assistance; during a ride from Newcastle to Durham, he distributed £8 in alms, and going from Durham to Stockton £5, besides many more which are minutely enumerated by Chambre.

This excellent prelate died at Auckland, and was buried, says Chambre, before the altar of the blessed Mary Magdalene, at the southern angle of the cathedral church of Durham, leaving a reputation untarnished by the breath of calumny.

The account, however, which Richard de Bury gives of the monks before his time, shows us that the old religious transcribers must have been endowed with singular patience and perseverance, for he says "many wrote them out with their

own hands in the intervals of the canonical hours, and gave up the time appointed for bodily rest to the fabrication of volumes; those sacred treasures of whose labours, filled with cherubic letters, are at this day resplendent in most monasteries."

Erasmus thus describes the *Secunda Secunda* of Thomas Aquinas, which was a ponderous treatise of scholastic divinity then so much prized and cherished: "No man can carry it about, much less get it into his head." The volume thus produced on fair parchment after the labour of years, was covered with immensely thick lids of wood and leather, studded with large nails and curiously clasped; and being deposited on the shelves of the monastery library, was kept sacred from all profane eyes. The monks generally laboured for themselves alone, without any desire to diffuse the knowledge which they strove, and properly so to preserve. "The resplendent volumes, with cherubic letters," bore striking marks not only of the persevering industry but of the great ingenuity of the monks. Their initial letters, that is, the letters at the beginning of each chapter or section, were indeed resplendent with gold and the brightest tints of crimson and azure. But the satisfaction to be afforded by these efforts of art was confined to a few. They were not, like the paintings with which churches were subsequently adorned, displayed before the people to exalt their devotion. They were unclasped only on days of solemnity, by the mitred abbot or the prior; and then conveyed like precious jewels to the obscurity of their worm-eaten and dusty cases.

1346. *Died*, John Bacon, otherwise denominated Baconthorpius, from an obscure village of Norfolk, where he was born, was distinguished in the schools by the name of "Doctor Resolutus." He studied first at Oxford; then visited Paris, where he obtained the character of "Averroistarum Princeps." On his return to London he became provincial of the Carmelites: afterwards was invited to Rome, where he gave great offence by arguing with too much subtlety and freedom in defence of the pope's unlimited right of granting matrimonial dispensations. The odium thus excited induced him to recant his doctrines on this head: and hence he was led to quarrel with the art itself in which he had been so great a proficient.

1347. *Died*, William Ockam, who was very celebrated in the annals of scholastic theology, and denominated "Doctor Invincibilis." He was a disciple of Scotus, and put himself at the head of the nominalists, he maintained the opinions of that party with great ingenuity.—Some consider him the founder of a distinct sect, whence he also received the denomination of "Venerabilis Inceptor et Doctor Singularis." He was an Englishman, but of what part is not known. His works were printed at Paris, by Cæsaris and Stol, 1476.

1347, *August*. The conquest of Calais by Edward III., the warriors and archers on foot received 3d.; the Black Prince £1.; and the Bishop of Durham (with the earls), 6s. 8d. per

\* That Edward exerted all his influence to promote the advancement of his tutor, is proved by an interesting document recorded in Rymer's *Fœdera*, and an account of his preferences in the first six years of his reign, is preserved by Tanner: Edward presented him to two rectories, six prebendal stalls, the Archdeaconries of Salisbury and Northampton, the Canonry of Weston, and the Deanery of Wells. He was so enriched by ecclesiastical preferment that he was enabled to expend five thousand marks on a journey to Rome. When he went into the presence of the Pope and Cardinals, he was attended by twenty of his clerks, and thirty six esquires, attired in the most expensive and sumptuous garments.—See Dibdin's *Bibliomania* and Warton's *Hist. of English Poetry*.

day. It was during this famous siege that St. GEORGE, of England, was first invoked in the battle.

1348. *Died*, Thomas Bradwardine an Englishman, supposed to be a native of Hartfield, in the diocese of Chichester, was of Merton College, Oxon, about 1325. He obtained the appellation of "Doctor Profundus." Afterwards became confessor to Edward III. canon of Lichfield, and chancellor of St. Paul's. He attended the king in his victorious expedition to France. In this year he was chosen to the see of Canterbury by the chapter, and after some hesitation his election was confirmed by the king and the pope. Bradwardine was consecrated at Avignon; but survived his consecration scarce forty days. He died at London before his enthronization had taken place.

1349. *Died*, Richard Rolle, a hermit, of Hampole, in Yorkshire; who translated and wrote a gloss upon the psalter, and a metrical paraphrase of the book of Job, one of the first attempts at a translation into the English language, as spoken after the Conquest.

1350. The constable of France, the greatest man in the state, and one of the greatest men of his age, could neither read nor write.

1350, *March* 18. In the roll of accounts relating to the ornamental painting and glazing of St. Stephen's chapel, Westminster, by order of Edward III. we find that the wages of the artists be from fivepence to one shilling per day, except to a person named John Barnaby, employed at St. Stephen's chapel, in 1355, who was paid twopence per day.

1351, *August* 1. (*Lammas Day*.) From ancient authorities we find that this was the usual nominal day of commencing *Harvest* in England. By a useful act, called the "statute of labourers" 25th Edward III. in 1351, it is provided, 'that no carter, ploughman, or day (dairy maid) or other servant, shall take in the time of sarching, (weeding) or haymaking, but a penny the day, and mowers of meadows for the acre, fivepence, or by the day fivepence, and reapers of corn in the first week of August, twopence, and the second threepence, and so till the end of August, and less in the country, where less was wont to be given without meat or drink or other courtesy; and that all workmen bring openly in their hands to the market towns, their instruments, and these shall be hired in a common place, and not privy. And that no servant go out of the town where he dwelleth in the winter, to serve in the summer, if he can get service in the same town, taking as before is said, saving that the people of the counties of Stafford, Lancaster, and Derby, and people of Craven, and of the marshes of Wales and Scotland, and other places may come in time of August, and labour in other counties, and safely return, as they were wont to do before this time. Bread offerings of the first fruits at the season of harvest were universal; and our Saxon holyday, of half mass or loaf mass, expresses, although in shadow, the natural piety merely of nations, called Heathen, now extinguished. The

Guild of August has lost its primitive importance by the reformation of the calendar. Wheat was from 3s. 4d. to 4s. the quarter; a fat hog, two-years old, 3s. 4d; clothing for a year of a common servant of husbandry, 3s. 6d; a quarter of beans or pease, 1s; a quarter of barley, 10d; a pair of shoes, 4d; two gallons of ale, 2d.

1351, *Sept.* 3. To George Cosyn, for one quatern of royal paper, to make the painters' patrens (patterns) tenpence.

1352. Lawrence Minot an English poet, is supposed to have died in this year. Mr. Tyrwhit first discovered his manuscripts in the Cottonian library, and they were published in 1795, 8vo.

1357, *May* 24. In a blank page of Cosmestor's *Scholastic History*, deposited in the British museum, it is stated, that this MS. was taken from the King of France, at the battle of Poitiers, fought on this day: it was afterwards purchased by the Earl of Salisbury for a hundred marks, and directed, by the last will of his Countess, to be sold for forty livres. One hundred marks were equivalent to £66 13s. 4d. This sum was exactly the pay of Henry Percy, keeper of Berwick castle, in 1359; at this time the king's surgeon's pay was £5 13s. 4d. per annum, and one shilling a day beside. Master carpenters had four-pence a day, their servants two-pence; the price of wheat was about 6s. 8d. a quarter.

1357. It was the prevailing opinion at this period, that even the Latin bibles should not be commonly allowed to the laity; when, therefore, archbishop Fitz Ralph, in this year, sent three or four secular priests of his diocese of Armagh into England, to study divinity in Oxford, they were forced very soon to return, because they could not find there a bible to be sold. And indeed, had the copies of the bible been more frequent than they were, it is no wonder that they were made so little use of, if what the writers of these times, D. Wiclif, archdeacon Clemangis, Belet, and others say, be true, that the clergy were generally so ignorant, as not to be able to read Latin, or even con their Psalter. Our poet Chaucer represents the religious as gathering the bibles up and putting them into their libraries, and so imprisoning them from secular priests and curates, and, therefore, hindering them from preaching the gospel to the people.—*Levis*.

Matthew of Westminster, an English historian of this century, was very much esteemed for his veracity, acuteness, and diligence.

1358. About this period Richard Fitz-Ralph, archbishop of Armagh, possessed a translation, probably made by himself, of the New Testament in Irish. According to the information of Bale, quoted by archbishop Usher, this copy was concealed by him in a certain wall of his church, with the following note:—"When this book is found, truth will be revealed to the world, or Christ shortly appear." This, observes the narrator, was written in the spirit of prophecy, for the book was found when the church of Armagh, was repairing, about the year of Christ, 1530.

Richard Fitz-Ralph, or Fitzraf, a man worthy for his christian zeal of immortal commendation,

was brought up at Oxford, under John Baconthorpe, who was called the resolute doctor. His abilities recommended him to King Edward III. by whom he was promoted, first to the archdeaconry of Lichfield, then to the chancellorship of Oxford, and afterwards to the archbishopric of Armagh, in 1347. The monks accused him of heresy, and he was cited to appear before the pope at Avignon, where he died in 1360, yet such was the character he had maintained, that on hearing of his death, a certain cardinal openly declared, "A mighty pillar of Christ's church was fallen."

1362. *Died*, at Paris, Petronus Borchorius, a native of Poitiers and author of the *Gesta Romanorum*, one of the most ancient story-books extant; and the outlines of some of the best stories in Chaucer, Gower, Lydgate, Shakspeare, and their most distant successors, even down to Parnell's *Hermi*, may be traced in it. Boccaccio is reported to have laid it under ample contribution. It first appeared in print at Louvaine in 1473, in folio, and at Paris, by John Petit, 1515.

1364. In this year the royal library of France, did not exceed twenty volumes, but shortly after, Charles V. increased it to nine hundred, which by the fate of war, as much at least as by that of money, the duke of Bedford, about 1440, purchased and transported to London, where libraries were smaller than on the continent.

It is a circumstance worthy of observation, that the French sovereign, Charles V. surnamed the Wise, ordered that thirty portable lights, with a silver lamp suspended from the centre, should be illuminated at night, that students might not find their pursuits interrupted at any hour. An objection to night studies in public libraries is the danger of fire, and in our own British museum, not a light is permitted to be carried about upon any pretence whatever.

1372, Nov. 17. *Died*, at Leige, Sir John Mandeville, the traveller. He was born at St. Albans, in the year 1300, and spent thirty-four years in visiting various countries, and on his return published a relation of his voyages. In 1455 the first edition was printed at Leige, with the following title, *Itinerarius a terra Angliæ ad partes Jerosolymitanis*, 4to. By Wynkin de Worde, in 1499.

1375. *Died*, John Boccaccio, a very celebrated Italian writer, was born at Certaldo, in Tuscany, in 1313. He resided a long time in Naples, where he fell in love with a natural daughter of the king. At the close of his life he returned to his native place, where he died, aged 76.

Boccaccio was the disciple of Petrarch; and, although principally known and deservedly celebrated as a writer and inventor of tales, he was, by his cotemporaries, usually placed as a poet in the third rank, after Dante and Petrarch. But Boccaccio having seen the Platonic sonnets of his master Petrarch, in a fit of despair, committed almost all his poetry to the flames, except a single poem, of which his own good taste had long taught him to entertain a more favourable opinion. This piece, thus happily rescued from destruction, was, until lately, so scarce and so

little known, even in Italy, as to have left its author but a slender proportion of that eminent degree of poetical reputation which he might have justly claimed from so extraordinary a performance.

It is an heroic poem, in twelve books, entitled, *La Teseide*, and written in the octave stanza, called by the Italians *ottavo rima*, which Boccaccio adopted from the old French Chansons, and here first introduced among his countrymen.

The story of this admirable production of the great Tuscan novelist is well known to the English reader, in consequence of its having been selected by Chaucer as the ground-work of his *Knight's Tale*, the finest of his poems, and the first conspicuous example of the English heroic couplet extant. "Dryden's paraphrase of this poem," says Warton, "is the most animated and harmonious piece of versification in the English Language."

1376. Du Cange cites the following lines from a French metrical romance written about this time, which proves that *waxen tablets* continued to be occasionally used till a late period.

Some with antiquated style,  
In waxen tablets promptly write;  
Others, with finer pen, the while  
Form letters lovelier to the sight.

There are many ample and authentic records of the royal household of France, of the thirteenth and fourteenth centuries, still preserved, written on waxen tablets.

1376. King Edward III. in the 50th or jubilee year of his reign, granted as an especial favour that judicial proceedings which had been written and administered in Norman French, might pass in English, but that all acts should be enrolled in Latin. Several of the ancient charters, however, had been written in Anglo-Saxon, and that the knowledge of their liberties might not be lost, some of the British monasteries, particularly those at Croyland and Tavistock, still taught the language. On this glorious occasion, every public prisoner was released, and the banished subject was restored to his country. This great monarch also conferred in full parliament upon his second son *Lionel* of Antwerp, the title of "Duke of Clarence," and upon his third son John of Gaunt, that of "Duke of Lancaster."

1377, June 21. Edward III. died at his palace of *Sheen*, (Richmond) and was buried in Westminster abbey. He was born at Windsor, Nov. 13th, 1312, and crowned at Windsor, on the 1st of February, 1327, in his fifteenth year. In 1337, the dignity of duke was first created by him in this country in favour of his son the black prince, as *Duke of Cornwall*, a title which is always vested in the king's eldest son the moment he is born.

The Chronicle of Rastel, speaking of the third Edward, contains the following apposite passage in relation to our national festival St. GEORGE'S DAY. "About the nineteenth year of this king, [1345] he made a solemn feast at Windsor, and a great just and tournament, where he devised and perfected substantially the *Order of the Knights of the Garter*; howbeit some affirm,

this order began first by Richard Cœur de Lion, at the siege of Acre [1191] where, in his great necessity, there were but *twenty-six* knights that firmly and surely abode with the king, where he caused all them to wear thongs of blue leather about their legs; and afterwards they were called the *Knights of the Blue Thong*."

Beneath the inspiring banner of England's patron Saint,\* a long and splendid line of nobility have sprung, illustrating by their deeds in arms, their faith in counsel, and with hearts of courtesy, a throne, venerable from inheritance, and unsupported by dishonour; abroad respected; approached with general affection at home; and possessing all those energies which, triumphant as they have been in a whirlwind of contention, are still proved soundly wise in a diet of repose.

On the 30th of March, 1363, Edward III. first distributed the *Maunday*† and purified the poor.

1377, *July 16*. The coronation of Richard II. may illustrate the manners of these times. The young prince, then in his twelfth year, passed from the tower to the abbey under a canopy of blue silk, borne on spears of silver by the barons of the cinque ports. "In the market of Cheapside, was erected (by the *merchants*) a building in the form of a castle, out of which ran two streams of wine. On its four turrets were placed four girls, dressed in white, and of the same age with the king. As he approached, they blew towards him small shreds of gold leaf; then showered upon him florins made of paper; and coming down, helped him and his attendants to wine out of cups of gold. To conclude this loyal exhibition, an angel descended from the summit of the castle, and offered to the king a golden crown." The baron Percy was created Earl of Northumberland upon that great occasion.

1377, *Dec. 28*. Wiclif divulges his opinions upon the pope's mandate.

1378. The clergy and scholars of St. Paul's school in London, presented a petition to Richard II. praying him "to prohibit some unexpected people from presenting the history of the Old and New Testament, to the great prejudice of the said clergy, who have been at great expense in order to represent it publicly at Christmas."

\* *Honi soit qui mal y pense.*—*Confusion to dishonourable thought.*—*Motto of the Garter.*

† Our ancient word of courage, fair St. George.—*Shakspeare.*

† *Maunday Thursday* records the institution of the holy sacrament of the Lord's Supper, when our Saviour celebrated, for the last time, the national passover. According to Speelman, the mandate is the hand-basket in which the king was accustomed to give alms to the poor. but its derivative is most probably the initial mandate in the Greek text—that the poor should always be remembered, even as this woman (Mary of Bethany) had remembered, men; or perhaps a corruption of the *mauron*, the cloak of odorous funeral ornaments bestowed by her upon the person of the Saviour. This ointment, said Judas Iscariot, who was the *purse-bearer* or almoner of Christ and the apostles, we might have purchased, and with it embalméd or purified the poor; but Christ rebuked him, saying "the poor always ye have with you, but me ye have not always."

The ceremony of purifying the poor was discontinued at the Reformation; but the provisions and silver pieces are still bestowed upon Maunday Thursday by the king's almoner in the royal chapel at Whitehall.

From Mysteries the boys of St. Paul's school proceeded to more regular dramas; and at the commencement of a regular theatre, were the best and almost the only comedians. They became at length so favourite a set of players as often to act at court, and on particular occasions of festivity, were frequently removed from London for this purpose only, to the royal houses at some distance from town. In early times, while no settled or public theatre was known, and itinerant minstrels acted in the halls of the nobility at Christmas, plays were performed by the boys of the public schools, and have continued to be so to the present time, of which the practice of acting Latin plays at Westminster, Eton, and other seminaries, are examples. The ancient consuetudinary as it is called of Eton school, containing all its old and original customs, relates that about the 30th of November, the master was accustomed to choose such Latin plays as were most excellent and convenient to be played in the following Christmas holidays before public audience.

1379. At this period red wine was four-pence a gallon; and Rhenish sixpence; in the following year it was four pounds a tun.

The Vintners or Vintonners, were incorporated in the reign of King Edward III. They were originally divided into *Vinetarii* et *Tavernarii*; Vintners who imported the wine, and Taverners who kept taverns, and retailed it for the former. The company flourished so much, that from its institution till 1711, it produced no fewer than fourteen lord mayors, many of which were keepers of taverns. Sir John Strodie, vintner, who was lord mayor in 1357, gave the land on which Vintner's hall in Thames-street was built. It was called the manor of the vinetre.

Our great wine trade was at first with Bourdeaux, and the neighbouring provinces; it commenced as early as the conquest, perhaps sooner. For in 979, or the reign of Etheldred, mention is made of ships from Rouen, laden with wines, but what duty was paid is not known; a small vessel was to pay "ad Bilynggesgate" one penny halfpenny as a toll; a greater, bearing sails, one penny; a keel or hulk (Cool vel Hulkus) fourpence; a ship laden with wood, one piece for toll; and a boat with fish, one halfpenny; or a larger, one penny.

But our trade in wine became very considerable in the reign of Henry II. by reason of his marriage with Elianor, daughter of the duke of Aquitaine; our conquest of that, and other great wine provinces of France, increased the trade to a high degree, and made great fortunes among the adventurers of this company. In after times, when sweet wines came into fashion, we had considerable intercourse with the Canary islands.

1380. The romance of *Amadis de Gaul* was written by Loberia.

1380. Wiclif, the *Morning Star of the Reformation*, completed his translation of the whole Bible unto English, including the apocryphal\*

\* The books called the Apocrypha, and appended to our bibles, are denominated from the Greek *apokrypto* to hide, either because they are of doubtful or hidden authority.

books. The new testament of Wiclif's version sold for four marks and forty pence, (£2 16s. 8d.) as appears from the register of W. Alnwick, bishop of Norwich, 1429, as quoted by Fox.

Wiclif says, that in his time, there "were many unable curates, that kunneen not the Ten Commandments, ne read their Sauter, ne understond a verse of it." This great and intrepid reformer died, December 30th, 1384, his body was buried in the chancel of Lutterworth church, Leicestershire, and there lay till 1284, when his bones were disinterred and burnt, and his ashes thrown into the Swift, a neighbouring stream, at the command of Pope Martin V. by Richard Flemmyng, bishop of Lincoln, according to a decree of the council of Constance, passed in the year 1415.

After a life wonderfully preserved from the unsparing cruelty of ecclesiastical power, by the protection of Edward III. the duke of Lancaster, and many of the nobility and gentry, his memory was affectionately revered, and, as printing had not been discovered, his writings were scarce and earnestly sought. The seed of dissent had germinated, and the appearance of dissenters at intervals, was a specimen of the harvest that had not yet come. Nothing more fearfully alarmed the establishment than Wiclif's translation of the New Testament into English. All arts were used to suppress it, and to enliven the slumbering attachment of the people to the 'good old customs' of the church. There is abundant evidence of studious endeavours to both these ends in the Coventry Mysteries. The priests industriously reported that Wiclif's Testament was a false one; that he had distorted the language and concealed facts. There was no printing press to multiply copies of his book; biblica criticism was scarcely known but by being denounced; the ecclesiastics anathematized scriptural inquiry as heresy\* from their confessionals and pulpits; and as 'the churches served as theatres for holy farces,' the Franciscan friars of Coventry

shortly after the meeting of the laymen's parliament in that city, craftily engrafting stories from the pseudo-gospels upon narratives in the New Testament, composed and performed the plays called the Coventry Mysteries. These fraudulent productions were calculated to postpone the period of illumination, and to stigmatize, by implication, the labours of Wiclif.

The most elaborate *Life of Wiclif* is that by the Rev. John Lewis; but the most correct list of his works, and one of the best written lives, will be found prefixed by the Rev. H. H. Baber, to his edition of *Wiclif's New Testament*.\*

The followers of Wiclif were called *Lollards*,† from a German term, signifying to *sing hymns to God*; and increased so rapidly, that a contemporary writer affirms, "a man could not meet two people on the road, but one of them was a disciple of Wiclif."

1380. Part of the cargo of a ship from Genoa to Sluys, in Flanders, which was driven ashore on the coast of England, consisted of twenty-two bales of writing paper.

1384. Died Albert Gerard, or from his general knowledge, and his devout and exemplary life, afterwards procured for him the distinctive appellation of the *great*. He instituted a society called "*Fratres Vitæ Communi*." "One heart, one soul, one common property," says Lambinet, influenced and supported this illustrious society; whose glory it was that they earned their livelihood by their pen." They were distinguished by wearing a grey coat, lined with hair next the skin. A black cowl hung down behind as low as the waist; and whenever they went abroad, they wrapt themselves in a large mantle, which descended to their heels. Their hair was closely cropped in a circular manner. Successive popes confirmed and extended their privileges; and in 1402, seven monasteries had admitted their rules, and imitated their example.

This extraordinary character was born at Deventer, in the year 1340. His parents took the greatest possible care of his education; and at the age of fifteen, he was sent to Paris, to perfect himself in philosophical and theological studies. His acquirements procured universal commendation; but in the midst of his intellectual celebrity, he debased himself by levity, luxury, and dissipation. A private, but faithful reproof, from one of his former fellow-students, was the occasion of an entire change in his conduct. He now became grave, devout, and exemplary; he clothed himself in a doublet of grey, lined with hair, and retired to a monastery at Munikhuyzen, where he devoted himself to prayer and the reformation of immoral characters. Meeting with unexpected success in this pious avocation, he instituted the fraternity before mentioned. He died in the 44th year of his age, and was buried in the church of the Virgin Mary at Deventer.

\* Heresy, in Greek, signifies *election, or choice*, and is used for any opinion which a man chooseth as best or most profitable. Heresy and heretic are often used by ancient writers as words of indifferent meaning, and the several ways of philosophizing were called *sects or heresies*. Dr. Johnson defines heresy, 'an opinion of private men different from that of the catholic and orthodox church.' Immediately after the council of Nice, the Emperor Constantine issued a decree, ordering, that if there were any book extant written by Arius, that it should be burnt to ashes, and the head of any man found hiding or concealing one should be struck off from the shoulders. The church extended the spirit of this edict to other books, hence it is that we have scarce any book of the ancient heretics existing. It has been questioned by the learned, whether the charge of heresy was any more than a popular charge against men who studied mathematics, and particularly astronomy and astrology with magic, and with using witchcraft and enchantment. Heretic is a favourite term of reproach for difference of opinion. It is told of one Netallis, who lived before the time of Jerome, that having accepted a bishopric among the heretics, he was severely scourged all night by angels, and the next morning repented and returned to the church.

When the order of Knight Templars was abolished, in 1310, to get possession of their vast estates, fifty-nine of them were burnt alive for pretended heresy, at Vienna and Paris. In 1324, Ledred, bishop of Osnory, persecuted to the stake, several persons of high rank, and thousands have suffered for opinions which at this day are held to be orthodox.

\* The Rev. Henry Harvey Baber, one of the librarians of the British Museum, edited a beautiful edition of *Wiclif's New Testament*, printed in 4to. 1810.

† Walter Lollard the founder of a religious sect in Germany, about 1315 was burnt at Cologne, in 1322.

The monks who devoted their time to writing, were sometimes distinguished by the name of *librarii*, but their more usual denomination was that of *antiquarii*. St. Isidore, of Seville, says, "the *librarii* transcribed both old and new works, the *antiquarii* only those that were ancient; from whence also they derived their name. Swift or short-hand writers obtained the name of *tachygraphi*; and elegant writers that of *calligraphi*. It was the duty of the librarian, who was the precursor of the monastery, to provide the writing monks with the books they were to copy, and whatever was necessary for their occupation; they were also forbidden to write any thing without his permission; and in some of the great houses it was usual for the librarian to make some benefit, by letting others have copies made of the manuscripts in their custody. Besides being employed in the transcription of the scriptures, and ecclesiastical works, and sometimes of the classics, the monks were the registrars of all public events of the age, and succession of the kings, and of the births of the royal family: and the constitutions of the clergy, in their national and provincial synods; and, after the conquest, even acts of parliament were sent to the abbays to be recorded by them. Instances also appear, of the pope's sending orders for certain books to be made for him; and the monks used to transcribe the bulls of privileges, in books of various nature; the affairs of their monasteries they placed as marginal notes in the books of history. Calligraphy, or the art of beautiful writing, has been considered as having arrived at its summit of excellence in the monasteries of Spain, though it was not confined in them, for in England, the Anglo-Saxon artists possessed eminent skill in the execution of their books, and the character they used had the honour of giving rise to the modern small beautiful Roman letter.

That the monks had not in high veneration the *profane* authors, appears by the following facetious anecdote. To read the classics was considered a very idle recreation, and some held them in great horror. To distinguish them from other books, they invented a disgraceful sign: when a monk asked for a pagan author, after making the general sign they used in their manual and silent language, when they wanted a book, he added a particular one, which consisted in scratching under the ear, as a dog, which feels an itching, scratches himself in that place with his paw, because, said they, an unbeliever is compared to a *dog*! In this manner they expressed an *itching* for those dogs, Virgil and Horace.—*Curiosities of Literature.*

The ancient poets and orators were represented as seducers to the path of destruction. Virgil and Horace were the imps of hell, Ovid a lecherous fiend, and Cicero a vain declaimer impudently elated with the talent of heathenish reasoning. Aristotle's logic alone was recommended because it was found capable of involving the simplest arguments and preplexing the plainest truths. A council of Carthage would not allow that a bishop should read any heathen book. St. August-

tine begged pardon of God for having read the works of Virgil with delight in his graver years.

Let our views be what they may of the general utility of monastic institutions, it is a well known fact, that when literature was neglected every where else, it found a refuge in the monasteries, where it was preserved amidst the ignorance and superstition, which so generally overspread the western world for many centuries. Monastic institutions are generally supposed to have been produced by the persecutions, and gloomy temper so natural to the natives of Egypt, where they took their rise, or were held in the highest estimation. They imperceptibly made their way through the greatest part of Europe, and gained voluntary proselytes, where their progress was not aided by the same causes. The violence and barbarity of manners, so common in the western parts of Europe, compelled many men to retire into the monasteries as places of security, where they might exercise those forms of devotion which were looked upon as of equal value with the practice of the moral and social duties of life. In the general estimation the monastic life was reckoned to be the most perfect; and the disorders of society gave some degree of authority to this opinion. Nor was the building of the monasteries totally useless with respect to the improvement of the lands. Erecting cells in the deserts, and collecting a number of followers by their admonitions, or admiration of the austerity of their lives, they afterwards built more spacious dwellings; and having obtained possession of the lands in their neighbourhood, by donations of the princes, or other benefactions, they improved them by their labour, and made them more salubrious and profitable. On the first institution of religious houses in England and other countries, the monks were generally obliged to labour, and to take their turns in the cultivation of the lands which belonged to their monastery. Learning was then a very rare accomplishment; and the interval of their devotions could not be more usefully employed than in husbandry. In after-ages, when their acquisitions were sufficient to maintain them, they spent their revenues in decorating their buildings, in acts of hospitality, and often in luxury. The learning and knowledge of those times, as poor and trifling as they may appear, fell chiefly to their share; and to them we are indebted for transmitting and preserving many valuable writings of ancient authors, which no other order of men thought worthy of regard. Many instances of their industry and perseverance in transcribing the scriptures, and promulgating religious instruction, have been already recorded not only in this work, but in many others, the authors of which are otherwise averse to the monastic institutions, to the monks, and their religious opinions.

One of the popular employments and entertainments of the ecclesiastics in the middle ages, and one of the modes adopted by them for the instruction of the people, in the place of the bible, was writing and exhibiting religious dramas; these being founded on scripture narratives, or

emblematical representations of moral qualities, were variously designated as *Scriptural Plays*, *Miracles*, and *Moralities*; and, from the festivals on which they were very generally performed, *Corpus Christi* and *Whitsun Plays*.

The theories which have been advanced to elucidate the origin of these theatrical exhibitions of scripture histories are various; one supposes them to have been first exhibited at the public mans or fairs, held at certain periods, in different parts of Europe; another conjectures that they had their rise at Constantinople; and a third believes them to have been introduced into the west by the pilgrims of the middle ages.

In erecting their buildings, as well as ornamenting their churches and shrines, they generally employed the most skilful workmen that were to be found in Europe, and taught and preserved many arts, which without their care, would have been entirely lost. The frequent visits which the clergy and monks made to the court of Rome, were the means of importing all the arts of civilized life, and gaining instructions in commerce, manufactures, and agriculture.

The religious houses were a kind of fortresses, to which the neighbouring inhabitants retired in times of public danger, and lodged their most valuable effects. So that, if they sometimes protected such as fled from justice, they secured others from violence and oppression. Such as resorted hither on these accounts were commonly retained by the abbots, and employed in the capacity of labourers or soldiers. In the abbey of Croyland the number of these fugitives once amounted to two hundred. And the power which the abbots possessed, of imprisoning and trying offenders within their jurisdiction, enabled them to keep such a numerous and licentious body in some degree of order. The power of the clergy in those times, was usually laid out for their own aggrandizement, was in this instance of public service, and by opening sanctuaries, afforded a place of refuge to the distressed commons. It has been observed, that the church has sometimes restrained the violence of the monarch, and put bounds to his tyranny; and in those barbarous ages, the right of sanctuary must have been of equal utility, and almost necessary.

1385. In the will of the celebrated citizen of London, Sir William Walworth,\* amongst other bequests is the following "Books of Divinity to three several religious communities, and some law books to his brother."

1390. In the accounts of the treasurer of Charles VI., King of France, the following article occurs:—"Paid fifty-six shillings of Paris, to Jaquenin Griengonneur the painter, for three packs of cards, gilded with gold, and painted with divers colours and divers devices, to be carried to the king for his amusement."

\* Sir William Walworth was the person who slew Wat Tyler, in Smithfield, June 15, 1381. He had assembled an army of 100,000 men. On the 16th of June, John Ball, an itinerant preacher, to be *chancellor*, gave them a sermon on Blackheath. On the death of Tyler, his followers returned to their homes.

There is abundant proof that playing cards were used in Italy, Spain, and Germany, for at least a century preceding the reign of Charles VI. and at this period, had, no doubt, become the common amusement of the noble and wealthy. The cards, like the missals, called forth the art of the limner; and the king, the knight, and the knave, (the characters of the early cards) were rich with crimson and purple, oftentimes painted on a golden ground. Gambling, like many other vices and follies, descend from the great to those below them in the social scale; and it is easy, therefore, to conceive that the followers of courts and of camps, and the artisans and dealers in the towns, seeing the amusement which their superiors derived from these painted bits of paper or parchment, would be anxious to possess the same means of excitement in their hours of idleness. The art of wood engraving was ready to supply the extended demand for playing-cards. The outline of the figure was cut in relief upon a block; and the coloured parts were afterwards added by the pencil. In Mr. Singer's elaborate and interesting work, entitled *Researches into the History of Playing Cards*, there are many fac similis of the early cards. Subjoined is a specimen of the KNAVE OF BELLS.

The argument which has been drawn from this fact, in support of their having been engraved, is grounded upon the prices paid being wholly inadequate, even in those days, unless they were first printed from outline engravings, and afterwards gilt and coloured by hand; although no doubt, with more than an ordinary degree of care, as they were for the king's use.

Heineken, and some other writers, ascribe the invention of engraving to the manufacture of playing cards; but this opinion is not supported by any satisfactory or conclusive evidence.

Mr. Otley argues, that we received the art

from the East; in support of which, he adduces the mode of printing practised by the first engravers by the means of friction; and also the custom, which is still preserved in Germany, of glazing the design to be engraved on the wooden block. M. Bulet endeavors to prove cards to be of French invention, about 1376: Heincken states, that they were used in Germany in 1300, at which time they were drawn and painted; and about this period, the outlines were made on blocks of wood, similar to the specimen given in the preceding page: they afterwards used thin plates of metal, with holes cut into them, for the purpose of finishing the cards with colours. Of these patterns, or stencils, it was requisite to have one for every different colour. Mr. Singer supposes that they were invented in Italy, and that they found their way to Germany as early as the period stated by Heincken. Stimulated by the high price paid for manuscripts, the engravers commenced executing works on wood, resembling those of the scribes; they were done in the most private way, no press being required, as they took their impressions by means of a roller or friction.

1390. In this year the first paper-mill in Germany, was erected near the city of Nuremberg.

1390, July 18, 19, and 20. The parish clerks of London, played interludes before Richard II. his queen, and their court, at the Skinner's well, the usual place of their performance.

The parish clerks of London, were incorporated into a guild by Henry III. about 1240, under the patronage of St. Nicholas. It was anciently customary for men and women of the first quality, ecclesiastics, and others who were lovers of church music, to be admitted into this corporation, and they gave large gratuities for the support or education of many persons in the practice of that science. It was an essential part of their profession not only to sing but to read; an accomplishment almost solely confined to the clergy: and on the whole they seem to come under the denomination of a religious fraternity. Their public feasts were very frequent and celebrated with singing and music; most commonly at Guildhall chapel or college. Before the Reformation this society was constantly hired to assist as a choir at the magnificent funerals of the nobility or other distinguished personages, which were celebrated within the city of London or in its neighbourhood. At this time they played the *Creation of the World*, and of the like subjects, for eight successive days, to splendid audiences of the nobility and gentry from all parts of England. The splendid ceremonies of their annual procession and mass in the year 1554, are thus related by Strype from an old chronicle, "May the sixth was a goodly evensong at Guildhall college, by the masters of the clerks and their fellowship, with singing and playing, and the morrow after was a great mass, at the same place, and by the same fraternity; when every clerk offered an halfpenny. The mass was sung by divers of the queen's (Mary) chapel, and children. And after mass done every clerk went their procession, two and two together; each having

on a surplice and a rich cope, and a garland. And then, four-score standards, streamers, and banners; and each one that bore them had an alb or a surplice. Then came in order the waits playing; and then thirty clerks singing *festas dies*. There were four of these choirs. Then came a canopy, borne over the sacrament by four of the masters of the clerks with staffes, torches burning, &c."—Suype's *Eccles. Mem.* vol. i. c. xiii.

Their profession, employment, and character, naturally dictated to this spiritual brotherhood the representation of plays, especially those of the scriptural kind; and their constant practice in shews, processions, and vocal music, easily accounts for their address in detaining the last company which England afforded in the fourteenth century at a religious farce for more than a week.—*Worton.*

The parish clerks' ancient performances are memorialized in raised letters of iron, upon a pump on the east side of Rag-street, now called Ray-street, beyond the Sessions-house, Clerkenwell; and which inscription records, the parish clerks of London, in remote ages, commonly performed sacred plays. That custom caused it to be denominated Clerk's-well, and from which this parish derived its name.—*Hone.*

1390. In this year a bill was brought into the House of Lords, to prohibit the use of English Bibles. The bill, however, being strongly repudiated, and opposed by John, Duke of Lancaster, Wiclif's firm patron, was rejected. The Duke is related to have said, "We will not be the dregs of all, seeing other nations have the law of God, which is the law of faith, written in their own language." Declaring at the same time, "that he would maintain our having the law in our tongue against those, whoever they should be, who first brought in the bill." The duke was seconded by others, who said, that "if the gospel, by its being translated into *English*, was the occasion of men's running into error, they might know, that there were more heretics to be found among the Latins, than the people of any other language." The consequence of this firmness of Wiclif's patron and friends, was, that the bill was thrown out.

1392. The progress of the poor laws is regularly traced from the 15th Richard II. c. 6, (which directs that, upon appropriations, a convenient sum of money shall be distributed yearly to poor parishioners, from the profits of the church,) to the 43rd Elizabeth.—*Sir F. Eden.*

1393. Alazie de Blevis, lady of Romolles, spouse of the magnificent Boniface of Castellane, baron of Germany, making her last will, left to her daughter a certain number of books, wherein was writ the whole body of the law, done in a fair letter upon parchment; charging her in case she should marry, that she would marry a doctor or lawyer; and for that end, she had left her that fine and rich treasure in abatement of her dowry.

1395. In an account roll of Winchester college for this year, there is an article of disbursement, for a tablet covered with *green wax*, to be kept in the chapel for noting down with a

style, the respective courses of duty alternately assigned to the officers of the choir. Shakespeare alludes to this mode of writing, in his *Timon of Athens*.

"My free drift  
Halts not particularly, but moves itself  
In a wide sea of war."

1396. Froissart, the poet, on his introduction to Richard II. presented to the king a book beautifully illuminated, engrossed with his own hand, bound in crimson velvet, and embellished with silver bosses, clasps, and gold roses, containing all the matters of *Armours and Moralities*, which in the course of twenty-four years he had composed. When Froissart left England, in this year, the King sent him a massy goblet of silver, filled with one hundred nobles.

The matter of Froissart's History, and the candid simplicity of his manner, must please the reader of every age. His works abound so much in individual character, and are so truly dramatic. His History is a faithful record of the sentiments and manners, the stately port, and romantic honour, of the nobility and gentry of France and England at this remote but highly interesting period; and are an inexhaustible source from which the poets of romance may deduce themes for the muse, that loves

"To sing achievements high  
And circumstance of chivalry."

Froissart lived at the period of the battle of Poitiers, at which King John was taken prisoner. His *History or Chronicle* commences in the year 1326, with the great comte Phillip first King of France of the line of Valois, and with the wars between him and Edward III. of England, and ending with the murder of Richard II. which is supposed to have taken place at Pontefract castle, in Yorkshire, on the 13th January, 1400. He had deposited himself in the preceding September.

1296, Oct. A quarter of wheat was valued at three shillings and sixpence; a quarter of oats at two shillings; a pound of wool three shillings.

1397. Adam Eston or Easton, an Englishman, educated at Oxford, became a Benedictine monk of Norwich, and successfully filled the sees of Hereford and London. He was eminently skilled in Hebrew, Greek and Latin, and appears to be the first of the moderns who attempted a translation of the Old Testament immediately from the Hebrew. This work he is said to have completed, except the Psalms. Robert Wakefield (who died in 1538) says, in the tract which he wrote on the *Purity of the Hebrew Text*, that for some time he had the work in his possession but that at length it was stolen. In the preface to his translation, he defends the integrity of the Hebrew original against Nicholas de Lyra and others, who supposed it to have been corrupted by the Jews. He was created a cardinal by Urban VI., but was afterwards thrown into prison, with five other cardinals by the same pontiff, where he remained for five years. After his release he wrote an account of his imprisonment.

1398, The mystery of the conception, passion, and resurrection of Christ, was performed at St. Maur, about five miles from Paris, but were prohibited by the provost of Paris. Charles VI. went to see these shows, and was so well pleased with them, that he granted the actors letters patent, dated Dec. 4, 1402. They also built a theatre of the hospital of the Holy Trinity, on which, during the space of almost one hundred and fifty years, they acted the *Mysteries*, or other pieces of a similar nature, under the common titles of *Moralities*. Francis I. by his letters patent, dated January, 1518, confirmed all the privileges of this fraternity.—Riccoboni's *Historical and Critical Account of the Theatres in Europe*.

1399, Oct. 13. Henry IV. is inaugurated on the anniversary of his exile. That solemnity is also memorable for the institution of the *Order of the Bath*. No sooner had Henry gained possession of the throne than Arundel, archbishop of Canterbury, who had supported him in his pretensions to the crown, applied, with his clergy, to the parliament that met at Westminster, to obtain the sanction of the legislature to his cruel and iniquitous measures. In this he was unfortunately successful, and a severe law was passed in 1400 against the Lollards. It has been shewn, that Wiclif had boldly advanced to an uncommon enlargement of thinking in religious matters, and Chaucer displayed a vein of poetry rich and new in this country. From such beginnings important consequences might have been expected; and the writings of these eminent men must have had no small effect on the minds of many individuals. The opinions of Wiclif appear to have been embraced by a larger number of persons than dare to avow them; and the admirers of Chaucer could not avoid having their understanding and their taste improved by a perusal of his works. Still, however, the progress of knowledge was far inferior to what, from auspices so favourable to the cultivation and refinement of the human faculties, might rationally have been predicted. Henry IV. at his accession to the crown, was understood to be friendly to the sentiments of Wiclif. But the conscience of this monarch, like that of most other princes, was not of that obstinate kind which refused to bend itself to political views. When he considered the state of parties, he was convinced that nothing could so effectually strengthen his claims as the support of the clergy; and, therefore, he determined to comply with the requisitions of the great ecclesiastics, however hostile these requisitions might be to the cause of reformation. The severest treatment of the advocates for religious improvements was the price of the church's favour; and it was a price to the payment of which Henry readily submitted. Through the influence of Arundel, whose character was deformed by superstition and cruelty, the above act was obtained, by which the bishops were authorised to imprison all persons suspected of heresy, and to try them in the spiritual court. If these disciples of Wiclif proved either obstinate or relapsed heretics, the ecclesiastical judge

was to call the sheriff of the county, or the civil officer of the town, to be present when the sentence of condemnation was pronounced; upon which the condemned person was immediately to be delivered to the secular magistrate, who was to cause him to be burnt to death, in some elevated place, in the sight of all the people.

1400, June 22. Died Geoffrey Chaucer, the father of English Poetry; or more emphatically, the "Morning Star." Of the history of this distinguished poet, whom his contemporaries and immediate successors denominate "the flower of eloquence,"—"superlative in eloquence," &c. it is astonishing that we should know almost nothing. His very descent is involved in impenetrable obscurity; for while one of his biographers asserts that he was of a noble stock, another declares that he was the son of a knight; a third, that his father was a vintner, and a fourth, that he was a merchant: there is a fifth opinion, which seems best entitled to credit, viz. that nothing can be said with any certainty respecting his origin.

The place of his birth, likewise, is equally a matter of dispute; for while some maintain, and, apparently, on his own authority, that he was born in London, others have brought what, to them, have appeared very conclusive arguments, that he was a Berkshire man; while a third party have strenuously maintained, that the honour of his nativity belongs to the county of Oxford. Amidst these discrepancies, which encumber almost every circumstance connected with the poet's life, it is difficult to know what to believe: we must, therefore, content ourselves with the information furnished by his tombstone, and various other records; from the first of which, it appears, that he was born in 1328, and that he died in 1400; and from the latter, that he was closely connected with John of Gaunt, to whose second wife he was related by marriage; that he was, at one time, in high favour at Court, where he enjoyed several lucrative offices; but that he afterwards, it is conjectured on account of his attachment to the doctrines of Wiclif, forfeited his places, and was compelled to fly the kingdom; and that, after his return to his native land, he was taken and committed to prison, from whence he was not released till he had made his submission.

From all that can be obtained, it appears that his father was a wealthy merchant, who gave him a liberal education, and that he studied both at Oxford and Cambridge. He next improved himself by travelling into foreign countries. Mr. Godwin, in his *Life of Chaucer*, has observed, after Leland, that "it was during the years that Chaucer resided at the university of Paris, that he imbibed all the beauties, elegance, charms, wit, and grace of the French tongue to a degree that is scarcely credible. Nothing indeed, can be more indubitable than that Chaucer was a consummate master of the language, and of all the literary productions which had then appeared in France." On his return he became yeoman to Edward III. who gave him a pension out of the

exchequer, and soon after was appointed shield bearer to that sovereign. He was sent to Genoa to hire ships for the king's service, and at his return obtained a grant of a pitcher of wine a-day, to be delivered by the butler of England; and the place of comptroller of the customs of London, for wool, &c. On his release from prison he retired to Woodstock, where he employed himself in correcting his works. Here he published his treatise on the *Astrolabe*. Henry IV. in the first year of his reign, gave him an annuity of forty marks for his life. He was buried in Westminster abbey. Chaucer married Philippa de Rouet, by which means he became allied to John of Gaunt, duke of Lancaster, who was his patron while he was himself in power.

On the accession to the throne of Henry IV. the son of his great patron, he quitted his peaceable retirement, and travelled to London; and this journey is supposed to have hastened his end, the near approach of which, if we may judge from the following Ode, which he is said to have composed in his last agonies, he bore with Roman fortitude. The reader will observe, that the phraseology of this little piece has been modernized, in order to obviate the obscurity of the old language.

#### THE POET'S LAST ADVICE.

FLY from the crowd and be to virtue true,  
Content with what thou hast, tho' it be small;  
To hoard brings bale: nor lofty thoughts pursue;  
He who climbs high endangers many a fall.  
Envy's a shade that ever waits on fame,  
And oft the sun that raises it will hide;  
Trace not in life a vast expensive scheme,  
But be thy wishes to thy state allied;  
Be mild to others, to thyself severe,  
So truth shall shield thee or from hurt or fear.

Think not of bending all things to thy will,  
Nor vainly hope that fortune shall befriend;  
Inconstant she, but be thou constant still,  
Whatever betide, unto an honest end.  
Yet needless dangers never madly brave,  
Kick not thy naked foot against a nail;  
Or from experience the solution crave,  
If wall and pitcher strive, which shall prevail.  
Be in thy cause, as in thy neighbour's clear,  
So truth shall shield thee or from hurt or fear.

Whatever happens, happy in thy mind,  
Be thou serene, nor at thy lot repine;  
He 'scapes all ill whose bosom is resign'd,  
Nor way nor weather will be always fine.  
Beside, thy home's not here, a journey this,  
A pilgrim thou, then hie thee on thy way;  
Look up to God, intent on heav'nly bliss,  
Take what the road affords, and praises pay.  
Shun brutal lusts, and seek thy soul's high sphere,  
So truth shall shield thee or from hurt or fear.

Chaucer had for cotemporary poets, Robert of Gloucester, Robert of Brunne, and Piers Plowman, believed to be a fictitious name. Their predecessors were Rendale and Thomas of Erceldowne, known by the appellation of the *rhymers*. Uniting, or supposed to unite, in his person, the powers of poetical composition with those of prophecy, and his memory after a lapse of five centuries, is regarded with veneration by his countrymen. For this, he is, perhaps, rather indebted to the superstitious credulity of the vulgar, than to the just claims which he possesses as the earliest Scottish poet whose name and rhymes, have descended to modern times. Of his history,

little is known with certainty; but from a record it is proved, that our poet was dead in 1290.

According to the popular belief, he still "drees his wierd" in fairy land, and is expected one day to revisit the earth.

In addition to many prophecies, Sir Walter Scott has attributed to him, the romance of *Sir Tristram*, which he published from a manuscript copy, with very numerous and valuable illustrative notes and observations.

Chaucer left two sons, one of whom was speaker of the house of commons and ambassador to France. His grand-daughter Alice was married to William de la Pole, the exiled duke of Suffolk, who was beheaded at Wingfield, in Suffolk, in May, 1450.

Of the works of Chaucer the *Canterbury Tales* are by far the best, and have been modernized by Dryden, Pope, and others. The following extract will give some idea of his language.

#### THE SCHOLAR.

Him was lever\* have at his hed's heed,  
Twenty bookes, clothed in black or red,  
Of Aristotle and his philosophy,  
Than robes rich, or fiddis, or psaltry.  
But all be that he was a philosopher,  
Yet hadde he but little gold in coffer,  
But all that he might of his friende's bent,  
On bookes and on learning he it spent,  
And husly 'gan for the soule's pray  
Of them that gave him to scholary,  
Of study took he mooste care and heed,  
Not a word spoke he more than was need;  
And that was said in form and reverence,  
And short and quick, and full of high sentence,  
Sounding in moral virtue was his speech,  
And gladly would he learn and gladly teach.

1400, *Died* The celebrated historian Froissart. The age of Froissart was an age of romance and chivalry, when not only the courts of princes, but the castles of barons vied with each other with shews; when tournaments, coronations, royal interviews, and solemn festivals were the grand objects of mankind. Froissart was an eye witness of many of the ceremonies which he describes. His passion seems to have been that of seeing magnificent spectacles, and of hearing reports concerning them. Although a canon of two churches, he passed his life in travelling from court to court, and from castle to castle; thus providing materials for his history. He was familiarly known to two kings of England, and one of Scotland. Froissart from his youth was strongly attached to carousals, the music of minstrels, and the sports of hawking and hunting. He cultivated the poetry of the troubadours;† and was a writer of romances. During his abode at the court of Gaston, earl of Foix, at Orlaix, in Bearne, which he himself informs us, was the most brilliant in Europe, where he was entertained twelve weeks, he presented to the earl his collection of the poems of the duke of Luxemburg, consisting of sonnets, ballades, and virelays. Among these was included a romance composed by himself, called *Meliader*; or the *Knight of the Sun of Gold*. Gaston's chief amusement was

to hear Froissart read this romance every evening after supper. He also presented to Gaston four greyhounds, "Tristran, Hector, Brut, and Roland;" and we are told that this earl actually kept no less than six hundred dogs in his castle.

Caxton in his exhortation to Knight, &c. of his age, ranks Froissart's *History*\* as a book of chivalry, with the romances of *Lancelot* and *Perceval*.

1400. A copy of the *Romans de la Rose* was sold before the palace gates at Paris, for forty crowns, or £33 6s. 6d.

The *Romans de la Rose*, which was written during the thirteenth century, places the French over all European nations in the invention of romances of chivalry, and the production of every species of offspring of the imagination. It may justly be regarded as the predecessor and progenitor of all that is admirable in the effusions of modern, in contradistinction to the chivalrous poetry.

The *Romans de la Rose* was commenced by Guillaume de Lorris, who lived in the time of St. Louis. He was a poet and juriconsult of a small town of France. Du Verdier says, that having become enamoured of a certain lady, he composed this celebrated romance in French rhyme, in imitation of the little work of Ovid, the *Art of Love*. It is agreed that he possessed most of those qualities which constitute a poet, namely, an agreeable wit, a lively imagination, and great fruitfulness of invention. He understood the charms of fiction; of which cotemporary poets knew little. His descriptions still please by their simplicity and truth, and are very characteristic of the times in which they were written.

Guillaume de Lorris died about the year 1200. Of the before-mentioned romance he wrote the first 4150 verses. Jean le Meun of Clopinel continued the work forty years after the death of de Lorris, in the reign of Philip le Bel, or at the latest about 1300. Jean de Meun (say the French critics) had more learning than de Lorris. Some think he was not only cotemporary with Dante, but the associate of his studies. If the licentiousness of his muse gave just offence to some, the pungency of his satire did not fail to enrage others. He found himself assailed by enemies of every class. The court ladies were in particular with great reason, indignant at many passages of his poems, and they determined, says Du Verdier, one day to chastise him. The poet coming on some business to court was stopped by the fair assembly in one of the apartments; in presence of many lords, who to please them had engaged not to interrupt their purpose. De Meun seeing them armed with rods, and hearing them importunately urge the gentlemen to strip him,

\* Mr. Warton, from whom the above account is taken, records that there were in his time existing, in the British museum, two or three finely illuminated manuscript copies of Froissart's chronicle; and that among the stores of Henry VIII. at his manor of Bedington, in Surry, we find the fashionable reading of those times exemplified in the following works:—"Item, a great book of parchments written and lymned with gold of graver's work, *De Cos sessione Amantis*; with xviii. other books. Le premier volume, de *Lancelot*, FROISSART. Le *Grand Voyage de Jerusalem*, MANDVILLE. *Enguerrain de Montrieu*, &c.

† The troubadours were French minstrels or poets, who chiefly flourished in Provence, during the twelfth and thirteenth centuries.

implored one boon; swearing he would not ask a remission of punishment from such as he had justly offended, but rather its execution. At the earnest instance of the lords present, his suit is with difficulty granted. But when De Meun stated the terms, not one lady could be found to accept the honour of beginning the chastisement, and De Meun escaped, leaving the ladies covered with blushes, and furnishing the lords present a very diverting occasion of laughter.

The earliest French romances of chivalry are generally divided into two classes, namely, those which relate to Arthur and the Round Table, and those which have relation to Charlemagne.

Chancer invested the *Romans de la Rose* with an English dress, with all the charms, wit, and elegance of the original.

The following statement, from Henry's *History of Great Britain*, may illustrate in some degree, the manners of these rude and unlettered time; "robbery was the reigning vice in all the nations of Europe; and the robbers, protected by the barons, who shared their booty, plundered all who came in their way, without distinction. A troop of these plunderers, commanded by Gilbert Middleton, and Walter Selby, assaulted two cardinals, who were escorted by Lewis Beaumont, bishop of Durham, and his brother lord Beaumont, attended by a numerous retinue, near Darlington. The cardinals they robbed of their money and effects, and then permitted them to proceed on their journey; but carried the bishop and his brother, the one to the castle of Morpeth, and the other to the castle of Mitford, and detained them till they had paid certain sums, as ransoms. The same unfortunate prelate had his palace afterwards plundered even to the bare walls, by sir Joselin Deinvile." Injurious as such a state of society must necessarily have been to the promotion of religion and learning, various instances occurred, which proved that in an age of strife, and ignorance, there were, nevertheless, some who promoted a desire for learning.

1401, *March 10*. The first person who suffered death under the act for exterminating heresy, was Sir William Sawtre, rector of St. Oswyth, London. He was brought to trial before the convocation of the province of Canterbury, at St. Paul's, and received sentence of condemnation upon a statute, which is so reproachful to the principles and manners of the times, and it was not one of denunciation, but was instantly carried into execution on this day, by being burnt to death. It was an honour to himself, but a disgrace to his country, that he was the first person who suffered death, for the adoption of sentiments the truth of which is now admitted by every liberal mind. Another clergyman, whose learning alone would entitle him to respect and esteem, was committed to a loathsome prison by Arundel, though he did not carry his vindictive spirit so far to William Thorpe, as with Sawtre.

1402, *June 5*. Henry IV. issues from Westminster a proclamation to dispel the rumours of Richard II. having appeared in Scotland, stating that he was recently dead and buried. In April

in the following year, the king replies to Louis duke of Orleans, who had reproached him with rebellion, usurpation, and the murder of Richard. "If you mean that we had any hand in his death, we say that you lie, and will lie falsely, as often as you shall assert it; as the true God knows whom we call to witness our innocence, offering, as a loyal prince ought, our body against yours, if you will or dare to prove it."\*

1403. By the authority of the lord mayor and court of aldermen of the city of London, the stationers were formed into a guild or fraternity and had their ordinances made for the good government of their fellowship. Thus constituted, they regularly assembled, under the government of a master and two wardens. Their first hall was in Milk-street; but, notwithstanding all the endeavours that have been made, no privilege or charter has yet been discovered under which they acted as a corporate body.

It appears from the most authentic records that the company of stationers, or text-writers who wrote and sold all sorts of books then in use namely, A. B. C. with the Paternoster, Ave Creede, Grace, &c. to large portions of the bible, even to the whole bible itself, dwelt in and about Paternoster-row. Hence we have, in that neighbourhood, Creed-lane, Amen-corner, Ave Maria-lane, &c. all places named after some scripture allusions.

There dwelled also turners of beads, and they were called Paternoster makers; as I read in a record of one Robert Nikke, Paternoster maker and citizen in the reign of Henry IV.—.....

Archbishop Seldon, in his *Miracles of Antichrist*, published in 1616, mentions "standing stationers and assistants at miracle markets and miracle forges." The name *stationer* was adapted by all the old booksellers and printers and it is well known that they had stalls or sheds in St. Paul's church yard. They acquired that name, (but not exclusively) from keeping fixed sheds or stalls, as distinguished from itinerant vendors, "whether" observes Dr. Pegge, "of books or broomsticks." Wynken de Worde in his will calls himself "citizen and stationer of London."

1404, *Sept. 24*. Died William of Wykeham, bishop of Winchester, in the reigns of Edward III., Richard II., and Henry IV., and secretary of state to the first of these monarchs. He was born at Wykeham, in Hampshire, in the year 1324. He was eminent both as a scholar and as an architect. In April, 1386, the first warden and fellows made their public entry into St. Mary of Winchester's college, since called New college, which he had founded; also a noble school at Winchester, was founded by him, and which continues to retain a high reputation to the present day. In his register under the year 1384, an episcopal injunction is recited, against

\* A Latin Psalter, ornamented with the most beautiful miniatures, and richly illuminated, for the use of king Richard II. when a youth, is preserved in the Cottonian library. It has a calendar, with various tables, besides hymns, and the Athanasian creed. The king is represented, in different places, on his knees before the Virgin Mary, who has the infant Jesus in her arms.—*La Long*.

the exhibition of "Spectula," or similar diversions, in the cemetery of his cathedral.\*

1404. In a parliament held at Coventry, which from its desire to compel the clergy to contribute largely to the state, was called the Laymen's Parliament. The country was in imminent danger, an abundant supply of money was immediately necessary; the parliament knew that the profusion of ecclesiastical wealth could only have been acquired from the industry of the laity; and they represented that the clergy had been of little service to the king, while the laity had served in his wars with their persons, and by contributions for the same purpose had impoverished their estates. The archbishop of Canterbury, (Arundel) said that if the clergy did not fight in person, their tenants fought for them, that their contributions had been in proportion to their property, and the church had offered prayers and masses day and night for God's blessing on the king and the army. The Speaker, Sir John Cheyne, answered, that the prayers of the church were a very slender supply. To this the archbishop replied, that it might easily be seen what would become of the kingdom when such devout addresses were so slighted. The persistence of the archbishop saved the church from the impending storm.

Amidst the ardour of the prelates for the suppression of novel opinions, and for impeding the progress of reformation, it might have been expected that their own favourite study, that of scholastic theology, would have been vigorously pursued. This species of divinity was, indeed cultivated to a certain degree: but it did not appear with the splendour which it had assumed in former ages. No such luminaries were produced as had heretofore obtained the pompous titles: there were no persons who attained the appellations of irrefragable, angelic, or seraphic doctors. The bishops chiefly concerned themselves in supporting the general pretensions of the church, or in framing canons for the maintenance of their separate interests. The poems of Chaucer abound with invective against the vices of the clergy, particularly the *Plowman's Tale*: an example or two will sufficiently discover the tenor of the poem.

Such as can nat saye ther crede,  
With prayer shul be made prelates;  
Mother canne thei the gossell rede,  
Such shul now weldin hel estates.

They use horedome and harlottrie,  
And covetise, and pompe, and pride,  
And slothe, and wrathe, and eke envie,  
And sewine sinne by every side.

As Goddes godenesse no man tell might,  
Ne writte, ne speke, ne think in thought,  
So ther falsed, and ther unright,  
Male oo man tell that ere God wrought

\* An interdiction of a similar nature is found among the statutes of the synod of the church of Diez, A. D. 1287; by which jocalators or minstrels, actors and dancers are forbidden performing in the church, cemetery, or portico.

The porticus, or portico, was not the same with what is usually called the church-porch, but either what is now commonly called the side-lale, or a particular division of it, consisting of one arch with its recess, and was frequently distinguished by the name of some saint, as Porticus Sd. Martini in St. Augustin's church at Canterbury.

1404, Jan. 13. It was enacted by the shortest parliament on the statute rolls, that none (referring to the chemists) from henceforth shall use to multiply gold and silver, or use the craft of multiplication; and if any do the same do, he shall incur the pain of felony. It was repealed 1 William and Mary.

1406. Henry Beda, a priest, bequeathed his manuscript breviary to the church of Jacques-la-Boucherie, he left at the same time, to William l'Exale, the churchwarden of the said church, the sum of forty sols, to pay the expense of having a cage made in which the breviary might be kept.—*Magasin Picturesque*.

1408, August 17. Died John Gower, a celebrated English poet, whom Chaucer styles the "moral Gower." He was born in Yorkshire about 1320, and became eminent as a professor of law in the Inner Temple, and is supposed to have been Chief Justice of the Common Pleas. His works consist of three parts, *Speculum Meditantis*; *Vox Clamantis*; and *Confessio Amantis*. They were printed by Caxton in 1483.

It is pleasant to observe the strange mistakes and anachronisms which Gower, a man of great learning, and the most general scholar of his age, has committed in his *Confessio Amantis*, concerning books which he never saw, his violent anachronisms and misrepresentations of the most common poets and characters: he mentions the Greek Poet Menander as one of the first historians, or, to quote his own expression, "the first editours of the olde cronike," together with Esdras, Solinus, Josephus, Claudius Salpicius, Termegris, Pandulfe, Frigidilles, Ephiloquorus, and Pandas. In this list, the omissions of which are as curious as the insertions, we are equally at a loss to account for the station assigned to some of the names as to the existence of others, which it would require an *Œdipus* to unriddle.

In the next paragraph, it is true he mentions Herodotus; yet not in his character of an early historian, but as the first writer of a system of the metrical art, "of metre, of ryme, and of cadence." We smile when Hector, in Shakspeare, quotes Aristotle; but Gower gravely informs his reader that Ulysses was a *clerke*, accomplished with a knowledge of all the sciences, a great rhetorician and magician; that he learned rhetoric of Tully, magic of Zoroaster, astronomy of Ptolomy, philosophy of Plato, divination of the prophet Daniel, proverbial instruction of Solomon, botany of Macer, and medicine of Hippocrates. And in the seventh book of the poem, Aristotle or the *philosophus* is introduced reciting to his scholar Alexander the Great, a disputation between a Jew and a Pagan, who meet between Cairo and Babylon, concerning their respective religions: the end of this story is to shew the cunning, cruelty, and ingratitude of the Jew, which are, at last, deservedly punished. But I believe Gower's apology must be, that he took this narrative from some Christian Legend, which was feigned for a religious purpose, at the expense of all probability and propriety.

Amongst the Astrological writers he reckons Noah, Abraham, and Moses; but he is not sure that Abraham was an author, having never seen any of that Patriarch's Works; and he prefers Trimegistus to Moses. Cabalistical tracts were, however, extant, not only under the names of Abraham, Noah, and Moses, but of Adam, Abel, and Enoch. He mentions with particular regard Ptolemy's *Almagest*, the grand source of all the superstitious notions propagated by the Arabian Philosophers concerning the science of divination by the stars. These infatuations seem to have completed their triumph over human credulity in Gower's age, who, probably, was an ingenious adept in these false and frivolous speculations of this admired species of study.

His account of the progress of the Latin language is exceedingly curious. He supposes that it was invented by the old Tuscan Prophetess, Carnens; that it was reduced to method by the grammarians Aristarchus, Donatus, and Didymus; adorned with the flowers of eloquence and rhetoric by Tully; then enriched by translations from the Chaldean, Arabic, and Greek languages, more especially by the version of the Hebrew Bible into Latin, by Saint Jerome (in the fourth century); and that at length, after the labours of many celebrated writers, it received its final consummation in Ovid, the poet of lovers. At the mention of Ovid's name, the poet, with the dexterity and address of a true master of transition, seizes the critical moment of bringing back the dialogue to its proper argument.—Love.—*Warton*.

The death of Gower has been dated on the 15th of October, 1402, but by no sufficient authority. His will was signed at the priory, in Southwark, the 15th of August, 1408, and an administration of his goods was given to Agnes, the poets widow, on the 7th day of November.

1410. Sabines surnamed *Lepus* archbishop of Prague, a prelate of illustrious extraction, but so illiterate, that he only acquired the knowledge of letters after his advancement to the archbishopric. The determined enemy of the Hussites, as they were called, commanded that all the books of Wiclif should be brought to him in order to be publicly burnt. This episcopal mandate was partially obeyed, and more than one hundred volumes finely written, and richly ornamented with costly covers and gold bosses, were committed to the flames.

Having in a preceding page given the rise and progress of monastic institutions, and shewn that in many of the religious houses luxury and indolence, had arisen to such a height, that some measures were rendered necessary for remedying the disorders created by their dissipation and licentiousness. For this purpose a new order of religious fraternity was introduced into the church, the members of which, being destitute of fixed possessions, might restore respect to the monastic institution, and recover the honour of the church, by the severity of their manners, a professed contempt of riches, and unwearied per-

severance in the duties of preaching and prayer. This new order were called Mendicants, or begging friars, which took their rise at the beginning of the thirteenth century; and by a decree of the second council of Lyons, in 1274, were divided into four orders, which were called Dominicans Franciscans, Carmelites, and Augustines, or Austins. The Franciscans were often styled friars, minors, minoretts, or grey-friars; the Dominicans were generally termed friars-preachers, or black-friars; the Carmelites bore the name of white-friars; and the Austins, of grey-friars. The Dominicans and Franciscans were the most eminent. The popes, among other immunities, allowed them the liberty of travelling wherever they pleased, of conversing with persons of all ranks, of instructing youth and the people in general, and of hearing confessions, without reserve or restriction; and as they exhibited more striking marks of sanctity than were observable in the deportment of the members of other monasteries, they were regarded with the highest esteem and veneration through all the countries of Europe. By the extraordinary assiduity and success with which they cultivated the various branches of literature, they acquired the most extensive influence. The theological professors in the university of Naples, founded in 1222, were chosen from among them. They were the principal teachers of theology at Paris; and at Oxford and Cambridge, respectively, all the four orders had flourishing monasteries. The Franciscans appear to have been the sole support and ornament of that university for more than two hundred years. Their diligence in collecting books was proverbial; and every mendicant convent was furnished with what was considered as a great and noble library. To literary pursuits they joined the arts of popular entertainment, and they were probably the only religious orders in England who acted plays. The *Creation of the World*, annually performed by the grey friars, at Coventry, is still extant.

The buildings of the mendicant monasteries, especially in England, were remarkably magnificent. These fraternities being professed poor, and by their original institution prevented from receiving estates, the munificence of their benefactors was employed in adorning their houses with stately refectories and churches. Persons of the highest rank bequeathed their bodies to be buried in the friary churches, which were esteemed more sacred than others, and were consequently filled with sumptuous shrines and superb monuments. In the noble church of the grey friars in London, finished in 1325, but long since destroyed, four queens, beside upwards of six hundred persons of quality, were buried, whose beautiful tombs remained till the dissolution. The Franciscans indeed enjoyed from the popes the privilege of distributing indulgences, which produced a valuable indemnification for their voluntary poverty. For the space of nearly three centuries, the Dominicans and Franciscans, appear to have governed the European church and state, with an absolute and universal sway; with

an authority which silenced all opposition; and maintaining the disputed prerogative of the pope against the united influence of prelates and kings, with a vigour only to be paralleled by its success.

1411. *July 24.* The battle of *Harlow*, between the Gaelic and Lowland Scottish factions, led by the earl of Mar and Donald of the isles. This battle was, in its consequences, of the highest importance, since it decided the superiority of the more civilized regions of Scotland, over those inhabited by the Celtic tribes, who remained almost as savage as their forefathers the Dulriads. Another mark of the advance of civilization, observes Sir Walter Scott, was the erection of the university of St. Andrew's, which was founded and endowed about this time, under the auspices of Henry Wardlaw, archbishop of St. Andrew's, and a cardinal.

1413. It was not till the 14th year of the reign of Henry IV. that villians (servants or slaves) farmers and mechanics, were permitted by law to put their children to school, and long after this period they dared not to educate a son for the church without a licence from their lord.

In this reign (Henry IV.) there was only one poet, and he contributed nothing to the improvement of our versification and language. His real name was John Walton, though he is called Johannes Capellanus. He translated into English verse Boethius's treatise on the *Consolation of Philosophy*, a work of genius and merit, which in the middle ages was admired above every other composition.

1413. *Feb. 20.* Died Thomas Arundel, archbishop of Canterbury, he was born in 1353. At the age of 21 he was consecrated bishop of Ely. In 1396 he was raised to the primacy, with which he exercised the office of lord high chancellor. Richard II. banished him, for some attempts to establish a regency, on which he went to Rome. When Henry IV. ascended the throne, Arundel returned to England. He was a zealous defender of the temporalities of the church and exerted himself greatly against the Wiclifites. For the severity of his conduct against those who embraced the doctrines of Wiclif, see the various constitutions which he framed, and also Fox's *Book of Martyrs*.

1413. *March 20.* Died Henry IV. and was buried at Canterbury. It is said of this monarch that he wished all his subjects could afford themselves a good supper once a week.

1415. The first record written in the *English* tongue, and by any Englishman, is in this year, being the confession of Richard Earl of Cambridge.

1415. *June 22.* John Huss, a Bohemian clergyman who had embraced the opinions of Wiclif, was burnt at the stake on this day. His friend and fellow-sufferer, Jerome of Prague, followed him through the flames the following year.

While the abettors of Wiclif's tenet were depressed and cruelly treated at home, that the doctrines which had been advanced by him contributed to the diffusion of religious knowledge among foreign nations. Bohemia was the king-

dom where his principles were the most zealously and extensively adopted, and where they were productive of effects which make no inconsiderable figure in the public history of Germany. Huss and Jerome were the first who suffered in Bohemia, in the cause of religious toleration. They bore their sufferings with constancy, going to the stake as to a feast, and allowing no expression to escape them which could indicate uneasiness of mind.

1415. In the second year of the reign of king Henry V. a parliament held at Leicester, it was enacted, "that whosoever they were that should read the scriptures in their mother tongue, (which was then called Wicleu's learning) they should forfeit land, cattle, body, life, and goods, from their heirs for ever, and be condemned for heretics to God, enemies to the crown, and most errant traitors to the land." Besides this, it was enacted, "that neither sanctuary, nor privileged ground within the realm should hold them, though they were still permitted to thieves and murderers. And if in case they would not give over, or were after their pardon relapsed, they should suffer death in two manner of kinds; that is, they should first be hanged for treason against the king, and then be burned for heresy against God, and yet neither of both be committed."—*State Trials*.

Lewis, in his *History of English Translations*, says "Because writing was dear and expensive, and copies of the whole New Testament not easy to be purchased by the generality of persons, Dr. Wiclif's portions of it were often written in small volumes. Of these we often find mention made in the bishop's registers as prohibited books, for having and reading which, people were then detected and prosecuted, and burnt to death, with these little books hanging about their necks."

Henry V. though he is said to have been fond of reading, derives his lustre from his character as a warrior, and not from his patronage of the fine arts. Although his coronation was attended with harpers, who must have accompanied their instruments with heroic rhymes, he was no great encourager of the popular minstrelsy. When, on his entrance into the city of London in triumph, after the battle of Agincourt,\* children had been placed to sing verses as he passed, an edict was issued by him, commanding that, for the future, no songs should be recited in praise of the late victory. This humility perhaps was affected; and, if it was real, does not appear to have been the result of true wisdom. Brightly as the name of Henry V. shines on other accounts, he was in the same disgraceful situation with that of his father. Indeed, the scheme he had formed with regard to the conquest of France, laid him under a greater necessity of courting the clergy than his father had ever experienced; and the bishops knew how to avail themselves of a crisis which could be converted to the farther establishment of their own power, and to the suppression of a free inquiry into the doctrines of Christianity. Secure in the protection of the crown, persecution

\* The battle of Agincourt was fought on Friday, October 25, 1415.—See Shakespeare's play of Henry V.

now took a bolder flight, and made an attack upon Sir John Oldcastle, lord Cobham, the most illustrious of the followers of Wickliff.

1415, April 11, *Died* Pierre Plaont, bishop of Senlis, he bequeathed a large quarto Bible, fairly written on vellum, to the house of the Sorbonne,\* at Paris, on the last leaf of which there was a latin note to the following effect. "This book, the value of which is fifteen pounds of Paris, belongs to the poor masters of Sorbonne,\* bequeathed to them by the reverend father in Christ, Pierre Plaont, formerly bishop of Senlis, and an eminent professor of Holy Scripture, of the society of the aforesaid house. May his soul rest in peace." "A similar PRINTED bible," says Chevallier, "could not have cost six francs."

1415. It appears from the regulation of the pageants of *Corpus Christi* play at York, in the mayoralty of William Alne, compiled by Roger Burton, the town-clerk, that they were fifty-four in number. They commenced with "God the Father Almighty, creating, forming the heavens, angels, archangels, Lucifer, and the angels that fell with him into hell;" the tanners performed this: the next, being "God the Father in his own substance, creating the earth, and which is therein, in the space of five days," was represented by the plasterers: the third "God the Father creating Adam of the slime of the earth, and making Eve of the rib, and inspiring them with the spirit of life," was played by the card-makers: the fifty-fourth, "Jesus, Mary, twelve apostles, four angels with trumpets, and four with a lance with two scourges, four good, and four bad spirits, and six devils," was performed by the mercenaries. The town-clerk's entry mentions the torches and torch-bearers in the procession:—"Porters, eight torches; cobblers, four torches; cordwaners, fourteen torches; cottellers, two torches; weavers — torches; carpenters, six torches; chalouers, four torches; fuller, four torches; girdellers, — torches; tailless, — torches; fifty-eight citizens had torches alike on the day of Corpus Christi; and it was ordained that the porters and cobblers should go first; then of the right the weavers and cordwaners; on the left the fullers, cutlers, girdellers, chalouers, carpenters, and tailless; then the better sort of citizens: and after, the twenty-four (common councilmen) the twelve (aldermen) the mayor, and four torches of Mr. Thomas Buckton."

The religious guild, or fraternity of *Corpus Christi* at York, was obliged annually to perform a Corpus Christi play. Drake says, this ceremony must have been in its time one of the most extraordinary entertainments the city could exhibit; and would necessarily draw a great concourse of people out of the country to see it. Several hundred of persons were annually admitted, and it was supported chiefly by the annual collection made at the procession. This religious play and procession was instituted at York about the year

1250; and was to be celebrated each year on the Thursday after Trinity Sunday; as a piece of religious pageantry, was so much esteemed that it was acted in that city till the twenty-sixth year of queen Elizabeth, 1584.

The performance of miracle plays is noticed in Peres the Plowman's Crede, written against the mendicant friars, at this period:

We hauten no tanernes, ne hobelen abouten  
At marketes, and miracles we medely vs neuer.

Chaucer, also, in the *Wife of Bath's Prologue*, makes her say—

Therefore made I my Visitations  
To Vigils and to Processions,  
To preachings eke, and to Pilgrimages,  
To plays of Miracles and Mariages,  
And wried on me my gay skarleit gites, &c.

The Mysteries were usually acted in churches or chapels upon temporary scaffolds; or according to Strutt upon three platforms, one above another. On the uppermost sat God the Father, surrounded by his angels; on the second the glorified saints, and on the last and lowest, men who had not yet passed from this life. On one side of the lowest platform was the resemblance of a dark pitchy cavern, from whence issued the appearance of fire and flames; and when it was necessary, the audience was treated with hideous yellings and noises in imitation of the howlings and cries of wretched souls tormented by relentless demons. From this yawning cave devils themselves constantly ascended to delight, and to instruct the spectators. When enough of performers could not be found among the clergy, the churchwardens employed secular players, and sometimes borrowed dresses from other parishes.

1415, Sep. 27. The reduction of Harfleur, in France, by Henry V. of England; he rifled the town of its affluent stores, and dismissed the inhabitants with *five pennies*.

1417, June 7. William Bowes, mayor of York, by regulation, ordains that all the pageants of the play of Corpus Christi should be brought forth in order by the artificers of the city, and play at the places specified in the regulation. And father William de Melton, of the order of the Friars minors, and professor of Holy Pageantry, and a most famous preacher of the word of God, willing to destroy sin, and a great lover of virtue, having by preaching, exhorted the populace that they would cause to be removed all public concubines in fornication or adultery, wherefore the mayor, by consent of the community, ordained that they should depart the city within eight days, on pain of imprisonment, unless any of them should find good security that she would not exercise her illegal vocation for the future.

1417, August 12, Henry V. by a letter to his high chancellor dated Tonques, in Normandy, gives directions for the sealing *annuities* of £6 13s. 4d. each to seventeen masters of the "grete shippes, carrackes, barges, and balyngers" belonging to the royal navy; "to take yearly of our grant while that us last, at our exchequer at Westminster, at the term, of Michaelmas and

\* The college of the Sorbonne, at Paris, was founded by Robert de Sorbonne, he was confessor and chaplain to St. Louis, who gave him the canonry of Cambrai. He was born in 1261, and died in 1274.

Easter, by seven portions." One of this king's ships was called his *saloon* where he kept his court at *sea*, which he considered part of his dominions.

1417, Dec. 14. Sir John Oldcastle, Lord Cobham, burnt in St. Giles Fields for heresy. This zealous supporter of the doctrines of Wiclif expended considerable sums in collecting transcribing, and dispersing the works of Wiclif; and in maintaining a many itinerant preachers, who were employed in spreading the tenets of that reformer in different parts of the country, particularly in the dioceses of Canterbury, London, Rochester and Hereford. Bale says, that he caused all the works of Wiclif to be copied by desire of John Huss, and to be sent to France, Spain, Bohemia, and other foreign countries the support afforded the Lollards by this nobleman, and his zeal in the diffusion of evangelical truth, rendered him the object of the most cruel persecution. He was accused of heresy, condemned and imprisoned in the tower of London, from whence he found means to escape, but being retaken by Lord Powis,\* was suspended alive in chains, upon a gallows, and burnt to death.—*Fox*.

Lord Cobham, not to mention his other eminent qualities, was distinguished by the vigour and extent of his intellectual powers. To his natural parts he joined all the acquisitions of knowledge and learning which the times he lived in could administer. In religion he attained to a dignity of sentiment which would not be a dishonour to the present age. The man who could say, that his faith was, "that God will ask no more of a christian in this life than to obey the precepts of his blessed law;" and that "if any prelate of the church requireth more, or any other kind of obedience, he contemneth Christ, exalteth himself above God, and becometh plainly antichrist." The man who could say this in the beginning of the fifteenth century, must have been enlightened far beyond the generality of his contemporaries. His conduct in avowing his opinions was equally open and manly; and he maintained them at the stake, to which, after several years of severe harassment and persecution, he was brought by the bigotry and malice of his enemies.

1418. In this year Eric, of Pomerania, requested permission from pope Martin V. to found a university at Copenhagen, and only obtained it, on the express condition, that the holy scriptures should neither be read nor explained in it, but that the lectures should be confined to profane literature.—*Henderson's Hist. of Danish Versions*.

1420. The earliest specimen of Scottish song, after the Scots spoke the English language, is preserved in the *Rhyming Chronicle* of Andrew Wyntown, prior of Lockleven, written, as is generally supposed, about this time, in which he relates the song which was made on Alexander

III. who was killed by a fall from his horse in 1286. The effect of the ballad in raising the passions has been known, and felt even in late times. Burn's song of "Scots wha hae wi' Wallace bled," is a sufficient proof of this. Andrew Fletcher, of Saltoun, speaks of a wise person whom, he knew, "who believed that if a man were permitted to make all the ballads, he need not care who should make the laws of a nation."

The word ballad in our language was formerly used to signify a sacred song. Thus, in the English translations of the bible, Solomon's Song is called the *Ballet of Ballets*. In poetry, a popular song or roundelay, generally sung in the streets. Bishop Percy says, the English word ballad is evidently from the French *balade*, as the latter is from the Italian *ballata*, a song which is sung during a dance. But the word appears to have had an earlier origin: for in the decline of the Roman empire, these trivial songs were called *ballisteæ* and *saltationes*.

The earliest ballad now remaining in the English language is believed to be a "Cuckow Song" of the latter part of the reign of Henry III. The song will speak for itself.

Sumer is Icumen in  
Lhude sing cucu;  
Groweth sed and bloweth med  
And sprighth the wde nu.  
Sing cucu.  
Awe beteth after lamb,  
Lhouth after calve co,  
Bulluc sterteth,  
Bucke verteth,  
Murie sing cucu;  
Cucu, cucu;  
Wei singes thu cucu,  
Ne swik the never nu.

i. e. Summer is come in; loud sings the cuckoo; now the seed grows, and the mead blows (i. e. is in flower) and the wood springs. The ewe bleats after the lamb; and the calf lows after the cow; the bullock starts, the buck verts (i. e. goes to harbour in the fern); merrily sings the cuckoo. Mayst thou never cease.

Ballads and rude poetry have been, in all countries, the earliest memorials of public transactions; and in the savage state of each were invariably used to rouse and perpetuate a martial spirit. Saxo Grammaticus, speaking of the Northern writers, says they drew the materials of their history from Runic songs. The Scandinavians had their Scalds, whose business it was to compose ballads, in which they also celebrated the warlike achievements of their ancestors. Similar panegyrists of warrior-merit existed in Gaul, Britain, Wales, and Ireland; and it must not be forgotten that when Edward I. formed the plan of reducing Wales to subjection, he thought it necessary to destroy the bards. Their compositions, however, survived; and a writer as late as Queen Elizabeth's time, describing North Wales, says "Upon Sundays and holidays the multitude of all sorts of men, women, and children of every parish do use to meet in sundry places, either on some hill or on the side of some mountain, where their harpers and crowthers sing them songs of the doings of their ancestors. Even in the New

\* On the 4th day of March, 1421, the tenants of Sir Edward Charlton, lord of Powis, execute on this day, at Shrewsbury, letters of release and satisfaction, as tokens of Sir John Oldcastle, that was miscreant and unboxom to the law of God, and traitor convict to the king!!

World, the American savages had their war-songs and rude poetry, in which they sung the praises of those who fought and died for their country. Garcilasso de la Vega says, that in writing his *History of Peru* he availed himself of old songs and ballads, which a princess of the race of their Incas taught him to get by heart in his infancy.

The ballad has no where been so completely naturalized as in Germany. The German ballads are not mere imitations of the rude songs and traditions of antiquity. They combine, in a wonderful degree, the polish and refinement peculiar to an advanced state of civilization, with the simplicity and nature of the older fragments of popular tradition. Almost all the great poets of Germany have occasionally descended from the severer labours of more elaborate composition, to the *déshabillé* of ballad-writing; and the consequence is, that Germany, at this moment, is richer in this species of literature, than all the rest of Europe (Spain excepted) put together.

The earliest English song, separately printed upon a single sheet, is believed to be one upon the downfall of Thomas Lord Cromwell, A. D. 1550. An ingenious Frenchman, M. Meusnier de Querlon, projected writing the history of his country by a chronological series of songs and ballads.

Ritson says the number of our own ancient printed songs and ballads which have perished must be considerable. Very few exist of an earlier date than the reign of James, or even of Charles I. Being printed only on single sheets, which would fall chiefly into the hands of the vulgar, who had no better method of preserving their favourite compositions than by pasting them upon the wall, their destruction is easily accounted for. The practice of collecting them into books did not take place till after queen Elizabeth's time.

In process of time, as manners refined, the ballad in every country by degrees included a wider range of subjects: it was no longer solely employed in rehearsing valorous deeds, but included in its rhymes the marvellous tale or the wild adventure, occasionally becoming the vehicle of sentiment and passion. And no festivity was esteemed complete among our ancestors in the eleventh, twelfth, and thirteenth centuries, which was not set off with the exercise of the minstrel's talents, who usually sung his ballad to his own or some other harp, and was every where received with respect.

As intellectual gratification advanced, however, these rude performances gradually lost their attraction with the superior ranks in society.

'When language became refined,' says Dr. Aikin, 'and poetical taste elevated by an acquaintance with the Greek and Latin authors, the subjects of the epic muse were no longer dressed in the homely garb of the popular ballad, but assumed the borrowed ornament and stately air of heroic poetry, and every poetical attempt in the sublime and beautiful cast was an imitation of the classic models. The native poetry of the country was reserved merely for the humorous

and burlesque, and the term ballad was brought, by custom, to signify a comic story, told in low familiar language, and accompanied by a droll trivial tune. It was much used by the wits of the time as a vehicle for laughable ridicule and mirthful satire; and a great variety of the most pleasing specimens of this kind of writing is to be found in the witty era of English genius, which I take to be comprehended between the beginning of Charles II.'s reign and the times of Swift and Prior. Since that period, the genius of the age has chiefly been characterized by the correct, elegant, and tender; and a real or affected taste for beautiful simplicity has almost universally prevailed.'

In the further progress of literary taste, these compositions came to be considered as objects of curiosity, on account of the insight they afforded into the manners and modes of thinking of remote times; while the strokes of nature with which they abounded, and the artless simplicity and strength of their language excited the admiration of liberal critics. When, therefore, they had long ceased to be current in popular song or recitation, they were carefully collected by poetical antiquaries, and elucidated by historical notes; and thus a secondary importance was attached to them scarcely inferior to that which they possessed when chanted to the harp of the minstrel.\*

1421, June 12. Expenses of Joanna the queen dowager, to master Laurens, is paid for aqua-vitæ for the queen's use, two shillings and eightpence; to two sergeants, for pleading the matter of the queen's dower, six shillings and eightpence; to John Perse, for divers medicine for the queen's body, twenty shillings; for one ounce of red thread, one shilling and fivepence; for making a gown, two shillings and sixpence.

1422, Aug. 31, Died at Vincenne, in France, King Henry V. and was buried in Westminster abbey. He was succeeded by his son Henry VI. who was only seven months old. It has been already stated that Henry V. had a taste for reading, and after his death several books which he had borrowed, were claimed by their owners. The countess of Westmoreland presented a petition to the privy council, in 1424, representing, that the late king had borrowed a book from her, containing the *Chronicles of Jerusalem*, and the *Expedition of Godfrey of Boulogne*; and praying that an order might be given, under the privy seal, for the restoration of the said book. This order was granted with great formality. About the same time, John, the prior of Christ Church,

\* Among numerous other collections of our own national ballads, Percy's *Reliques*, Evans's *Old Ballads, Historical and Narrative*, and Ritson's *Antient Songs from the time of Henry III.*, stand conspicuous. Pinkerton, Jamieson, and Finlay have collected the *Scottish Ballads*; and Sir Walter Scott the particular *Minstrelsy of the Scottish Border*. Of those of other countries we cannot omit the Spanish ballads so frequently quoted by Percy. Among the ancient ballads of the North, the *Altendliche Heldenlieder, Balladen und Marchen*, Übersetzt von Wilhelm Carl Grimm, 8vo., Heidelb., 1811. St. Cesari and the monks of Illes collected the remains and biographies of the minstrels of Provence; and the canon Manesse those of the Swabian poets.

Canterbury, presented a similar petition to the privy council, setting forth, that the king had borrowed from his priory a volume containing the works of St. Gregory; that he had never returned it; but that, in his testament, he had directed it to be restored; notwithstanding which the prior of Shine, who had the book, refused to give it up. The council, after mature deliberation, commanded a precept, under the privy seal, to be sent to the prior of Shine, requiring him to deliver up the book, or to appear before the council to give the reasons of his refusal.

1422. The following memorial, written in Latin, with the bishop's own hand, is at the beginning of *Peter's Breviary of the Bible*. "I Phillip of Repyndon, late bishop of Lincoln, give this book called *Peter de Aureolis*, to the new library to be built within the church of Lincoln; reserving the use and possession of it to Richard Tryseley, clerk, canon and prebendary of Miltown, in fee, and for the term of his life; and afterwards to be given up and restored to the said library, or the keeper of the same, for the time being, faithfully and without delay. Written with my own hand. A. D. 1422."

1422. Printing from blocks is supposed to have been invented in this year.

1423. The earliest print from a wood block of which we have any certain date, is in the collection of earl Spencer. It is the representation of St. Christopher carrying the infant Saviour across the sea, bearing this date. It was discovered in one of the most ancient convents in Germany, the Chartreuse of Buxheim, near Memmingen, pasted within one of the covers of a Latin manuscript of the year 1417. It has an inscription at the bottom, which has been thus translated.

In whatever day thou seest the likeness of St. Christopher, In that same day thou wilt, at least, from death no evil blow incur.—1423.

Mr. Otley and Mr. Dibdin have both given *fac-similes* of this interesting specimen of wood engraving.

Another wood print, representing the *Annunciation*, said to be the undoubted production of the same artist, but evidently executed with an improved hand; and a third, of the *Martyrdom of St. Sebastian*, together with one or two others, by the hands of German wood-engravers, shews the advanced state from singly-printed and coloured prints to the advanced step of block book-printing. The method adopted in printing wood-engravings and other subjects was anciently the same as that used in the manufacture of cards.

In my attempt to give a brief outline of the early progress of Xylographic typography, that is, of printing words, sentences, or pages from wooden plates or blocks, from the best materials, and to give a short account of the successive gradations of the printing art, until its arrival at the acme which it has since attained, I shall give them chronologically as they arose, from the works of those who have written upon this interesting subject. The reader will understand, that the figures or words on such plates or blocks, were represented by having all that was not to

appear in print, cut away below the surface a place containing that which was to appear; and that by covering the prominent parts with colour or ink, prints might be transferred to any attenuated even substance, such as paper by means of friction or pressure: and that these prints might be repeated by the same process, from the same block, so as to obtain any quantity of impressions.

As the art of engraving on wood proceeded, its professors composed historical subjects, with a text or explanation subjoined. The Books of Images are of this description, the pages being placed in pairs facing each other; and as only one side of the leaves is impressed, the blank pages come also opposite to one another; which, being pasted together, give the whole the appearance of a book printed in the ordinary way, on both sides of the paper. This, even to the present day, is the mode of book printing in China. The text corresponding to the figures is placed sometimes below; sometimes on the side; and not unfrequently proceeding, as a label, from the mouth of the figure or personage.

The mode of multiplying copies having been fully accomplished by means of printing from carved blocks, this at length gave birth to the idea that every letter and character throughout a work might be made capable of re-arrangement, and thus be brought to form all the succession of pages belonging to any work, instead of doing it by the interminable labour of cutting in solid wood every letter, figure, and page, that required to be printed. Thus, by a seemingly natural gradation of human ingenuity, the cutting or engraving of whole pages on entire blocks, was followed by the improvement of cutting the letters separately upon wood;—the next step after which, was to engrave them separately upon metal, and this was succeeded by forming matrices and moulds for casting each single letter. After the ground work of the art had been completed, its rise towards perfection was more rapid, perhaps, than that of any other art or science whatsoever, for little more than thirty years elapsed from the time of printing the *Biblia Pauperum* (which will be hereafter described) from wooden blocks, to the time when Gutenberg and Schœffer had perfected their cast metallic types.

The style of art which was practised by the most ancient engravers on wood, was extremely simple. The designs from which they worked were little more than outlines; such as it was customary to prepare for those who painted on glass. The engraved blocks furnished the ~~finis~~ elements of the figures, and the illuminist supplied the rest. By degrees a few light hatching were introduced, thinly scattered upon the folds of the draperies, and other parts of the figures: and occasionally, where the opening of a door, or a window, or the mouth of a cavern were to be expressed, the block was left untouched that it might print black in such places, and thereby diminish the task of the colourist. The ornamental borders, which often surrounded the devotional cuts, were rendered more attractive to

the ere by the opposition of broad white and black lines; and sometimes intermediate spaces of greater extent were enlivened by large white dots, cut out, or perhaps punched, at equal distances in the block; or decorated with sprigs of foliage, or small flowers, relieved by a similar process upon a black ground. Gradations of shadow next began to be attempted in the figures and other parts of wood engravings, by means of white dots, differing from each other in their magnitude and proximity, according to the degrees of darkness required.\* This mode of finishing engravings in wood appears to have been practised at Mentz, among other places, soon after the invention of typography, and was afterwards occasionally resorted to by the wood engravers of other countries, especially those of Paris.

I have already shown the degree of certainty with which the origin of book-printing may be ascribed to the prior art of engraving upon wood: and I now come to treat somewhat more historically upon the principal stages of the art. At the end of the fourteenth, and at the beginning of the fifteenth century, the Italians, Germans, Flemings, and Dutch, began to engrave on wood and copper. The advances which had been previously made connect themselves more with the art of sculpture, than with that to which our inquiry is more immediately directed. The inscriptions in relief upon monuments and altars, in the cloisters, and over church porches, served as models or designs for block-printing; and the text on painted windows is composed of letters much resembling those in the books of Images.

The Rev. Mr. Horne, in his *Introduction to Bibliography*, has given the most judicious selection from the greater works of those who have written upon this interesting subject, that is to be met with; and so general a compilation is it of every useful and curious information, that no printer who studies his profession as a science, nor any amateur of that science, ought to be without it.

1424. Two Antiphoners, books containing all the invitatories, responsories, verses, collects, and whatever were said or sung in the choir, except the lessons, cost the little monkey of Crabhouse, in Norfolk, twenty-six marks, or £17 6s. 8d. The common price of a mass book was five marks, equal to the yearly revenue of a vicar, or curate, which, about this period, was fixed at five marks, 6s. 8d. or two marks and his board. The supplying of books for divine service—Missals—Breviaries, or Breviary—Manuals, &c. originally fell upon the rector: as they were all written, and all of them beautifully illuminated, it was a very expensive duty. On the institution of vicars,

the parishioners agreed to supply some of the books; but the vicars were at the expense of binding and preserving them.

1425. On the conquest of Paris, the duke of Bedford sent the royal library to England which had been collected by Charles V. Charles VI. and Charles VII. and kept with great care in one of the towers of the Louvre. From a catalogue still extant, it appears to have been chiefly composed of legends, histories, romances, and books of astrology, geomancy, and chiromancy, which were the favourite studies in these days: it consisted of only eight hundred and fifty-three volumes, but it was valued at two thousand two hundred and twenty-three livres, rather more than the same number of pounds sterling. At this time the price of a cow was about eight shillings, of a horse about twenty shillings. And the pension paid by the English government to the earl of Wallachia, who had been driven out of his territories by the Turks, was £26 13s. 4d. per annum.

The King's Library at Paris, now deemed one of the finest in Europe, may justly be attributed to Charles V. This prince, who was fond of reading, and to whom a book was an acceptable present, began his library with *twenty volumes*, left him as a royal legacy by his father. These he afterwards augmented to *nine hundred*. The whole was deposited in three chambers, in one of the towers of the Louvre, from thence called the Tower of the Library. The rooms designed for their reception, were, on this occasion, wainscoted with Irish oak, and ceiled with cypress curiously carved. The windows were of painted glass, fenced with iron bars and copper wire. Many of the volumes were most superbly illuminated by John of Bruges, the best artist in miniatures of this period. A saying of Charles V. deserves to be remembered; some persons having complained of the respect he shewed to men of letters, who were then called *clerks*; he replied, "Clerks cannot be too much cherished; for, so long as we honour learning, this kingdom will continue to prosper; but, when we begin to despise it, the French monarchy will decline. This monarch, with that wisdom which characterised his reign, formed the design of a new translation of the scriptures. The versions prior to his time had generally been made from Cosmestor's *Historia Scholastica*. Christina de Pisan\* a female poet and historian, patronised and pensioned by this prince, informs us that he "was fond of books, and by his liberality procured translations

\* In the British Museum, among the Harleian Manuscripts, No. 4431, there is a large volume, containing part of the works of this celebrated female. It is a vellum manuscript, written in a small Gothic letter, in double columns. On the recto of the first leaf, in a large hand, is the following autograph:—Henry, Duke of Newcastle his book, 1676. The illuminations are by various hands: a beautiful sketch of a portion of the principal one is copied in Dibdin's *Bibliographical Decameron*, p. cxxxv. which represents the authoress presenting her book to the Queen of France. About the period of the composition of her poems or balades, the Duke de Berry gave her not less than two hundred crowns for a set of them.—See Dibdin's *Bibliographical Decameron*.

\* See Dibdin's *Bibliographical Decameron* for a facsimile of an engraving of Death upon a Black Horse, in which the horse and a raven are finely depicted in this manner, while the remainder of the figures in the cut are executed in outline.

Mr. Otley does not give any specimen of this kind of work, but his description is highly interesting. Mr. Dibdin supplies the one, without the least interfering with the other.

of the best authors into French; especially the Bible.

1426. The earliest mention of the performance of mysteries at Newcastle-upon-Tyne, is in the ordinary of the coopers for this year. They were celebrated with similar exhibitions as those at York, and other towns, on *Corpus Christi* day. In 1437, the barbers played the baptizing of Christ. In 1568, the offering of Abraham and Isaac was exhibited by the slaters. By the ordinary of the goldsmiths, plumbers, glaziers, pewterers, and painters, dated 1535, they were commanded to play at their feast "the three kings of Coleyn." In the books of the fullers and dyers, one of the charges for the play of 1561, is, "Item for 3 yard and a<sup>n</sup>. lyn cloth for God's coat, 3s. 2d. ob." Between the first and last mentioned periods, there are many minutes in the trades' books of the acting in different years, which may be seen in Brand's *History of Newcastle*, together with the only vestige that remains of the Newcastle Mysteries, entitled *Noah's Ark*, or the Shipwright's ancient play, or dirge, wherein God, an Angel, Noah, and his wife, and the Devil, are the characters. In this, as in the Chester Mystery of the same subject, the wife of Noah is a vixen: the last words she says to him are,

The devil of hell thee speed  
To ship when thou shalt go.

In Cornwall they had interludes in the Cornish language from scripture history. They were called the *Guany Miracle plays*, and were sometimes performed in the open fields, at the bottom of any earthen amphitheatre, the people standing around on the inclined plane, which was usually forty or fifty feet in diameter. The players did not learn their parts, but were followed by a prompter, called the ordinary, with the book in his hand. Long after the *mysteries* had ceased elsewhere, and the regular stage been established, they were exhibited in Cornwall to the country people, who flocked from all sides to hear and see the devils and devices that were provided to delight the eye, as well as the ear. Two manuscripts in the Bodleian library contain the Cornish plays of the Deluge, the Passion, and the Resurrection.—Borlase's *Antiq. of Cornwall*.

Concerning the *Coventry Mysteries*, Dugdale relates, in his *History of Warwickshire*, that "before the suppression of the monasteries this city was very famous for the pageants that were play'd therein, upon *Corpus Christi* day (one of their ancient faires) which occasioning very great confluence of people thither from far and near, was of no small benefit thereto: which pageants being acted with mighty state and reverence by the Grey Friars, had theatres for several scenes, very large and high, placed upon wheels, and drawn to all the eminent parts of the city, for the better advantage of spectators, and contain'd the story of the Old and New Testament, composed in the old Englishe rithme, as appeareth by an manuscript intituled *Ludus Corporis Christi* or *Ludus Coventrie*."

It is remarkable, that in its entire series of forty mysteries in the Coventry manuscript men-

tioned by Dugdale, there is not one, says Hone, from the Apocrypha to the *Old Testament*, whilst there are paraphrases of the *New Testament* Apocrypha.

It may be supposed that the Chester plays, written in an early and dark age, would contain a great mass of apocryphal interpolations, and that the Coventry plays, written much later, would contain less; yet the contrary is the fact. The Chester mystery-maker of 1328, found the *scriptural-subjects* so numerous as to render recourse to the *New Testament Apocrypha* unnecessary. But the Coventry mystery-maker of 1416, was under circumstances that would suggest powerful motives to the cunning of a monkish mind for apocryphal adoption.

"*The Pageant of the Company of Sheremen and Taylors in Coventry, as performed by them on the Festival of Corpus Christi*," is a manuscript belonging to the corporation of Coventry, bearing the following inscription: "Thys matter newly correcte be Robart Croo, the xiiij<sup>th</sup>. day of Marche, fenysschid in the yere of owre lord god mcccc & xxxiiij<sup>th</sup>. The celebrity of the performances may be inferred from the rank of the audiences; for, at the festival of *Corpus Christi*. 1483, Richard III. visited this city to see the plays, and at the same season in 1492, they were attended by Henry VII. and his queen, by whom they were highly commended.

It may be observed, and there can be no doubt that in the Mysteries of the *Creation*, &c. performed at Chester, Coventry, and other places, that Adam and Eve appeared on the stage naked. In the second Pageant of the Coventry manuscript, in the British museum, Eve on being seduced by the serpent, induces Adam to taste the forbidden fruit. He immediately perceives their nakedness, and says to her,

Se us nakyd be for & be hynde.

Woman lky this leff on the pryvyte  
And with this leff I shall hyde me

Warton observes, that this extraordinary spectacle was beheld by a numerous company of both sexes with great composure: they had the authority of scripture for such representation, and they gave matters just as they found them in the third chapter of Genesis.

The present age rejects as gross and indelicate those free compositions which our ancestors not only countenanced but admired. Yet, in fact, the morals of our forefathers were as strict and perhaps purer and sounder than our own; and we have been taught to look up to them as genuine models of the honest, incorruptible character of Englishmen. They were strangers indeed to delicacy of taste; they beheld the broad and unpruned delineations of nature, and thought no harm: while we, on the most distant approach to freedom of thought and expression, turn away in disgust, and vehemently express our displeasure. Human nature is ever the same, but society is always progressive, and at every stage of refinement the passions require stricter control; not because they are more violent, but because the

circumstances which excite them are multiplied. If we trace back the progress of society to its primitive state, we shall find that the innocence of mankind is in an inverse ratio to their advancement in knowledge.—*Cromek's Remains.*

1427, *Sep.* 24. In a copy of the will of lady Ravensworth, the wife of lord Fitz-Hugh, are the following bequests: "Also I wyl yat my son Robert" (bishop of London) have a "Sauter, covered with rede velvet, and my doghter Margory a primer covered in rede, and my doghter Darey a sauter covered in blew, and my doghter Maufde Eure, a boke covered in blew, and yong Elizabeth Fitz-Hugh, my god-doghter, a boke covered in greene, with praires thereinne."

1427. In the accounts of St. Mary's church Stamford, is the following item: "mending the books, tenpence; writing, twopence."

1429. The following curious depositions which were made by the enemies of the Lollards, will sufficiently prove that however violent were the measures pursued against them, and the various penances and imprisonments to which they were subjected, there were some found, who at every hazard sought wisdom from the book of God. Nicholas Belward, of South Elmham, in Suffolk, was accused of having in his possession a New Testament, which he had bought in London, for four marks and forty pence, £2 16s. 8d. a sum equivalent to more than £40 at present; an astonishing price to have been paid by a labouring man, for such Belward appears to have been: William Wright deposing that he "had wrought with him continually by the space of one year; and studied diligently upon the said New Testament." Against Margery Bagsster it was deposed, that she had desired Joan, the wife of one Cliffand, and her maid, to "come secretly in the night to her chamber, and there she should hear her husband read the *Law of Christ* to them; which Law was written in a book that her husband was wont to read to her *by night*; and that her husband was well learned in the christian verity." Against Richard Fletcher of Beccles, in Norfolk, "He is a most perfect doctor of that sect, and can very well and perfectly expound the Holy Scriptures, and hath a book in the new law in *English*." Against Sir Hugh Pye, a priest, it was deposed, that he had "bequeathed to Alicet servant to William White, a New Testament, which they then called the book of the *New Law*, and was in the custody of Oswald Godfrey, of Colchester." Even the ability to read was enumerated amongst the crimes of sect, by their violent persecutors, for it is remarked in the depositions, that "William Bate, tailor, of Sything, and his wife, and his son, which can read *English* very well, is of the same sect;" that "the daughter of Thomas Moone is partly of the same sect, and can read *English*;" and that John Pert, late servant of Thomas Moone, is of the same sect, and can read well, and did read in the presence of William White."—*Fox's Actes and Monumentes.*

1430. At the annual feast of the holy cross, at Abingdon, in Berkshire, twelve priests each re-

celved fourpence for singing a dirge; and the same number of minstrels were each rewarded with two shillings and fourpence, besides their diet and provender for their horses. This, among many other instances, proves that the minstrels were more amply remunerated than the clergy; for we find that in this year, the prior de *Maxtock* gave sixpence for a sermon, to an itinerant doctor in theology, one of the Mendicant orders, who went about preaching to religious houses.

One of the most celebrated books in the annals of bibliography, is the richly illuminated missal executed about this period for John duke of Bedford, regent of France under Henry VI. By him it was presented to that king in the year 1430. It was probably left by Henry in the palace at Rouen, and fell into the hands of Charles VI. at the taking of that town. Henry II. of France, afterwards possessed it, and affixed his arms to it. Through whose hands it passed from this time does not appear, till it is found in the possession of lady Worseley, (a descendant of William Seymour, second duke of Somerset, who was appointed governor to the prince of Wales, by Charles I.) wife of Sir Robert Worseley, bart. of Appledurcombe, in the Isle of Wight. From her it was purchased by Edward, second earl of Oxford, from whom it descended to his daughter the duchess of Portland.\*

This curious missal, eleven inches long, seven and a half wide, and two and a half thick, contains fifty nine large miniatures, which nearly occupy the whole page: and above a thousand small ones in circles of about an inch and half diameter, displayed in brilliant borders of golden foliage, with variegated flowers, &c. At the bottom of every page are two lines in blue and gold letters, which explain the subject of each miniature. The miniatures are in a good state for the time, and appear to be the work of various artists, probably French or Flemish. The contents of these miniatures are in this account particularly described. The subjects are symbols of the twelve months, historical paintings from the Scriptures, portraits of the duke and duchess of Bedford, with various paintings, designed as compliments to the noble owners of the book. Of these miniatures are given, in this work, copies accurately engraved, together with particular descriptions of the numerous figures which they contain. A *fac simile* is added of the attestation of the presenting of this manuscript to

\* In January 1786, when the Bedford Missal was on Sale, with the rest of the Duchess of Portland's collection, King Geo. III. sent for his bookseller and expressed his intention to become the purchaser. The bookseller ventured to submit to his Majesty, that the article in question, as one highly curious was likely to fetch a high price. "How high," exclaimed the king. "Probably two hundred guineas," replied the bookseller. "Two hundred guineas for a Missal!" exclaimed the Queen, who was present, and lifted up her hands with astonishment. "Well, well," said his Majesty, "I'll have it still; but since the Queen thinks two hundred guineas so enormous a price for a Missal, I'll go no further." The biddings for the royal library did actually stop at that point; and Mr. Edwards carried off the prize, by adding three pounds more. The same Missal was afterwards sold at Mr. Edwards's sale, in 1815, and purchased by the Duke of Marlborough, for £627. 15s.

Henry VI. The subjects of all the smaller figures are distinctly examined; and it is amazing to observe, with what ingenuity topics for painting have been extorted from the books of the Old and New Testament. Among the more curious paintings which decorate the book are the following:

Judas hanging himself: he is in a blue coat, hanging on a tree, his hands sprawling, a devil coming to him, and two more pulling at his legs with hooks.

Christ breaking the gates of hell, and carrying away Adam and Eve and the other holy prophets.

God and Christ seated under a triple throne, and *nimbus*, holding a chalice into which the dove descends.

Angels singing;—men and angels striking balls hung in air;—two apostles at the ascension—John baptizing Christ—two angels holding his garment—Cupids riding on sticks holding a cross—a greyhound tied to a tree, an owl above.

Christ between the virgin and the baptist, angels taking up souls, devils pulling them into the mouth of hell: angels with the instruments of the passion. A devil with a soul on his back; two others pounding and beating two men; another turning Ixion's wheel. A dead body saying, *O mori cruelle trop es dure et amere*.

Jesus Christ sending a letter to the bishop of Pergamos, signifying that sinful men and women, who dance, play, and kiss, shall be in danger of death.

The trinity; God crowning a crucifix; the dove issuing from the mouth of the Father.

This piece, at the same time that it exhibits a splendid monument of the arts in the fifteenth century, may furnish the philosopher with matter for reflection upon the ignorance and superstition of the age.

1430. THE BIBLIA PAUPERUM, or the BIBLE OF THE POOR, executed about this time.

The Biblia Pauperum is acknowledged to be a very ancient book. The few copies of it which remain in existence are, for the most part, either imperfect, or in very bad condition. This will not excite much surprise when it is considered that it is a kind of Catechism of the Bible, which was executed for the use of young persons, and the common people; and hence its title, *Biblia Pauperum*, or the Bible of the Poor. This was the only part of the sacred book at that time within reach of the commonality, a complete Bible in manuscript being then worth a hundred pounds of our money. This will sufficiently account for the destruction of almost every copy of the Biblia Pauperum by repeated use, and for the mutilated state of the few copies that remain. The work consists of forty leaves of a small folio size, each leaf containing a cut in wood, with extracts and descriptive sentences referring to the subjects of the cuts. Each page contains four busts—two at the top, and two lower down; together with three historical subjects. The two upper busts represent certain prophets, or other eminent persons, whose names are added beneath them. Of the three historical subjects, the chief

type, or principal piece, is taken from the New Testament; and occupies the centre of the page, between the two ante-types, or subordinate subjects, which are allusive to it. Some difficulties have arisen among bibliographers as to the precise time at which the first editions of the Biblia Pauperum was executed. Heineken, an author who examined with minute attention the few copies of this work which have escaped the wreck of time, discovered five different editions; the fifth being found to contain ten plates more than any of the others. Mr. Dibdin has supposed the date to be about 1450; but Mr. Horne thinks that it is twenty or thirty years older. The fac-simile annexed will shew the execution of the blocks to have been very coarse, and the form of the letters, compared with specimens in other books of which the date is better ascertained, is very gothic, and their proportions are not all well preserved. Upon comparison with some of the fac-similes in the Bibliotheca Spenceriana, supposed to have been executed between 1420 and 1430, the similarity of coarseness in the shape of the letters, will render it probable that the Biblia Pauperum is nearly of equal antiquity. The edition here particularly spoken of is more valuable than any of the others, being that which contains the additions before-mentioned.\*

—(See Engraving.)

The second class of Xylographic Works to be described, consists of Books of Images with Text. Of all the ancient books of images which preceded the invention of the present mode of printing, the *Speculum Humane Salvationis*, or as it is generally termed, the *Speculum Salutes*, is confessedly the most perfect both with respect to design and execution. This compilation is a collection of historical passages from the Scriptures, with a few from profane history, which have some relation to the scriptural subjects. It is ascribed to a Benedictine monk of the thirteenth or fourteenth century styled Brother John. So popular was this "Mirror of Salvation," that it was translated into German, Flemish and other languages; and very frequently printed. Two latin editions are extant, without date. The impressions in both are sixty-three in number, and are executed from the same blocks; but in that which is reputed to be the more ancient, the explanations of twenty-five, not in regular succession, are printed from entire wooden blocks, while the remaining thirty-eight, and the five leaves of preface, are wholly executed with *faul*

\* It may be amusing to those unacquainted with the estimation such ancient pieces of printing bear among the virtuous, to see the prices that have been given for copies of the Biblia Pauperum.

1754—At the sale of M. de Boze, 100 livres . . .	£43 15
1769 " " M. Gaignat, 830 " . . .	56 6
1791 " " M. Paris . . . . .	51 6
1813 " " M. Willett . . . . .	257 6
1818 or 1819 " Duke of Marlborough . . .	52 10

A copy of this book, formerly Gaignat's, is in His Majesty's library, another copy is in the library of Earl Spencer. The Bodleian and Corpus Christi College libraries, at Oxford, contain each a copy; and there is also one said to be in the library at Bennett College, Cambridge, one in the Hunterian Museum, Glasgow (very imperfect; one in the Royal Library, Paris, and one in the public library of Basle.

type. Mr. Otley seems to have formed a decided opinion, that the *Biblia Pauperum* and the *Speculum Salvationis* were both executed by the same artist.

In Bibliography these books are described under two classes; namely, Books of Images without Text; and Books of Images with Text. Of the former class, the most celebrated specimen is the volume called the *Biblia Pauperum*; and of the latter, the *Speculum Humane Faltvationis* is in the highest estimation.

The *Speculum Salvationis* is the most celebrated block book in the annals of typographical controversy; if indeed the appellation of block book can properly be given to it, in which the text, accompanying the figures, is printed for the most part with moveable characters: in one edition of it, and in the other editions, entirely so. In truth, says Mr. Otley, it seems to hold a distant place, midway between the ordinary books, printed entirely from engraved wooden blocks, and the first specimen of typography in its mature state; and is therefore independent of its intrinsic merit, particularly interesting. The Latin edition is comprised in thirty-one sheets and a half; and in the Dutch the introduction occupies only four leaves, and consequently there are only sixty-two leaves in the whole. The work when entire, is composed of a preface, and forty-five chapters in prose Latin, with rhythmical terminations to the lines, produced about 1446.

The change and improvement from the manner in which these books of images were executed to moveable wooden characters, seems obvious and not difficult; but there is no evidence that they were ever used, except in the capital letters of some early printed books.

1431. About this period, Whethamstede, the learned and liberal abbot of St. Albans, being desirous of familiarising the history of his patron saint to the monks of his convent, employed *Lydgate*, as it should seem, then a monk of Bury, to translate the Latin legend of his life in English rhymes. It was placed before the altar of that saint, which Whethamstede afterwards adorned with much magnificence, in the abbey church. He paid for the translation, writing, and illumination of the legend *one hundred shillings*, and expended on the binding and other exterior ornaments upwards of *three pounds*. The monk, who mentions it, and who lived after him, when it was still unfinished, exclaims, "God grant that this work may receive, in our days, a happy consummation."—*Warton's History of English Poetry*.

1431, May 30. Joan of Arc burned at Rouen. The general ignorance and barbarity of the times are marked by several curious and very striking circumstances. When Joan of Arc, the heroic maid of Orleans was cruelly put to death, the judges in their condemnation of her, were influenced by a serious opinion that she was a sorceress, and a worshipper of the devil. Indeed, the insatiation with the respect of the belief of witchcraft, must have been irresistible, when it was

not in the power of such a distinguished character as Humphrey duke of Gloucester, to prevent his duchess from being brought to an open trial, and sentenced to a public penance and imprisonment for life, upon an accusation of this kind.\*

1433. Sixty-six pounds thirteen shillings and fourpence, was paid for transcribing a copy of the works of Nicholas de Lyra, in two vols. to be chained in the library of Grey Friars, London. It is most probable, however, that the illuminations, as well as the ornaments, probably included in the sum; if not the materials used, at least the workmanship.

Sir Richard Whittington (the famed lord mayor of London,) built the library of the Grey Friars, now called Christ's Hospital, in London, which was one hundred and twenty-nine feet long, and twelve broad, (Pennant says thirty-one) with twenty-eight desks, and eight double settles of wainscot; and was also ceiled with wainscot. In three years it was filled with books to the value of £556; of which Sir Richard contributed £400, and Dr. Thomas Winchelsey, a friar, of the Augustine's, supplied the rest. Thomas Walden, a learned Carmelite friar, who went by order of Henry V. to the council of Constance, and died approved in 1430, bequeathed to the same library as many MSS. of authors, written in capital-roman characters, as were then estimated at more than two thousand pieces of gold; and adds, that this library, even in his time, exceeded all others in London, for multitude of books, and antiquity of copies.

The postillst of de Lyra are brief commentaries which he carried through the whole bible. They were formerly in great request. De Lyra is commended for having made the literal sense his primary object: but his writings partake strongly of the scholastic character. He obtained in the schools the appellation of doctor utilis.

Nicholas de Lyra of Normandy was, as some pretend, a converted Jew. He assumed the habit of the Friars Minors, 1291: came to Paris, and, for a considerable time, expounded the scriptures with applause in the convent of his order. He obtained the patronage of Jane of Burgundy, wife of Philip V., surnamed the long, who appointed him one of her executors. De Lyra died at a very advanced age, October 23, 1340. Both Luther and Wiclif were con-

\* Roger Bolnbroke, chaplain to the Duke of Gloucester, Margery Jourdain, the witch of Eye, and their associates, being accused of necromancy, were publicly exposed at St. Paul's, in July, 1441, and on the 21st of October following, Mrs. Jourdain was condemned to be burnt for furnishing *love-potions* to Eleanor Cobham, wife to the Duke of Gloucester.—See Shakspeare's *Henry VI.*

† The term *postilla* frequently adopted by the commentators of period, was generally applied to those explanatory notes after the text, and was probably derived from the Latin *postea*, or *postilla*, unless we suppose the word *postilla* to be a corruption from *postea* a page.—*Du Cange*.

As to the term *postilla* so often given to these early annotations, Lomeir says that Aleuin, preceptor of Charlemagne, by order of that monarch, first collected the homilies of the fathers upon those portions of the gospels which are termed in the Breviary "*Dominicalis*," and as these homilies were to be read after the gospels, respectively, hence the terms "*Post illa*," which in process of time were joined together, and converted into a noun "*faminiol genera*."

siderably indebted to his Postilla; for it has been affirmed, that

If Lyra had not harped on profanation,  
Luther had never planned the Reformation.

1433. At this period writing quills were so scarce at Venice, that men of letters could scarcely procure them. Ambrosius Traversarius, a monk of Cameldule, sent from Venice, to his brother, a bunch of quills, together with a letter, in which he said; "They are not the best, but such as I received in a present. Show the whole bunch to our friend Nicholas, that he may select a quill, for these articles are indeed scarcer in this city than at Florence." Ambrosius also complains, that at the same period, he had scarcely any more ink, and requested that a small vessel filled with it, might be sent to him." — *Beckmann's History of Inventions.*

This Nicholas was a famous writer, and wrote several tracts, exposing the frauds and errors of the popish monks and priests, and treatises on church government.

1436. Conrad Saspach was the name of the turner who made the first printing press, under the direction of Gutenberg; and John Dunius declared before the magistrates of Strasburg in 1439, that he had received one hundred florins for work done at a press three years before.

John Gutenberg or Genesfleisch, of Sorgeloch, called *zam Gutenberg*, of an illustrious family but who on a revolution at Mentz, in the time of Conrad III. retired to Strasburg; where it is thought, about the year 1420 or 1423, he made his first experiments connected with the art of printing. An authentic document corroborative of his being at Strasburg in 1424, has been discovered in the archives of the acts of Mentz; to which city Gutenberg was invited to return by the aforesaid Conrad—but in which it is supposed he never made his re-appearance till about the year 1434. It is certain that misfortune had then reduced this enterprising genius to poverty; for in 1435, he entered into partnership with Andrew Drozhenniss (or Dritzehen), John Riff, and Andrew Heelman, citizens of Strasburg, binding himself thereby to disclose to them some important secrets by which they should make their fortunes. The workshop was in the house of Andrew Dritzehen, who dying, Gutenberg immediately sent his servant, Lawrence Beildech, to Nicholas, the brother of the deceased, and requested that no person might be admitted into the workshop, lest the secret should be discovered and the formes stolen. But they had already disappeared; and this fraud, as well as the claims of Nicholas Dritzehen to succeed to his brother's share, produced a lawsuit among the surviving partners.

Somewhere about this time he appears to have attached himself to a young lady called *ISEVEN THURE*, of the christian name of Anne, and whom, there is every reason to think, he eventually married. Whether she brought him any property, or whether the sweets of love gave a more fortunate, as well as more ardent turn to

his genius may possibly be questioned. In this year *something like a printing press* was probably established—who first primed the balls, who first wetted the sheet, who first laid it upon the tympan—seized upon the handle—pressed, and threw off the *friskit*—and then hold up the typographical miracle—moving in the wind, and glittering in the sunbeam, must, alas, I fear, remain in eternal obscurity!\* About the year 1443, Gutenberg returned to Mentz, and there hired a house called *zam Jungen*; and about 1450 he formed his celebrated connexion with John Faust.

Gutenberg seems to have had pretty distinct notions of the mechanism of a printing press, without the means of carrying his views into effect.

An author who is said to have written at a period not very remote from that of Gutenberg's discovery, pretends that he received the first idea of the art from an impression taken in wax from the seal of his ring; which he accidentally observed some letters in relief. Thus our author, who wrote in poetic numbers:

"Respicit archetypos auri vestigia lustrana,  
Et secum tacitus talia verba refert.  
Quam bellè pandit certas hæc orbita voces;  
Monstrat et exactis apta reperta libris."

He afterwards proceeded to remark, that the contemplation of a WINE PRESS suggested or assisted his first crude conceptions of a machine proper for the exercise of his newly discovered art:

"Robora prospexit dehinc torcularia Bacchi,  
Et dixit Preli forma sit ista novi."

In 1438, the unfortunate Drizchen lamented to his confessor, the great expense which he had incurred, without having been reimbursed a single *obolus*. Nor did Gutenberg himself, who persisted in his unsuccessful attempts, reap any advantage from them; for, on quitting Strasburg, he was overwhelmed in debt, and under the necessity of parting with the greater portion of his property.

In December 1439, a trial took place at Strasburg between John Gutenberg and his partners. In the course of this law-suit, five witnesses, among whom was Beildech, Gutenberg's confidential servant, incontrovertibly proved that Gutenberg was the first who practised the art of printing with movable types. The result was a dissolution of partnership. The whole proceedings on this important trial are in existence, and have been printed After this, Gutenberg returned, poor and disappointed, but not dispirited to his native city. It is doubtful whether he had hitherto really printed any thing. Heineken, who has investigated this subject with great diligence and labour, is of opinion that he had ruined both himself and his partners, without being able to produce a single clean and legible leaf.

1437, Feb. 21. James I. King of Scotland, murdered at Perth. The character of this sovereign shines with distinguished excellence in the literary annals of his country. The misfortunes

\* Dibdin, *Bibliographical Decameron.*

of his youth, his early and long captivity, the incident which gave rise to his passion, its purity, constancy, and happy issue, are all displayed by invention and fancy, by genuine simplicity of sentiment, and by the felicity of poetical description. To his knowledge of the Greek and Latin languages, the last of which he is represented as having written with ease, he added an acquaintance with the philosophy of the age. But the studies to which he was more particularly devoted were those of poetry and music. Various works were written by him, both in prose and verse, most of which are unfortunately lost. Four of James's pieces, which have happily escaped the depredations of time, are a *Song on his Mistress*; *The King's Quair*; *Pebble to the Play*; and *Christ's Kirk on the Green*. The *King's Quair* is a poem of large extent, being divided into six cantos. Its theme is the royal author's love to Jane, daughter to the Earl of Somerset, a beautiful lady, of whom he became enamoured while a prisoner at the castle of Windsor, and who was afterwards his queen. Several men of ingenuity and taste have contended that James is little if at all inferior to Chaucer. If the former's Court of Venus be compared to the latter's Court of Love, the royal author will lose nothing by the comparison. The *Jane*, in particular, of King James, is painted with a beauty and delicacy that are not equalled in Chaucer's *Rosal*. It is to be lamented that many of the graces of the *King's Quair* are concealed, at least from common view in the antiquity of the language.

Three other Scottish poets are named in this period, but they are, on the whole, contemptible, when compared with the monarch of the country. Andrew Winton, a canon regular of St. Andrew's, and prior of the monastery in Lochleven, and who preceded James the First, wrote in verse a very large chronicle of Scotland. Notwithstanding his mode of composition, he ought, perhaps, rather to be considered as an historian than a poet. His work, which is valuable so far as it relates to his own country, and which contains materials not to be met with in Fordun, whom he had never seen, has not to our knowledge been published. It would be a desirable accession to the history of North Britain. Holland was the author of a poem entitled *The Howlat*, which appears to have described the poetical employments, and the musical entertainments of the age. Henry, the minstrel, who, on account of his being blind from his birth, is usually called Blind Harry, composed the *Life of Wallace*. It is a romance, like *Barbour's Bruce*, but not to be ranked with it in point of excellence. At the same time, it is not destitute of merit, and there are various things in it which cannot fail to gratify the curiosity of the antiquary and the critic.

John Lydgate, a monk of the Benedictine abbey of Bury, in Suffolk, was the poet whose reputation stands the highest among the English bards of this age. He possessed the advantage of as good an education as the times could afford.

After having studied at Oxford, he travelled for improvement into France and Italy. Here he acquired the knowledge not only of the language, but of the literature of these countries, and paid a very particular attention to the poetry of both nations. Besides obtaining an acquaintance with all the polite learning which was then cultivated, he was no inconsiderable proficient in the fashionable philosophy and theology of his contemporaries. The vivacity of his genius, and the versatility of his talents, enabled him to write a great number of poems, extremely diversified in their subjects, and in the nature of their composition. His three chief productions were the *Fall of Princes*, the *Siege of Thebes*, and the *Destruction of Troy*; he likewise composed a procession of pageants from the *Creation*. Lydgate is to be reckoned among the improvers of the English tongue. His language is uncommonly perspicuous for the times he lived in, and his verses frequently excite surprise from their modest cast. He seems to have been ambitious, at least in the structure and modulation of his style, of having rivalled Chaucer; but undoubtedly he was far inferior to him in the grand requisites of poetical excellence. His mode of writing is diffuse, and he is not distinguished by animation or pathos. Nevertheless, he is not destitute of beauties; and his *Destruction of Troy*, in particular, displays much power of description, in conjunction with clear and harmonious numbers. He died in the year 1440, and was buried in the monastery at Bury.

Having dwelt so largely on the poetical history of this period, for which the materials are more copious than for most other articles, and which will always constitute a prime object in a view of the progress of taste and literature, we proceed to the rest of the polite arts, concerning the rest of which, however, there is little to be said. Although the civil wars of the fifteenth century were a great hindrance to the erection of magnificent buildings, at least by private persons, a skill in architecture, where there was an opportunity of displaying it, was by no means upon the decline. That species of it which hath commonly, though improperly, been styled the Gothic, was gradually improved, and carried to its highest pitch of perfection. Of this several striking examples may be mentioned; such as the chapel of King's College at Cambridge, the Divinity School at Oxford, the collegiate church at Fotheringay, and the chapel of St. George at Windsor. The most admired of these structures is King's College chapel at Cambridge, which was erected by that pious prince, Henry the Sixth. It is distinguished by its lightness, loftiness, and beauty, and the contemplation of it will afford peculiar pleasure to men of taste and judgment.

Sculpture and statuary did not decline in this age, or fail of receiving ample encouragement. In fact, the artists in these branches had fuller employment, and obtained higher rewards than had been conferred upon them in former times. The very opposite which was made, by the followers of Wiclif, to the veneration and worship

of images, contributed to this event. Hence the clergy were more solicitous to please the people by the elegant and splendid execution of works of this nature: nor were their efforts unsuccessful.

Sepulchral architecture, in particular, was advanced to much perfection in the present period. The monuments were adorned with statues, and with figures in basso and alto relievo, and the public taste in this respect called forth the abilities of the sculptor and the statuary. It is to the honour of our country that the English artists were of equal reputation with those of other kingdoms, and were occasionally employed by foreign princes. Thomas Colyn, Thomas Holewell, and Thomas Poppehowe, were engaged to make the alabaster tomb of John the Fourth, Duke of Brittany. The work was executed by them in London, after which they carried it over, and erected it in the cathedral of Nantes. Of five artists who were appointed to construct the monument of Richard Beauchamp, Earl of Warwick, and to adorn it with images, four were natives of England. The images, besides a large one representing the earl, were thirty-two in number. In an age when almost every person of rank and wealth had a monument erected to his memory, with his effigies upon it, either in free-stone, marble, or metal, it was impossible but that the zeal and emulation of the artists must have been excited, and some degree of improvement be hence communicated to their arts.

At this period the pay of a labourer was three-pence per day; a quarter of wheat was sold for five shillings to five shillings and sixpence; a quarter of malt, four shillings; clothing for a servant for a year, four shillings; a quarter of oats, two shillings; a fitch of bacon, one shilling and eightpence; a yard of cloth for a shepherd, one shilling; two gallons of ale, three-pence.

The countess of Anjou paid for a copy of the *Homilies* of bishop Haiman, two hundred sheep, five quarters of wheat, five quarters of barley, and five quarters of millet. Piccolimini relates, that eighty golden crowns were demanded for a small part of the works of Plutarch, and sixteen golden crowns for a few tracts of Seneca.

The revival of Greek literature in Italy is dated from this time, when Europe could boast of fifty universities. Italy had above five hundred associations like our societies, called academies, for general or particular pursuits. Petrarch, Boccacio, and Chrysoloras, was then dead; but Poggio and Aretin still flourished with the elder Medicis, and Chalcocondyles, Pope Nicholas V. Pulci, and Boiardo soon followed in their illustrious train. Long before the fall of Constantinople,\* the love of classical literature had been gradually reviving;—that event increased it, by compelling a great number of learned Greeks to seek shelter in Italy. But it could not be grati-

fied, till the manuscripts, which lay buried and neglected, were brought to light. The researches of literary men were chiefly directed to this point; every part of Europe and Greece was ransacked; and, the glorious end considered, there was something sublime in this humble industry, which often recovered a lost author of antiquity, and gave one more classic to the world. This occupation was carried on with enthusiasm, and a kind of mania possessed many who exhausted their fortunes in distant voyages and profuse prices. The acquisition of a province would not have given so much satisfaction as the discovery of an author little known, or not known at all. Some of the half-witted, who joined in this great hunt, were often thrown out, and some paid high for manuscripts not authentic. In reading the correspondence of the learned Italians of these times, their adventures of manuscript hunting are very amusing: and their raptures, their congratulations, or at times their condolence, and even their censures, are all immoderate. It is curious to observe that in these vast importations into Italy of manuscripts from Asia, John Aurispas, who brought many hundreds of Greek manuscripts, laments that he had chosen more profane than sacred writers; which circumstance was owing to the Greeks, who would not so easily part with theological works, but they did not highly value profane writers!

These manuscripts were discovered in the obscurest recesses of monasteries; they were not always imprisoned in libraries, but rotting in dark unfrequented corners with rubbish. It required not less ingenuity to find out places where to grope in, than to understand the value of the acquisition. It sometimes happened that manuscripts were discovered in the last agonies of existence. Papirius Masson found, in the house of a bookbinder at Lyons, the works of Agobart; the binder was on the point of using the manuscripts to line the covers of his books. A page of the second decade of Livy it is said was found by a man of letters in the parchment of his battle-dore, while he was amusing himself in the country. He hastened to the maker of the battle-dore—but arrived too late! The man had finished the last page of Livy—about a week before. The original manuscript of Justinian's code was discovered by the Pisans, accidentally, when they took a city in Calabria; that vast code of laws had been in a manner unknown from the time of that emperor. This curious book was brought to Pisa; and when Pisa was taken by the Florentines, was transferred to Florence, where it is still preserved. The most valuable copy of Tacitus, of whom so much is wanting, was discovered in a monastery of Westphalia. It is a curious circumstance in literary history, that we should owe Tacitus to this single copy; for the Roman emperor of that name had copies of the works of his illustrious ancestor placed in all the libraries of the empire, and every year had ten copies transcribed; but the Roman libraries seem to have been all destroyed, and the imperial protection availed nothing against the teeth of time.

\* Constantinople, the capital of the Greek empire was taken by the second Mahomet, in May, 1453. The beautiful Irene whose fate was dramatised by Dr. Johnson, was one of the captives.

The labours of those who may justly be called the restorers of classical literature, were mainly instrumental in producing that state of things, which turned men's minds towards the invention of printing, and nourished it to maturity, when invented. The monks themselves, so far as they contributed to the perusal of legends and miraculous stories, were the unconscious instruments of that spreading desire for knowledge, which ushered in the invention of printing, and which issued in the Reformation itself.

We lost a great number of ancient authors, by the conquest of Egypt by the Saracens, which deprived Europe of the use of the papyrus. They could find no substitute, and knew of no other expedient but writing on parchment, which became every day more scarce and costly. Ignorance and barbarism unfortunately seized on Roman manuscripts, and industriously defaced pages once imagined to have been immortal. The most elegant compositions of classic Rome were converted into the psalms of a breviary, or the prayers of a missal. Livy and Tacitus "hide their diminished heads" to preserve the legends of a saint, and immortal truths were converted into clumsy fictions. At Rome, a part of a book of Livy was found, between the lines of a parchment but half effaced, on which they had substituted a book of the bible; and the recent discovery of Cicero's *de Republica*, which lay concealed under some monkish writing, shows the fate of ancient manuscripts.

In these times, manuscripts were important articles of commerce; being excessively scarce, and preserved with the utmost care, users themselves considered them as precious objects for pawn. A student of Pavia, who was reduced, raised a new fortune by leaving in pawn a manuscript of a body of law; and a grammarian, who was ruined by a fire, rebuilt his house with two small volumes of Cicero.

In this age of manuscript, there is reason to believe, that when a man of letters accidentally obtained an unknown work, he did not make the fairest use of it, and cautiously concealed it from his contemporaries. Leonard Aretino, a distinguished scholar at this time, having found a Greek manuscript of Procopius *De Bello Gothico*, translated it into Latin, and published the work; but concealing the author's name, it passed as his own, till another manuscript of the same work being found, the fraud of Aretino was apparent.

The first public library in Italy was founded by a person of no considerable fortune: his credit, his frugality, and fortitude, were indeed equal to a treasury. Nicholas Niccoli, the son of a merchant, after the death of his father relinquished the beaten roads of gain, and devoted his soul to study, and his fortune to assist students. At his death, he left his library to the public, but his debts being greater than his effects, the princely generosity of Cosmo de Medici realized the intentions of its former possessor, and afterwards enriched it by the addition of an apartment, in which he placed the Greek, Hebrew, Arabic, Chaldaic, and Indian manuscripts.—*D'Irreali*.

Mr. Watson in his history of printing quotes an epistle of Antonius Boronia, to Alphonsus king of Naples and Sicily, in which are the following expressions:—"You lately wrote to me from Florence, that the works of Titus Livius are there to be sold, that the price of each book is one hundred and twenty crowns of gold; therefore I entreat your Majesty that you purchase it, and cause it to be sent to me. One thing I want to know of your prudence, whether I or Poggio, have done best; he that he might buy a country house near Florence sold Livy, which he had writ in a very fair hand; and I, to purchase Livy, have exposed a piece of land to sale." No man, of this period, devoted himself with so much industry to the restoring of classical manuscripts and literature, than Poggio. No difficulty, no want of assistance, no expense or labour discouraged him. His youth was spent in travelling to attain what seemed to be the sole object of his life; and when he became secretary to the popes, eight of whom employed him in succession, he used the influence and opportunities his situation gave him, for the promotion of literature and the collecting of manuscripts at Rome; though he complains that his zeal was not assisted by the great. He found under a heap of rubbish in a decayed coffer the works of Quintilian; and to his great joy drew it out of its grave. "Oh, great gains! Oh unexpected felicity! I entreat you my Poggio, send me the manuscript as soon as possible, that I may see it before I die," exclaims Aretino, in a letter overflowing with enthusiasm on Poggio's discovery of the above manuscript.

The term academy was revived in Italy, at this time, but with a signification somewhat different from what it had borne in ancient times. It was used to imply, not a school in which philosophy was taught by a master to his pupils, but an association of individuals for the cultivation of learning or science, and usually constituted and endowed by the head of the state in which it was established. What was now called an academy, in fact more nearly resembled what was anciently denominated a Museum,—the name given, for example, to the famous association of the learned, founded by the first Ptolemy at Alexandria, which so long subsisted in that city. The emperor Charlemagne is also recorded, to have established in his palace at Paris a society of this description. It was the fancy of the members of this society to assume each a classical or scriptural appellation. At their meetings they were accustomed to give account of such books as they had been studying; and their attention is said to have been directed, not without effect, to the regulation and improvement of the vernacular language of the country.

It has of late become common, more especially in England and the United States of America, to give the name of academies to those seminaries in which so many various branches of education are taught as to entitle them to rank, it may be thought, as a sort of minor universities. In this sense, many of the principal towns in

Scotland have their academies, which are merely great schools, as in Germany would be called *gymnasias*, embracing in some cases both the languages and the sciences, but in general confined chiefly to the latter. In England, again, the colleges of the dissenters are commonly called academies; and the name is also frequently assumed by mere private boarding houses, on however small a scale. The government institution at Woolwich for the instruction of military cadets is called the Royal Military Academy. It was founded in 1741, and is under the direction of the Board of Ordnance. There is also a Royal Naval Academy at Portsmouth, founded in 1722, under the direction of the Board of Admiralty. The Jewish seminaries for the highest branches of learning, in the different countries of Europe, have usually borne the name of academies. The same name has long been applied to schools of riding, of dancing, and of gymnastic exercises. On the other hand, many of those associations of the learned, which, in all respects, resemble the academies that arose in Italy with the revival of letters, are, nevertheless, not known by that name. They are called not academies, but *societies, associations, museums, lycæums, athenæums, institutes, &c.*

It is commonly stated, that the term academy is derived from the name of the original proprietor Academus or Ecademus, who is said to have established a house and garden in one of the suburbs of Athens, inclosed by a wall, and having the grounds laid out in walks, shaded by trees. Other etymologies of the term, however, have also been given. About the middle of the fifth century, before the commencement of our era, the groves of Academus fell into the possession of Cimon, the Athenian general; and it was he who first adorned the place with statues and fountains, and added other improvements, so as to convert it into a retreat uniting to the charms of natural scenery many of the luxuries of the art. At his death he left the garden to the public; and it became a favourite resort of the lovers of philosophy and solitary meditation. Hither Socrates went occasionally to repair to converse with his disciples. But it was his illustrious pupil, Plato, who first gave celebrity to the Academy as a seat of philosophy, by establishing here the school over which he presided for nearly half a century. Hence the Platonic philosophy is frequently called Academicism or the philosophy of the Academy; and its followers, Academics or Academists. Plato died about the year 348 before the Christian era. About the year b. c. 296, one of his successors, Arcesilaus, introduced certain changes into the original doctrines of the school; and he is on this account considered the founder of a second, or Middle, as distinguished from the old Academy. There was also in this sense a third academy, called the New, of which the founder was Carneades, who flourished about a century after Arcesilaus. Some writers even reckon a fourth Platonic

academy, founded soon after the time of Carneades, by Philo, (not the celebrated Platonic Jew) and Charmidas or Charmadas: and a fifth, designated the Antiochian, from its founder Antiochus, who had been a disciple of Philo. Cicero had a country seat on the Neapolitan coast, to which, as one of his favourite retreats for philosophical study and converse, he gave, in memory of the famous Athenian school, the name of academia. It was here he wrote his *Academic Questions*. Its remains are still pointed out near Pozzuoli, under the name of the *Bagni de' Tritoli*.

With regard to the academy of Plato, we may further notice that it was situated in the suburb, lying to the north-west of Athens, called Ceramicus, that is, literally, the Place of Tiles; and it has been remarked, as a curious coincidence, that the principal public garden of that city should thus have apparently had the same origin with the *Thuleries* of the modern capital of France, a name which also indicates that the site was anciently that of a tile-work.

Having arrived at that period, when it becomes our duty to investigate into the origin and progress of printing; and looking back on the state of mankind from its earliest source, and through the dark and middle ages, must not the heart be warmed with gratitude to that All-wise and beneficent Being, who has thus gifted us with this inestimable treasure,—that valuable fountain of intellectual enjoyment,—THE PRESS. It is not now, as it was heretofore, that the wealthy alone could enjoy this delectable repast. Books are not now treasured up as a great rarity and of high value, but on the contrary, accessible to all: and thus it is, says Dr. Middleton, in his *Free Enquiry into the Art of Printing*, the ease which we now find in providing and dispersing what number of copies of books we please, by the opportunity of the press, makes us apt to imagine, without considering the matter, that the publication of books was the same easy affair in all former times as in the present. But the case was quite different. For, when there were no books in the world but what were written out by hand, with great labour and expense, the method of publishing them was necessarily very slow, and the price very dear; so that the rich only and curious would be disposed or able to purchase them; and to such also it was often difficult to procure them, or to know even where they were to be bought.

Say, what was man ere by the Press refined?  
What bonds his glorious energies confined?  
Did Genius, thro' the dull chaotic waste,  
Court the fair form of beauty and of taste,  
Tho' stroog his ardour, and tho' pure his love,  
Small was the sphere wherein those powers could move.  
The meteor-beam that science lent mankind,  
Darting effulgence on th' inquiring mind,  
Of gleam'd—a weak and transitory light,  
A moment glared—then sunk to endless night:  
Man knew no means to hold the flitting race  
Of Art's coy forms, that courted his embrace;  
His only hope in Memory's stunted power,  
The oral record—changing every hour.—M'CHERRY.

# HISTORY OF PRINTING,

AND PROGRESS OF LITERATURE,

FROM THE INVENTION OF THE ART TO THE ABOLITION OF THE STAR  
CHAMBER, IN THE YEAR 1694.

How shall I speak thee, or thy power address,  
Thou God of our idolatry—the Press !  
By thee Religion, Liberty, and Laws,  
Exert their influence, and advance their cause ;  
By thee, worse plagues than Pharaoh's land befell,  
Diffused, make earth the vestibule of hell ;  
Thou fountain at which drink the good and wise :  
Thou ever bobbling spring of endless lies ;  
Like Eden's dread probationary tree,  
Knowledge of good and evil is from thee.—Cowper.

But not to make our eyes sore by looking only on the hurt ; let us turne them on the benefits of the well employed Press ; and we shall see it a mint of solid worth, the good it hath done, (and yet may do) being inestimable ; it is Truth's Armory, the Bank of Knowledge, and Nursery of Religion, never suffering a want of the sincere Milk of the Word, nor Piety's Practice to be out of print (and that not only in one book) weekly issuing forth helps to doing, as well as knowing our duty.—Whitlock's *Treasures of the Press*, London, 1654.

It creates our surprise, when we are told, that the art of printing, which has been styled the "Nurse and Preserver of the Arts and Sciences," should be so negligent of itself, as not to leave the smallest record of its own origin ; the inventors having been more ambitious of deserving, than of purchasing praise. That the invention of an art, so curious in its nature, and so highly beneficial in its consequence, should have been the boast and contention, not of individuals only, but of cities and countries, is less surprising, than, that the inventor should have neglected to secure to himself the honour of the discovery. Public gratitude, at least, might have been expected to perpetuate the name to which it owed such infinite obligations. But neither this, nor personal ambition, prevented the obscurity which has fallen on the subject, and which has nearly concealed from us the *author*, as well as the time and place, which his art commenced.

As many cities have contended for the honour of this invention, and engaged the learned in defence of their respective claims, it cannot be improper to select the most considerable testimonies from those authors, who wrote soon after the discovery, and were better acquainted with this matter than those who lived at some distance of time after it, and may be supposed to have followed their predecessors in the accounts they have

given us of the origin of printing. From the multiplicity of evidence, and the contradictory facts adduced by contending parties, difference of opinion may still exist, yet, from an impartial survey, there appears a preponderance of testimony, calculated to produce conviction, and to form the judgment of those who candidly investigate the point.

"It is wonderful," says Lemoine, "but it is true, that the only art which can record all others, should almost forget itself."

To us of the present day, indeed, who are tenacious only of the freedom of this inestimable art, but in no respect connected with its original discovery, the question is of less importance than to those cities which contend for the sake of investing themselves with the honour of the invention. But that which is every day growing more and more valuable to the whole moral world, and whose ultimate consequences, both as they concern religion, and embrace every thing that belongs to human institutions, afford matter for speculation of the deepest interest, is worthy of our highest regard : and thus it is that the History of Printing becomes to us an object of the most laudable curiosity.

The chief causes to be assigned as having tended to occasion doubts with whom the art actually originated, may be thus briefly summed

up:—First, the real inventor would be unable to confine the secret wholly to himself, and advantage would be taken by such as had opportunities of learning any particulars concerning it during its experimental progress and imperfect state, to arrogate to themselves the merit of being the inventors of that to which they contributed nothing, but mechanical agents.—Secondly, for a time, printing was as much the *counterfeit* of, as the *substitute* for writing; being, as it were, the *fac-simile* of the hand-writing of the most approved scribes: and as large sums were paid for manuscript copies of choice works, the first printers were desirous to sell their printed copies as manuscripts; hence, lucrative motives might operate to prevent the founder of the art from divulging himself to the world as the author of so great a novelty.—Thirdly, the want of sufficient funds for his purpose induced the original projector, and those artists immediately concerned with him, to engage jointly with men of property in the practice of the art; and their names thus becoming blended, the merit of the invention became liable to be falsely ascribed.—Fourthly, the commencement of book-printing could not have been earlier than the year 1422, nor later than 1442; and it is probable that within this period presses were established in various parts of Europe: and as intercommunication between distant countries was not then very easily effected, each printer and each city might claim the honour of the invention without much risque of immediate detection. These appear to have been some of the principal causes that conduced to render it doubtful in whom, and at what place, the art had actually its origin.

A controversy has arisen concerning the first discoverer of the art of printing, between the three towns of Haerlem, Mentz, and Strasburg; each, from a natural partiality, attributing it to their own countrymen. The dispute, however, has turned rather on words than facts; and it seems to have arisen from the different definitions of the word *PRINTING*. If we estimate the discovery from the invention of the principle, the honour is unquestionably due to Laurence Coster, a native of Haerlem, who first found out the method of impressing characters on paper by means of carved blocks of wood. If moveable types be considered as a criterion, the merit of the discovery is due to John Gutenberg of Mentz, and Schoeffer, in conjunction with Faust, was the first who founded types of metal.

The claims of Coster depend principally on the authority of the celebrated historian of Holland, Hadrianus Junius, or Adrian Young, who was born at Horn in 1511, and took up his residence at Haerlem in 1560; he was rector of the Latin school, and also teacher of natural philosophy at Haerlem. In January, 1575, he finished his work, intitled *Batavia*, and died on the 16th of June the same year: this work appeared in 1578, from which it is considered that all Coster's partisans have taken their ground of argument. The following particulars are supposed to have been written in 1568.

"About 120 years ago, Laurence Zannen Coster, inhabited a decent and fashionable house in the city of Haerlem, situated on the market-place, opposite the royal palace. The name of Coster was assumed, and inherited from his ancestors, who had long enjoyed the honourable and lucrative office of Coster or Sexton to the church. This man deserves to be restored to the honour of being the first inventor of printing, of which he has been unjustly deprived by others, who have enjoyed the praises due to him alone. As he was walking in the wood contiguous to the city, which was the general custom of the richer citizens and men of leisure, in the afternoon and on holydays, he began to pick out letters on the bark of the beech; with these letters he stamped marks upon paper in a contrary direction, in the manner of a seal; until at length he formed a few lines for his own amusement, and for the use of the children of his brother-in-law. This succeeding so well, he attempted greater things; and being a man of genius and reflection, he invented, with the aid of his brother, or son-in-law, Thomas Pieterison, a thicker and more adhesive ink, as the common ink was too thin and made blotted marks. With this ink he was able to print blocks and figures, to which he added letters. I have seen specimens of his printing in this manner: in the beginning he printed on one side only. This was a Dutch book, entitled *Sprekial enser Behoudenisse*. That it was one of the first books printed after the invention of the art, appears from the leaves, which are pasted together, that the naked sides might not be offensive to the eyes; and none at first were printed in a more perfect manner. As this new species of traffic attracted numerous customers thus did the profits arising from it increase his love for the art, and his diligence in the exercise of it.

"He engaged workmen, which was the source of the mischief. Among these workmen was one Jan—whether his surname be that of Faust, or any other, is of no great importance to me; as I will not disturb the dead, whose consciences must have smote them sufficiently while living. This Jan, who assisted at the printing press under oath, after he had learned the art of casting the types, setting them, and other matter belonging to the art, and thought himself sufficiently instructed, having watched the opportunity, as he could not find a better, he packed up the types and the other articles on Christmas eve, while the family was engaged in celebrating the festival, and stole away with them. He first fled to Amsterdam, thence to Cologne, until he could establish himself at Mentz, as a secure place where he might open shop, and reap the fruits of his knavery. It is a known fact, that within the twelve months, that is, in the year 1440, he published the *Alexandri Galli Doctrinale* a grammar at that time in high repute, with *Petri Hispani Tractatibus Logicis*, with the same letters which Laurens had used. These are the principal circumstances I have collected from creditable persons, far advanced in years, which they have transmitted like a flaming torch from hand to

hand; I have also met with others who have confirmed the same." &c. &c. The particulars here recorded, Junius states to have received from his tutor, Nicholas Gallius, an old gentleman of very tenacious memory, who related that, when a boy, he often heard one Cornelius, a bookbinder, (then upwards of eighty years of age, who had when a youth, assisted at the printing-office of Coster) describe with great earnestness the numerous trials and experiments made by his master in the history of the invention: when he came to that part of his narrative touching the robbery, he would burst into tears, and curse, with the greatest vehemence, those nights in which he had slept with so vile a miscreant; and that, were still alive, he could with pleasure execute the thief with his own hands. Junius states, that he received a similar account from Quirinus Talesius, the Burgomaster, who declared that it was recited to him by the said Cornelius: the latter died in the year 1515.

Mr. Otley is of opinion that Junius is in error, when he states that Quirinus Talesius received the information from the same Cornelius who worked for Coster, he imagines him to have been a son, or nephew, of the former; as Meerman found mention of *Cornelius the bookbinder* in the records of the church of S. Bavon, at Haerlem, under the years 1474, 1485, 1487, 1496, 1503, 1507, 1508, and 1515. If the chronology, observes Mr. Otley, be correct, Cornelius must have been ninety in the year 1496; therefore, he concludes, that the latter dates refer to a younger Cornelius, the informant of Talesius.

Authors disagree with respect to the person who committed the robbery alledged to have taken place. There cannot be the least reason for supposing Faust to have been the thief, he being a wealthy citizen of Mentz. Scrivener fixes the theft on John Gutenberg. Some suppose the robber to have been John Maidenbachius, others John Petersheimius, but most probably it was Geinssfleisch, sen. whom Kohlerus states came to Mentz in 1441, and not before.

There certainly appears a strange inconsistency in the different statements respecting this robbery. A majority of writers agree that it took place in 1441; whereas, it is universally allowed that Coster died in 1440. The account is certainly a very natural and pleasing one, if we divest it of the above and a few other inconsistencies. It is necessary to observe, that in the confusion of names which follow this event in the history of printing, the thief has been suffered to escape, and the crime attributed to an innocent person.

Scrivener informs us, that he had collected fragments of a work upon this subject, written upon this subject, written at Haerlem, between 1549 and 1561, by Jan. Van Zuyren, Burgo-master of that city: Scrivener laments its loss, observing, that had this been handed down to posterity, there would now be no occasion for a reference to the testimonies of Junius and others, in order to prove that Haerlem is entitled to the merit of the discovery. He says, that he preserved the Latin title, and some part of the preface,

but the name of Coster does not appear. He admits that the honour of perfecting the art, and of making it known throughout Europe, is justly due to Mentz. It appears an unfortunate circumstance for Haerlem, that the documents of Jan. Van Zuyren, which Scrivener so much laments the loss of, should not have been preserved; if they had, it is doubtful whether they would in the least have advanced the cause of Junius and Meerman.

That Coster carried the art no further than separate wooden types, appears from a Dutch poem, entitled *Hertspeigal*, published in the sixteenth century, by Henry Spiechal, who exclaims, "Thou first Laurentius, to supply the defect of wooden tablets, adaptedst wooden types, and afterwards did connect them with a thread, to imitate writing. A treacherous servant surreptitiously obtained the honour of the discovery; but truth itself, though destitute of common and wide spread fame; truth, I say, still remains."

There is no mention in this poem of metal types; had he been robbed of these, as well as of wooden ones, such a circumstance could not have been passed over in silence.

That the rough specimens with which Coster amused himself should be discovered, at the distance of three centuries, appears almost improbable: yet John Enchedius, a printer, discovered an old parchment *Horarium*, printed on both sides, in eight pages, containing the *Alphabet*, the *Lord's Prayer*, the *Apostles' Creed*, and three short prayers, which he imagines to be the first productions of Laurentius. Mr. Meerman submitted this to artists, (competent judges) who gave as their opinion that it exactly agreed with the description of Junius: it also corresponds with the first edition of the Dutch *Speculum Salvationis*, and the fragment of the *Holland Donatus*, which are said to have been the productions of Laurentius, and are specimens of his piety and ingenuity, in this essay of his newly invented art. Mr. Meerman has given an exact engraving of this singular curiosity.

It has been urged by those who oppose the claims of Coster, that it would have been more satisfactory had his descendants preserved the old type in its original state. Junius informs us, that it was melted down and converted into drinking cups. Coster's defenders reply, that it was not unnatural for them to have it made into useful and ornamental articles of furniture: and that, if Junius intended to deceive his readers, he might have stated that the type still remained in Coster's house.

It is quite unreasonable to suppose that Coster's descendants and friends would have suffered his fame to sink into oblivion, and there rest quietly sepulchred for the space of one hundred and thirty years, before they thought of even hinting that such a circumstance had ever taken place at Haerlem, either by Coster, or any other person.

Junius has an able advocate in Mr. Otley, who boldly defends the cause of Coster and Haerlem with much sound argument; but with respect to the robbery, he forbears to make any comment,

and contents himself by giving the statement of Junius, that the types taken from Coster's house were cast types. If the evidence of Guicciardini, on which Mr. Otley seems to place implicit reliance, is to be depended upon, we must understand that Coster died previous to the robbery, as stated by Junius.

In defence of Coster, we find Junius, Van Zuyren, Guicciardini, Coornhert, Shriverius, Boxhorni, Seiz, and Meerman, and others, all resting upon the famous *hearsay* evidence of Junius.

The testimony of Hadrianus, then, is the only document on which the Dutch writers have relied, in their strenuous efforts to vindicate for Haerlem its chimerical honours. But, surely, an event so remarkable, so glorious for a country, would have been mentioned by cotemporary authors, had there been the least foundation for the claim; yet no Dutch author, nor any work whatever of the fifteenth or sixteenth century, makes the least possible mention of the fact.

Having touched upon the principal arguments in favour of Haerlem, we shall proceed to give those in favour of Mentz; reserving further information respecting Coster under the year 1440.

Writers in favour of Haerlem, have managed the controversy with great warmth, and charged Faust, the inventor, with robbing his supposed master, Laurence John Coster, of many thousand weight of his materials, on Christmas-eve, when the family and most of the city were in prayer at church; with other such ridiculous stories, fabricated merely to deprive this great man of the honour which he had so long incontestably enjoyed. Had this been published in his life-time, when he might have defended himself, or presently after his death, when his son-in-law, or some of his friends, might have done it for him, he had undoubtedly been cleared; but such an accusation was not hinted till 125 years after, and then grounded only on suspicion, as Dr. Junius owns, who was the first that attempted to transfer this discovery from Mentz to Haerlem. Faust's name, however, died not with him, though some Dutch writers made use of his art to asperse his memory, but others, of several nations, rose immediately in his defence; in particular, the learned Malinkrot, dean of Munster, who, in his treatise, *De Ort et Progressu Artis Typographice*, has not only refuted what was advanced on the other side, but made such researches after the old monuments of the arts and collected so great a variety of testimonies, supported by undeniable facts, as seem at once to determine the controversy.

Writers have differed much upon this subject; first, because the inventors made many fruitless trials, and a great number of calculations, before they could bring the art to any tolerable degree of perfection: secondly, because the vast expense of such a discovery compelled them to keep it secret as long as possible; or at least, until they had reimbursed themselves, in some measure, by finishing the Latin Bible, which, though a great and expensive work, was the most likely to com-

pensate their labour and cost when finished. On these two circumstances rests the foundation of the disagreement; which may, however, be easily reconciled by attending to the various periods from which the discovery is dated. Wimpeling, Palmerus, Althamers, &c. date it from the infancy of the invention of wooden blocks, and assign the year 1440. Trithemius, Aventine, and many more, from the invention of fustil types, anno 1450. Thevet, Rocha, &c. fix the invention of the former method in 1442; whilst others place the time of the typographical improvements in the year 1453 or 1454, among whom are Apianus and P. Langius. Ramus and Burgamensis assign the year 1458 for the perfection of it. To reconcile this contrariety of opinion among these writers, it will be sufficient to say, with respect to the first, that they fixed the date from the time in which wooden blocks were first invented, rather than from the infancy of the Art: with regard to the last, that they thought an interval of ten years rather too short for the transition from the infancy of the former, to the perfection of the latter method; and, therefore, allowed a few years more than their predecessors had done.

But of all those who have treated on this invention, none deserve more attention than the abbot Trithemius, who lived about the time it was made, and dived into the fountain head for information. Speaking of the year 1450, in his *Chronicon Spanheimense*, he says, "About this time, the Art of Printing and casting single Types was found out a-new in the city of Mentz, by one John Gutenberg, who having spent his whole estate in this difficult discovery, by the assistance and advice of some honest men, John Faust and others, brought his undertaking at length to perfection: that the first improver of this Art, after the invention, was Peter Schoeffer (in Latin, Opilio) de Gernsheim, who afterwards printed a great many volumes: that the said Gutenberg lived at Mentz in a house called the *ZUM-JUNGHEN*, but afterward known by the name of the *Printing-house*." By the word *a-new*, in the preceding extract, we are almost led to suppose that the author meant rather a revival of the Art than a new invention; but he fully destroys this conjecture in another work, published some years after, intitled *Chronicon Hirsaugiense*. Trithemius wrote this towards the close of his life, after he had been informed of many particulars relating to this invention, from the mouth of Peter Schoeffer, surnamed de Gernsheim, who was at first a servant to Faust, and being very expert in preparing the moulds, and casting the letters, his master gave him his only daughter, Christiana, in marriage, and took him into partnership, as appears by the inscriptions to their first books. The following inscription, which is taken from his *Breviary of History*, gives so concise an account of the origin of printing, and speaks so powerfully in favour of Mentz, that I am induced to insert it here:—This present chronological work was printed and finished anno, 1515, on the eve of St. Margaret

Virgin, in the noble and famous city of Mentz, first inventress of this Art of printing, by John Schoeffer, grandson of the worthy John Faust, citizen of Mentz, the First author of this Art, who found it out by his own ingenuity, and began to practice it anno 1450, in the time of the thirteenth indiction. Frederick III. being then Emperor, and the most reverend father in God, Theodorick Pincerna de Erbach, being prince-elect and archbishop of Mentz, anno 1452, he perfected this Art, under God, and began to put it in practice, with the assistance of Peter Schoeffer de Gernsheim, first a servant, and then his son-in-law; who having made many necessary inventions in it, had his daughter Christiana Faust in marriage, as a just recompense for his labour and useful discoveries. These two above named, viz. John Faust and Peter Schoeffer, kept this art secret, having taken an oath of all their workmen and servants not to divulge it in any manner whatsoever; but afterwards it was divulged by those very workmen, anno 1462, and spread itself over several provinces of Europe, &c."

In the beginning of the above passage, the abbot gives the discovery to Gutenberg; and shortly after he twice gives the title of the *first Inventor of Printing*, to John Faust, which contradiction may be reconciled, by supposing that he, through inadvertency, wrote the name John Gutenberg; and this very probable, as their given names are the same.

This inscription of itself, without calling in any other aid, is fully sufficient to determine the dispute in favour of Faust, and Mentz.

Many authorities, and those of the most respectable kind, might be adduced to prove the preservation of the cases, &c. in Mentz, for more than a century after the city was destroyed in the year 1462, and that one Albinus, a printer, was in the habit of shewing them as curious relics of typography.

It may be curious to trace the art through its several progresses. From the blocks of wood, which could only be employed on the work for which they were carved, an attempt was made to cut *moveable letters* on wood, which were soon abandoned, for it is supposed that no entire book was ever printed with them; and if Schoeffer's happy genius had not discovered the art of casting *matrices* and cutting punches, the art must have remained imperfect and barbarous.

That John Gutenberg was attempting to perfect the art at Strasburg, from 1436 to 1444, without being able to produce a clean sheet, there can be no doubt. Whether he received any hint from his brother upon the subject, or not, it is impossible now to ascertain. It appears most probable, that the two brothers were going on with their experiments at the same time, and that the elder proved most successful, he having produced works before his brother joined him.

On the authority of Kohlerus, John Geinsfleisch, sen. returned to Mentz in 1441; that two works were published by him in 1442, there can be no doubt. In 1443, he was induced for want

of capital, to admit John Faust and others as partners; in 1444, John Gutenberg from Strasburg made an addition to the firm. It is a singular circumstance that from this period, we find no mention of Geinsfleisch, sen. in the disputes which caused a dissolution; and in the renewal of the partnership, Gutenberg alone being noticed. We find him employed with his brother, cutting metal types, in 1444, consequently he was then in the firm; and as he survived till 1462, it is a most singular omission in our early chronologers not to have favoured us with a few particulars, however trivial, of so extraordinary a man: in fact, he must be considered, strictly speaking, as the first printer, because he brought it to perfection before his brother at Strasburg.

Wooden types being found not sufficiently durable, and not answering expectation in other respects, the two brothers first invented *cut metal types*. But while these were preparing, which must have been a work of time, several works were printed, both on *wooden separate types* and on *wooden blocks*; which were well adapted to small books of frequent use. After many smaller essays, they produced, in conjunction, the bible, with *large cut metal types*. Considering the immense labour this work must have cost, it is no wonder that it should have been seven or eight years in completing. The progress of the art has been thus traced through its second period, the invention of cut metal types.

*We insert the following testimonies, in order that the Reader may form an idea on the variety of opinions which have existed on this important subject.*

Fournier contends that Gutenberg is not the inventor of printing: his definition of typography being contrary to that of most other writers, his arguments are given by Mr. Horne, in his *Introduction to the Study of Bibliography*.

The opinions of Fournier are completely set aside by Baron Heineken, in his work on early engraving, 1771, which is in high estimation among bibliographers and amateurs of the Fine Arts. He conjectures, that Gutenberg took the hint from the card-makers, who are said to have been the first engravers of historical subjects intermingled with texts. All his attempts to cut single letters, at Strasburg, proved ineffectual, and brought ruin upon both himself and his partners, without producing a clean legible leaf. This failure induced him to quit Strasburg, and return to his native city, when he joined Faust and his brother; here their endeavours were crowned with complete success. Heineken is of opinion that their first productions were taken from wooden blocks.

Mr. Bagford contends, that Haerlem is entitled to the merit of the discovery.

Lichtenberger states, that the first attempts were made by Gutenberg at Strasburg, and perfected by him at Mayence. The claims of Coster and Haerlem he rejects as a fable.

Arnold de Begel, (a corrector of the press), in his poem, intituled *Encomium Chalcographia*, 1541, indicates Strasburg as the place, and Gu-

tenberg the person who first attempted it; but that he practised more successfully at Mayence, with the assistance of Faust and Schoeffer, particularly the latter, who cut the punches, struck the matrices, and cast the letters from them.

Catherinot considers Gutenberg and Schoeffer to have been the inventors at Mentz, about the year 1455.

Dr. Clarke is in favour of Gutenberg, and states that he commenced his experiments at Strasburg, between 1430 and 1448, with the assistance of John Mentil and others.

Maittaire, in his *Annales Typographici*, 1719, conjectures that the art was discovered about 1440, by Faust, Gutenberg, and Schoeffer, who at first used engraved plates or blocks; these gave place to moveable wooden types, and at last they adopted fusile types. On the dissolution of partnership with Faust, in 1455, he observes, Gutenberg went to Strasburg, and thence to Haerlem, where he employed Corsellis, at the time he was bribed to leave him, and was carried to Oxford, 1459.

Meerman steps forward as the avowed champion of his beloved Coster, and treading close upon the heels of Junius, follows him through all the intricate mazes of hearsay evidence, and at length sits down, after various conjectures, without being able to favour his readers with the name of the robber.

The claims of Coster and Haerlem are considered by Mr. Horne as entitled to no credit.

Christ. Besoldi, in his work, published in 1620, is of opinion that we are not indebted to the Chinese for the discovery of typography, (as they only practise block-printing) the Germans of the fifteenth century having no communication with that secluded people. The claims of Strasburg, Mentz, and Haerlem he does not decide upon.

Boxhornii advances nothing new in favour of Coster, he comments upon two inscriptions, one under the statue, the other in front of Coster's house.

Chevillier stands forward in the front rank, under the banner of Gutenberg and Strasburg.

Judex vaguely indicates, first John Faust, a goldsmith of Mayence, and then his partners, Schoeffer and Gutenberg, as the inventors of printing.

Lambinet explodes the account of Coster as a fable; he is of opinion that the art originated with Gutenberg at Strasburg, and perfected at Mayence.

Lemoine ascribes the origin of printing (with wooden types only) to Coster, at Haerlem, about 1430, and afterwards continued by his family: to Gutenberg and Schoeffer he awards the merit of cut, and also cast metal types.

Luckombe gives the palm to Gutenberg: and rejects Coster's claim altogether, as scarce worthy of notice.

Mr. Astle is of opinion, that the art is of Chinese origin, and that it was first practised in Europe in the fifteenth century.

Stower ascribes the origin to Haerlem, the improvements to Mentz.

Wurdtewin attributes the first productions of the press to Geinsfleisch, Gutenberg, or Sörgelock.

Tiraboschi, upon Meerman's evidence, completely sinks the cause of Haerlem, for Strasburg and Mentz.

Palmer leaves Gutenberg in the background, and advances with Faust and Schoeffer; he fixes the invention in 1440, and metal types prior to 1450.

The account given of Coster by Junius is considered as authentic by Messrs. Bowyer and Nichols, in their *Origin of Printing*, 1774.

Schœpflin arrests our attention with a judicial decree of the Court of Strasburg, by this he considers the glory secured to Gutenberg and Strasburg, prior to 1440, and its perfection to Mentz about 1450.

Seizii concurs with the hearsay tradition.

Schrag rises up for Mentilius and Strasburg: he says, that Mentz received it from one of the workmen.

Santander inveighs against the claims of Haerlem, and defends the cause of Gutenberg.

Scrivenius wears the colours of Coster and Haerlem, known there in 1430, not before 1450 at Mentz.

Tentzellii stains his paper in the cause of Gutenberg and Strasburg in 1440, and Mentz in 1450.

Fischer employs his pen for Gutenberg, and explodes the claims of Haerlem.

Danou favours Gutenberg, and condemns the claims of Haerlem.

Zell gives the discovery to Haerlem, the improvements to Mentz.

Caxton deservedly treats Haerlem with silent contempt; he bestows the laurel wreath on Gutenberg and Mentz.

Oberlin meets us with a translation of the German passage, discovered by Schœpflin, relative to fusile types, it runs thus:—"Go, take away the component parts of the press, and pull them to pieces; then no one will understand what they mean. Gutenberg intreated him to go to the press, and open it by means of two screws, and thus the two parts would separate: that these need only be placed under the press, and no one would understand anything about them. Gutenberg sent him to bring together all the different forms which were pulled to pieces before him, because there were some with which he was not satisfied. Dritzehen was particularly careful to secure every bit of lead," &c.

Hoffmann is of opinion that printing was practised in Poland in the fifteenth century.

Møller enters the list in favour of John Mentilius of Strasburg; he says, a line must be drawn between the first attempts of the art, and its progress.

Naupe advances with confidence to reward Gutenberg and Strasburg with the palm for the invention; and Gutenberg, Faust, and Schoeffer, for its perfection at Mentz.

Norman boldly declares that Gutenberg's first productions issued from his press at Strasburg.

Pater writes for the cause of Gutenberg and Strasburg, in the first instance; and Gutenberg, Faust and Schoeffer in the second, at Mentz; he observes, that he had some of wooden characters when a boy.

Rivinus loudly exclaims against the pretensions of Haerlem, and favours Mentz; Faust bears the laurel.

That great bibliographer, the Rev. T. F. Dibdin, in his *Typographical Antiquities*, is in favour of Gutenberg and Faust at Mentz, for its perfection: he is of opinion that the knowledge of block-printing was derived from the Chinese, and probably may be some hundred years more ancient, in Europe, than has generally been imagined.

The late talented John McCreery, in his poem of the *Press*, gives the honour to Mentz, Gutenberg, Faust, and Schoeffer.

O MENTZ! proud city, long thy fame enjoy  
For with the Press thy glory e'er shall die,  
Still may thy guardian battlements withstand  
The ruthless shock of War's destructive band,  
Where GUTENBERG with toll incessant wrought  
The imitative lines of written thought;  
And as his art a nobler effort made,  
The sweeping lever his commands obey'd;  
Elastic balls the sable staves supply,  
Light o'er the form the sheeted tympana dy;  
The beauteous work returning leaves unfold,  
As with alternate force the axle roll'd.  
His bosom o'w unbounded joys expand,  
A printed volume owns his forming hand!  
The curious work from sculptur'd blocks impress,  
The rising glories of his art confess!  
To give to distant times a name more dear,  
To spread the blessing thro' a wider sphere,  
SCHEFFER and FAUST with kindling ardour fir'd,  
Lent the strong aid that thirst of fame inspir'd;  
The stubborn block, with rude unchanging form,  
One end could answer, but one task perform,  
Till FAUST, with all his powers of genius ripe,  
Struck the fine die, and cast the moving type,  
That ever, as the curious artist will'd,  
In some new station some new office fir'd.

With ancient MENTZ, our central point of art,  
In the proud race the neighbouring cities start,  
Spreading, as light diverges from its source,  
The great invention through a distant course;  
Thronging around, the candidates for fame  
To breathe the new life in countless numbers came,  
Press for the meed which we alone bestow,  
The source from which immortal honours flow.

Mr. Willett, in the *Archæologia*, (vol. xi.) has given a most interesting disquisition on the *Origin of Printing*; from the body of evidence given, he demonstratively rejects the pretensions of Haerlem, and decides in favour of Mentz.

Johnson, in his *Typographia*, (vol. 1) rejects the pretensions of Haerlem, and awards the palm to Gutenberg, jun. Faust, and Schoeffer, though last, not least, to Geinsfleisch, or Gutenberg, sen. who unquestionably produced THE FIRST PRINTED BOOK.

Hansard, in his *Typographia*, awards to Gutenberg the high appellation of Father of Printing: to Schoeffer that of Father of Letter-founding; and to Faust that of the Generous Patron, by whose means the wondrous discovery, "The Nurse and Preserver of the Arts and Sciences," was brought so rapidly to perfection.

Malinkrot, who handles this subject with great skill and discernment, bath, with indefatigable industry, collected testimonies from both sides of

the question, from the promulgation of the art to the time in which he wrote, 1640, and placed them, in the following order, in the beginning of his works:—

For Mentz, before the dispute was started by Dr. Juuius.....	62
Those who have written on the same side, since Junius .....	47
	109
Those who have written in favour of Haerlem .....	13
Those who are neuters .....	11
	24

By this list, it appears that the numbers are greatly in favour of Mentz.

The following inscription set up at Mentz, in the inner court of the college of lawyers, by Ives of Witigen, or Venz, doctor of laws, and professor of that university, is a strong proof that printing was first practised in Mentz.

JOHANNI GUTTENBERGENSI MOGUNTINO,  
QUI PRIMUS OMNIUM LITERAS ÆRE  
IMPRINENDAS INVENIT,  
HAC ARTE DE TOTO ORBE BENE MERENTI;  
IVO WITIGENSIS  
HOC SAXUM PRO MONUMENTO POSUIT.

Englished thus:

IVES OF WITIGEN  
ERECTED THIS MONUMENT  
TO THE MEMORY OF  
JOHN GUTTENBERG MOGUNTIN,  
WHO FIRST INVENTED THE ART OF  
CASTING FUSIL TYPES.

And in the oldest books printed at Mentz, yet discovered, are inscriptions which style that city. "The mother and inventress of printing."

In order to prevent any misunderstanding that might arise from an apparent confusion of names, in reading any early histories of typography, it may be useful to notice that in the various documents necessary to be referred to, John Gutenberg is variously called *Johannis Gutenberg—de Moguntia*\*—*Genesfleisch*, *alias nuncupatus Gutenberg de Moguntia—Genesfleisch junior*, *dictus Gutenberg—Gansfleisch*, *dictus Sulgeloeh vel Sorgeloeh*.

An ample testimony in favour of Schoeffer† is given by Jo. Frid. Faustus of Aschaffenburg, from papers preserved in his family; "Peter Schoeffer of Gernsheim perceiving his master Faust's design, and being himself ardently desirous to improve the art, found out, by the good

\* Mogunce, Mogounce, Moguntia, Maynce, were the ancient names of the city called Mentz.

† The signification of Schoeffer, in Latin, is *Opilio*; in English, *Shepherd*—Gutenberg signifies, in English, *Good-Ale*—John Faust or Fust, is by many supposed to have derived his name from *Fausfa*, happy; and Doctor Faustus seems to carry an air of grandeur in the appellation; but very erroneously so; for John Faust, or Fust, is no more than John Hand, whence our word *fat*.—Nichols' *Origin of Printing*.

providence of God, the method of cutting (*incidendi*) the characters in a *matrix*, that the letters might easily be singly cast, instead of being cut. He privately cut matrices for the whole alphabet; and when he showed his master the letters cast from these matrices, Faust was so pleased with the contrivance, that he promised Peter to give him his only daughter, Christiana, in marriage; a promise which he soon after performed. But there were many difficulties at first with these letters, as there had been before with wooden ones, the metal being too soft to support the force of the impression; but this defect was soon remedied, by mixing the metal with a substance which sufficiently hardened it."

From all the arguments and opinions which have been adduced in this important controversy, the conclusion may be satisfactorily drawn:—That to JOHN GUTENBERG is due the appellation of the FATHER OF PRINTING: to PETER SCHOEFFER that of FATHER OF LETTER-FOUNDING: and to JOHN FAUST that of the GENEROUS PATRON, by whose means the wondrous discovery, of the ART OF PRINTING was brought rapidly to perfection.

We are informed that the Mentz printers, in order that the art might not be divulged, administered an oath of secrecy to all whom they employed; this appears to have been strictly adhered to until the year 1462, at which period the city was sacked and plundered by archbishop Adolphus, its former rights and franchises were also abolished; amid the consternation occasioned by this extraordinary event, the workmen of the Mentz press, considering their oath of fidelity no longer binding, now became free agents, and spread themselves in different directions; by this circumstance, the hitherto great mystery was rapidly carried through a considerable portion of Europe, and which commenced a contention for the merit of the discovery.

If Harleim, &c. could have advanced a claim equal to that of Mentz, and upon as good grounds, for the invention of printing, it is singular that this city should have enjoyed it without interruption for more than 125 years; and that none of the Dutch writers attempted, in that long period of time, to disprove the colophons, or inscriptions, which subjoined to his works, when it was out of his power to conceal his art, and wherein he mentions the inventors, and the manner in which the books were printed.

It is remarkable, that none of these writers mention Gutenberg otherwise than being as an

assistant. Mr. Palmer says: "Among all the learned I have conversed with whose curiosity hath led them to search into the rise and progress of printing, and all the writers upon this subject I could never meet with, not one has pretended to have seen any book printed in John Gutenberg's name even in the oldest monuments remaining of the infancy of this art, whether printed upon wood, or by separate metal types. That on the contrary, where there is any mention made of either printer or place, it is still in Faust and Schoeffer's name. Therefore, until there is some better proof of Gutenberg's name, either jointly with the other two, or separately, or some book produced with it, it seems evident beyond contradiction, that the glory of this invention is wholly due to John Faust, and the improving and perfecting it to his son-in-law Peter Schoeffer, exclusive of John Gutenberg."

Salmuth informs us, that Peter Schoeffer added considerably to the improvement of printing, by inventing punches, matrices, &c. and speaks of the difficulties which Faust and he met with, owing to the softness of the metal in which they had cast their first types; and of his discovering a mixture by means of antimony, which fully answered the purpose: which so pleased Faust, that he made him his son-in-law.

Monsieur Thevet, cosmographer to the king of France mentions some particulars which ought not to be omitted, not only because they overcome every argument advanced by the Dutch writers, but that they are peculiarly interesting in themselves. Speaking of printing, he says, "This art is believed to have been first invented at Mentz, in Germany, about the year 1442, by John Gutenberg, a German knight, who began his first essays of it there; and found out a new sort of ink, now used by the printers: but there are some writers of opinion, that this honour rather belonged to John Faust and Ives (in Latin *Ivo*) Schoeffer two years before that time."

One of the finest specimens of early printing, is *Gregorii IX. Nova Compilatio Decretalium*, Mogunt. per Petrum Schoeffer, 1473,\* printed upon vellum and paper alternately. This magnificent book is remarkable in the history of typography, on account of various Latin verses at the end, which lay claim to the invention of the art, a few years after it had been in practice. The reference to Gutenberg, Faust, and Schoeffer, in despite of the barbarous style, cannot be misunderstood in these lines—

\* Quos genuit ambo urbe Moguntina Joannes,  
Litterarum insignes Protoclerigmaticos;  
Cum quibus optatu Petrus venit ad pollandrum,  
Cursu posterior, intrando prior.

Mariangelus Accuesius, a learned Italian, who flourished about the sixteenth century, wrote the following lines upon the first leaf of a *Donatus*, printed at Mentz, by John Faust:—"John Faust citizen of Mentz, grandfather by the mother's side, of John Shepherd, was the first that devised this art of printing with brass types."

\* A fine copy in russell, gilt leaves, was marked in a London catalogue at £28.

which he afterwards changed for leaden ones. His son, Peter Schoeffer, added many other improvements to the art. This *Donatus*, and the *Confessionalia*, were first printed in the year 1450. He certainly took the hint from the *Donatus* printed in Holland upon wooden planks."

Neither the writer of the Cologn Chronicle, nor Mariangelus Accursius, positively asserts that the old method of printing with blocks of wood was the ground-work of the new one: they only affirm, that the method of printing by full types was found out at Mentz by John Faust, and improved by Peter Schoeffer; that they printed some books in the year 1450; that there was a *Donatus* printed before that time in Holland upon wooden planks; and that from this hint, or pattern, Faust began to print with brass types. They do not say that the *Donatus* was printed at Haerlem; neither do they mention by whom it was printed; they do not even hint at Coster: aware that it was unknown in Holland till 1575, the year in which Junius died, that any such book had been printed there. If any such information had reached that author, as it would have favoured his cause, he would not have failed to mention it.

Scaliger's original opinion was, that this rude invention belonged to the city of Dort, though he afterwards declared himself for Haerlem.

Mr. Maittaire is of opinion that Coster's pretensions are very ill founded; and seems to think that he was initiated into the art by Gutenberg, who removed at first to Strasburg, soon after the sentence was pronounced against him by the judges of Mentz; and, either suspecting his safety there, or dreading a further prosecution from Faust for the money adjudged to him by the decree and deed, or for some other cogent reason, afterwards settled at Haerlem, where he taught Coster the art of printing, and practised it with him there about the year 1459.

As the *Donatus* has been several times mentioned among the writers of the controversy, it may be necessary, lest it should be supposed to have something excellent in it, to say, that its merit, as well as that of the *Ars Moriendi*, the *History of the Apocalypse*, the *History of the Bible*, the *Speculum Humanae Salvationis*, and the *Sprighele*, consist only in being among the very first essays in the art of Printing, before the invention of fusile types.

From Accursius's account, it is clear that the *Donatus* bore no date, or name of place, or printers it also appears that *Donatus* was the name of the author, not of the book; and that it was a grammar for boys; for so Rocha calls it; consequently not so trifling a work as it has been deemed by those authors who call it a *primer*.

Another observation, which deserves to be noticed, is the printing the *Catholicon* upon wooden planks, cut with a knife, after the manner of the Chinese; and the bible, with separate types, which is the only method that deserves the appellation of printing: this appears plain, from the words "when they came to print the bible," &c. from which we may infer, that this sacred book

was the first the authors of this art made choice of to signalize the original fruits of the invention.

Having given the most material points respecting the claims of Haerlem and Mentz, we shall now proceed to state those in favour of Strasburg. With respect to the claims of John Mentil, or Mentilius, little need be advanced to set them aside; according to the most favourable accounts, he did not practice the art before 1440; others state 1444: but the most probable opinion is, that he did not begin before the dispersion of the Mentz printers, because if he had produced works prior to this event, a rivalry must have been the consequence. The first work from his press (now known) bears the date of 1471.

John Mentilius, a physician at Paris, has strenuously defended the cause of his namesake of Strasburg; but his endeavours have not advanced the cause of Mentilius one title beyond what had been done by his predecessors.

The principal argument which the defenders of Mentilius have set forth, is the title of nobility conferred upon him by the emperor Frederic III. This circumstance was handed down by the granddaughter of Mentilius, who married J. Schottien; and he gave it publicity in the *Ptolemaic Geography*, printed at Strasburg, 1520. It has been asserted, that he was induced to make this boast, from the conduct of John Schoeffer, of Mentz, who had previously announced in his *Colophus*, that the discovery was made by John Faust, his grandfather by his mother's side. In consequence of the above-mentioned grant of the title of nobility, we are informed that, in 1520, he began to prefix his family arms to all the books which he afterwards printed: adding,

"That they were granted to John Mentilius, the first inventor of printing."

A variety of evidence might be adduced in favour of Mentilius, had it not been superceded by Schoeffer's discovery of a document of the lawsuit before-mentioned at Strasburg, 1439. Jacob Wimpfeling informs us, that Mentilius acquired a fortune by printing his works in a correct and elegant manner: therefore, if Gutenberg claims the honour of the invention, the profitable harvest was reaped by Mentilius. The chief and only merit of Mentilius, appears to have been that of becoming rich, by adopting the art, after it had been established, as his own: for the diploma contains not a word of the invention of printing.

The Rev. Archdeacon Coxe, in his *History of the House of Austria*, gives the following description of the Invention and Art of Printing:—"It took its rise about the middle of the fifteenth century, and in the course of a few years reached that height of improvement which is scarcely surpassed even in the present times. The invention was at first rude and simple, consisting of whole pages carved on blocks of wood, and only impressed on one side of the leaf; the next step was the formation of moveable types in wood, and they were afterwards cut in metal, and finally rendered more durable, regular, and elegant, by being cast or founded.

"The consequence of his happy and simple discovery was a rapid series of improvements in every art and science, and a general diffusion of knowledge among all orders of society. Hitherto the tedious, uncertain, and expensive mode of multiplying books by the hand of the copyist, had principally confined the treasures of learning to monasteries, or to persons of rank and fortune. Yet even with all the advantages of wealth, libraries were extremely scarce and scanty; and principally consisted of books of devotion, and superstitious legends, or the sophistical disquisitions of the schoolmen. An acquaintance with the Latin classics was a rare qualification, and the Greek language was almost unknown in Europe; but the Art of Printing had scarcely become general, before it gave new impulse to genius, and a new spirit to inquiry. A singular concurrence of circumstances contributed to multiply the beneficial effects derived from this invention, among which the most considerable were, the protection afforded to literature and the arts by the states of Italy, and the diffusion of Greek learning by the literati who sought an asylum in Europe after the capture of Constantinople."

Opmer, who was a native of Holland, and who died about 1595, bestows the following elegant panegyric upon the art and its inventor, "That in the decline of the world, when the last day seemed to approach, so many men of accomplished learning and singular piety should break forth, like bright stars, with unusual lustre through the tempestuous clouds of deadly discord; so that you would have thought the world had been recovered from a long disease, and gradually re-assumed its lost strength, in the arts and sciences. This was effected by the assistance of that art, which from metal characters of letters ingeniously cast, disposed in the order in which we write, spread over with a convenient quantity of ink, and put under the press, has ushered into the world books in all languages, and multiplied their copies like a numerous offspring, and has obtained the name of **TYPOGRAPHY**. This art of printing was most certainly invented and brought to light by John Faust in the year 1440. It is amazing that the author of so important a discovery, and so generous a promoter of divine and human learning, should be unworthily forgotten, or only casually remembered as a mere artist. Surely such a person deserves a place amongst the greatest benefactors of mankind!"—*Lemoine*.

Erasmus, who was born during the life-time of Gutenberg (1467) and who was probably writing within fifty years of the alleged time of Coster, is totally silent on the subject. Mr. Horne thus elegantly sums up his opinion on the claim in favour of the Dutch pretenders. After the conclusive arguments which he had previously adduced, "It is evident, therefore," says he, "that Haerlem is not the city where the art of printing was discovered. If we examine all the authors without exception who have written in favour of that city, we shall not find the least cotemporary document on which to support their pretensions. Every

assertion they make is reduced to the narrative of Junius, solely composed of hearsays, on which every one comments according to his fancy or prejudices. Yet on the authority of this fable, have the Dutch proceeded to strike medals, engrave inscriptions, and erect statues, and other monuments, to the glory of the 'immortal and incomparable first printer, Laurent Janssone,' whom they have sometimes represented to be a disturber of the public peace, and have condemned him as such; sometimes as a sacristan, or churchwarden; afterwards as a sheriff; then as a treasurer; and finally, as an illustrious branch of the House of Brederode, a descendant in the right line from the ancient sovereigns of Holland."

"Thus, in a compendious, but impartial manner," says Lemoine, "I have traced the rise and progress of an invention, the practice and improvement of which has altered the manners as well as the opinions of the whole world. Before the invention of this divine art, mankind were absorbed in the grossest ignorance, and oppressed under the most abject despotism of tyranny. The clergy, who before this era held the key of all the learning in Europe, were themselves ignorant, though proud, presumptuous, arrogant, and artful; their devices were soon detected through the invention of typography. Many of them, as it may naturally be imagined, were very averse to the progress of this invention; as well as the *brief-men*, or writers, who lived by their manuscripts for the laity. They went so far as to attribute this blessed invention to the devil; and some of them warned their hearers from using such diabolical books as were written with the blood of the victims who devoted themselves to hell, for the profit or fame of instructing others. Such was the fate of its first rise: but, like all other useful inventions, it soon soared far above the malignant reach of invidious objections: the more liberal part of mankind, amongst whom it is but justice to say were some ecclesiastics, gave it every necessary encouragement; and kings and princes became, for the first time, the patrons of learning. Genius, like beaten gold, spread over the world; and the latter end of the fifteenth century saw a complete revolution in the human mind; for this art brought with it that of discovering deception and exposing hypocrisy: and, by its rapid multiplication of copies, more could be accommodated with the labours of the learned, than before by the tedious operation of the solitary pen. The diffusion of knowledge, by this art, was astonishing and rapid. The most bigoted, as well as the most liberal, joined in spreading its influence. Even the Jews, who are to this day so tenacious of their ancient customs, allowed the use of this art to propagate their sacred books. Those paladiums of their faith and liberty then, for the first time, became mechanically impressed on paper. Thus we see how early this art was an auxiliary to the spreading of the sacred light of the word of God, even among those of the confined and prejudiced minds. Many religious establishments in Europe encouraged the art of printing, inasmuch that they established printing

offices within the walls of monasteries; and, in fact, they were the most proper persons for such an undertaking. Possessing more knowledge than the laity, and having more leisure, they were the better calculated to produce works of learning."

Having given every authority that may tend to elucidate this important controversy, without venturing an opinion of my own; yet I cannot refrain from stating my conviction to Mentz as the city where the art took its rise, and that to Gutenberg, Faust, and Schoeffer, is due the high honour already awarded them by more competent judges. I shall conclude this portion of my labour with quoting from an high authority, the advantages and blessings derived from the divine art, and then proceed in the chronological order as first laid down.

"To the art of printing," says Dr. Knox, "it is acknowledged we owe the Reformation. It has been justly remarked, that if the books of Luther had been multiplied only by the slow process of the hand-writing, they must have been few, and would have been easily suppressed by the combination of wealth and power: but, poured forth in abundance from the press, they spread over the land with the rapidity of an inundation, which acquires additional force from the efforts used to obstruct its progress. He who undertook to prevent the dispersion of the books once issued from the press, attempted a task no less arduous than the destruction of the hydra. Resistance was vain, and religion was reformed; and we, who are chiefly interested in this happy revolution, must remember, amidst the praises bestowed on Luther, that his endeavours had been ineffectual, unassisted by the invention of Faustus.

"How greatly the cause of religion has been promoted by the art, must appear, when it is considered, that it has placed those sacred books in the hand of every individual, which, besides that they were once locked up in a dead language, and could not be procured without great difficulty. The numerous comments on them of every kind, which tend to promote piety, and to form the Christian philosopher, would probably never have been composed, and certainly would not have extended their beneficial influence, if typography had still been unknown. By that art, the light, which is to illuminate a dark world, has been placed in a situation more advantageous to the emission of its rays: but if it has been the means of illustrating the doctrines, and enforcing the practice of religion, it has also, particularly in the present age, struck at the root of piety and moral virtue, by propagating opinions favourable to the sceptic and voluptuary. It has enabled modern authors wantonly to gratify their avarice, their vanity, and their misanthropy, in disseminating novel systems subversive of the dignity and happiness of human nature: but though the perversion of the art is lamentably remarkable in those volumes which issue, with offensive profusion, from the vain, the wicked, and the hungry, yet this good results from the evil, that as truth is great and will prevail, she must derive fresh

lustre, by displaying the superiority of her strength in the conflict with sophistry.

"Thus the art of printing, in whatever light it is viewed, has deserved respect and attention. From the ingenuity of the contrivance, it has ever excited mechanical curiosity; from its intimate connection with learning, it has justly claimed historical notice; and from its extensive influence on morality, politics, and religion, it is now become a subject of very important speculation.

"But, however we may felicitate mankind on the invention, there are perhaps those who wish, that, together with its compatriot art of manufacturing gunpowder, it had not yet been brought to light. Of its effects on literature, they assert, that it has increased the number of books, till they distract rather than improve the mind; and of its malignant influence on morals, they complain, that it has often introduced a false refinement, incompatible with the simplicity of primitive piety and genuine virtue. With respect to its literary ill-consequences, it may be said, that though it produces to the world an infinite number of worthless publications, yet true wit and fine composition will still retain their value, and it will be an easy task for critical discernment to select these from the surrounding mass of absurdity; and though, with respect to its moral effects, a regard to truth extorts the confession, that it has diffused immorality and irreligion, divulged with cruel impertinence the secrets of private life, and spread the tale of scandal through an empire; yet these are evils which will either shrink away unobserved in the triumphs of time and truth over falsehood, or which may, at any time, be suppressed by legislative interposition."

The most munificent patron of learning at this period, was Humphrey duke of Gloucester, whose character is so amiable in our civil history, that he has received the appellation of *good*; and who shines with extraordinary lustre in the annals of literature, that his name is still remembered with gratitude as a singular promoter of learning, and the common patron of the scholars of the times. Perhaps there never was a more zealous encourager of literature than the duke; and we are not a little indebted to Mr. Warton for being the first person who has enabled the literary world fully to be sensible, in this respect, of the excellence and lustre of his character. In 1440, he gave to the university of Oxford a library containing six hundred volumes, only one hundred and twenty of which were valued at more than £1000. These books are called *Novi Tractatus*, or *New Treatises*, in the university register, and said to be *admirandi apparatus*. They were the most splendid and costly copies that could be procured, finely written on vellum, and elegantly embellished with miniatures and illuminations. Among them was a translation into French of Ovid's *Metamorphoses*. Another, and the only remaining specimen of these valuable volumes, is a magnificent copy of Valerius Maximus, enriched with the most elegant decorations, and written in duke Humphrey's age, evidently with a design of being placed in

this sumptuous collection, and the index of which was made by Whethamstede, the celebrated abbot of St. Albans. As the duke patronized, in a particular manner, the abbey of St. Albans, many of the abbots paid their court to him, by sending him presents of books, beautifully executed, and adorned with the most exquisite paintings, which seem to have constituted a part of his gift to the library at Oxford. In the library of Oriel college, at Oxford, there is a manuscript *Commentary on Genesis*, written by John Capgrave. In the superb initial letter of the dedicatory epistle, is a curious illumination of the author, humbly presenting his book to his patron, who is seated, and covered with a sort of hat. At the end is this entry, in the hand-writing of the duke himself: "*Ce livre est a moy Humphrey duc de Gloucestre du don de frere Jehan Capgrave, quy le me fit presenter a mon manoyre de Penshurst le ——— jour de ——— P an MCCCXXXVIII.*" [probably, says Warton, MCCCXXXVIII] i. e. "This book belongs to me, Humphrey duke of Gloucester, the gift of brother John Capgrave, who presented it to me at my manor of Penshurst, the ——— day of ——— in the year 1438." This valuable collection of books, which, from their ornamental bindings, looked like missals, conveyed ideas of popish superstition, were destroyed or removed by the pious visitors of the university in the reign of Edward VI. whose zeal was equalled only by their ignorance, or perhaps by their avarice.

It was at the recommendation and command of this munificent prince, and under his protection and superintendence, that Lydgate translated Boccaccio's treatise de *Casibus Virorum Illustrium*. The duke's condescension in conversing with learned ecclesiastics, and his diligence in study, are highly applauded by the translator, by whom his patron is compared to Julius Cæsar, who amidst all the cares of state, was not ashamed to enter the rhetorical school of Cicero at Rome. Duke Humphrey's patronage was not confined to the scholars alone of his own country. Titus Livius, a learned Italian, was his poet laureat. The most celebrated writers of France and Italy solicited his favour, and experienced his liberality, many of whom dedicated works to him; and it appears from their encomiums, that he was distinguished by an ardent attachment to books of all kinds, and by the eagerness with which he cultivated every branch of knowledge. He also retained in his service a number of learned foreigners, for the express purpose of transcribing and translating ancient manuscripts. The duke hath been represented as an author; but it is a false supposition that he wrote an astronomical tract, entitled *Tabula Directorum*. There is, however, in the library of Gresham college, a scheme of calculations which bears his name. Gilbert Kymer, physician to King Henry VI. among other ecclesiastic promotions, dean of Salisbury, and chancellor of the university of Oxford, inscribed to duke Humphrey his famous medical system *Diaetarium de sanitatis custodia*. To the same noble encourager of learning, Petrus

Candidus, the friend of Laurentius Valla, and secretary to the great Cosmo duke of Milan, inscribed by the advice of the archbishop of Milan, a Latin version of Plato's *Republic*. An illuminated manuscript of this translation is in the British museum. Humphrey was brother to Henry V. and the duke of Bedford; and uncle to Henry VI. during whose minority he occasionally administered the affairs of the kingdom, as regent. It is lamentable to record that this great and good prince was murdered at St. Albans, February 28, 1447.\*

1440. The first book on *Heraldry* in England, was written by Nicholas Upton, a native of Devonshire.

1440. In this year Coster, printed an edition of the *Speculum Salvationis*, which is perhaps the first specimen of two different coloured inks being used on the same page. The one is intensely black on the two columns of text; the other is bistre, and applied to two subjects engraved on wood to resemble pen and ink drawings at the top of each page.—*Savage*.

1440. DIED LAURENTIUS COSTER, who has acquired a name in the annals of printing, the Dutch affirming him to be the inventor of the art about 1430, but which claim is obstinately doubted. He was born at Haerlem, about the year 1370, and executed several departments of magistracy in that city. Those writers are mistaken who assign to him the surname of Coster, or assert that the office of *ædituus* was hereditary in his family. In a diploma of Albert of Bavaria, in 1380, in which, among other citizens of Haerlem, Laurentius' father is mentioned by the name of Joannes Laurentii filius. Beroldus is called *ædituus*, who was surely of another family; and in 1396, and 1398, Henricus a Lunen enjoyed that office; after his resignation, Count Albert conferring on the citizens the privilege of electing their *ædituus*, they then chose Laurentius; who was afterwards called Coster from his office, and not from his family name, as he was descended from an illegitimate branch of the Geas Brederodia. The elegance of his house may testify that he was a man of property. His works were printed on separate moveable wooden types fastened together by threads. It may be thought improbable, that so ingenious a man should not have proceeded farther than the invention of wooden types; it may be answered, he printed for gain, not for reputation; for wooden types could be made sooner and cheaper than metal. His press was shaped like the common wine-presses. He printed some copies of all his books on paper and vellum. It has been erroneously stated, that he quitted the profession, and died broken hearted: but it is certain, that he did not live to see the art brought to perfection. He died at the age of 70; and was either succeeded by his son-in-law Thomas Peter, or by their immediate descendants, Peter, Andrew, and Thomas; who were old enough to conduct the business,

\* From the above account of Humphrey duke of Gloucester, it will appear in the favour, and do honour to those persons who are frequently compelled to die with him.

the eldest being at least twenty-three. It is said that the city of Haerlem advanced no pretensions to the merit of its invention for the space of 130 years after the first exercise of this art at Mentz. The learned Meerman, counsellor and pensionary of Rotterdam, zealous for the honour of his country, supported the cause of Haerlem with all the sagacity and erudition that could be exerted, in a work intitled, *Origines Typographicæ* 2 vols. 4to. printed at the Hague, in 1765; an abridgement of which is given in Bowyer and Nichols's *Origin of Printing*.

After a distance of 400 years, it is not easy to decide rightly upon the several claims which have been advanced for the honour of the invention of the art; but as to the cities of Haerlem and Mentz, the dispute between them seems easily cleared up, from the two-fold invention of printing before mentioned; the first with *separate wooden types* at Haerlem, by Coster, about 1430, and afterwards continued by his family; the other with *metal types*, first cut, and afterwards cast, which was invented at Mentz, but not used in Holland till brought thither by Theodric Martens, at Alost, about 1472.

"On the market-place at Haerlem there is a statue in honour of Laurence Jansoen Coster. It is of stone, painted white, upon a pedestal inclosed by a square iron railing, and represents the celebrated printer in a civic robe, with a wreath of laurel on his brow. His right arm rests upon the trunk of a tree, with a branch sprouting therefrom. In his right hand is an open book; his left exhibits a cube, having thereon the letter A.\* On the south side of the pedestal is the following inscription:—

"E. M. S.

"Laurentio Costero, Harlemensi, viro Conulari, Typographiæ Inventori vero, monumentum hoc erigi Curavit collegium Medicum, Anno c1510cccxi11."

On the east side are figures, in bas relief, representing Coster at his composing frames, and two pressmen at work. Over them a shield of arms, a sword erect between four mullets or stars, and surmounted by a small cross. On the north side of the pedestal:—

"Costerus clara redimitus tempora lauro,  
Quiquis ades, quare conspiciatur, habet.  
Hæc propria Heroum fuit olim gloria, quorum  
Vel gestis celebris vita vel arte fuit.  
Invento qui gesta suo servavit et artes  
Quis neget hunc tantum his meruisse decus?"

IVAN ZANTEN, M. D.

On the west side, a bas relief, representing Coster in his municipal robe, in the act of cutting letters upon the bark of a tree; in the background is seen the great Church of Haerlem.

At the foot of the pedestal:—

"Transl. ex. Hort. Med. c1510cccxi11."

\* A print of the monument, then in the Medical Garden at Haerlem, will be found in *Annus Secularis Tertius Inventa Artis Typographicæ*, auctore Seiz, p. 17.

On the 16th of July every year there is an anniversary at Haerlem for two days, commemorative of the invention of printing with movable types by Coster. It is also celebrated by the printers of Dort and Rotterdam.

In the Dom Church, on a black marble tablet against the north-west pillar of the transept, is the following inscription:—

"Honori et meritis Laurentii Jani F. Costeri, Harlemensis, Festo Saeculari quarto Inventæ Typographiæ celebrato Harlemi, A. D. x Julii, anni c1510cccxi11. Annuente Augustissimo Belgii Rege Gulielmo primo."

In an apartment of the Hotel de Ville, are preserved several specimens of early printing, said to be from the press of Coster, which, on account of the well-known controversy between Mentz and Haerlem, I was desirous of inspecting. The exhibition (by the Custos, who unfortunately for foreign visitors speak only Dutch) is introduced by a reference to the following memorandum:—

"Le temps précis de l'impression est inconnu: néanmoins il paraît par l'histoire que Coster a commencé d'imprimer dans l'année 1420 environ. Il décéda à la fin de l'an 1439: ainsi on doit fixer le temps dans cette période."

The specimens exhibited are thus described:

"No. 1. *Revelation de St. Jean* en figures. C'est la plus ancienne impression d'estampes de quelque étendue.

"No. 2. *La Cantique des Cantiques*. Ce N° se trouve joint au livre N° 5, étant une des dernières impressions d'estampes de Coster.

"No. 3. Deux fragments de *Donatus*, imprimés, comme aussi les deux livres suivants, avec des *Caracteres mobiles et fondus*.

"No. 4. *Le miroir de notre salut*, dit *Spiegel onzer behoudenis*: c'était la première édition.

"No. 5. Le même livre en latin dit *Speculum humanæ salvationis*, aussi première édition."

There are also two autographs of Coster, a fac-simile of one of them is given:—

\* Mr. C. Este, in a *Journey through Flanders, &c.* in the year 1793, gives the following information concerning Coster, in his visit to Haerlem. "The art of printing at Mentz, is, philosophically, the feature the most prominent, and the most attractive. For at Mentz, the art, so magnificently bountiful, begun! though no small preparation for it might be achieved, by the lucky labours of Laurence Coster, at Haerlem. And, therefore, the people there, do well to assert what little honour they can claim, and consecrate the name, and wooden moulds of Coster; on which alone that claim can be attempted.—The Mirror of our Salvation (*Den Spiegel Van Onse Zaligheid*) is the title of the book, which he thus worked off. And the book and moulds are deposited in a coffer of silver and silk, with other treasure, at the townhouse; each magistrate being entrusted with a key. All this is done not without some show and solemn ceremony! and it were well if parade could always justify itself upon so decent a plea. There is a statue too of Coster—and his house, in the market-place, is still distinguished by an inscription:

Memorie sacrum

Typographia, ars artium omnium conservatrix, hic, primum inventa, circa annum 1440.

This work of Coster has no date. The first work printed with a date at Haerlem, is 1485—*De proprietatibus rerum*. Still, however, for the work of Coster being of a date prior to this, there is a lurking probability, not easily to be got over, at the bottom.—A probability from the comparative inferiority of his performance—that Coster, like every man would do the best for himself—that if two modes had been before him, he would not have taken the worst—he would not have stamped the paper as he did, only upon one side, with moulds made of wood and immovable, if he had known, what his successors at Mentz certainly did, the mode of printing on both sides the paper, with types moveable and of metal."

His name was "Janzoon," son of John : "Kostor," if he ever bore it, which is, I think justly, doubted by Meerman, was a sobriquet, from his occupation, which appears to have been, at one period of his life, "Keeper" of the Church, an officer who, in Holland, generally resides in a house adjoining the sacred edifice, with a door of communication within the dwelling of the Keeper.

I shall forbear to touch the controversy, which has been exhausted by Messrs. Otley and Singer; but only observe, says a recent traveller,\* that the printed books or fragments, which were placed under my view, being all without date or colophon, I saw nothing to connect them with the printing press of Janzoon. The exhibitor, in his zeal for the cause of his country, was anxious to direct my attention to the *Cologne Chronicle*, from a passage in which (p. 312) it is inferred that editions of the *Donatus* had been printed in Holland previously to the use of types at Mentz. He also showed me an original deed, whereby Laurens Jans Zoen and another, being "Schepen" or Sheriffs of Haerlem, confirmed, in 1431, the gift of certain houses to the poor of the city. This, however, would only tend to prove the existence of a person of that name, and his municipal rank, at a particular date; facts which I believe are susceptible of proof from other sources, but which leave the question so interesting to the historians of the typographical art, exactly where it stood."

1441, Oct. 11. A decree of the government of Venice of this date, refers to playing cards, making a prohibition against foreigners printing or vending the same. If we require further proof to establish the early practice of the art of engraving on wood, it will be found in the following Decree of the Government of Venice, which Lanzi asserts was discovered by Zanetti; but it evidently appears that it first caught the eye of Temanza, an architect of that city, while searching over the archives of the old company of Venetian painters;† of which the following is a translation:

"MCCCXLI. October the 11th. Whereas the art and mystery of making cards and printed figures, which is used at Venice, has fallen to total decay; and this in consequence of the great quantity of playing cards, and coloured figures printed, which are made out of Venice; to which evil it is necessary to apply some remedy; in order that the said artists, who are a great many in family, may find encouragement rather

than foreigners. Let it be ordered and established, according to that which the said masters have supplicated, that, from this time in future, no work of the said art, that is printed or painted on cloth, or paper, that is to say, altar pieces (or images) and playing cards, and whatever other work of the said art is done with a brush and printed, shall be allowed to be brought or imported into this city, under pain of forfeiting the works so imported, and xxx livres and xxii soldi; of which fine, one third shall go to the state, one third to the Signori Giustizieri Vecchi, to whom the affair is committed, and one third to the accuser. With this condition, however, that the artists, who make the said works in this city, may expose the said works to sale in any other place but their own shops, under the pain aforesaid, except on the day of Wednesday at S. Paolo, and on Saturday at S. Marco, under the pain aforesaid." Then follows the subscriptions of the *Provveditori del Comune*, and Signori Giustizieri Vecchi.

This document is justly considered by the Italian writers as a convincing proof that the art was practised at Venice as early as the fifteenth century: as they contend, that twenty or thirty years may fairly be granted from its first introduction to its full establishment; when it not only afforded subsistence to a numerous body of artisans; but also proved a beneficial article of commerce: a similar time may reasonably be allowed between the last-mentioned period and 1441, when it is described to have been almost totally abandoned.

Temanza informs us, that he possessed fragments of rude engravings on wood: these represented parts of Venice in its ancient state; which from his knowledge of the local alterations in that city, could not be later than the commencement of the century, (1401.)

Is it not singular, that the earliest European travellers should omit to mention Chinese printing? Can we suppose that they were unacquainted with it? An account of the travels of two Arabs, who visited China in the ninth century, are translated into French by the learned Eusebe Renaudot. The writer says nothing about engraving, though he informs us, that

'All the Chinese, rich and poor, learned to read and write.' Can we collect, from this assertion, that their works were confined to manuscripts? The Arabian author also mentions several customs practised in Italy; they agree with those exercised in the East: this note is one.\*

\* A Tour on the continent, inserted in the *Gentleman's Magazine*, for November, 1835.

† The first notice of this circumstance was made by Temanza, in a letter addressed to Count Algarotti, in which he informs him that the discovery was the first fruit of his labour after reading a portion of the ancient laws of the old company of Venetian painters, from which he had made a selection; having produced this decree, as a proof that engraving was practised in Venice before the time of Flinqueria, he omits to make a distinction between that of wood and copper engraving. Had it not been for this discovery, we might to this day have remained in ignorance of the practice of the art prior to the year 1467; this being the date of the *Meditations of J. de Turrecremata*, the first book printed in Italy with wood cuts.

\* The trial by fire obliged the accused person to carry in his hands, for the distance of nine or twelve paces, a plate of iron, of the weight of three pounds, heated till it was red hot; or, else, he was to thrust his hand into an iron glove, heated in the same manner, or into a chaudiiron of boiling water, from the bottom of which he was to take a ring. Immediately upon his hand being taken out of the iron glove, or from the chaudiiron, it was wrapped in a cloth, which was sealed with the seal of the judge, and that of the accuser; and, at the expiration of three days, the hand was uncovered, in a public and formal manner, by breaking the seals; when, if it was found to have sustained no visible injury, the accused person was declared innocent.

History records the Venetians to have had a great naval and commercial power in the sixth century; and prior to the ninth had formed an extensive connexion at Constantinople. In 1189, so great was their credit, that the Emperor granted them a district of that city. After the tenth they had possessions in Tyre, at Jerusalem, Alexandria, Cairo, Arabia, Persia, Tartary, China, Japan, and the extreme parts of Asia, &c. the traffic of these nations produced them immense wealth. Their territory having become so great, the government, (in 1200,) ordered Marsilio Giorgio, to compose an account of the places under their dominion, it was one of the first specimens of Venetian literature.

No satisfactory reason has yet been assigned to induce us to believe that the art was invented in Europe; whereas in a number of instances may be cited to prove that it (probably) was received from the East.\* Of all the nations in Europe, not one appears so likely to have gained information of the Chinese as the Italians; and when we consider the production of the two *Cunio* at Ravenna, in confirmation of which we have the decree of Venice, these circumstances clearly prove that engraving on wood was known in that territory much earlier than in any other part of Europe. Their first employment was engraving the outlines of the figures of saints, &c. which were afterwards coloured in imitation of paintings; next succeeded the outline of playing cards. By this process they were enabled to sell their commodities at that price which was within the reach of all classes of society. These artists were incorporated with the painters, similarly to the ancient barbers and surgeons in this country,

1444, March 11. The university of Paris issues a circular addressed to all the French clergy, expressing the opinion of the church, that the *Fest of Fools*, was a well imagined institution, connected with Christianity, and that those who had attempted to suppress it should be *curst* and *excommunicate*. Beletus, who lived in 1182, mentions the feast of fools, as celebrated in some places on New-year's-day, in others on twelfth day, and in others the week following. In France, at different cathedral churches, there was a bishop or an archbishop of fools elected; and in the churches immediately dependant upon the papal see, a pope of fools. These mock pontiffs had usually a proper suite of ecclesiastics, and one of their ridiculous ceremonies was to shave the precentor of fools upon a stage erected before the church in the presence of the populace, who were amused during the operation by his lewd and vulgar discourses accompanied by actions equally reprehensible. They were mostly attired in the ridiculous dresses of pantomime players and buffoons, and so habited entered the church, and performed the service accompanied by crowds of

laity in masks, representing monsters, or with their faces smutted to excite fear or laughter, as occasion might require. Some of them personated females and practised wanton devices. During divine service they sung indecent songs in the choir, ate rich puddings on the corner of the altar, played at dice upon it by the side of the priest while he celebrated mass, incensed it with smoke from old burnt shoes, and ran leaping all over the church. The bishop or pope of fools performed the service habited in pontifical garments, and gave his benediction; when it was concluded, he was seated in an open carriage, and drawn about to the different parts of the town followed by a large train of clergy and laymen, and a cart filled with filth, which they threw upon the populace assembled to see the procession. These licentious festivities were called the December liberties.\* They were always held at Christmas time, or near to it, but not confined to one particular day, and seem to have lasted through the chief part of January. When the ceremony took place upon St. Stephen's day, they said as

\* The Romans, and many other nations made superstitious processions, and it is from them, no doubt, that the custom came to us. For in the pomp of our processions it is customary to rank in the first place something to make an appearance, as some files of soldiers, infantry and cavalry, or some burlesque ridiculous contrivance of a figure, with a great gaping mouth, and snapping his teeth to frighten folks. Some other pieces of merriment often precede, as a representation of the prophets; one acts David, another Solomon, and others are distinguished like queens, and they cause children with wings to sing.—*Polidore Virgil*.

The heathen were delighted with the festivals of their gods, and unwilling to part with those delights; and therefore Gregory (Thaumaturgus, who died in 366, and was Bishop of Neocesarea) to facilitate their conversion, instituted annual festivals to the saints and martyrs. Hence it came to pass, that for expelling the festivals of heathens, the principal festivals of the Christians succeeded in their room: as the keeping of Christmas with joy and feasting, and Playing and sports, in the room of the *Bacchanalia* and *Saturnalia*; the celebrating of May-day with flowers, in the room of the *Feralia*; and the keeping of festivals to the Virgin Mary, John the Baptist, and divers of the Apostles in the room of the solemnities at the entrance of the sun into the signs of the zodiac, in the old Julian Calendar.—Sir Isaac Newton on *Daniel*.

The feast of St. Peter ad vincula was instituted to supersede a splendid Pagan festival, celebrated every year on that day, to commemorate the victory of Augustus over Antony of Actium. We may infer the inevitable corruption of practical Christianity in the middle ages, from the obstinate attachment of the converted barbarians to their ancient Pagan customs, and the allowed continuance of many by the catholic clergy. Boniface complained of German Priests, who would continue, although Christians, to sacrifice bulls and goats to the heathen idols.—Turner's *History of England*.

A letter from Pope Gregory the Great, in the sixth century, to the Abbot Mellitus, then going to Britain, desires him to tell Augustine, the first Archbishop of Canterbury, that after mature deliberation on the affairs of the English, he was of opinion that the temples of the idols in that nation ought not to be destroyed, but that the idols should. He further orders the temples to be sprinkled with holy water, and relics to be placed in them; and, because our ancestors sacrificed oxen in their pagan worship, he directs the object of the sacrifice to be exchanged, and permits them to build huts of the boughs of trees about the temples so transformed into churches, on the day of the dedication, or natives of the martyrs whose relics they contain, and there to kill the cattle, and celebrate the solemnity with religious feasting.—Bede's *Ecclesiastical History of England*.

Not long ago, in the metropolis itself, it was usual to bring up a fat buck to the altar of St. Paul's, with hunters horns blowing, &c. in the middle of divine service. For on this very spot, or near it, there formerly stood a temple of Diana.—*Warton*.

\*The Venetians (at an early period) exclusively practised several arts exactly similar to the Chinese, from whom it is probable that they gained a knowledge; one of which was, a peculiar mode of making looking-glasses and glass beads.

part of the mass, a burlesque composition, called the fool's prose, and upon the festival of St. John the Evangelist, they had another arrangement of ludicrous songs, called, the prose of the ox.—*Strutt's Sports and Pastimes*.

About the year 990, Theophylact, patriarch of Constantinople, caused the *Feast of Fools*, and the *Feast of the Ass*, with other religious farces of that sort, to be exhibited in the Greek church. The fact is recorded by Cedranus, one of the Byzantine historians, who flourished about 1050, in the following words: "Theophylact introduced the practice which prevails even to this day, of scandalizing God and the memory of his saints, on the most splendid and popular festivals, by indecent and ridiculous songs, and enormous shoutings, even in the midst of those sacred hymns, which we ought to offer to the divine grace with compunction of heart, for the salvation of souls. But he, having collected a company of base fellows, and placing over them one Euthyonius, whom he also appointed the superintendent of his church, admitted into the sacred service diabolical dances, exclamations of ribaldry, and ballads borrowed from the streets and brothels."

1444. Gibbon, in his *Decline and Fall of the Roman Empire*, remarks, that in this year seven or eight tables of brass were dug up between Cortona and Gubio; part of them were inscribed with the Etruscan character; the rest representing the premature state of the Pelasgic letters and language.—VOL. VIII. CHAP. XLIV.

1445. Frederic III. Emperor of Germany permitted printers to wear gold and silver, and granted coat armour to the *Typothetæ* and *Typographia* to perpetuate the honour of the discovery. This armorial bearing is still claimed by the professors of the art in Germany. The reign of Frederic III, was from 1440 to 1493.\* The emperor Frederic III. knew no better gratuity for John Capnion, who had been sent to him on an embassy by Edward of Wittemberg, than by making him a present of an old Hebrew bible.

1446. An ordinance was made by king Henry VI. relative to grammar schools in London. In consequence of persons keeping grammar schools, it was ordained that five were sufficient, and which were to be kept:—1, within the churchyard of St. Paul; 2, within the collegiate church of St. Martin; 3, in Bow Church; 4, in the church of St. Dunstan in the east, and 5, "in the hospital of St. Anthony."

1446, April. Henry VI. grants a charter to Sir Edmund de Trafford and Sir Thomas Ashton, for the transmutation of baser metals into real or fine gold and silver. By this commission, they were emancipated from the penalties of an act to which the professors of alchemy had been subjected in the beginning of the reign of king Henry IV. Dr. John Faunceby who was physician to the king, also obtained a commission from

his royal master to discover an universal medicine, called the elixir of life, for the cure of all diseases, wounds, and fractures, and for prolonging the health and strength of the body, and the vigour of the mind, to the greatest possible extent of time. The above grants were confirmed by parliament. This was the folly of the age. It was by an application to the occult sciences, and not by a rational attention to the human economy, to the progress of nature, and the dictates of a judicious experience, that the art of healing was expected to be promoted. Surgery, though the knowledge of it was so much wanted, in consequence of the wars both at home and abroad, in which the nation was perpetually engaged, was in a most deplorable condition, and the skill of the surgeons was inferior to their number. In the hands of ignorance, many wounded men, who otherwise might have been preserved, probably suffered the loss of their lives. Medicine, though more studied than natural philosophy in general, does not appear with much greater lustre. Dr. Friend, in his *History of Physic* could not find one physician in this period whom he thought worthy of being applauded. The *Dietary for the Preservation of Health*, by Dr. Gilbert Kymer, and which is still extant, is said, however, to contain several curious things, and some salutary advices.

From the opinions of Wielik,\* and the writings of Chaucer, Lydgate, and others, the progress of knowledge was far inferior to what, from auspices so favourable to the cultivation and refinement of the human faculties, might rationally have been predicted. In fact, this period is one of the most disgraceful, with respect to the subject before us, that can be found in the history of England. It affords but few literary facts and characters on which we can expatiate with much satisfaction. Several circumstances contributed to the neglect of learning; the chief of which undoubtedly was the confusion of the times arising from the civil wars that were occasioned by the long contests between the two rival houses of York and Lancaster. In the perpetual tumult and din of arms, and amidst the desolation that were spread through the kingdom, little opportunity was afforded for the pursuits of science, and the culture of the polite arts. Ignorance and barbarity obtained new triumphs over the minds of the multitude; and in such a deplorable condition of the human mind, the clergy had ample encouragement to suppress, with unrelenting rigour, the smallest attempts at reformation, and to bind the laity closer still in the chains of absurdity, error, and superstition. And such was the inconsistency of the monarch, (Henry VI.) that whilst he himself read the scriptures constantly, and regarded them as an inestimable source of instruction and consolation, his subjects were persecuted, imprisoned, and burned alive, for

\* Hansard in his *Typographia*, gives a copy of the arms thus granted, as a vignette on his title page.

\* This mode of spelling our reformer's name, I have adopted from Haber, who remarks, that "it is so spelt in the oldest document in which his name is known to appear, viz. in the instrument which nominated him one of the embassy to meet the pope's delegates in 1374."

reading, or hearing, or pursuing the dictates of those very scriptures.

The scarcity of books, which was a formidable obstruction to the progress of knowledge, was increased during a period wherein long civil wars must, in a great measure, have destroyed both the patronage and the leisure that was necessary to the transcription of manuscripts. In almost the whole of the writers to whom the larger part of this century gave birth, a want of taste is eminently discernable. They were equally strangers to propriety of sentiment and purity of style; nor was their composition vulgar only, but frequently ungrammatical. The Latin tongue continued to be the usual vehicle in which the authors of the time conveyed their works to the public. It might, therefore, have been expected that this language would have been cultivated at least as much as it had been in some preceding centuries. But so far was this from being the case, that the learned men of the early ages may be ranked as pure and classical composers, when compared with the writers of this period. Perhaps an exception might be made in favour of Thomas Chaudler, an ecclesiastic of great preferments, and one or two more, concerning whom Leland and Wood speak in high terms.

If it should be imagined that, while philological and classical literature were thus neglected, the philosophical sciences will be found to have been in a more prosperous condition, they will be wholly disappointed. These sciences were as little attended to as the other parts of learning. Were we to search into Tanner, Leland, Bale, Pitts, and other writers of that kind, we might draw out a list of persons who are said to have been mathematicians and philosophers; but no traces will be met with of their having made any discoveries, or been the authors of any works, which deserve to be recorded.

It was enacted by the statutes of St. Mary's college, Oxford, that "no scholar shall occupy a book in the library above one hour, or two at most, lest others should be hindered from the use of the same." Several latin books were given to the university of Oxford, on condition that the students who read them should deposit a cautionary pledge.

The first concordance of the Hebrew bible was made by a famous Jewish Rabbi, called by some Rabbi Mordecai Nathan; he began this work in the year 1438 and finished it this year.

1447. A petition to parliament complaining of the monopoly of education which had been established in the preceding year, and praying,—“for where there is grete nombre of lerners, and fewe teachers, and all the lerners be compelled to goo to the same fewe teachers and to noon other, the maisters waxen riche in money, and the lerners pouere in counyng”—that the parsons of All-hallows, St. Andrew's, in Holborn, St. Peter, in Cornhill, and St. Mary Colechurch, should also have the same privilege of keeping grammar schools. To this petition the king (Henry VI.) assented, provided it were performed with the advice of the ordinary, or the archbishop of Can-

terbury;—who, it appears from the ordinance had been the directors of the former arrangements. Thus, says Mr. Fosbroke, commenced grammar schools, properly so called.

1447. A contract in form had passed between a certain individual, and the Procureur de l'Hôtel Dieu at Paris. The former transferred to the latter for the perpetual use of the Hospital, a manuscript copy of “*Le Pelerinage de la vie humaine*,” in return for which, out of the spiritual treasure conferred by the pope on the said hospital, the donor was to be entitled to “the pardon of his sins,” and his wife and children, his father, mother, friends, benefactors, and especially “Nicole Ducar, late surgeon to king Charles,” who had bequeathed to him this manuscript, were all to be included; and participants èt bous pardons, &c.

1448. Waynflete, bishop of Winchester, on the presentation of Merton Priory, in Surrey, instituted a rector to the parish of Sherfield, in Hampshire. The rector, however, previously took an oath before the bishop, that on account of his insufficiency in letters, and default of knowledge in the superintendence of souls, he would learn Latin for the two following years; and that at the end of the first year he would submit himself to be examined by the bishop, concerning his progress in grammar; and that, if on a second examination he should be found deficient, he would resign the benefice. The introduction of men into the sacred office, through the influence of rank, who were destitute of competent abilities, are exemplified by many curious anecdotes.—Warton.

1450. The first important specimen of printing was the celebrated bible of 637 leaves, with *large cut metal types*, and which was executed between Gutenberg and Faust. It is known by the number of its leaves to distinguish it more accurately from other editions without date; and was executed between the years 1450 and 1455. This bible, the first ever printed, is an edition of the *Latin Vulgate*. It forms two volumes in folio, is printed in the large Gothic or German character, and is said to be “justly praised for the strength and beauty of the paper the exactness of the register, the lustre of the ink, and the general beauty and magnificence of the volumes.” It is without date, a circumstance which has occasioned considerable dispute, as to its priority to other undated editions, executed about the same time.\*

To commence printing an edition of the bible in this early stage of the art, must be acknowledged by all as a most astonishing undertaking: if we consider the immense labour of this work, it is no wonder that it should be seven or eight years in completing. In the early part of this year the partnership was dissolved; but in the

\* This edition is generally known under the appellation of the *Mazarine Bible*, as De Bure first discovered a copy of it in the library of Cardinal Mazarine, belonging to the Collège des quatre Nations.—No production of the press has attracted more of the attention of bibliographers than the present; it has been minutely described by De Bure, Maach, Lambinet, Berna Sander, Burnet, and Dibdin.

month of August, Faust and Gutenberg entered into a new agreement, the former supplying money, the latter skill, for their mutual benefit. Various difficulties arising, occasioned a law-suit for the money which Faust had advanced; the cause was decided against Gutenberg.\*

C. G. Schwarz, an eminent bibliographer, says, in his *Primaria quaedam Documenta de Orig. Typog. Altorfi*, 1740, 4to, that "in the year 1728, in a Carthusian monastery, a little beyond the walls of Mentz, he saw a copy of an old Latin bible, which was printed in a large character, similar to what is called the missal type; and that, however a few of the end leaves were cut out, so that the date, place, and printer's name, could not be ascertained, yet, in an ancient manuscript catalogue of the same library, an entry, or memorandum, was made, that this bible, with some other books, (the names of which he had forgotten) was given to the monastery, by Gutenberg."

Copies of this superb work of Gutenberg's, are in his majesty's library, in the Bodleian library, at Oxford, and in those of Earl Spencer, and Sir M. M. Sykes, bart. There is also a magnificent copy of this bible in the royal library at Berlin, printed upon vellum, and enriched with a profusion of ancient and elegant embellishments; and in the king's library at Paris, there are two other copies of this most valuable edition, one upon vellum, in four volumes, and the other upon paper, in two volumes. The latter copy has a subscription in red ink, at the end of each volume. That at the end of the first volume, of which a fac simile is given in the *Classical Journal*, No. 8, p. 481.—TRANSLATION.

"Here ends the first part of the Bible, or Old Testament. Illuminated, or rubricated, and bound, by Henry Albech or Cremer, on St. Bartholomew's day, April, A. D. 1456. Thanks be to God. Hallelujah."

At the end of the second volume the following is a TRANSLATION.

"This book, illuminated and bound by Henry Cremer, vicar of the collegiate church of St. Stephen, at Mentz, was completed on the feast of the assumption of the Blessed Virgin Mary, A. D. 1456. Thanks be to God. Hallelujah."

The earliest work executed between Gutenberg and his partners, are supposed to be an alphabet, engraved on a plate for the use of schools, and some doctrinal tracts. Then followed two editions of *Donatus* on the parts of speech: the first from wooden blocks, which are still in the royal library of Paris; the second with moveable types on vellum.

1452, Dec. 3. The expense of printing the bible is not exactly known; of the money advanced by Faust upon his partnership with Gutenberg, no specific voucher remains but the second deposit is proved, and that incidently

establishes the first, for it states Faust to be supplying another eight hundred florins. And if tradition is uniform, that Gutenberg had expended 2,200 gold florins more.

1454, May, 29. Constantinople was captured, and the emperor Constantine slain on this day. On the day of the capture, the sultan, Mohammed II. entered the city in triumph; viewed its still remaining monuments; and proceeded to the forms of the new government, and the rites of the moslem worship. We are informed, that the Turks on entering the city, spared neither rank, nor age, nor sex; the aged men and women were slain, the virgins were violated even in the sanctuary itself; the nobles were degraded into slaves; the temples of God were polluted, the images of the saints, were treated with contumely, and dashed to pieces; and the books belonging to the churches, were torn to pieces, defiled, and burnt. The imperial library, amounting to upwards of 120,000 volumes was destroyed; many were put into perforated vessels, and thrown into the sea.

1455, March 24. Died Pope Nicholas V. the friend of ancient literature, and the protector of the learned exiles from Greece. He was the son of a poor physician of Sarzana, a town of Italy. His industry and learning were so extraordinary, that by rapid degrees, he rose from his humble situation to the highest preferments in the ecclesiastical state, and succeeded to the pontifical chair in 1447, when he assumed the name of Nicholas V. During the eight years that he enjoyed the supreme dignity in the church, he acquired a high reputation, not by enlarging his territory or enriching his dependents, but by providing the most efficacious means for the extirpation of ignorance, and the acquirement of knowledge. He was equally decisive in promoting the general diffusion of science. At a period when literature was emerging from under the cloud by which it had been obscured for ages, the literary exertions of Nicholas V. and those of his secretary, Janotus Manetto, spared neither labour nor expense to promote its rising interests among their countrymen. No expense was spared in the purchase of books; and where the originals could not be procured, copies were directed to be made. His transcribers were every where employed; and the most learned men were engaged in translating into Latin, the most valuable and useful of the Greek fathers, and ecclesiastical writers, as well as the most elegant and important classical authors. He caused the sacred scriptures to be transcribed, and richly ornamented with gold and silver. About the year 1453, he offered for St. Matthew's gospel in Hebrew, no less a sum than five thousand ducats. By his intrepid spirit the Vatican library, at Rome, was founded, which be enriched with 5,000 manuscript volumes, procured at immense expense. Whilst this mild and munificent patron of letters was thus sedulously employed, and marking with satisfaction the progress of his labours, the news which astounded Europe arrived, that the capital of the Grecian empire was in the hands of the Turks! The melancholy event is said to have preyed upon the

\* Many writers are of opinion that this was the edition which Faust sold in France as manuscript; whereas it appears evident that it was the second, and more expensive edition of 1462, that was disposed of, which had cost 4000 florins before the third quaternion (or quire of four sheets) was printed.

gentle spirit of Nicholas, and helped to terminate his days.—*Berrington*.

The curates of London procured a bull from pope Nicholas V. commanding every householder within the city and liberty, that is in the rent of ten shillings by the year, to pay to God and his curate, every offering day, one farthing: and so by the scale for the more wealthy inhabitants.

1455, May 23. Battle of St. Albans, this was the first battle fought between the house of Lancaster or the red rose, and the house of York or white rose. The Yorkists conducted Henry their king and prisoner with a mock authority to London.

There is no situation of human affairs, however disagreeable and calamitous, which is not converted by divine Providence to the production of some advantage. Even the civil wars had their use, at least in one respect, as they contributed to the declension of slavery. The contending parties, in order to carry on the purposes of their ambition, and to supply their armies with sufficient forces, were occasionally obliged to set their bondmen at liberty. Some little enlargement of mind upon this subject began likewise to prevail, and experience served to convince our ancestors by degrees, that agriculture and other services were better performed by hired labourers than by unwilling and refractory slaves. It is certain that, at this period, the number of bondmen had considerably decreased; and though this may be thought to have been principally a political event, yet, so far as it might proceed from any justice or liberality of principle, it deserves to be noticed in a history of the progress of knowledge and mental improvement.

It is worthy of observation, that we are not to look to the English historians for the best accounts of the public transactions of this age. Foreign writers must be applied to, as the most copious sources of information. To Froissart, Philip de Comines, and Montreset, recourse must be had for the fullest, the most interesting, and the most entertaining intelligence concerning the political events and revolutions of our own country.

1455, Nov. 6. The sums advanced by Faust to Gutenberg, under whose superintendence the establishment had been carried into effect, having become very considerable, the result was a litigation between them; Faust instituted a process against Gutenberg for the recovery of 2,020 gold florins which he had furnished, and the interest accruing thereon. The judges, having taken the depositions of each party, Gutenberg was sentenced to pay the interest, as well as that part of the capital which his accounts proved to have been employed for his particular use. The consequence was a dissolution of partnership. Gutenberg being unable to discharge his debt, he was obliged to cede to Faust all the moulds, types, presses, and utensils, which were previously engaged to him as surety for the payment of the sums he had advanced. Faust obtained the record of this sentence from Helmasperger, the notary, on this day. By the pecuniary aid of

Conrad Humery, syndic of Mentz, and others, Gutenberg opened another printing office in the same city.

Luigi Pulci, a learned Italian, and one of the restorers of classical literature, translated the following beautiful lines from the Greek of Menecrates. Pulci was born at Florence, on the 3rd of December, 1431.

#### THE POET'S PEN.

I was an useless reed; no cluster hung  
My brow with purple grapes, no blossom stung  
The coronet of crimson on my stem;  
No apple blushed upon me, nor (the gem  
Of flowers) the violet strewed the yellow heath  
Around my feet nor jessamine's sweet wreath  
Robed me in silver: day and night I pined  
On the lone moor, and shiver'd in the wind.  
At length a poet found me. From my side  
He smoothed the pale and withered leaves, and dyed  
My lips in *Helicon*. From that high hour  
I *eroka*! My words were flame and living power,  
All the wide wonders of the earth were mine,  
Far as the surges roll, or sunbeams shine;  
Deep as earth's bosom hides the emerald;  
High as the hills with thunder clouds are pall'd.  
And there was sweetness round me, that the dew  
Had never wet so sweet on violets blue.  
To me the mighty sceptre was a wand,  
The roar of nations peal'd at my command;  
To me, the dungeon, sword, and scourge were vain;  
I smote the smiter, and I broke the chain;  
Or tow'ring o'er them all, without a plume,  
I pierced the purple air, the tempest's gloom,  
Till blaz'd th' Olympian glories on my eye,  
Stars, temples, thrones, and Gods—infinity.

1457. A specimen from Gutenberg's press was discovered some years since by Mr. Fischer, among a bundle of old accounts, in the archives of Mentz. It is an almanack for this year, and in order to be effectual, must have been published quite at the opening of the year, and, therefore, it would follow that this almanack was executed before the psalter of this year, which was not finished until the month of August; and may consequently be deemed the most ancient specimen of typographic printing extant with a certain date. From this discovery, Mr. Fischer observes, that those bibliographers are mistaken, who think the earlier presses were employed only upon works of greater interest.

1457, Aug. 14. The first publication which is known to have issued from the press of Faust and Schoeffer was a beautiful edition of the *Psalm*, in Latin of this day, which from the place where it was printed, is usually denominated the *Mentz Psalter*. It is the first book known to be extant, which has the name of the place where it was printed, and that of the printers, together with the date of the year, when it was executed. The most perfect copy known, is that, in the imperial library of Vienna. It was discovered in the year 1665 near Inspruck, in the castle of Ambras, where the Archduke Francis Sigismund had collected a prodigious quantity of manuscripts and printed books; taken for the most part, from the famous library of Matthias Corvinus, king of Hungary, from whence it was transported to Vienna. The book is printed in folio, on vellum, and of such extreme variety, that not more than six or seven copies are known to be in existence, all of which, however, differ from each other, in some respect or other. The psalter occupies 135

leaves, and the recto the 136th, the remaining 41 leaves are appropriated to the litanies, prayers, responses, vigils, &c. The psalms are executed in larger characters than the hymns; the capital letters are cut on wood, with a degree of delicacy and boldness, which are truly surprising: the largest of them the initial letters of the psalms, which are black, red, and blue must have passed three times through the press. In the appendicular title-page, which, though being printed with an ostentation of care, is printed *Psalmorum Codex* instead of *Psalmorum Codex*.

Another edition of this psalter was printed in 1459, by the same printers containing probably, the first printed text of the Athanasian creed. It is said not to be equally beautiful with the former edition, though executed with the same types, and capital letters and also on vellum. The St. Alban's and Benedictine monks are supposed to have been at the expense of these editions.

From the short time that elapsed between the dissolution of partnership that had subsisted between Gutenberg and Faust, and the date affixed to the above mentioned edition of the psalter, there is reason to believe that the characters employed in its execution were all ready at hand; and that they had been completed by Gutenberg, previous to his rupture with Faust. In fact, it does not seem likely that Peter Schoeffer, though he is admitted to have improved the art of letter-founding, could have prepared the instruments he invented for casting letters, and have cast the characters necessary for printing so considerable a work, in the short space of eighteen months. Another argument against Schoeffer with regard to this work, is, that the large initial letters of this edition of the psalter had already been employed in former impressions which were indisputably the work of Gutenberg. The initial letter B, of the first psalm, forms a beautiful specimen of the art in its early progress. It is richly ornamented with foliage, flowers, a bird, and a greyhound. It has been justly observed, that the artists employed on the work were both well-skilled and well-practised in their profession; and that the art of engraving was no longer in its infancy. Various engravings and *fac-similes*, coloured, of this letter, are to be met with. Horne has a neatly-engraved copy of it in black. He says, the letter itself is in a pale blue colour; the ornaments in which it is placed are red; and the figures and flowers are transparent and white as the vellum on which it is printed.

In the *Bibl. Spenceriana*, this letter is given with a few lines of the text with these colours reversed thus—the letter itself red, the ornaments blue. However, I believe both may be right; for it is acknowledged that in this and many other instances, the various editions, and even copies of the same edition, are varied in the colour of their ornaments.

Ackerman, in the frontispiece to *Senefelder's History of Lithography*, has given a copy of the plate mentioned above, as a specimen of lithographic printing in colours, which has a very good effect.

Although the initial letters of this psalter were engraven on wood, yet the rest of the volume is certainly printed with metal types, the invention of which has by some authors been ascribed to Peter Schoeffer. Trithemius, however, who was cotemporary with him, asserts, on the contrary, that Gutenberg and Faust invented the art of casting characters in metal which they had before been obliged to cut with the hand; but that Schoeffer discovered a more expeditious method, which further contributed to the perfection of the art. It seems evident, therefore, that the art of founding metal characters was invented by John Gutenberg; and it was afterwards perfected by Schoeffer, who contrived punches for striking the matrices.

It appears, both from Papillon and Savage, that this mode of ornamental printing was practised by the earlier typographers: they both affirm the large ornamental capital letters of the Mentz psalter (Faust and Schoeffer, 1457) as well as the bible and other books, to have been printed in colours with suits of blocks. The former asserting that there were three colours used, viz. red, blue, and purple, the latter contending for two only, viz. blue and red. I have had no opportunity of examining any one of these treasures of typography. The letter B at the beginning of the volume has been, as I have before stated copied in *fac-simile* by several authors, and described by others; and I mean to give it in those two colours, both as an exemplification of the principle, and for the purpose of showing that it may be produced by a process certainly never yet called in aid of such a purpose, but which would save much time and expense of engraving suites of blocks; namely, stereotype; and, having one block only engraved, the rest may be effected by merely such hands as are on the ordinary establishment of a printing office.

Mr. Savage, who examined a fine copy of this psalter with the most anxious curiosity, says, "he could not help admiring the great accuracy with which the workmanship was executed, in inserting a large capital letter into the surrounding ornamental part, where the exact shape is bounded by a fine line of a different colour, so near to each other, as to be separated by a space not more than the thickness of writing paper, and uniformly true in every instance;" but the general appearance of the work is heightened in beauty, by a more bright and delicate tint of each of those colours in other places written or painted in by hand, as well as some other emendations of even the black ink.

It is a curious fact," says Mr. Savage "that under Faust and Gutenberg the process should be carried nearly to perfection; for some of the works they printed, both in the quality of the ink, and in the workmanship, are so excellent, that it would require all the skill of our best printers, even at the present day, to surpass them in all respects; and I do not hesitate to say, that in a few years after, the printers were actually superior to us in the use of red ink, both as to colour, and as to the inserting of a great

number of single capital letters in their proper places in a sheet, with a degree of accuracy, and sharpness of impression, that I have never seen equalled in modern workmanship.\*

1458. King Charles the Seventh, King of France, having received private information of the invention of printing at Mentz, sent Nicolas Jenson, or Jensonius, an engraver of coins and medals at Paris, to obtain a knowledge of the art. Having succeeded, he returned to France when he found his patron was dead; upon which he retired to Venice and commenced letter-founder and printer; he excelled in all branches of the art, and more than are united with it. He first determined the form and proportion of the present Roman character. The date of his first work is 1471, and the last 1481, in which year he is supposed to have died.

1458. Eneas Sylvius, afterwards Pope Pius II. observed of the Italian priests, that it did not appear that they had ever so much as read the New Testament. (Hody de Bibl. Textibus, p. 464.) Robert Stephens, (who died in 1564) tells us of the Doctors of the Sorbonne that being asked by him in what place of the New Testament such a thing was written, they answered, that they had read it in Jerome, or in the Decrees, but that the New Testament was they did not know.—*Lea's Hist. of Transl. of Bible.*

Many of the Scottish clergy affirm, that Martin Luther had lately composed a wicked book called the New Testament, but that they for their part, would adhere to the Old Testament. A foreign monk, declaiming in the pulpit against Lutherans and Zuinglians, said to his audience: 'A new language was invented some time ago, called Greek, which had been the mother of all these heresies; a book is printed in this language, called the New Testament, which contains many dangerous things! another language is now forming, the Hebrew; whoever learns it, immediately becomes a Jew.' The commissioners of the senate of Lucern, confiscated the works of Aristotle, Plato, and some of the Greek poets, which they found in the library of a friend of Zuinglius, concluding that every book printed in that language must be infected with Lutheranism.—*Dr. McCrie's Life of Knox.*

In a synod of the rural deans of Switzerland, only three were found who had read the Bible; the others confessed that they were scarcely acquainted even with the New Testament.—*Hess's Life of Zuinglius, by Miss Aikin.*

An ecclesiastic of eminence was asked what were the ten commandments; he replied there was no such book in the library. Martin Luther never saw a bible till after he was twenty-one years old, and had taken a degree in arts. Carlstadt had been a doctor of divinity twenty-eight years before he read the Scriptures, and yet when he stood for a degree in the university of Wittenberg, he obtained an honour, and it was entered in the university records that he was *sufficienssimus*. Pellican could not procure one Greek

Testament in all Germany; the first he got was from Italy.—*Robinson's Eccl. Researches.*

1460. The art of engraving upon copper is supposed to have been invented about this period. The origin of the art of engraving upon copper, like that of every other, is involved in obscurity. Italy, Germany and Holland have respectively put in their claims to the honour of the invention, but which has the greater right is hard to determine. The Italians tell us that Finiguerra, a goldsmith of Florence, hit upon the method of printing from an engraved plate in the year 1460; taking off the impression upon a moistened paper, and rolling it gently with a roller. He communicated the discovery to Baccio Baldini, of his own profession and city, who pursued it with success, and engraved several plates from drawings of Sandro or Alessandro Boticelli, which being seen by Andrea Mantegna, he not only assisted Baldini with designs, but cultivated and improved the new art himself. It was not long before Ugo da Carpi used different stamps for the gradation of lights and shades, and thereby added a variety of tints. The manner in which Finiguerra made this discovery, is thus given by the Rev. T. F. Dibdin:—

"Of engraving upon copper the earliest known impression is that executed by one Thomaso Finiguerra, a goldsmith of Florence, with the date of 1460 upon it. One of the following circumstances is supposed to have given rise to the discovery. Finiguerra chanced to cast, or let fall a piece of copper, engraved and filled with ink, into melted sulphur; and observing that the exact impression of his work was left on the sulphur, he repeated the experiment on moistened paper, rolling it gently with a roller. This origin has been admitted by Lord Walpole and Mr. Landseer; but another has been also mentioned by Huber:—'It is reported,' says he, 'that a washer-woman left some linen upon a plate or dish on which Finiguerra had just been engraving: and that an impression of the subject engraved, however imperfect, came off upon the linen; occasioned by its weight and moistness. We learn also from Vasari,' continues Huber, 'that as early as the year 1450, the same artist had engraved very ingeniously, upon a chalice, (or sacramental cup) some small figures of the *Passion of our Saviour*, for the service of the church of St. John of Florence, &c. But,' observes Huber, 'it is material to remark, that we have no direct evidence whatever of the workmanship of Finiguerra; for his name is not subscribed to any of his productions. The efforts of Boticelli and Baldini, his cotemporaries and acquaintance, seem to be strengthened by somewhat less exceptionable evidence.'"

With respect to this grand discovery, the learned Buonarroti observes,

"That it would be sufficient to occasion our astonishment that the ancients did not discover the art of chalcography, were it not known that discoveries of this sort generally occur accidentally to mechanics in the exercise of their calling."

\* Hansard, *Typographie*, p. 666.

Different opinions also exist upon this subject: that Masso Finiguerra is entitled to the full merit, the reader will have no doubt, after an attentive perusal of Mr. Otley's valuable Work on *Early Engraving*.

From Italy the art travelled into Flanders, where it was first practised by Martin Schoen of Antwerp; or, as some contend, of Colmar, in Germany.

The Germans contend, that engraving was practised in that country long before the time of Finiguerra, Pollaiuoli and Montegna. Some contend that Francis à Bocholt, was the inventor of the art, and his immediate followers were Israel à Meckenick, and Martin Stock the preceptor of Albert Durer. John Muller or Regiomontanus of Nuremberg, is also mentioned as a very early engraver; William Baur and Frederic Schott, at Strasburg about 1464. Martin Schoen, they tell us, engraved between 1460 and 1470; Luptrecht Rust was his master, and, consequently, must have worked as early as 1450. They also produce a print executed by one H. S. in 1455, and another by Hirschvogel even ten years earlier.

Strutt, in his *History of Engraving*, says prints from engraved copper first made their appearance in Germany about 1450. The earliest date of a copper-plate print is indeed only 1461; but however faulty this print may be with respect to the drawing, or defective in point of taste, the mechanical part of the execution of it has by no means the appearance of being one of the first productions of the graver. We have also several other engravings, evidently the work of the same master; in which the impressions are so neatly taken from the plates, and the engravings so clearly printed in every part, that according to all appearance they could not be executed in a much better manner at the present day, with all the conveniences which the copper-plate printers now possess, and the additional knowledge they must necessarily have acquired in the course of more than three centuries. Hence we may fairly conclude, that if they were not the first specimens of the engraver's workmanship, they were much less the first efforts of the copper-plate printer's ability. It is likewise to be observed, that Martin Schoen, who is said, with great appearance of truth, to have worked from 1460 to 1486, was apparently the scholar of Stoltzshirs; for he followed his style of engraving, and copied from him a set of prints, representing the passion of our Saviour. Now, allowing Stoltzshirs to have preceded his disciple only ten years, this carries the era of the art back to 1450, as was said above. There is no ground to suppose that it was known to the Italians till at least ten years afterwards. The earliest prints that are known to be theirs are a set of the seven planets, and an almanack by way of frontispiece; on which are directions for finding Easter from the year 1465 to 1570 inclusive: and we may be well assured, that the engravings were not antedated, for the almanack, of course, became less and less valuable every year. In all probability, therefore, these prints

must have been executed in the year 1464, which is only four years later than the Italians themselves lay any claim to. The three earliest Italian engravers are, Finiguerra, Boticelli, and Baldini. If we are to refer these prints to any of the three, we shall naturally conclude them to be the work of Finiguerra or Baldini: for they are not equal either in drawing or composition to those ascribed to Boticelli, which we know at least were designed by him; and as Baldini is expressly said to have worked from the designs of Boticelli, it will appear most probable that they belong to Finiguerra.

The Dutch will have the source of the art to be among them, and to have flowed from Holland into Germany, and from Germany into Italy. They contend that Laurentius Coster, not only invented printing at Haerlem, but also the method of taking off impressions on wood; and Peter Schoeffer found out the art of engraving on copper, and taking impressions from plates of that metal.

When the Mentz printers were dispersed in 1462, they carried the art of engraving and copper-plate printing into Germany, where they became commonly practised about the year 1465.

Conrad Sweynheim, of Mentz, and Arnold Pannartz, imported the art of engraving into Italy about 1465; the former of these betook himself wholly to engraving about 1474: the year following some of his plates for Ptolomy's *Cosmographia* were printed, and these were the first copper-plates Italy ever saw. Meerman says, that this work could not appear before the year 1478, at Rome, by Arnold Buckinck, a German.

Whether we consider the art of engraving with regard to the utility and pleasure it affords, or the difficulty that attends its execution, we cannot but confess, that on every account it deserves a distinguished rank among the polite arts. It is by means of this art that the cabinets of the curious are adorned with the portraits of the greatest men of all ages and all nations: that their memoirs, their most remarkable and most glorious actions, are transmitted to the latest posterity. It is by this art also, that the paintings of the greatest masters are multiplied to a boundless number; and that the lovers of the polite arts, diffused over the face of the whole earth, are enabled to enjoy those beauties from which their distant situation seemed to have for ever debarred them; and persons of moderate fortune are hereby enabled to become possessed of all the spirit, and all the poetry, that are contained in those miracles of art, which seemed to have been reserved for the temples of Italy, or the cabinets of princes. When we reflect, moreover, that the engraver, beside the beauties of poetic composition, and the artful ordinance of design, is to express, merely by the means of light and shade, all the various tints of colours and *clair obscure*; to give a relief to each figure, and a truth to each object; that he is now to paint a sky serene and bright, and then loaded

with dark clouds; now the pure tranquil stream, and then the foaming, raging sea; that here he is to express the character of the man, strongly marked in his countenance, and there the minutest ornament of his dress; in a word, that he is to represent all, even the most difficult objects in nature; we cannot sufficiently admire the vast improvements in this art, and that degree of perfection to which it is at this day arrived.—*Lemoine.*

Of the different modes of engraving, and the date of their invention, with notices of those who have improved the art, will be found under their respective dates.

1462. Faust and Schoeffer published a *Latin Bible*, in 2 vols. folio. This is the first edition with a date, and like all other early typographical productions, is of extreme rarity and value. The copies of this bible on paper, are even more rare than those on vellum, of which last, more, probably, were printed, that they might have the greater resemblance to manuscripts, which the first printers endeavoured to imitate as much as possible. Lambinet, in his *Recherches sur l'origine de l'imprimerie*, says, "it is certain that from the year 1463, Faust, Schoeffer, and their partners, sold or exchanged, in Germany, Italy, France, and the most celebrated universities, the great number of books which they had printed; and whenever they could, sold them as manuscripts. As proofs of which, it may be remarked, 1st. That we know of no work that issued from their press, betwixt the bible of 1462, and the first edition of *Cicero de Officiis*, in 1465. 2nd. Gabriel Naudé informs us, that he brought to Paris a considerable number of copies of the bible, of 1462. As they were on parchment, and the capital letters illuminated with blue, and purple, and gold, after the manner of ancient manuscripts, he sold them as such, at sixty crowns. But those who first purchased copies, comparing them together, soon found that they exactly resembled each other: afterwards they learned that Faust had sold a great number of copies, and had lowered the price, first to forty, and then to twenty crowns. The fraud being thus discovered, he was pursued by the officers of justice, and forced to fly from Paris, and return to Mentz; but not finding himself safe, he again quitted Mentz, and withdrew to Strasburg, where, it is supposed, he taught the art to John Mentilius. The facility with which Faust thus supplied bibles for sale, is said to have caused him to be accounted a necromancer; and to have given rise to the well-known story of the *Devil and Dr. Faustus*. Others have called the truth of this in question, and remarked that there was a Faustus living at the same period, who wrote a poem *De influenza Syderum*, which, with a number of other tracts, was printed at Paris, per Gndio Mercator, 1496." His proper name was Publius Faustus Andrelinus Foroliviensis, but he called himself, and his friends in their letters to him called him, *Faustus*.

Faust, when he could no longer prevent a discovery, gives an account of the inventors, and the manner in which the books were done, and throws

some light upon the affair, by placing at the end of his book the following colophon or inscription: "This present work, with all its embellishments, &c. was done not with pen and ink, &c. but by a new invented art of casting letters, printing, &c. by me John Faust, and my son-in-law, Peter Schoeffer, in the famous city of Mentz, upon the Rhine, anno —"

Next to the Latin bible, we have five several impressions, which were certainly made between the years 1457 and 1466. The first of these, which is omitted in all the lists of the early books that were printed before Lambeck's catalogue of the Vienna library, the *Mentz's Psalter*, of 1457. The second is the *Rationale Divinorum Officiorum*, written by William Durand, and printed at Mentz, upon vellum, two years after the *Psalter*. The *Durandi Rationale* was the first book printed with the improved types (*cast metal*) the work of Faust and Schoeffer. They seem to have had only one size of cast letters, all the larger characters which Faust gave him his daughter in marriage, and thus he became heir to his father-in-law's office, presses, &c.

The third is the *Catholicon*, a Latin vocabulary, printed at Mentz, in 1460, for the second time; for the first impression was done upon wood. This book was likewise in the earl of Pembroke's library; it is in large folio, and beautifully printed. This *Catholicon* is a kind of grammar, compiled by John of Genoa, a Dominican friar, 1286. It is divided into four parts, the last of which contains a dictionary of Latin words, digested alphabetically. There have been several editions of it in folio, as Chevillier informs us, who saw two of them; one very old, and without date; the other printed at Paris, 1506, by Jodocus Badius. Another impression of it is done at Lyons by Antony Du Ry, 1520, and augmented by Peter Gille. Furetiere, therefore, was led into a palpable error, when he affirmed, after Dr. Mental, and Father Jacob, a Carmelite, that the first printed book, *de Ritibus Ecclesie*, printed 1461; a Bible printed anno 1462; *St. Austin de Civitate Dei*; and *Tully Offices*; seeing here are no less than four printed books before the oldest of them; besides, this book, *de Ritibus Ecclesie*, was not written by William Durand, but by John Stephen Durand, who was first president of the parliament of Thoulouse, and is, therefore, a different book from Durand's *Rationale*, and of a much later date.

The fourth is the second edition of the Latin bible, in folio, 1462, with the following inscription at the end:—"This present work was finished and perfected, for the service of God, in the city of Mentz, by John Faust, citizen, and Peter Schoeffer de Gernsheim, clerk of the same diocese; it was completed in the year of our Lord's incarnation MCCCCLXII, on the eve of the assumption of the glorious Virgin Mary."

The fifth is *Tully's Offices*, printed at Mentz, 1465, though some editions have a later date by one, and others by two years, all of which were printed at Mentz, with the same inscription in every respect, as we shall shew immediately. It

is a small quarto, and very beautifully printed, and well preserved. Sir Thomas Bodley had this in his library, which he presented to the university of Oxford; where it is still kept. Dr. James published a catalogue of all Sir Thomas's books, entitled *Catalogus Bibliothecæ Bodleianæ*, in quarto, 1605; in the 197th page of which book, we find this Tully's Offices, with the following inscription, *Ejusdem Liber de Officiis, &c. 1465*. About seventy years after this, Dr. Thomas Hyde published his catalogue of all the books in the University library, printed at Oxford, in folio, 1674, in which he gives the date of the book, page 162; which is the same with the former, and confirmed by Antony Wood's History of that University, printed likewise 1674.

1462. Faust printed an edition of the German Bible, in 2 vols. fol. which is the first German Bible with a date; but the priority must be allowed to an edition without date, place, or printer's name, of which a copy is in Lord Spencer's library. There is also a copy of the latter in the Electoral Library at Munich, with two manuscript observations, the one of the date of 1467, being that of the illuminator, at the end of the Prophet Jeremiah; the other is at the end of the Apocalypse, and contains a notice of the genealogical respectability of one Hector Mulich, and a memorandum to this effect, "1466, 27th of June, this book was bought unbound for twelve guilders." Hector Mulich received a patent of nobility from the Emperor Ferdinand that same year. The author of this translation is unknown; and Walchius remarks, that "there were several ancient versions all made from the Latin, but so obscure and barbarous as to be almost unintelligible."

We have under the firm of Faust and Schoeffer, the *Psalter* of 1457, and a reprint of the same work in 1458. The *Rationale Durandi*, 1459. *Clementis Papa Constitutiones*, 1460. *Biblia Latina*, 1462. *Liber Sextus Decretalium*, 1465. *Cicero de Officiis*, 1465, and a reprint of the same 1466, *quarta die Mensis Februarii*. Faust's name appears for the last time to the *Cicero de Officiis* of 1466.

The device of Faust and Schoeffer consisted of two shields suspended to a bough of a shield, on one of which were three stars. These shields are usually executed in red; and first appeared in the German bible. The mark of the paper on which Faust and Schoeffer, printed many of their works, was the ox-head, sometimes with a star or a flower over it.

The following epigram, which is found in Gal Mandauer, was written on the supposition, that the paper used by Faust was uniformly characterized by having the figure of a bull's head as a water mark:

His duo si nostra teneris impressa papyris  
Artificum signo vitulina corund frontis  
Grandia chalcographia referunt intrinseca Fausti  
Qui primus calamus liberos transcripsit abemlis  
Atque sua terris mirum decus intulit arte

"The printing office of Faust and Schoeffer," says Fischer, "was established at a house called

Zum Heimbrecht or Heimerhof, in Cordwainer's street, opposite the college of the Cordeliers, and lately of the Jesuits. That very house was even recently called *Drei Königshof*, from the name of a small chapel—where according to an ancient tradition, the skulls of three Magicians were deposited, having been carried in solemn procession, from Milan to Cologne." Faust's department was that of the compositor, and Schoeffer's that of the pressman.

The date and cause of the dispersion of Faust and Schoeffer's workmen, and the consequent spreading of the art of printing over the continent of Europe, have been already stated. The respective periods of its first introduction into the principal cities and towns, not only in Europe, but in every country where the press has shed its influence, and carried with it the blessings of civilization and liberty, together with such notices and anecdotes of its professors, as shall be interesting to the antiquary, and the lover of the typographic art, have been diligently sought after, and will be given with the utmost possible accuracy.

1462. Died JOHN GEINSFLESH or GUTENBERG senior, one of the reputed authors of the art of printing. (See *Gutenberg*, 1468.)

1462. Besides the several editions of the *Biblia Pauperum*, printed with wood blocks, there exist two in which the text is printed in moveable characters; one in the German, the other in

\* The most remarkable books printed from blocks with figures, are these.

*Speculum humane salvationis*. 1465, 1473, 1483.—*Figure typica veteris atque antitypica novi Testamenti—sive historia Jesu Christi in Aguris*. 1475.—*Historia sive Providentia Virginis Mariæ ex Cantico Cantico iconice exhibita*. before 1473.—*Fasciculus temporum*. 1476.—*Dialogus creatorum*. 1480.—*Arts moriendi*.—*Historia S. Johannis Evangelista, quæque visiones Apocalyptice*.—*Arts moriendi notabilis per Aguris Evangelistarum*.—*Tractatus de Ankerharto*.—*Jo. Hartlieb Libellus Chironomiae*.—*Veris fabule et similitudines*.—*Meditationes Reverendissimi Patris Joannis de Perrecrematis*. &c. Rome by Udalricus Hahn, 1467, again in 1473, and by John Hummelster of Mayence 1473. Remarkable for the singularity of the type, and wood cuts excellent for the time.—*Robertus Valturi Opus de Re Militari*. Verona, a Joanne Cyrrus, 1472. The wood cuts to this book are supposed to be done by Matteo Pasti or de Postis, a friend of Valturi's and a painter. He engraved some coins. Reyster calls these copper-plates; and therefore since Mantegna was only twenty-one years old when this book was printed; he will have it that the invention of engraving on copper-plates, and printing from them, cannot be ascribed to him.

Other books with wood cuts are: *Alvarus Pelagius, Summa de planctu Ecclesie*. 1474.—*A Bible* printed at Augsburg. 1477; two others without place or date; a fourth at Nuremberg, 1483; a fifth in 1490, both by Koburger; a sixth at Lubec; also one printed at Venice, 1499.—*Carlton's Myrrour* of 1489, is adorned with wood-cuts: as is also his *Golden Legend*, of 1483; and his *Esop's Fables*, of 1484.—*A Herbal* published in Germany, 1484.—*Herba Senecio*, 1486 and 1488, both at Augsburg; and at Mainz, 1491, by Meydenbach. Medebach.—Sebastian Brandt, born 1458, published *Stultit Nunci*; or, *The Ship of Fools*, with one hundred wood cuts after Locher. The first edition has no date, but is supposed to have been printed in 1490; the second has the date, 1494.—*Hore Beate Mariæ*, 1490, also 1493; and again by Philippe Pichouet, with admirable wood cuts, in 1506.

Books most remarkable for the excellence of their wood cuts, are: *Hypnerotomachia Poliphili*, 1499; and *Le transformationi di M. Lodovico Dolce*. Ven. typis Gæz. Gioliti de Ferraria, 1553.

See Meerman's *Origines Typographicæ*.—*Clemen's Bibliothèque Curieuse*.—*Fournier sur l'origine et les progrès de l'Imprimerie*.—De Bure, Maittaire, Ames, Dibdin, Ottley, Singer, &c.

the Latin language. They were published from the press of Albert Pfister, at Bamberg; although they are without date, and are considered the earliest examples of books printed on both sides of the page, with metal types, and decorated with wood cuts. The earliest printed book, containing text and engravings illustrative of scriptural subjects is called the Histories of *Joseph, Daniel, Judith, and Esther*, printed by Pfister in this year. It is among the rarest typographical curiosities in existence, there being at present only two known copies of it—one in the royal library at Paris, and another in the collection of Earl Spencer. The following is a metrical version of the original metrical colophon in the German language.

Each man with eagerness desires  
To learn, and to be wise aspirer,  
But books and masters make us so;  
And all men cannot Latin know.  
Thereon I have for sometimes thought,  
And HISTORIES BOOK together brought:  
*JOSEPH, and DANIEL, and JUDITH,*  
With good intent; *ESTHER* therewith,  
To these did God protection give,  
As new to all who godly live.  
If by it we our lives amend,  
This little book hath gained its end,  
Which certainly in Bamberg town  
By ALBERT PFISTER'S press was done,  
In fourteen hundred sixty-two,  
As men now reckon; that is true,  
Soon after good St. Walbough's day,  
Whom to procure for us we pray,  
Peace and eternal life to live;  
The which to all of us God give. Amen.

This version is literally accurate, and was supplied by my friend Mr. R. W. Wade.—*Dibdin*.

It is probable that this partial impression of the sacred text, thus decorated, gave the idea of publishing the *entire* text of the bible, with similar embellishments, and in the same language, at Angsburg, about the year 1473, and a similar one by Fyner, of Eslingen, between the years 1474 and 1477: a practice frequently adopted afterwards, both in the *German* and other vernacular translations, and in various editions of the Latin bible. Pfister is also supposed to have published a bible, described in the *Bibliotheca Spenceriana*.

1463. On the application of the card-makers of London to Parliament, an act was made against the importation of playing-cards. From this statute it appears, that both card-playing and card-making were known and practised in England before this period, or about fifty years after the era of their supposed invention.

Austis, in his *History of the Order of the Garter*, 1277, produces a passage, cited from a wardrobe *computus*, made in the sixth year of King Edward I. in which mention is made of a game entitled the Four Kings VIII. Vd. and hence that writer conjectures that playing cards were then used in England, a supposition which might seem the less unreasonable, since we have no account of any game played in Europe, in which four kings were used except in cards.—Edward I. resided five years in Syria.

1464, August 1. Died Cosmo de Medicis, called the elder, was born at Florence, in 1399, and he became an eminent merchant. Cosmo de Medicis

deserves to be recorded as one of the most munificent patrons of literature of his time; he collected a noble library, which he enriched with inestimable manuscripts from Greece and other countries. The envy excited against him by his riches and eminent qualities, raised him many enemies, by whose intrigues he was obliged to quit his native country. He then retired to Venice, where he was received as a prince. His fellow citizens afterwards recalled him, and he bore a principal share in the government of the republic for thirty-four years. On his tomb was engraven this inscription: *THE FATHER OF HIS PEOPLE, AND THE DELIVERER OF HIS COUNTRY*.

An historical account of the pageants, and a short notice of the most interesting, may serve to illustrate the manners and customs of the times, as marking things, "though familiar to a few, will be new no more." Strutt, in his *Sports and Pastimes*, observes, that the old chronicles contains large particulars of these and similar exhibitions, and even up to fifty or sixty years ago in the lord mayor's show; but the pageants and orations have long been discontinued, and the lord mayor's itself is so much contracted, that it is in reality altogether unworthy of such an appellation.

Watson thinks that the Pageants, which on civil occasions derived great part of their decorations and actors from historical fact, and consequently made profane characters the subject of public exhibition, dictated ideas of a regular drama much sooner than the Mysteries. Whether this were so or not, the Pageants sometimes partook of the nature of Mysteries, and were of a mixed character. This is particularly exemplified in the prints to the descriptive volume of the great Hærelem show. There were on that occasion personifications of Vanity, Wisdom, War, Cruelty, Faith, Hope, Charity, Learning, Pride, Poverty, Blindness, Drunkenness, Evil Conscience, Wickedness, Despair, Fame, Bad Report, Envy, Hypocrisy, Hunger, Thirst, Pain: personations of Christ, Judas, Ananias, Sapphira, Zaccheus, Cornelius, Tabitha, Tobias, Midas, Mercury, Soldiers, Murderers, Merchants, Priests, &c. Riches is there represented as a man richly habited, accompanied by Covetousness, a female with a high ruff open at the neck in front, from whence springs a large branch that falls horizontally over her shoulder, to Achan, Ahab, and Judas, who follow in the procession, plucking the fruit from the bough. In another of these prints, Christ barefooted, and in a close vest, precedes a penitent-looking man, and grasps a sword in his right hand, which he turns round and points at the devil, who holds a prong, and is at the man's heels with Hell and Death following. Hell is denoted by a black monk-like figure walking without a head, flame and smoke issuing forth at the top instead; Death, gaunt and naked, holds a large dart; the Devil has a human face with horns, and blunt tail, rather thickened at the end. Trailing on the ground like a rope. A procession in one of these plates represents the story of Hatto, Bishop of Mentz,

who, in order that a scarcity might the sooner cease, assembled the poor that were suffering by famine in a barn, and caused them to be burnt alive, saying, that poor people were like mice, good for nothing but to devour corn; wherefore God Almighty raised up an army of mice to do judgment upon him, from whom he escaped to a tower in the middle of the Rhine, whither the mice swam, and miserably devoured him. This story was told in the pageant by a wooden building apparently on fire; people enclosed within, put their hands through the bars of the window imploring relief; a soldier with a lighted torch in one hand, stabs at them with a dagger grasped in the other; the archbishop, robed, mitred, and crossiered, follows dignifiedly; while Avarice infuses her thoughts into his ear with a pair of bellows; lastly, a dart, from which mice are hung by the back, is uplifted against him by death.\*

Strutt remarks that Pageants, though commonly exhibited in the great towns and cities of England on solemn and joyful occasions, were more frequent in London, on account of its being the theatre for the entertainment of foreign monarchs, and for the procession of our own kings and queens to their coronation, or on their return from abroad; besides which, there were the ceremonious incident at stated periods, such as the setting of the midsummer watch, and the Lord Mayor's Show. Accordingly a considerable number of different artificers were kept at the city's expense to furnish the machinery for the Pageants, and to decorate them; and a great part of Leaden Hall was anciently appropriated to painting and depositing them. The fronts of the houses in the streets through which the processions passed, were covered with rich adornments of tapestry, arras, and cloth of gold; the chief magistrates and most opulent citizens usually appeared on horseback in sumptuous habits, and joined the cavalcade, while the ringing of bells, the sound of music from various quarters, and the shouts of the populace, nearly stunned the ears of the spectators. At certain distances, in places appointed for the purpose, the Pageants were erected, which were temporary buildings representing castles, palaces, gardens, rocks, or forests, as the occasion required, where nymphs, fauns, satyrs, gods, goddesses, angels, and devils, appeared in company with giants, savages, dragons, saints, knights, buffoons, and dwarfs, surrounded by minstrels and choristers; the heathen mythology, the legends of chivalry and Christian divinity, were ridiculously jumbled together without meaning; and the exhibitions usually concluded with dull pedantic harangues exceedingly tedious, and replete with the grossest adulation. Warton is of opinion, that it was not until about the reign of Henry VI. that the performers in the Pageants began to recite. From a few notices some estimate may be formed of the consequence in which they are held, and the nature of the exhibition.

Strype says, that Pageants were exhibited in London when Queen Eleanor rode through the city to her coronation in 1236, and again in 1298, on occasion of the victory obtained by Edward I. over the Scots. There were Pageants in 1357, when Edward the Black Prince brought John, King of France, prisoner through the city; in 1392, when Richard II. passed through London after the citizens, by submission, and the queen's intercession, had obtained the restoration of their charter; and again, in 1415, upon the entry of Henry V. after the battle of Agincourt.

In 1431, when Henry VI. entered Paris as King of France, he was met there by the national and municipal authorities, accompanied by the nine worthies on horseback, richly armed.

In 1445, on the same king's marriage with Queen Margaret, when she approached London, the mayor, aldermen, sheriffs, and the crafts, wearing their respective cognizances, went forth to meet her, and brought her in great state through the city, where were sumptuous and costly pageants, with verses by Lydgate, and resemblance of divers old histories, to the great comfort of the Queen and her attendants.

On the Queen of Henry VI. visiting Coventry in 1455, at Bablake in that city, there was a Jesse over the gate, showing two speeches made by Isaiah and Jeremiah, in compliment to the Queen, and comparing her to the root of Jesse. Within the gate at the east end of the church, St. John the Evangelist, were equally polite in their welcome to her majesty. Afterwards the conduit in the 'Smythford-strete' was right well arrayed, and there were showed the four speeches of the four cardinal virtues. At the cross in the 'Croschepyng' were divers angels censuring abigh on the cross, and wine running out at divers places. Between the cross and the conduit were nine pageants, and in every pageant a speech from one of the nine conquerors. Joshua, in his speech, told her majesty, that if any one dared to do her wrong, he would fight for her: David told her that in dainties he had lived all his life, and had slain Goliath, and would obey her as a kind knight for the love of her liege Lord, King Henry. The conduit was arrayed with as many virgins as might be thereupon; and there was made a great dragon, and St. Michael slaying him by miracle, with a suitable speech from her.

On the 24th of April, 1474, Prince Edward coming out of Wales to Coventry, was welcomed by the mayor and commonality. There was a station with three patriarchs there standing with Jacob's twelve sons, with minstrelsy of harp and dulcimers, and a speech from one of the patriarchs. At the cross were three prophets standing, and upon the cross above were children of Israel singing and casting down sweet cakes and flowers, and four pipes running wine. Upon the conduit was St. George and a king's daughter kneeling before him with a lamb, and the father and mother in a tower above, beholding St. George saving their daughter from the dragon, and the conduit running wine in three places, and minstrelsy of organ playing.

\* This story is agreeably verified by Mr. Southey in the ballad of *God's Judgment on a Bishop*.—*Minor Poems*. 1815.

In 1486, King Henry VII. after his coronation, made a progress to the north, with a large attendance of nobility. Three miles from York the king, in a gown of cloth of gold, furred with ermine, was received by the sheriffs and citizens with their recorder, who welcomed him with a speech. Half a mile without the gate he was received by processions of friars and dignified clergy, who, with an immense multitude, attended him to the gate of the city, where was a pageant of divers persons and minstrelsy, and thereby stood a crowned king, by name Ebraueus, who had a verified speech. At the hither end of 'House Brigge' was another pageant, garnished with ships and boats, and Solomon in his habit royally clothed, had another speech. At the turning into 'Conyeux-street' there was a pageant of the Assumption of our Lady, with her speech. At the end of 'Conyeux-street' was another stage with a pageant, wherein stood King David, armed and crowned, with a naked sword in his hand, also making a speech. In divers parts of the city were hung tapestry and other cloths, and galleries from one side of the street over athwart to the other, with casting out of sweet cakes, wafers, and comfits, in quantity like hailstones, for joy and rejoicing at the king's coming.

On the 25th of November next year, 1487, Elizabeth, Queen to Henry VII. departed from Greenwich by water, to her coronation. She was attended by the city authorities and company in their barges, richly decorated, but especially a barge called the bachelors' barge, was garnished passing all the rest, with a great red dragon, spouting flames of fire into the Thames, and many other 'gentlemanlie' pageants curiously devised to do her highness sport; and so attended, she was landed at the tower, where she slept. On the morrow her progress through the city to Westminster was magnificently welcomed by singing children, some arrayed like angels, and others like virgins, to sing sweet songs as she passed along.\*

1466. The learned John Bemer introduced the art of printing into the imperial city of Ausburgh; but the only two books that are known to have been printed by him, are the Latin Bible, in folio; and his translation of Neck's *Summa Præcipuorum Capitum Fides Christianæ*, out of Latin into High Dutch, printed in 1472. There were in Ausburgh five other eminent persons, who, though they did not begin so early as John Bemer, yet printed many learned works: most of these printers being either citizens, or natives of Ausburgh, might, in all probability, learn the art from him.

1466. Printing introduced at the town of Reutlingen, in the duchy of Wirtemberg, by John of Amerbach, who published there a Latin bible in folio. This John Amerbach has, by some, been confounded with the learned John Amerbach, of Basil.

\* For some further information concerning Pageants see 1548.

1466. Printing introduced into Rome by Conrad Sweynheim, and Arnold Pannartz, two Germans, in the second year of the pontificate of Paul II. under the patronage of John Andreas, bishop of Aleria, who was the pope's librarian, and justly famed for his learning and generosity. They had previously exercised the art in the monastery of Subbiaco, in the kingdom of Naples, to which they had been invited by the monks; and where they had printed, in 1465, an edition of Lactantius's works, in which the quotations from the Greek authors are printed in a neat, but heavy Greek letter, of which a specimen is given in Horne's *Introduction to the Study of Bibliography*, vol. I. They also were the first to introduce what has since been called the Roman character, instead of the gothic, or black letter. The paper and types made use of by these printers were both excellent, and their ink, it is observed, "may vie in blackness with the best of the present day." They were encouraged by all the men of letters and fortune at Rome, and even by the pope himself, who visited their printing-house, and examined, with admiration, every branch of this new art. The bishop of Aleria especially, not only furnished them with the most valuable manuscripts out of the Vatican and other libraries, but also prepared the copy, corrected their proofs, and prefixed dedications and prefaces to their works, in order to recommend them the more to the learned world, and followed this laborious task with such application, that he scarcely allowed himself time for necessary relaxation. These printers settled in the house of the Maximis, brothers, and Roman knights, from whence their works are dated. In 1471, they published a Latin bible in 2 vols. fol. with an *Epistle* of the bishop of Aleria to Pope Paul III., Aristeus's *History of the Septuagint*, and Jerom's *Prefaces* to the different books of the Old and New Testament. As this edition varies in several places from former editions, it is probable the bishop of Aleria furnished the printers with a more correct manuscript copy from the library of the pope, or from some other source, or at least corrected the Mentz edition by such manuscript. Of this edition they printed 550 copies. In the same year they commenced an edition of the *Postills of Le Lya*, in 5 vols. fol. which they completed the following year. This ponderous work seems to have ruined these indefatigable artists, for in a Latin petition of the printers to the pope, Sixtus IV. written by the bishop of Aleria, and prefixed to the fifth volume of *De Lya's Postills*, or Commentary, they state themselves to be reduced to poverty, by the pressure of the times, and the vast expense of the works they had printed, of which great numbers remained unsold. In the course of seven years, they had published twenty-eight different works, some of them very large; the impressions of which amounted to 12,475 volumes, an immense number at that period! It is evident, however, that some method must have been taken to extricate them from their distress; for although Sweynheim published nothing after the year

1473, and for that reason is supposed by some to have died about that time, yet his partner, Pannartz, continued printing until about 1476, using a smaller type than what had been used by him during the former partnership.—An extract from the Latin petition from the printers to the pope, is given, with a list of their works, in Beloe's *Anecdotes of Literature and scarce Books*, vol. III. There is also a short extract from it in Le Long's *Bibliotheca Sacra*. Sweynheim and Pannartz were the first printers who used spaces between the words.

In a short time after Sweynheim and Pannartz, Ulric Han commenced printing at Rome. He was so accomplished in the art, that several nations have claimed him; particularly the Germans and French. Anthony Carpanus, bishop of Terumo, the most distinguished poet and orator of his time, prepared and corrected his copies, and revised his editions. The merit of this printer appears from his fine impressions, and the choice that his patron made of him to publish those works, which he had procured and corrected with the most diligent application.

The invention of printing produced a wonderful change in the valuation of manuscripts and other literary commodities. In 1468, manuscripts had fallen in price, not less than eighty per cent. And in proof of the moderate prices assigned to printed works, writers on these subjects are fond of citing the letter of Giovanni bishop of Aleria, to pope Paul II. under whose patronage the art of printing was commenced at Rome. In the first volume of the "*Epistole Hieronymi*," Rome, 1470, the aforesaid prelate thus addresses the pontiff in a prefatory inscription:—

"In your days, amongst other divine blessings which the Christian world enjoys, it may congratulate itself on the facility with which books may be purchased, even by the poorest student. It reflects no small glory on the reign of your holiness, that a tolerably correct copy of such a work as formerly cost more than a hundred crowns, may now be purchased for twenty—those which were heretofore worth twenty, for four at most. It is a great thing, holy father, to say, that in your times the most estimable authors are attainable, at a price little exceeding that of blank parchment or paper. Some monarchs have gloried, not without reason, that under their administration, the price of corn hath scarcely exceeded that of the empty sack—of wine, that of the cask. With equal exultation I record it for the admiration of posterity, that persons exquisitely skilled in the typographic art, first began to exercise their calling at Rome, under the auspices of Paul II. the Venetian; that by means of that super-eminent pastor of the church, heaven gives us in these days, to purchase books, for less than would formerly defray the expense of the binding."

1466. Died JOHN FAUST, a goldsmith of Mentz, who is one of the three artists considered as the inventors of printing; it is not certain that Faust did more than supply the money for carrying on the concern. The exact date of his death is

not known; he was at Paris in this year, and it is strongly conjectured, that he fell a victim to the plague which then raged in that capital.—After Faust, no books seem to have been printed upon vellum, but for the sake of curiosity; for as paper became more necessary, the art of making it became more common, and it grew cheaper than vellum, of which the quantity might be said to be limited by nature; whereas paper may be increased without difficulty.

1467. The archbishop of Tours, in France, introduced the art of printing into that city, and the first work was done in his palace; but instead of its being a work of piety, as might have been expected from the house of a prelate, this singular production contains the *Loves of Camillus and Emilia*, with other tales.

1468. Feb: Died JOHN GUTENBERG, OF GENS-FLEISH, the reputed inventor of printing,\* was born at Mentz of noble and wealthy parents, about 1440. The abbe Mauro Boni says, that "stimulated by his genius to discover something new," he travelled in his youth through various countries, where he learned several arts unknown to the Germans. In the year 1421, he took up his residence at Strasburg, as a merchant; but from a deed of accommodation between himself and the nobles and burghers of Mentz in 1430, it is evident, he returned to his native place. A document adduced by Schoepflin, proves him to have been a wealthy man in 1424. Scribevius informs us, that he resided at Strasburg from 1436 to 1444, during which period he made several ineffectual attempts to gain a perfect

\* It is not possible that the inventor of the art of printing should have foreseen how large would be his claim to the gratitude of after-ages. Happily he was the immediate precursor of Luther; and the press became the engine by which nations were roused to civil and religious liberty. The great reformer's vindication of both spread with the swiftness of lightning throughout Europe; and before the first quarter of the sixteenth century had revolved, even Asia knew him by his writings. The year 1836 will be the fourth centenary of Gutenberg's inappreciable invention, and will be celebrated at Mayence, where he first brought it into active being, by the erection of a monument to his memory; but we regret to say, that the gratitude of the present day has hitherto afforded but indifferent proof of its being endued with vitality. The committee of Mayence have not, even after two years' appeal, received sufficiency of contributions to cover the expenses to which they stand pledged: we trust, however, for the honour of our times, that the sovereigns of Grand Ducal Hesse and France will not prove the only crowned heads who are not afraid publicly to record their veneration for the press and its parent; and we cannot believe that a citizen of Bristol, who has presented the committee with a donation of fifty guineas, will be the only admirer of Gutenberg amongst our fellow-countrymen, who will hereafter contemplate the intended shrine without a personal sense of shame at the unthankfulness of a posterity that has derived so vast a benison from the agency of the typographical art. Thorwaldsen, the first sculptor of the present day, has, we are happy to add, nobly stepped forward and undertaken to design and execute the monument in marble as a free-will offering; and those who have seen the model, pronounce it every way worthy of his fame. The booksellers of Leipzig, and the citizens of Oldenberg, too, have contributed £30 each to the fund now raising, and the society of arts at Mayence have added £150. Surely there never was occasion which commended itself more irresistibly to the patronage of the scholar, the artist, and the bibliophile, than this homage, tardy though it may be, to the master-mind which has opened to them the road to scientific acquirements, to fortune, and to fame.—*Printing Machine.*

From some circumstance, the ceremony was delayed for another year. (See Appendix.)

knowledge of the art of printing; not succeeding he quitted Strasburg, and returned to Mentz, when he opened his mind more fully to Faust, and prevailed upon him to advance large sums, in order to make more complete trials of the art. Having already investigated the subject, and given the opinions of the most impartial writers, which entitles Gutenberg to the honour of being the inventor of the art of printing, little need be added to convince the unbiased reader. It is proved that Gutenberg did not use any other than *cut metal types* until 1462. In 1465 he was honoured by the archbishop Adolphus with a mark of distinction, to which his genius and labour entitled him. He was admitted among the nobility of his court, allowed to wear the dress peculiar to that order, and had a pension, together with several privileges and exemptions, conferred upon him, and it is supposed that he then relinquished an art which had caused him so much vexation. Many writers adduce the honours conferred by the archbishop, and which were sanctioned by Erasmus, as strong proofs in favour of Gutenberg; for Erasmus being a Dutchman, would not have conceded to this, had any rival press existed at Haerlem. Geinsfleisch, sen. died before these honours were conferred upon his brother; probably the archbishop was generally informed that the younger brother was the sole inventor; and it is to be regretted, that from some unforeseen cause the elder brother has been overlooked; for which it is quite impossible now to account. This could not possibly have been the case, had the art been known beyond the city of Mentz; therefore, as no rival press appears to have existed, the only conclusion that can be arrived at is granting to the Gutenbergs, with the assistance of Faust, and the ingenuity of Schoeffer, the merit of the discovery. Gutenberg junior, was interred in the church of Recollets, at Mentz; and the following epitaph was placed over, or near his tomb:

"D. O. M. S. Johann Gutsutisch, (from the name of his house) artis impressoriae repertori, ex omni natione et lingua optime merito in nominis sui memoriam immortalam, Adam Gelthus, posuit."

At the death of Gutenberg, Conrad Humery took possession of all his printing materials, and engaged to the archbishop Adolphus, that he never would sell them to any one but a citizen of Mentz. They were, however, soon disposed of to Nicholas Bechtermunze, of Altavilla, who in 1469, published the *Vocabularium Latino Teutonum*, which was printed with the same types which had been used in the *Catholicon*. This very curious and scarce vocabulary is in the duke of Marlborough's valuable library at Blenheim. It is in 4to. thirty-five lines long, contains many extracts from the *Catholicon*, and is called "*Ex quo*" from the preface beginning with these words.

\* Johnson, in his *Typographie*, vol. I. queries this, and says, have not those writers been in error, who assign this inscription to the memory of John Gutenberg, jun. ? I contend that it belongs to the senior, who was distinguished by the name it bears; whereas the younger was not known by that appellation: the senior had an equal, if not a superior claim to the invention.

1468. In this year £1 16s. 8d. was lent on the security of a manuscript of Peter Comester deposited as a pledge. Wheat at this time was six shillings and eightpence the quarter; beef, ten shillings the carcase; mutton, one shilling and fourpence; veal, two shillings and sixpence; pork, two shillings; ale, three halfpence a gallon.

1468. Until this year, the proficients in this new art had proceeded no farther than in the common alphabet, suited to the vulgar and Latin tongues. The Gothic alphabet, as it most resembled the manuscripts of those times, was the first attempt; then some of the Italian princes introduced the Roman alphabet; and in a short time, brought it to that perfection, that, in the beginning of the year 1474, they cast a letter not much inferior to the best types of the present age; as may be seen in a Latin grammar, written by Omnibonus Leonicensis, and printed at Padua, on the 4th of January, 1474. It is from this work, that our grammarian Lilly has taken the entire scheme of his grammar, and transcribed the greatest part of it, without paying any regard to the memory of this author.

1468, Dec. 17. OXFORD BOOK. This book is a small quarto, consisting of forty-one leaves, a copy of which is in the public library at Cambridge, bearing the following title:—*Expositio Sancti Jeronimi in Symbolum Apostolorum ad Papam Laurentium*: and at the end, *Explicit expositio, &c. Impressa Oxonie, et finita Anno Domini M.CCCC.LXVIII.—XVII die Decembris*.—For further particulars concerning this book, see *Life of Caxton*, 1474.

1469. The art of printing introduced at Venice, by John and Windiline de Spira. These printers were natives of Germany, where they learnt the art; they settled at Venice, and printed their first book *Cicero's Epistles*, in this year. They surpassed all their predecessors in the beauty of their impressions; they employed two very learned men as correctors of their press. The Spiras were the first who applied the art on a regular and extensive scale to the publication of the classics.

These two brothers soon surpassed all other printers, in the beauty and symmetry of their types, and the elegance of their impressions, which render their editions admired and esteemed by the curious, in preference to those of all other ancient typographers. Venice, by this, gained so much reputation for the fineness of her types, that some eminent printers at Rome, and in other places, either furnished themselves with founts of the same letter, or endeavoured to imitate their beauty; acquainting their readers in their next impressions, that they were printed with Venetian types. The high character Venice had acquired for beautiful printing, induced many inferior printers to avail themselves of this favourable circumstance, to recommend to the world the most wretched productions. But this demonstrates the superior merit of that city, and the laudable emulation of her printers, not only to excel those places, but even one another. And, indeed, the Spiras, with John de Cologne, and

Jenson, seem to have brought the art to its utmost perfection. And yet it is a lamentable instance of the perverted taste of those times, that these ancient printers were obliged to change their beautiful Roman type, for the old and disagreeable Gothic, which they did in about seven years, viz. anno 1477.

The Spiras had the two following learned men for their correctors, viz.: Christopher Berardus, of Pisauro; and George Alexandrinus. John Spira, the elder brother, is reported to have been the first who put the direction-word at the bottom of the page. He died in 1470, and was succeeded by Windiline, who conducted the business, on his own account, until 1472, when he took John de Cologne as a partner; but the connexion was of short duration. Windiline Spira, in consequence of an earnest solicitation of some eminent law counsellors, quitted Venice, and went to Germany, where he printed, in the year 1471, some considerable volumes, without the name of the place. But having, soon after the decease of his brother, entered into an engagement not to reside out of Venice, he returned thither, and continued printing with great reputation until the year 1477, when he began to adopt the Gothic character. In this he was followed by every other printer, and even by the celebrated N. Jenson; yet Jenson still preserved neatness and uniformity, whilst the others were much degenerated.

By an order of the senate of Venice, John and Windiline de Spira, had the exclusive privilege granted to them of printing the letters of Cicero and Pliny, for five years, in consequence of the beauty of their impressions.

There has been some disagreement about who was the first printer in Venice. Maittaire, who had a particular regard for his countryman, Jenson, seems to think him the first; but without much reason, as the following verses will evince; they are found at the end of an edition of Tully's *Epiſtles at Venice*; in this year, the first work of another famed printer, John de Spira, who, in the four following verses, at the end of the book, claims the honour of being the first who had printed in that city:

Primus in Adriaca foamis impreſſit ænâ  
Urbe libros Spira genitus de ſtirpe Johannes.  
In reliqua ſit quanta, vides, ſpes, Lector, habenda.  
Quam labor hic primus cœlam ſuperaverit Artem.

It is the more general opinion, confirmed by the testimony of cotemporary writers, that Jenson was the first printer at Venice: but these verses of John de Spira, published at the time, as well as in the place in which they both lived, and without any contradiction from Jenson, amount to a conviction in favour of Spira, not easily to be now removed.

Nicholas Jenson is allowed, by the generality of writers, to have been a Frenchman; and as he was one of the first of that nation that became eminent in the art of printing, his countrymen have been more than ordinarily lavish in his praise: they consider him the only printer of merit in that age, and that the productions of

his press were far superior to those of any other.

Polydore Virgil highly commends Jenson and his partner, another John de Cologne, for their improvements in the art; and Sabellicus says, that Jenson and his partner, John de Cologne, excelled all the printers of their time, in the richness and elegance of their impressions. The learned Omnibonus Leonicensus, who prepared copies for Jenson, and corrected some of his editions, has left an excellent character of him, affixed to his Quintilian, printed in 1471, in which he extols his types, and speaks of him as one to whom the greatest share of the invention of typography was due. For which reason, writers on this subject express their astonishment, that so great a master of typography should have introduced at Venice the Gothic characters; in which he printed his bibles, divinity, and law books. The first work printed by Jenson in the Gothic characters was, St. Austin's *De Civitate Dei*, 1475, and the last of his works is dated 1481.—Nicholas Jenson died in the year 1481.

John and Windiline de Spira, were natives of Germany; but from what particular place is now unknown; but, like others, might derive their names from the place where they were born.—John de Spira died at Venice, in the year 1470.

Windiline is supposed to have died in the year 1477, no impression of his bearing a later date.

1470, April. A curious deed of sale, of the Latin edition of the bible by Faust and Schoeffer, informs us, that Herman de Statten, agent of Faust and Schoeffer, sold a copy of it to William Tourneville, bishop of Angers, for forty golden crowns, in 1470. The manuscript memorandum, in Latin, was found in one of the vellum copies of this bible; the following is the sense: "I Herman, a German, workman of the honest and discreet John Guymier, sworn bookseller of the university of Paris, acknowledge to have sold to the illustrious and learned master William, of Tourneville, archbishop and canon of Angers, my most respectable lord and master, a bible at Mentz, printed upon vellum, in two volumes, for the price and sum of forty crowns, which I have absolutely received, which also I ratify by these presents, promising to abide by the same, and guaranteeing my lord, purchaser of the said bible, against any one who would dispossess him. In ratification of which I have hereunto affixed my seal, this 5th day of the month of April, in the year of our Lord mcccc.lxx. Herman,—Dibdin's *Biblioth. Spencer.* 1. p. 16, note.

1470. Conrad Winters introduced the art of printing at Cologne; here Caxton received the first rudiments of the art. The author of the Cologne chronicle affirms that printing was introduced there next to Mentz. But whether the first printers who settled at Cologne neglected to add their own as well as the city's name to their editions, or whether the volumes were too inconsiderable to be preserved; it is certain there is not any book with an authentic date before this year by Conrad Winters. Notice has been taken of John Koellhoff; but as his date is older than either himself or the invention of printing, it is

uncertain as to the exact time of his appearing. Mattaire mentions some bibles, and a few other books, printed here without printers' names.

1470. Anthony Zarot introduced the art of printing into Milan. He is esteemed the inventor of signatures, or alphabetical letters at the bottom of every sheet, as a guide to the binder: he placed them at first under the last line of the page; but afterwards he put them at the end of the last line. This whim of his, however, was not followed by any other printer, nor by himself long; for he soon returned to the first method. Authors are divided in opinion as to the exact date when signatures were first introduced in any work. It appears they were inserted in an edition of *Terence*, by Zarot, in 1470; Chevillier says, they were first introduced by Zarot in 1476, in a work entitled *Platea de Usuris*. An edition of *Baldi Lectura super Codic*, &c. was printed at Venice, by John de Cologne and Jo. Manthen de Gheretzem, in 1474; it is in folio, and the signatures are not introduced till the middle of the book, and then continued throughout. Abbé Reve ascribes the discovery to John Koëlhoff, at Cologne, in 1472. They were used at Paris, in 1476; and by Caxton, in 1480. Zarot's main province was printing of classics, which he executed with extraordinary diligence and accuracy. He is said to be the first person that printed missals or mass-books for the use of the clergy. The chief corrector of Zarot's press was the famous Peter Justin Philadelphus, a person of learning and great application, especially in correcting the faulty editions which were procured at Rome and other places. His next corrector was the learned P. Stephen Dulcinio, prebend of Scala, who tells the marquis of Palavicino, to whom he dedicates the second edition of Manilius, in 1499, that he had corrected that author in above three hundred places, and cleared it from the barbarisms, and other faults of the transcribers, as far as it was possible to be done in a very corrupt and mutilated copy. Zarot continued printing till the year 1500, when he is supposed to have died.

1470. The art of printing was begun in the city of Paris by Ulric Gering, and his two associates, Martin Crantz and Michael Friburger. These Germans, at the instance of Guillaume Fichet and Jean de la Pierre, came to settle at Paris; and had an establishment assigned them in the college of the Sorbonne; of which society their two patrons were distinguished members.

Chevillier enumerates eleven distinct books printed by Gering, Crantz, and Friburger, in the Sorbonne, in the years 1470, 1471, and 1472. The list is increased by Panzer to eighteen. These constitute what is called the first series of Gering's impressions; of which bibliographers give the precedence to *Gasparini Pergamensis Epistolarum opus*. The works of these printers are generally without date; though Panzer exhibits some exceptions. What is more remarkable, none of them are printed in the Gothic character. On the contrary, they are in a handsome Roman letter, formed in imitation of the characters of the Augustan age, as exemplified

in the medals and other monuments of those classic times. They are all printed in the same large and bold Roman character, with types cast from the same matrices. Some letters indeed appear imperfect; and some words but half printed, and afterwards finished by the pen. There are no capitals. The initial letter of each book or chapter is omitted, such omissions being intended to be supplied by the ingenuity of the illuminator. They abound in abbreviations; which is the case with ancient impressions in general. The paper is not of a fine whiteness, but strong, and well sized. The ink is of a glossy blackness: and some instances of red letters occur occasionally. Some of these works commence on the *folio verso*. They are all without titles, cyphers, and signatures.

Louis XI. having thus witnessed the introduction into his own capital of an art so important to literature, had afterwards the gratification of seeing it carried to a considerable degree of perfection, by several industrious and skillful typographers, whom he honoured with his special favour. Whatever might be the political character of this monarch, he appears to have been a friend and protector of learning. For literary works he entertained also a particular predilection. He caused to be brought from Fontainebleau to Paris, all the manuscripts which his predecessors Charles V. and VI.\* had been at great pains in collecting. He established in the Louvre a spacious and noble library, the superintendence of which he gave to Robert Gaguin general of the order of the Holy Trinity. It became one of the principal objects of his magnificence to augment it as much as possible, both with manuscripts and printed books. As a further proof of his zeal and earnestness in such pursuits, it is recorded, that having been informed that the gentlemen of the faculty of medicine of Paris, had in their possession an original manuscript of Rasis a celebrated Arabian physician of the tenth century, he directed that part of his silver plate should be pledged as a security, in order to obtain permission of having it transcribed, and the king was obliged to procure a nobleman to join with him as surety in a deed, by which he bound himself to return it under a considerable forfeiture. At this period a few manuscript volumes were deemed of sufficient value to form the greater part of a daughter's marriage portion.

The early typographers we are told, met with great opposition in the commencement of their labours at Paris from scribes or copyists, whose gains were likely to be diminished, or rather almost annihilated, by the introduction of the

\* The most esteemed French poet, historian, and orator, of this time was Alain Chartier a native of Normandy, and secretary to Charles V. VI. and VII. kings of France. His extraordinary talents procured him great esteem, both at court and throughout the whole kingdom.

He is said to have been one of the ugliest persons of his age. Yet Margaret of Scotland, wife of the dauphin of France, afterwards Louis XI. finding him asleep in an apartment through which she chanced to pass, kissed his lips: alledging, as Pasquier relates, that she did not consider herself to have kissed the man who was so ugly and deformed in his whole person; but the mouth from which had issued so many golden expressions.

new art. They encouraged the most malignant and ridiculous charges against our artists, even that of sorcery or magic. They also contrived to institute against them a vexatious legal process. The affair was brought before the parliament, and that tribunal, little more enlightened and liberal than the credulous multitude, ordered their books and impressions to be confiscated. But to the honour of Louis XI. it is recorded, that upon this occasion he interposed his royal authority in behalf of the printers. He interdicted the parliament from taking further cognizance of the affair, reserving it for his own special decision and that of his privy council; and it is scarcely necessary to add, that the event was entirely favourable to the typographers, and their books and copies were ordered to be restored.

Even at an earlier period than that of the introduction of printing into Paris, it appears that Conrart Hannequis and Pierre Schoeffer, printers and burgesses of the city of Mentz, had established magazines for the sale of books at Paris, Angers, and some other places in France. Stratten their agent happened to die in that country; and as he had never obtained any legal instrument of naturalization, he had not the power of disposing of his effects by will. Every thing belonging to this stranger, or entrusted to his hands, was seized and confiscated; and amongst the rest, the works which Hannequis and Schoeffer had placed at his disposal. The German printers prevailed upon Frederick III. king of the Romans, and the elector of Mentz, to interest themselves in their behalf; and Louis XI. moved not only by the considerations due to their recommendation, but also by his own favourable disposition for the encouragement of such artists, and the diffusion of useful learning, ordered plenary restitution to be made. The indemnification claimed by Hannequis and Schoeffer amounted to 2425 ecus and three sols tournois, or about 1100 francs, (£45 16s. 8d.) The finances of this monarch would not conveniently admit of the payment of so large a sum at once. He therefore gave directions to Jean Briçonnet, his receiver general, to pay to these printers annually the sum of 800 livres, till the whole claim should be discharged.

In the year 1473, Gering and his associates removed from the Sorbonne, and established themselves in "la rue S. Jacques," at the sign of the Golden Sun. Of the second series of their impressions, those of 1473 are considered as the earliest; and the latest are those of 1483. Amongst this series we find *Biblia Sacra*,\* in folio; which was the earliest impression of the

sacred scriptures, printed in the whole realm of France. Panzer, by conjecture from its subscription, fixes the date about the commencement of the year 1476. The characters used in the second series of Gering's impressions are wholly different from those employed in the first. Several of them exhibit specimens of the Roman character, varying both in size and degrees of elegance and beauty. Some of them are in a character neither Roman nor Gothic, but which exhibits a coarse imagination of the writings of those ages. Chevillier says the bible is of a character of this kind, "*mais plus gros*." Some few of those works which are executed in the Roman letter will compare in the same bibliographer's opinion, with the finest specimens of Jenson, the Spiras, and other most celebrated of the early Italian printers.

In those works which came forth subsequently to the year 1477, Gering's name appears alone. It is supposed that Crantz and Friburger at this period returned to Germany as no mention is afterwards made of them. But Gering passed the residue of his days at Paris; formed new associations; and published new works. It is chiefly on this account that he has obtained the appellation of the earliest Parisian printer; for in the impressions of the society, his name is not uniformly found the first in order of mention; but in some books occupies the second place, and in others the third. Gering is by some believed to have admitted his scholars Cœsar and Stol into a participation of his establishment. He afterwards associated himself with Berthold Rembolt. In 1483 Gering removed his Innigne and establishment, once more, to a part of the city, more immediately in the vicinity of the Sorbonne. With the doctors of this institution he maintained the strictest intimacy; and consulted with them on the subject of those works which might prove most worthy of being submitted to the press. The learned body accorded to him the "Privilege of hospitality;" that is, of possessing apartments in the college, and of a seat at the table of the doctors. For these honours Gering made ample recompense in his life time, by liberally opening his purse to relieve the occasional necessities of the foundation, and by numerous charitable donations to poor students.

In several of the impressions of his third series, Gering used the same bold and handsome Roman character which was employed in the finer specimens of his second series. But the greater part are printed in the Gothic character, which Gering used more especially in works of an ecclesiastical nature. It was not without reluctance that this meritorious printer yielded so far to the prevailing fashion, as to exchange his fine Roman letter for the clumsy and ill-favoured Gothic. The *annals* of Maittaire and Panzer furnish a long enumeration of early Parisian printers, the infancy of whose establishments Gering witnessed; and who successively were become the rivals of his art and industry. From their presses various popular works were constantly issuing, "*en lettres Gothiques*," and on

\* This celebrated edition attracted much curiosity and discussion, about the middle of the last century, in consequence of a fraud practised upon a copy of it, now in the public library at Cambridge. By an alteration and erasure in the colophon, it is ascribed to the year 1463, or 1464; the words *fridus undecimus iudrie*, in the first line, referring to the reign of Louis XI. being altered into *seculi undecimus iudrie*, and the two last lines being erased. A full account of the detection of this fraud, which for many years engaged the attention of bibliographers, may be found in two letters written by Dr. Taylor, preserved in Nichols's *Literary Anecdotes*.

that account actually acquired additional favour, and a preference with the public. It is not surprising that Gering should at length, on some occasions, be induced to sacrifice taste to interest, and comply with the perverse inclinations and prejudices of the age.\*

It is said that more than six thousand persons at Paris subsisted by copying and illuminating manuscripts, at the time when printing was first introduced into that city; they held their privilege under the university.

With regard to the regulation of the prices of books, from a very remote period the university of Paris claimed such a right of estimation, that the "Libraire" might have a reasonable profit, and that the purchaser might not pay too dear. For this purpose, before the introduction of printing, they had their "Taxatores Librorum." But when this noble art was newly established, their interference was for a time, judged to be no longer necessary, on account of the unlimited multiplication of literary works, and the comparative cheapness of their prices.

In process of time, however, when the booksellers began to overcharge their commodities, the university thought proper to resume its power of taxation. Four "Libraires Jures" were employed to determine the price of every printed volume: and the list or catalogue of books on sale, with their authorized prices, was ordered to be printed, or legibly written, and hung up to public view in some conspicuous situation, by every individual "Libraire." Many of the catalogues of early Parisian printers and booksellers are still extant; and several of them may be seen in the *Annals* of Maittaire, which evince the very moderate rates at which books of great merit and utility were offered to the public.

From these facts it appears, that the early printers were justified in the insertion of those frequent epigrams which bespoke their own moderation, and the cheapness of their impressions. Sometimes editors, or scholars of known eminence, address the public in the printer's behalf. In further proof of the deference and submission which early printers and booksellers of Paris, paid to the university, it may be mentioned, that a great part of them affected to add to their own names some other epithets or designations, which might more especially attest their close union and connexion with that literary establishment. In token of the connexion, many of them exhibited the arms of the university in the title pages of their impressions. Others prefixed to their impressions both the royal arms and those of the university. Others again prefixed to their impressions the arms of France in the middle of the title, accompanied by those of the university and of the city of Paris. The custom of certifying the place of their residence, common to the early

printers of Paris, was a further indication of their subordination to the jurisdiction of the university.

At this period manuscripts were so highly rated, as to be conveyed or pledged like an estate for a very valuable consideration, by formal deeds and instruments. The *Speculum Historiale* in *Consuetudines Parisienses* was thus formally transferred, by Jeoffery de S. Liges, to Gerrard de Montagu, king's advocate, for a sum equal to more than two hundred francs of the present date. Even at the period when Gering commenced printing at Paris, a manuscript concordance to the bible was estimated at a hundred crowns.

A French historian and poet of this period, sneered at the invention of printing, and the discovery of the New World by Columbus. In speaking of the press, this author says,

I've seen a mighty throng  
Of printed books and long,  
To draw to studious ways  
The poor men of our days;  
By which new-fangled practice,  
We soon shall see the fact is,  
Our streets will swarm with scholars  
Without clean shirts or collars,  
With bibles, books, and codices,  
As cheap as tape for bodices.

1470. In this year, a curious work was printed by Schoeffer, at Mentz, and by Helyas Helye, alias de Louffen, at Berahm, in folio, entitled *Mammotrectus*. It contains, 1. An exposition of the phrases of the bible, and of the prologues of St. Jerome. 2. Two little treatises of orthography and of accents. 3. A short declaration of the months, festivals, &c. and of the Jewish priests. 4. An explanation of ancient words and terms, in responses, hymns, homilies, &c. 5. A declaration of the rules of the minor friars. The author of the work is supposed to be John Marchesinus, a priest of the order of minor friars, of St. Francis, and a native of Reggio; who composed it in 1366, for the use of the less instructed in his own profession. This work was reprinted more than twenty times during this century.

1470. Almanacks first published by Martin Ilkus, at Buda, in Poland.

1471. Strasburg may be justly esteemed one of the first cities that practised the art of printing after Mentz, though there is no book printed with a certain date before this year, by Henry Eggelstein, who printed two volumes, the last of which is perhaps the largest book that ever was printed, the paper of it exceeding that which is commonly called *charta magna*; and the beginning and end of it were printed in red. It is the first book printed in this manner. John Mentil, or Mentilius has claimed the honour of introducing the art into Strasburg; but as there is not one book printed in his name before 1473, and that without any mention of Strasburg, common justice must award the palm to Eggelstein. Mr. Dibdin, in his *Bibliographical Decameron*, says that Mentil, was upon good authority, well acquainted with Gutenberg at Strasburg, and was not only probably instructed by him in his art, but on Gutenberg's final departure to Mentz, he established himself as a printer at Strasburg.

\* For the account of the early Parisian printers, I am much indebted to the *Annals of Parisian Typography*, &c. by the Rev. William Parr Gresswell, a work abounding with much interesting and valuable information, and which every lover of typography should endeavour to possess.

That Mentil was resident at Strasburg in the middle of this century is quite certain from two documents extracted by Schoepflin. There have not been wanting those, who influenced rather by misplaced zeal, or invincible prejudice, than by dispassionate enquiry, have made out Mentil to be the father of printing in general. I. P. Lignamine places the operations of Mentil's press between the years 1458 and 1464; and says that as well as Gutenberg and Faust, Mentil printed three hundred sheets a day at Strasburg. Perhaps more fuss is made about Mentil than he merits; as his type is exceedingly indifferent, and many works bear the character of having been put forth from his press, which in fact may have been elsewhere executed. He died in the year 1478.

Orlandi gives a list of eighty-four separate works printed at Strasburg without printers' names.

1471. Christopher Valdarver, printed the first edition of Bocacio's *Decameron*.—see Roxburgh club, 1813.

1471. Florence, it appears, was not indebted to foreigners for the art of printing; for it originated with one of her own citizens. Bernard Cenninus, an eminent goldsmith; who had two sons, Dominic and Peter; they were very ingenious artificers, and the latter a scholar. The father and his two sons set about cutting punches, sinking matrices, &c. and soon completed the whole apparatus of a printing office. They began to print about the commencement of this year. The first fruits of their labour were Virgil's works, with Servius's commentaries. After the preface, which was at the end of the book, are the following words:

"At Florence VII. Ides Novemb. 1471.

"Bernard Cenninus, a most excellent goldsmith in the opinion of all men, and Dominic, his son, a youth of an extraordinary genius, having first made their steel punches, and afterwards cast their letters from them, printed this their first work. Peter Cenninus, another son of the said Bernard, hath used his utmost care in correcting it, as you see it.

"Nothing is too hard for a Florentine genius.

"FINIS."

And after, the colophon runs thus:

"Bernard Cenninus, a most excellent goldsmith, &c. (as in the last,) and Dominic his son, a youth, &c. printed this book; Peter, the son of the same Bernard, corrected it, having first compared it with the most ancient manuscripts. It was his first care that nothing should pass under the name of Servius but what was truly his, or any thing that was plain from the most ancient copies to be his, lest any thing might be maimed or wanting. But because many persons choose to write the Greek quotations with their own hands, and there were but few to be met with in the old copies, and their accents cannot be printed but with great difficulty, he thought proper to leave blank space for them. But as man can

produce nothing absolutely perfect, it will be sufficient for us if these books be found, as we heartily wish, more perfect than any other."

1471. Sixtus Russinger, a learned and pious priest, and a native of Strasburg, commenced the art of printing in the city of Naples. It is supposed that Ferdinand III. king of Naples, prevailed upon Russinger to settle in that city: for having discovered that he intended to return to his native country, he tried to divert him from it, and even offered him a noble bishopric, or any other preferment, if that could fix him in his dominions. But this venerable old man, whether out of modesty, or rather a desire of spending the small remainder of his days in his native city, refused the king's offer, and returned home loaded with the presents of that generous monarch.

The following four boastful lines were placed at the end of a volume printed by Sixtus Russinger, at Naples, in the year 1472:—

Sixtus the copies printed with much care,  
Now twice revised by Dr. Olivieri;  
The happy purchaser in vain shall look,  
Yet find no error in this faultless book.

—*Mélanges d'Histoire et de Littérature.*

Capitals and distances between the lines were first used at Naples, about this time.

1471, July 25. Died Thomas (Hamerkin) of Kempis, at Mount St. Agnes, near Zwoll, in the 91st year of his age. In a painting near his tomb he is represented as sitting in a chair, a monk on his knees before him inquires, "Thomas, where shall I with certainty find true rest?" To which he replies, "Never canst thou find certain rest, but in the cell, in the bible, and in Christ." He was the author of *De Imitatione Christi*, and many other works. His incomparable work of the *Imitation of Christ* has been translated into most European languages, and even into Chinese.

1471. Balthazar Azzoguidi, a gentleman of great learning, commenced printing in the city of Bologna, and continued to exercise the profession until 1480. His productions are all in a neat Roman character, and executed with great accuracy.

The art of printing was also introduced into the following places in 1471:—

Treviso, by Gerard de Liza, or Lissis.

Ratisbon, but by whom, is not known.

Amberg, the printer also unknown.

Colle, the printers unknown, notwithstanding their works are extant.

Paria, by Antonio de Carcano.

Spire, by Petrus Drach.

Ferrara, by Andreas Gallus, who was either a Frenchman, or of French extraction, though a citizen of Ferrara, which honour might have been conferred on him on account of his setting up the first press in that city. But whether he brought it to Ferrara from any distant place, or devised it there, it is not possible now to ascertain. Catchwords are found in a work entitled *Lilium Medicinæ*, printed at Ferrara, in 1486.

1471. For the loan of a volume of *Artemus*, a baron of France, offered a pledge of two marks of silver, which was refused; because it was not considered equal to the risk incurred of losing a

volume of Avicenna. In these times, manuscripts were very important articles of commerce; they were excessively scarce, and preserved with the utmost care. Usurers themselves considered them as precious objects of pawn. A student of Paris, who was reduced, raised a new fortune by leaving in pledge a manuscript of a body of law; and a grammarian, who was ruined by a fire rebuilt his house with two small volumes of Cicero.

1471, April 14, (*Easter Sunday*.) The battle of Barnet, between the houses of York and Lancaster, remarkable for the death of Neville, earl of Warwick, styled the *king maker*.\* As an instance of the superstition and ignorance of the age, can it scarcely be believed that on this day the earl of Warwick's forces were thrown into confusion by an unhappy mistake, in consequence of a mist, which was believed to have been raised by friar Bungay, a reputed magician. Queen Margaret, on the same day that her husband was taken prisoner at Barnet, landed at Plymouth with a body of French auxiliaries, which recalled Edward once again from his brief repose at London, to the still more fortunate field at Tewksbury, which was fought on the 4th of May, and firmly established Edward on the throne.† Eighteen days after this eventful battle Edward made his triumphant entry into the city of London, attended by queen Margaret as a prisoner. On the evening of that day, (May 22) Henry VI. was murdered in the tower of London.

Henry VI. was born at Windsor, December 6, 1421, and crowned in Paris, December 17, 1431. He married Margaret, daughter of René duke of Anjou (titular king of Naples and Jerusalem) which marriage was solemnized at Tichfield, April 22, 1445, and on May 30, she was crowned at Westminster. This princess chose for her device a *daisy*, in allusion to her name,—as expressed in French, *marguerite*.

\* The popularity and manner of living of this great Earl merits recital.—Stow mentions him coming to London in the famous convention of 1458, with six hundred men all in red jackets embroidered, with ragged staves, before and behind, and was lodged in Warwick-lane; in whose house there was often six oxen eaten at a breakfast, and every tavern was full of meate, for hee that had any acquaintance in that house, might have there so much of sodden and roast meate as he could pike and carry away upon a long dagger.

Warwick-lane took its name from its having in it the inn or house of Richard Neville, Earl of Warwick. The memory of this king-making earl was preserved by a fine stone statue, placed in the front of a house in this lane, within two or three doors of the south side of Newgate-street.

† During the turbulent factions between the Houses of York and Lancaster, the scaffold, as well as the field, was incessantly drenched with the noblest blood of England. It has been computed, that no fewer than 86000 persons lost their lives in the civil wars between the two roses; of whom were kings, two,—prince, one,—dukes, ten,—marquises, two,—earls, twenty-one,—lords, twenty-seven,—viscounts, two,—lord prior, one,—judge one,—knights, one hundred and thirty-nine,—esquires, four hundred and forty-one,—and gentry, six hundred and thirty-eight. Twelve pitched battles were fought between the parties. These unnatural wars continued from 1455 to 1485. Upon the marriage of Henry VII., of the house of Lancaster, with Elizabeth, daughter of Edward IV., of the house of York, the two houses became united.—See Shakespeare's Henry VI., p. 3.

The countenance which the study of the sacred scriptures derived from the devotional habits, and regular acts of piety of Henry VI. ought not to be forgotten. John Blackman, a Carthusian monk, observes of him, "that on ordinary days the king spent his time not less diligently, in treating of the affairs of his kingdom with his council, according to the exigency of the case; or else in reading or writing chronicles." And Richard Tunstall, formerly his faithful chamberlain, gives the following testimony concerning his master: "When I was with him in his palace at Eltham alone engaged with him in his books, and listening to his salutary admonitions, and the breathings of his profound devotions, for being interrupted by a knocking at the royal gate, by a certain powerful duke of the realm; the king said, 'they so disturb me, that I can scarcely snatch time to refresh myself either by day or night, with the reading of any sacred doctrines, without being interrupted with some noise or other.'" The inconsistency of Henry has already been noticed, of his persecuting his subjects to death for reading those "sacred doctrines" from which he himself derived so much consolation. Henry was more fitted for the cloister than the throne. He was a munificent patron to the universities of Oxford and Cambridge; besides being the founder of Eton.

The circumstance of their being rival candidates for the crown was favourable to the free form of our government. Our princes, in a situation so critical, being perpetually liable to be cast down from the throne, and standing in need of the support of as many of their subjects as possible, could not make, in general, those strides in unjust and arbitrary power which they probably would have done if their claims and their authority had been firmly established. The constitution was not indeed greatly altered in this age, and it must be allowed that many irregularities were permitted to continue; but yet some advantageous changes were introduced. The rights and qualifications of electors, especially of freeholders, were more accurately ascertained; and the method of enacting laws was conducted with a precision, an order, and solemnity which had not hitherto been observed. Edward IV. from his intimate connexion with the court of Burgundy, had opened his mind to a discernment of the benefits of commerce. Hence he became himself one of the greatest merchants in Europe, and passed many excellent acts for the regulation and encouragement of trade and manufactures.

Though knowledge in general was in a low state during this period, various measures were pursued which contributed to its future advancement. Among the patrons of learning two names in particular must be mentioned of great and eminent merit. These are John Tiptoft, earl of Worcester, and Anthony Widville, earl Rivers, brother to the queen of Edward IV. Nor were these noblemen not only the protectors and promoters of science and literature, but they were writers themselves.

John Tiptoft studied at Baliol college, Oxford,

where his rapid progress in knowledge excited much admiration. Having been some time employed in public affairs, he quitted them in order to travel abroad for further improvement. After he had travelled so far as the Holy Land, he came to Italy, where he resided three years, and devoted himself entirely to the pursuit of letters. Horace Walpole remarks, that whatever disputes there may be about his titles in the state, there is no doubt but he was anciently at the head of literature, and so masterly an orator, that when upon a visit to Rome, he drew tears of joy from the eyes of pope Pius II. (the celebrated Eneas Sylvius,)\* through a curiosity of the Vatican library. He expended large sums in collecting books; and upon his return to England he presented as many writings and books to the university of Oxford, which had cost him five hundred marks, upwards £330 a large sum at this period. The light in which he is now only known to us by his own works, is that of a translator; and from his choice in this respect it appears that he had a classical knowledge and taste. Of his original productions no more than a few letters and small pieces are remaining in manuscript. From certain rules, orders, and statutes, which he drew up, by the king's commandment, when constable of England, it is evident that he was well acquainted with the regulations and laws which respected justs, tournaments, and triumphs. His fondness for literature, and perhaps his political opinions, both being zealous Yorkists, brought him acquainted with Caxton. When Edward IV. was obliged to abandon his kingdom in order to save his life, in October, 1470, the earl of Worcester was taken and beheaded on tower-hill, on the 15th of that month. Caxton speaks in warm and affectionate language of him. "In his time," he says, "he flowered in vertue and cunning, and to whom he knew none lyke among the lords of the temporality in science and moral vertue." Again: "O, good blessed Lord God! what grete loss was it of that noble, vertuous, and well-disposed lord; and what worship had he at Rome in the presence of our holy fader, the pope; and so in all other places unto his deth, at which deth, every man that was there might lern to die, and take his deth patientlye."

Equal in birth and accomplishments, and superior in alliance and military exploits, was Archbishop Widville, earl Rivers. He does not seem to have had the same advantages of education and improvement that were enjoyed by the earl of Worcester. But whatever these were, he made the best use of them, and amidst all the tumults of the times, never lost sight of the

pleasure derived from the pursuit of literature. It was greatly to his honour that he was the friend of Caxton, whose new art he patronized with zeal and liberality. The second book which Caxton printed in England was a work of this accomplished and amiable nobleman's. Caxton gives the following account of him and his works. "The noble and virtuous lord Anthoine, earl Rivers, lord Scales and of the Isle of Wight, under governor to my lord Prince of Wales, notwithstanding the great labour and charge that he hath had in the service of the King and of the said Lord Prince, as well in Wales as in England, which hath be to him no little thought and business both in sprite and body, as the fruit thereof experimentely (sheweth; yet, over that, t'enrich his virtuous disposicion, he hath put him in devoyr, at all times, when he might have a leisure, which was but startmele, to translate divers works out of French into English. Among other passed through myn hand, the book of the *Wise Sayings or Dictes of Philosophers*,\* and the wise holsum *Proverbs of Christine of Pise*, set in metre. Over that, he hath made divers balads agens the seven dedly synnes.† Furthermore he took upon him the translating of a work named *Cordiale*, trusting that both the reders and the hearers thereof should know themself hereafter the better, and amend their lving." The dreadful catastrophe of this nobleman is well known..

\* Rivers, Vaughan, and Grey.

Ere this, lie shorter by the head at Pomfret."

Earl Rivers was beheaded at Pontefract, in Yorkshire, on the 13th of June, 1483.

Imperfect as the writings of Tiptoft and Widville may now be deemed, great praise is due to them for their zealous endeavours to promote the cause of learning, and to spread among their countrymen a regard to mental accomplishments. The example of men so illustrious could not fail of producing some good effects. It must ever be lamented that these two highly distinguished noblemen met with so untimely and unhappy an end; both of them having been beheaded when they were little more than forty years of age. If their existence had been prolonged to the natural term of human life, it is highly probable that they would have rendered very essential services to the interests of science and literature.

Another promoter of literature, that deserves to be recorded, is Grey, bishop of Ely, who proved a most noble benefactor to the university of Oxford. In 1454, he contributed largely to the

\* A manuscript of Lord Rivers's translation of this work, with an illumination representing him introducing Caxton to Edward IV. his queen, and the prince, is preserved in the Archbishop of Canterbury's Library, at Lambeth Palace.

† These ballads are supposed to be lost; but John Rouse, of Warwick, a cotemporary historian, has preserved a short poem of the Earl. Rouse seems to have copied it from his hand-writing; it was written during his confinement in Pomfret Castle, a short time before his death in 1483; and, as Dr. Percy justly remarks, "gives us a fine picture of the composure and steadiness with which this stout Earl beheld his approaching fate."

It is printed in Percy's *Reliques of Ancient English Poetry*, vol. II. p. 44; and in Ritson's *Ancient Songs*, p. 87.

\* Pope Pius II. was born at Corsignano on the 18th of October, 1405, and died at Ancona on the 14th of August, 1464. The letters of Eneas Sylvius, who was advanced to the papal chair under the name of Pius II. abound in curious and interesting particulars. They are in number ecccivii: many of them written before his elevation to the pontificate. He was a learned man, who before his exaltation thought, spoke, and wrote with a degree of liberality which excited great expectations. But these the pontiff completely disappointed.

support of Baliol college, not only in money for the building, but in adding to the library a collection of about two hundred manuscripts, many of them richly illuminated, which he purchased in England and Italy. In the latter country he employed transcribers and illuminators, as appears by some of his manuscripts still in this library. The illuminations were chiefly executed by Antonius Marius, an "exquisite painter," of Florence, during the bishop's residence in that city. On most, if not all of the manuscripts, the donor's arms were fastened, painted on vellum, and covered with pieces of thin horn, to prevent their being torn or defaced.—*Chalmer.*

The following catalogue of the library of John Paston, a gentleman of this period, may serve to shew what kind of books were then in use. Made the 5th day of November, in the ..... year of the reign of Edward IV.—From Burnett's *Specimens of English Prose Writers*.\*

1. A book had of my hostess at the George, of the Death of Arthur, beginning at Casibelan.  
Gay Earl of Warwick.  
King Richard Cœur de Lion.  
A Chronicle to Edward III, price ...
  2. Item. A Black Book, with the Legend of Lady sans Merce.  
The Parliament of Birds.  
The Temple of Glass.  
Palatye, and Sciatus.  
The Meditations of .....  
The Green Knight ..... worth
  4. Item. A book in prints of the play of .....
  5. Item. A book lent Middleton, and therein is  
Belle Dame sans Merce.  
The Parliament of Birds.  
Ballad of Guy and Colbrand.  
..... the Goose, the .....  
The Disputing between Hope and Despair.  
..... Merchants.  
The Life of Saint Cry .....
  6. Item. A red Book, that Percival Robeart gave me, of the Meeds of the Mass.  
The Lamentation of Child Ispis.  
A Prayer to the Vernicle, called the Abbey of the Holy Ghost.
  7. Item. In quires, Tully de Senecute, in diverse whereof there is no more clear writing.
  8. Item. In quires, Tully or Cypio (Cicero) de Amicitia, left with William Worcester ..... worth
  9. Item. In quires, a Book of the Policy of T. ....
  10. Item. In quires, a Book de Sapientia, wherein the second person is likened to Sapience.
  11. Item. A Book de Othen (on Wisdom) text and glose, worth in quires .....
- Memorandum. Mine old Book of Blazonings of Arms.  
Item. The new book portrayed and blazoned.  
Item. A Copy of Blazonings of Arms, and the names to be found by letter (alphabetically.)  
Item. A Book with Arms portrayed in paper.  
Memorandum. My Book of Knighthood, and the manner of making of Knights, of Justs, or Tournaments; fighting in lists; places holden by soldiers; challenges; statutes of War; and de Regimine Principum, worth .....
- Item. A Book of new Statutes from Edward IV.

Having endeavoured to show the low state of knowledge during the various periods on which we have treated, various measures were pursued

\* It is written on a scrap of paper, about seventeen inches long, and has been rolled up; by which means, one end, having been damp, is entirely decayed; so that the names of some of the books are imperfect, and the then price or value of all of them, is not now to be discovered. It gives an account of all the books he had, as it mentions those which were lent out at the time the catalogue was made. It contained only one book in print, the rest being manuscripts. An account of most of them is to be found in Warton's *History of English Poetry*, and some of them, when afterwards printed, in Mr. Herbert's improved edition of Ames's *History of Printing*.

at this time which contributed to its future advancement, we shall conclude this article with a brief account of the erection of public seminaries of education, during this century.

At Oxford, Richard Fleming, bishop of London, founded Lincoln college. The particular design of it was to provide for a rector and seven scholars, who were to make controversial divinity their study, and to be capable of defending the church against the heresies of the disciples of Wiclif. Bishop Fleming died January 25, 1431, and was buried at Lincoln. Thomas Scot, of Rotherham, one of Fleming's successors in the bishopric of Lincoln, completed the building, and thus was esteemed its second founder.

To Henry Chicheley, archbishop of Canterbury, Oxford, is indebted for All Souls' college, which was founded in 1437. It was instituted for a warden and forty fellows, who were to pray for the souls of those who had fallen in the French wars, and for the souls of all the faithful who had departed this life. Hence the college derived its name. Archbishop Chicheley died April 12, 1443, and was buried at Canterbury.

Magdalen college was founded by William Patten, better known as William of Waynflete, bishop of Winchester and lord chancellor, in the year 1457. This college is bound by its statutes to entertain the kings of England and their sons when at Oxford, whence its hall has often been the scene of royal and princely festivities. There is an oak at Oxford, called *Waynflete's oak*. He died in the year 1486.

Three similar establishments were formed, in the same age, at the university of Cambridge.

King's college was founded by Henry VI. The original plan was very magnificent, but the execution of it was prevented by the calamities in which that Prince was involved. Eton school, the parent of so many eminent scholars, was instituted by Henry as a nursery for King's college.

Margaret, the high-spirited consort of this monarch, did not, in the midst of her political engagement, forget the cause of literature. She was the foundress of Queen's college, which, however, from the misfortunes that soon came upon her, would have been in danger of perishing in its infancy, had it not been preserved by the attention and zeal of Andrew Duckett, its first president. This worthy man, who continued in his office forty years, obtained so many benefactions for the college, that he is justly considered as having rescued it from destruction.

Katharine Hall owes its institution to Robert Woodlark, third provost of King's college. During this period the new schools, as they were then called, were erected at Oxford, by Thomas Hokenorton, abbot of Osney. About the same time, the foundation was laid in that university, of the magnificent divinity schools and library.

Though the universities of Oxford and Cambridge had so long subsisted in England, nothing of the like kind had hitherto taken place in Scotland. The natives of that country, who devoted themselves to the pursuit of learning, were obliged to seek for instruction in foreign parts. But,

in the beginning of the fifteenth century, a few men of letters at St. Andrew's\* voluntarily and generously engaged to teach the sciences usually taught, to such as choose to receive their instruction. The names of the persons who first set on foot so laudable a design deserve to be recorded. They are Laurence Lindores, Richard Cornel, John Lister, John Chevez, William Stephen, John Gyll, William Fowles, and William Croiser. Peter Lombard's Sentences, the Civil and Canon Law, Logic and Philosophy, were the subjects of the lectures. Henry Wardlaw, bishop of St. Andrews, who had probably been an original favourer of the scheme, was so highly pleased with the prospect of its success, that he granted a charter, declaring the city to be an university for the study of Divinity, Law, Medicine, and the liberal arts. This charter, agreeably to the ideas of the time, was confirmed by the Pope. That admirable Prince, James I.† of Scotland, when he obtained the possession of his crown, soon took notice of the new institution. He gave the members of it many marks of his favour, and sometimes attended their public acts and disputations. Ecclesiastical dignities and benefices were bestowed by him on the most prominent professors; and such of the scholars as distinguished themselves by their literary progress, he noted down for future preferment. St. Andrew's, though the mother university of Scotland, is inferior to the others in the number of its pupils: the young persons who are sent thither being usually, we apprehend, intended for divinity. In the characters and abilities of its professors it hath always sustained an honourable reputation; and some of them have been of no small note in the learned world. In 1458, bishop Kennedy founded St. Salvator's college in the university. The bishop died in 1466, and was buried in the church of St. Salvator, in a most beautiful tomb of gothic workmanship.

The establishment of an university in St. Andrew's, excited the zeal of William Turnbull, bishop of Glasgow, to have an university in the latter city. Accordingly he obtained an ample bull from the pope, for his purpose, which was no sooner brought over than the design was carried into execution. King James II.‡ of Scotland, by letters patent under the great seal of this kingdom, took the university of Glasgow under his special protection, and bishop Turnbull granted it by charter, a variety of powers and privileges, still, however, at its commencement, its endowments and revenues were very small. The first valuable benefaction was derived from the noble family of Hamilton. James, lord Hamilton, and Euphemia, countess of Douglas, his lady, gave a tenement for the accommodation of the regents and students, with four acres of ground adjacent. The motive appears to have been superstitious, but the gift was useful.¶

\* St. Andrew's University, see 1411, ante.

† James I. see 1437, ante.

‡ James II. king of Scotland, he with the *fiery face*, was killed by the burning of a gun on the 3rd of August, 1460. He was in the 29th year of his age, and 24th of his reign.

¶ Dr. Kippis's *History of Knowledge*, &c.

1471. The first book known to be printed in English, and by Caxton, is generally supposed to be a work entitled *Recuyell of the Histories of Troy*, which he printed at Cologne; but he had printed there, at least, two works before that; the original of the *Recuyell*—a work unknown to German bibliographers—in 1464-7; and the oration of John Russell, on Charles, duke of Burgundy, being created a knight of the garter in 1469. The existence of this was unknown till the year 1807, when it was discovered at the sale of Mr. Brand's books. No other book printed by Caxton at Cologne, has been discovered; but that he printed there *Bartholomæus de Proprietatibus Rerum*, is plain, from Wynkyn de Worde, (see 1491.) This is the only instance of Caxton's having printed a Latin work, and would seem to imply some knowledge of that language.

Caxton's worthy patroness, the duchess of Burgundy, urged him to undertake the translation of this work into English. It seems to have been projected by her, with a design to introduce the art of printing into England whenever a favourable opportunity should offer.

The little knowledge which Caxton had acquired of the French tongue, and his partial forgetfulness of the English, after a residence in foreign parts of nearly thirty years, led him to think himself but badly calculated for such an undertaking. His patroness, however, urging him to begin, he entered on his work, though with much reluctance; but after proceeding a little way in his translation, he dropped it altogether for nearly two years. The duchess at length sent for him, to inquire into the progress he had made, and to read what he had translated. "In 1469," he says, "having no great charge or occupation, and wishing to eschew sloth and idleness—which is the mother and nourisher of vices—having good leisure, being at Cologne, I set about finishing the translation. When, however, I remembered my simpleness and imperfections in French and English, I fell in despair of my works, and after I had written 5 or 6 quairs, purposed no more to have continued therein; and the quairs laid apart; and in two years after laboured no more in this work: till in a time it fortune'd lady Margaret sent for me to speak with her good grace of divers matters, among the which I let her have knowledge of the foresaid beginning. The duchess," he adds, "found default in myne English, which she commanded me to amend, and to continue and make an end of the residue, which command I durst not disobey." The duchess rewarded him liberally for his labour. In his prologue and epilogue to this work, he

\* In the court of Burgundy, he became intimate with Raoul le Fèvre, chaplain to the duke, whose *Recuyell of the Histories of Troy*, he translated in 1466, and published his English version in 1471. The original was the first book printed by Caxton; it bears date 1464-7. It is amply described by Mr. Dibdin, in his *Typographical Antiquities*, Vol. I. The "Oration of John Russell, on Charles Duke of Burgundy being created a Knight of the Garter (1469)," was the second. and the translation of the former was the third book which issued from his press.—*Horne*, p. 188.

mentions that his eyes are dimmed with over much looking on the white paper; that his courage was not so prone and ready to labour as it had been; and that age was creeping on him daily, and enfeebling all his body;—that he had learnt and practised at great charge and dispense to ordain the said book in print; and not written with pen and ink, as other books be.

On the back of the title, which is printed in red ink, is the following prologue:\*

"*Whan I remembre that every man is bounden by the commandment & counceyll of the wyse man to eschewe southe and ydleness whyche is moder and nourysshur of ryces and ought to put my self into vertuous occupacion and beynesse. That I haveynge no grete charge or occupacion followyng the sayd counceyll take a frenshe boke and redde therein many straunge meruoullous histories where in I had great pleasur and delyte.*" &c.

After informing us that he thought he understood 'the sentence and substance of every matter,' he proceeds,

"*And afterwarde whan I remembred my self of my synples and imperfytines that I had in bothe languages, that is to wete in frenshe and in englishe for in france was I neuer, and was born and lerned myn englishe in kente in the weald where I doubt not is spoken as brode and rude englishe as is in ony place in England and have contynued by the space of xxx. yere for the most part in the contres of Brabant, flandres holand and zeland and thus whan alle thyse thynges cam to fore me after that y had made and wretyn a fyve or six quayers. y full in dyspayr of thys werke and perdon no more to have contynuyd therein and the quayers leyd a part and in two yere after laboured no more in thys werke And was fully in wyll to have lefte hyte. tyll on a time it fortuneth that the ryght hygh excellent and right vertuous prynces my right redoughed lady my lady Margarete by the grace of god nuster into the kynge of england and fraco, &c. sente for me to speke wyth her good grace of diuerse maters among the whych y let her hyenes have knowleche of the foresaid begynnyng of this werke anone comanded me to shewe the sayd. v. or. vi. quayers to her sayd grace and whan she had seen hem. anone she fonde defaute in myn englishe whiche sch comaded me to amende ad more ouer comanded me straitly to contynue and make an ende of the resydue than not imolated. whos dredfull comademnt y durste in no wyse disobey because y am a seruant unto her sayd grace and reserue of her yerly ffec and other many goode and grete benefets, &c. &c.*"

"*Thus ende I this booke whyche I have translated after myn auctor as nyghe as god hath gyuen me cunnyng to whom be gyuen the laude and preyng,*

*And for as moche as in the wrytting of the same my penne is worn, myn hande very & not steadfast myn eyen dimed with overmoche lokyng on the whit paper, and my corage not so prone and redy to labour as hit hath been, and that age crepeth on me dayly and feebleth all the bodye, and also be cause I have promysyd to dyuerce gentilmen and to my frendes to addresse to hem as hastily as I myght this sayd booke, Therfor I have practysed & lerned at my grete charge and dispence to ordeyne this sayd booke in prynte after the manner & forme as ye may here see, and is not wretton with penne and ynke as other booke. ben, to thende that every man may have them attones, ffor all the booke of this story, named the Recule of the histories of Troyes thus enpryuted as ye here see were begonne in oon day, and also fynyshe in oon day,\* whiche booke I presented to my sayd redoughed lady as a fore is sayd. And she hath well acceptid hit. and largely rewarded me, wherfore I beseeche almyghty god to rewarde her ewerlastyng blisse after this lyf," &c.*

He then concludes,

"*And also as for the propre names, hit is no wonder that they acorde not, ffor some oon neme in thyse dayes have dyuerce equyuoacions after the contrees that they dwelle in, but alle acorde in conclusion the generall destruction of that noble cyte of Troye, And the deth of so many noble prynces as kynge dukes erles barons. knyghtes and comyn peple and the ruynes irreperable of that cyte that neuer syn was reedefyd which may be ensample to all men duryng the world how dredfull and leopordous it is to begynne a warre and what harmes. losses. and deth followeth. Terfore thapostle saith all that is wretton is wretton to our doctrine, whyche doctrine for the comyn wele I beseeche god may be taken in suche place and tyme as shall be moete nedefull in encreynging of peas lous and and charyte whiche graunte us he that suffryd for the same to be crucyfyed on the rood tree, And saye we alle Amen for charyte."*

1472. Nuremberg received the art of typography, from Anthony Koburger, a person conspicuously eminent for his learning, as well as for his elegance and correctness in printing. He was styled the prince of printers. Frederick Pistorius assisted him in correcting the press.

\* Upon this expression Herbert makes the following remark:—"This seems calculated to appear the more marvellous to those who did not well understand the method of printing; as if the books had all been completed in one day."

† Mr. Dibdin here asserts this to have been the first book which was printed in the English language—

"This is the first book printed in the English language. Herbert says it was 'not printed in England, yet being printed by Caxton, and being full of information, Mr. Ames began with it, and hoped that it would be favourably received.' In his additions [p. 1705] he properly observes, that 'it is without initial capital letters, signatures, catch-words, numerals or figures to the leaves or pages: but it contains 778 pages, as told over by Mr. Bandal Minshull, library keeper to the late Earl of Oxford, who published, about the year 1710, *Proposals for printing by subscription, an account of all the books printed by William Caxton, who was the first printer in England,*" &c.

Can we possibly have stronger proof in favour of Caxton being our first printer, than the above observation of the learned librarian? Would the Earl of Oxford have countenanced such an assertion, if the city of Oxford had had a prior claim to the merit of the first English press?

\* We conceive that no better apology can be given for presenting this abstract of the monument which Caxton reared by his indefatigable industry, in its original dress, than the following observation of the learned and most skilful antiquary, the editor of the *Most Noble Order of the Garter*:—"It is hoped that those extracts which the reader will find here made from the writings of Caxton and others, will not be disapproved because they are inserted in their primitive spellings and obsolete terms, which like the precious rust of medals, are marks both of the antiquity and genuineness."

He spared no cost nor pains in procuring the best manuscripts, and always desired the judgment of the learned before he ventured to print them. The great Jodocus Badius says that he was indefatigable in printing the best copies faithfully, neatly, and correctly. And John Andreas Endters affirms that he kept daily twenty-four presses at work, and employed no less than an hundred journeymen, whom he maintained without doors. They had a set hour to come to work and to leave off: he admitted none individually into his house, but obliged them to wait at his door until they were all together, and they were admitted, and entered upon their respective employments.

He was likewise a considerable bookseller, and kept a spacious printing-house at Lyons, in France, where he had sundry law-books printed. He had, besides, factors and agents in every considerable city in Christendom, and kept sixteen open shops, with a vast number of warehouses: all of which were stocked with the most correct editions published. Almost all his books relate to the canon law, and to theology; and are distinguished for the lustre and magnificence of their execution. Of thirty-seven editions printed by him, thirteen are of the Bible, viz. twelve in Latin, and one in German, all in folio. Most of the Latin editions were accompanied with the postills of De Lyra. But his most superb work was the edition of the *German Bible*, which he printed in 1483, folio. This is said to be the first *German Bible* printed at Nuremberg; and is pronounced by Lichtenberger to be the most splendid of all the ancient German Bibles. It is embellished with impressions from the very curious wood-cuts which had been previously used for the Cologne edition of the Bible, printed by Quentel, in 1480, and which were also employed in the Bible printed at Halberstadt, in the Low Saxon dialect, in 1522: and it is worthy of remark, that in one of the large wood-cuts employed by Koburger, the pope is introduced as being the principal of the fallen angels! The paper, characters, press-work,—all concur to prove this Bible a masterpiece of typographical excellence.

1472. The art of printing was introduced into the following places in this year:—

John de Verona set up a printing-press in the city of Verona.

Parma received the art of printing from Stephen Corali.

George and Paul de Burschbach introduced printing into Mantua.

Richard Pafradius, at Derventer.

Padua received it from Bartholomew de Val de Zachio.

Alost, in Flanders, received the art by Theod. Martens; followed by John de Westphalia.

1473. Gunther Zainer is considered as having introduced printing into Augsburg; unless that honour should be conceded to John Bemler, who is supposed to have been the printer of a *Latin Bible* in 2 vols. fol. in 1466. From De Murr we learn, that in an old book of entries of

benefactors to the Carthusian monastery at Buxheim, there is one of the date of 1466, in which the name of Gunther Zainer occurs, as the printer and donor of certain works, and among others of "the Bible in the vulgar tongue," (German,) "in super-royal form." Another entry informs us of the death of Gunther Zainer in 1478—"impressor librorum, civis Augustensis benefactor huius domus," "printer of books, citizen of Augsburg, benefactor to this house."

1473. Melchior de Stamham, wishing to establish a printing office in the abbey of St. Ulrich, at Augsburg, engaged a skilful workman of the same town, of the name of Saurloch. One whole year was occupied in making the necessary preparations. He bought of John Schnesseler five presses, which cost him seventy-three Rhenish florins (about two hundred and ninety livres of the present value;) he constructed with these materials five other smaller presses: cast pewter types, and commenced printing in the year 1474. The *Mirror of Vincentus de Beauvais*, was the first fruit of his press; but he died shortly after the completion of the third part of it. He had spent not less than seven hundred florins in establishing his office, and putting matters in a train for work. His successor, Henry de Stamham, finding the concern greatly involved sold the three parts of the *Speculum* for twenty-four florins.—*Lambinet, cited by Dibdin.*

Almanacks compiled nearly in their present form by John Muller, otherwise Regiomontanus, a printer at Nuremberg.—see 1476.

1473. In this year Pierre Caesaris and Jean Stol, both also natives of Germany, and instructed by Gering, established in the city of Paris the second press: and with him became the instructors of many other artists, who in succeeding years exercised there the same profession.

It is doubtful to whom the merit of inventing printing ink should be ascribed; most writers ascribing the invention to Gutenberg, some, however, give the merit to Polydore Virgil. Many experiments doubtless were made before ink of a proper substance and quality was discovered, to which circumstance the following lines probably allude, which are found at the end of the *Decretals* printed by Schoeffer, at Mentz, in the year 1473.

*Aut atramentum probat hoc non esse caducum  
Cerotumque rapax, aut cineris aqua,  
Quamlibet in fluida carta non liquitur unda  
Tetra, neque astior hoc fatis in arte liquor.*

1473. Printing introduced into the following places during this year:—

Brescia, by Thomas Ferrandus.

Messina, by Henry Alding.

Ulm, by John Zainer, of Reutlingen.

Buda, received the art by Andrew Hess.

Laugingen, printer's name not known.

Merseburg, by Lucas Brandis.

Utrecht, by Nicholas Ketelaer and Gerard de Leempt.

Lyons, by Bartholomew Buyer.

S. Ursio, a small place near Vicenza, by Joannes de Rheno.

1474. Vallis Sanctæ Mariæ, the art first practiced by the Fratres vitæ communis. Santander conjectures this place to be Marihausen, a convent of the brethren of the common life, situated in the Rhingau, a territory belonging to Mentz. This order was instituted by Gerard de Groot, under the rule of St. Augustine; they were bound to transcribe the works of the fathers and other ecclesiastical authors; and when the art of printing deprived them of the means of subsistence, they applied themselves to the practice of the art.

1474. Valencia is conjectured to be the city where the art of printing was first exercised in the kingdom of Spain. The earliest work printed there, of which the date has been ascertained, was *Obres, o Trobes les quales tracten de las hors de la Sacratissima Verge Maria*, &c. 1478. 4to. The printers were A. F. de Cordova and L. Palmart.

The number of books printed in Spain, during this century, was three hundred and ten. These appeared chiefly at Barcelona, Burgos, Salamanca, Saragossa, Seville, Toledo, and Valencia; and were principally executed by Germans.

1474. John de Cologne and John Manthen de Geretzen were printers at Venice soon after the Spiras, and appear to have been equal to any of their cotemporaries; but they likewise fell into the Gothic way of printing. From an inscription affixed to their edition of *Valerius Maximus*, printed in this year, they appear to be booksellers, and not printers; for they inform the reader, that they had given this work to be printed by men hired for that purpose. Yet all the works that came from their press, or were printed for them, do them infinite credit.

Breviaries were first printed at Venice, in this year, by James de Rubeis.

It is worthy of being noticed, that the dates given by early printers to their works being so confused, that it is scarcely possible to ascertain the exact date of any book. It has, however, been my endeavour to give them as correct as possible, being chiefly taken from Santander, who is acknowledged as the best authority.

The following places received the art of printing in the year 1474:—

Vicenza, by Leonardus Achatas, of Basle.

Como, by Ambr. de Orcho and Dion. de Pavinio.

Turin, by John Fabri and Joanninus de Petro. Genoa, by Matthias Moravus and Mic. de Monacho.

Savona, by John Bon (Bonus Johannes.)

Esslingen, by Conradus Fyner.

Basle, by Bernardus Richel and Bertoldus Rodt.

Louvain, by Johannes de Westphalia.

Westminster, England, by WILLIAM CAXTON.

The man to whom we are indebted for bringing the noble art of PAINTING into the kingdom, is WILLIAM CAXTON, this fact is corroborated by the testimony of most of our ancient writers; and must be still conceded to him by every impartial person who will take the trouble to investigate the subject.

It is not surprising therefore, that Caxton hath attained a high reputation, and that he hath been esteemed an eminent benefactor to his country. His praise stands upon a firm foundation; and his memory may be reflected upon with the greater pleasure, as he appears to have been a person of uncommon worth and modesty.

O Albion! still thy gratitude confess  
To Caxton founder of the BRITISH PRESS;  
Since first thy mountains rose, or rivers flow'd  
Who on thine isles so rich a boon bestow'd?  
Yet stands the chapel in yon gothic shrine,  
Where wrought the father of our English line;  
Our art was half'd from kingdoms far abroad,  
And cherish'd in the hallow'd house of Gon;  
From which we learn the homage it received  
And how our sires its heavenly birth believ'd;  
Each Printer hence, howe'er unblest his walls,  
E'en to this day his house a Chapel\* calls.—*M<sup>c</sup>Creery.*

The lives of some men supply scanty materials for private and personal biography; whereas the materials that connect them with the advancement of the human race in knowledge, civilization, and happiness, are in no common degree, rich and interesting. Such is the life of William Caxton, and many others of his profession, whose lives have been selected in this work. Very few of the events of Caxton's life are known; and it is highly probable that, if we had them in minute detail, they would have presented nothing very curious or very instructive—nothing that will justify us in searching into every minute particular, an account either of the insight it affords into the formation of the human mind and character, or of the impressive or practical lesson it teaches, that, in moral conduct, as certainly in the material world, like causes will always produce like effects. Such lives as give this insight, and teach by powerful and repeated examples this most important, but too often neglected truth, are certainly of the highest utility as well as interest: they give biography a just claim to be ranked above all other studies, in so far as it teaches, most emphatically, that close attention, and persevering and zealous industry, are absolutely necessary for the acquisition of knowledge, and that these qualities, united with probity, are equally necessary to our success in the world, and to our usefulness and respectability in society.

The biography of such men as Franklin, Richardson, the Bowyers', Nichols, the Strahans', Bulmer, Hansard, Smellie, Faulkner, Bensley, and many others whose lives have contributed to the improvement of the human race must always command interest, because they convey useful information and moreover they come before us in the character of authors, as well as that of printers, and whose labours have been received by the world with no small degree of applause.

Considering the low state of literature in England at this period, the translations from

\* The title of *Chapel* to the internal regulations of a printing office, originated in Caxton's exercising the profession in one of the chapels in Westminster Abbey, and may be considered as an additional proof, from the antiquity of the custom, of his being the first English printer.—*M<sup>c</sup>Creery.*

Foreign writers, by Caxton, with whatever indifference we may now look upon them, were works of consequence. It is to be remembered, that the literature of the time consisted principally of translations. The French for a century or two before, employed themselves in rendering into their own tongue a number of productions, then held in estimation, chiefly Latin, upon different subjects, religious and civil. These translations, though the originals were in prose, were often done in metre. Even some of the classics were rendered into French. This circumstance, which was comparatively a great improvement in the learning of that nation, had its effects in England. Caxton, therefore, was very usefully employed in becoming a translator. By himself, or the aid of his friends, a considerable number of pieces were turned into English, and being printed by him, enriched the state of letters in this country with many valuable publications. Virgil, Ovid, Cicero, and many other eminent writers, were circulated in our own language immediately after the introduction of the art of printing. The garb indeed, in which they appear, was very mean when compared with their native dress; but still the introduction of them, even in so imperfect a form, could not fail of being attended with a desirable accession to the knowledge and taste of Englishmen.

The following tribute to the memory of Caxton, is from the pen of Ebenezer Elliot, the talented author of *Corn Law Rhymes*, and other works.

#### TO CAXTON.

Lord! taught by thee, when Caxton bade  
His silent words for ever speak;  
A grave for tyrants then was made—  
Then crack'd the chain which yet shall break.

With study worn, the all-scorn'd man  
For bread, for bread, his press prepared;  
He knew not, Lord! thy word'rous plan,  
Nor why, nor what, he did and dared.

When first the might of deathless thought  
Impress'd the far-instructing page—  
Unconscious giant, how he smote  
The fraud and force of many an age.

Pale wax'd the harlot, fear'd of thrones,  
And they who bought her harlotry;  
Thy printer shook the throned on bones,  
And *shall* all evil yet to be.

The power he grasp'd let none disdain,  
It conquer'd then and conquers still;  
By fraud and force assail'd in vain,  
It conquer'd then and ever will.

It conquers *Aere*! the fight is won!  
We thank thee, Lord! with many a tear;  
For many a not unworthy son  
Of Caxton does thy bidding here.\*

We help ourselves—thy cause we aid;  
We build for heaven, beneath the skies;  
And bless thee, Lord, that thou hast made  
Our daily bread a tyrant's sighs.

William Caxton, (the subject of our enquiry) was born according to his own statement, in the weald, or woody part of Kent. With respect to the date of his birth, we are left to surmise. Oldys states the year 1412. In his works he expresses his gratitude to his parents for having caused him to be instructed in his youth, and

thereby "to get his living truly." He observes, respecting the place where he received the rudiments of his native language, that "it was spoken as broad and rude as in any place in England;" but it is most probable that he finished his education in London, which city he calls "his mother; of whom he had received his nurture and living."

Lewis and Oldys conjecture that he was put apprentice, (between his fifteenth and eighteenth year,) to one Robert Large, a mercer, or merchant of considerable eminence: who was afterwards successively elected high sheriff and lord mayor of London. According to Bagford, "mercers in those days were general merchants, trading in all sorts of rich goods." Amongst other commodities, books were included, which the mercers either purchased in manuscripts, or caused to be printed at their expense.

Whatever were the traits of his juvenile character, we may conclude that he conducted himself to his master's satisfaction; who, on his death, in 1441, bequeathed our printer a legacy of "twenty marks," which Lewis considers a great sum in those days, and a proof of his good behaviour and integrity. Thus freed, by the death of his master, from all obligation to continue in the same line, (although he had become a sworn freeman of the company of mercers),\* either curiosity or speculative projects induced him to quit England for the Low Countries. Lewis informs us, that he travelled as an agent or factor for the company of mercers; Oldys attributes to him both talent and occupation; and Palmer, that he was an accomplished merchant, and had acquired a great deal of politeness.

It is certain, that he was joined in a commission, in 1464, with one Richard Whitehill, "to continue and conclude a treaty of trade and commerce between Edward the IV. and Philip duke of Burgundy; in this document they are styled "ambassadors and special deputies." Seven years after, he describes himself as leading rather an idle life; "for having no great charge or occupation, and wishing to eschew sloth and idleness, which is the mother and nourisher of vices;" moreover "having good leisure, being in Cologne;" he sat about finishing the translation of Raoull le Fevre's *Recuyell des Histoires de Troye*; he began this two years prior, 1469.

We are little acquainted with his pursuits and travels abroad, he informs us, that he confined himself "for the most part to the countries of Barbant, Flanders, Holland, and Zealand: and in France was never! He appears to have preserved that respectable character in foreign countries which he had acquired in his own; he indulged his literary passions in the perusal of histories and romances, to which he was excited by his "venerable" friend Bolomyer.

\* This *Ode* was written for the anniversary of the Sheffield Typographical Society, January, 1832.

\* It is pretty certain, says Mr. Dibdin, that mercers, in the time of Caxton, were general merchants, trading in all kinds of goods, and that they united a love of literature and a love of books with their other multifarious concerns. Hence, probably, Caxton acquired his passion for books and learning—a passion which never seems to have deserted him.

The Low Countries were this at period the great mart of Europe, in which were to be purchased, at all times, and in great abundance, the produce and manufactures of most parts of the world. Treaties of commerce between England and them were frequently made and broken; and it required not only considerable knowledge in commercial affairs, and in the relative commercial wants and advantages of the two countries, but also a sound judgment, and much circumspection and prudence, to make or renew them.—Merchants seem to have been generally employed on these occasions; and we may reasonably conjecture that Caxton's character and experience, as a merchant, and his long residence in the Netherlands, pointed him out as a fit person for this embassy.

On the marriage of lady Margaret to Charles duke of Burgundy,\* his majesty placed Caxton upon her house establishment: the situation he filled is not known: Lewis says that it could not be a mean one, because her grace requested him to correct his English: Oldys thinks that he was employed in a literary way. Caxton acknowledges that he received an yearly fee, besides many other good and great benefits; Mr. Dibdin supposes that he was a sinecure gentleman of her household. It was at the request of this lady that he finished the translation of the *History of Troy*; on the completion of which, she did not fail to reward him largely. He informs us, in the latter part of this performance, that his eyes "were dimmed with over much looking on the white paper; that his courage was not so prone and ready to labour as it had been; and that age was creeping on him daily, and enfeebling his all body: that he had practised and learnt, at his great charge and expense, to ordain this said book in print, after the manner and form as we there see it; and that it was not written with pen and ink as other books be." By this we understand, that he had learned the art of printing, and that he was advanced in years. We find that our typographer "paid his obedience to Edward IV. [then driven to the duke of Burgundy's court, to seek succour against the earl of Warwick,] and received his majesty's approbation for his engagement in this new art."

There is no doubt but Caxton was particularly

curious as to every thing relative to the invention of printing, though it is much to be regretted that he had not inspected the beautiful specimens of the Roman, Venetian, and Parisian presses, before he caused his fount of letters to be cut, otherwise it is probable that he would have selected the Roman character, amongst the variety of his type. It is conjectured that he consulted Zell and Olpe of the Cologne press, (who had learned the art at Mentz) and Colard Mansion of Bruges, as to the materials necessary for his office. We have no account of Caxton's typographical labours from 1471 to 1474. Is it not probable that a curious and active mind like his, just embarked in a new undertaking, would have a variety of subjects in view for publication? We are not informed of the exact period when he returned to his native country: Oldys is of opinion, that three years might elapse during the period of his procuring materials for his office, prior to his return, at which time he had arrived at the evening of life; for we find him in England, in 1474, which date appears to the *Game of Chess*. This is considered the first book ever printed in this kingdom: it is dedicated to the duke of Clarence, brother to Edward IV. it has been conjectured that it was printed before his return.

Upon his arrival in England, his press was set up in a part of Westminster abbey,\* at which time Thomas Milling, bishop of Hereford, held the abbotsip of St. Peter in commendam. According to Oldys, his father, William Caxton, resided with him at Westminster during the height of his business; he must have lived to a good old age. From a memorial in St. Margaret's church, we learn that he died between 1478-80. John Leland, the learned antiquarian, who died in London 1552, sixty years after Caxton, calls the latter Anglie Prototypographus, the first printer of England. Bagford informs us that our typographer, exclusive of the labour of working at his press, contrived, though "well stricken in years," to translate not fewer than five thousand closely printed folio pages, and that "his like for industry," had never yet appeared. Oldys states, that "he kept preparing copy for the press to the very last."

Wynkyn de Worde, in the colophon of his edition of the *Viata Patrum*, in 1495, mentions, that these lives of the fathers were "translated out of French into English by William Caxton

\* Philip, duke of Burgundy, died in June, 1467, and was succeeded by his son, Charles.—Philip, duke of Burgundy, was the most magnificent prince of his age: his court, one of the most polished; and his fondness for the expiring customs of chivalry, and for literature, equally great and influential. In the prologue to a book of the whole life of Jason, translated under the protection of King Edward, Caxton thus describes the chamber of this prince, in his castle of Hesdin, in Artois. It ought to be premised, that Philip had instituted the order of the Knights of the Golden Fleece. "Not, well wrote I, that the noble duke Philip, first founder of this said order, did do maken a chamber in the castle of Hesdin, wherein was craftily and curiously depainted, the conquest of the golden fleece, by the said Jason; in which chamber I have been, and seen the said history so depainted; and in remembrance of Medea, and of her cunning and science, he had do make in the said chamber, by subtil engine, that, when he would, it should seem that it lightened, and after, thunder, snow, and rain, and all within the said chamber, as oftentimes, and when it should please him, which was all made for his singular pleasure."

\* Mr. Dibdin, in his *Typographical Antiquities*, vol. 1, p. cl. cli. says:—"It is most probable that Caxton, after the manner observed in other monasteries, erected his press near one of the chapels attached to the aisles of the abbey, and his *Printing-office* might have superseded the use of what was called the *Scriptorium* of the same. No remains of this once interesting place can now be ascertained; indeed, there is a strong presumption, that it was pulled down in making alterations for the building of Henry VIII's chapel; for if Henry made no scruple to demolish the chapel of the Virgin (See Pennant's London, p. 78, 3rd edit.) in order to carry into effect his own plans for erecting the magnificent one which goes by his own name, the office of the Printer stood little chance of escaping a similar fate! According to Bagford, \*Caxton's office was afterwards removed into King-street, but whereabouts, or what sign is not known."

of Westminster, late dead;" and that "he finished it the last day of his life." Oldys is of opinion, that he purposely selected this work for his final literary effort; because, "from the examples of quiet and solemn retirement therein set forth, it might further serve to wean his mind from all worldly attachments, exalt it above the solitudes of this life, and inure him to that repose and tranquility with which he seems to have designed it." For some time previous to his decease he attended the making up of the churchwardens' accounts, as one of the principal parishioners, and a regular vestryman; his name being subscribed to several of these: it will appear that he died either in 1491 or 1492; quickly following one of his female relatives to the grave.—For further information of Caxton, see 1491.

## TO CAXTON.

From "*Leigh Lyrics to Leigh Men.*"

HAIL! mighty Caxton! friend to great and low  
Accept the humble tribute of a man,  
Who, but for thee, had not yet learned to know  
The glorious objects of life's little span.

Albeit the way to learning's somewhat crude,  
Choked up by prejudice and superstition;  
And ancient custom, like a ruffian rude,  
Steps in, and points his finger with derision.

"Knowledge is power,"—a by-word grown of late,  
But not a whit the worse for being so;  
Bacon, the world's indebted to thy pate  
More than a tithe of this and world does know.

The Germans boast of Panst, (and well they may)  
Although the Devil and he, as sayings go,  
Were coter cousins. Mind I only say  
That such is said,—I do not think 'twas so.

But thou! great printer! never has thy name  
By canting priest received its defamation:  
Thou earn'dst an urn, so wear thy "honest fame;"  
And whilst I live thou'lt have my veneration.

Hail! mighty Caxton; friend to great and low;  
Accept the humble tribute of a man,  
Who but for thee, had not yet learned to know  
The glorious objects of life's little span. J. B. B.

That Caxton introduced the art of printing into England, and first practised it here, was never doubted till the year 1642: a dispute arose, at this time, between the company of stationers and some persons, respecting a patent for printing; the case was formally argued; and in the course of the pleadings, Caxton was proved, incontestably, to have been the first printer in England. Soon after the Restoration, a book was discovered in the public library at Cambridge, the date of which was Oxford, 1468. The probability is, however, that the date of this book is incorrect, and that it should have been 1478, not 1468; this is inferred from its being printed with separate fusile metal types, very neat and beautiful, from the regularity of the page and the appearance of signatures; and, moreover, from the fact, that no other production issued from the Oxford press till eleven years after 1468, it being highly improbable that a press connected with a university should have continued so long unemployed. But, even granting that the date is accurate, and that the book was printed in 1468, six years before the execution of any work by Caxton, the merit of Caxton, and the obligations of this country to

him, are but little lessened by this circumstance.

Dr. Conyers Middleton,\* in his curious dissertation concerning the *Origin of Printing in England*, printed in 4to, in 1735, gives the following statement of Caxton and the *Oxford book*:—

It was a constant opinion delivered down by our historians, that the art of printing was introduced and first practised in England by William Caxton, a mercer and citizen of London; who, by his travels abroad, and a residence of many years in Holland, Flanders, and Germany, in the affairs of trade, had an opportunity of informing himself of the whole method and process of the art; and by the encouragement of the great, and particularly of the abbot of Westminster, first set up a press in that abbey, and began to print books soon after the year 1471.

This was the tradition of our writers; until a book, which had scarce been observed before the restoration, was then taken notice of by the curious, with a date of its impression from Oxford, anno, 1468, and was considered immediately as a clear proof and monument of the exercise of printing in that university, several years before Caxton began to practise it.

This book, which is in the public library at Cambridge, is a small volume of forty-one leaves in quarto, with this title: *Expositio Sancti Ieronimi in Simbolum Apostolorum ad Papam Laurentium*: and at the end, "*Explicit Expositio, &c. Impressa Oxonie, & finita An. Dom. M.cccc.lxviii. xvii. die Decembris.*"

The appearance of this book has robbed Caxton of a glory which he had long possessed, of being the introducer of printing into this kingdom; and Oxford ever since has carried the honour of the first press. The only difficulty was, to account for the silence of history in an event so memorable, and the want of any memorial in the university itself, concerning the establishment of a new art amongst them, of such use and benefit to learning. But this likewise has been cleared up by the discovery of a record which had lain obscure and unknown at Lambeth-house, in the register of the see of Canter-

\* Conyers Middleton, a celebrated divine and critic, was the son of a clergyman, and born at Richmond, in Yorkshire, December 27, 1663. In 1717 he was created D.D. by mandamus, on which occasion he resisted the claim of Dr. Bentley, regius professor, to exorbitant fees. This occasioned a law-suit, in which Middleton triumphed. In 1724 Dr. Middleton was in Italy, and having a near observation of the ecclesiastical pomp and ceremonies, he wrote his famous letter from Rome, to show that the religious rites of the Roman church were drawn from the heathens. In 1731 he was appointed Woodwardian professor, but resigned that place in 1734. In 1741 appeared his *Life of Cicero*, in 3 vols. 4to., afterwards reprinted in 3 vols. 8vo. This is a very curious and valuable work, and highly necessary towards forming a just idea of the character and writings of that great man, as well as exhibiting an exact picture of the Roman republic in his time. In 1743 Dr. Middleton published the *Epistles of Cicero to Brutus*, and those of *Brutus to Cicero*, in Latin and English, with a vindication of their authenticity. Dr. Middleton died at Cambridge, July 28, 1750; and in 1752 appeared all his works, with the exception of the *Life of Cicero*, in 4 vols. 4to.—Hansard says that Dr. Middleton appears to have been the first person who wrote upon the *Origin of Printing in England*.

bury, and gives a narrative of the whole transaction, drawn up at the very time.

An account of this record was first published in a thin quarto volume, in English, with this title:—“*The Original and Growth of Printing, collected out of History and the Records of this Kingdom: wherein is also demonstrated, that Printing appertaineth to the Prerogative Royal, and is a Flower of the Crown of England. By Richard Athyns, Esq. London. 1664.*”

It sets forth, in short, that, “as soon as the art of printing made some noise in Europe, Thomas Bouchier, archbishop of Canterbury, moved King Henry VI. to use all possible means to procure it to be brought into England: the king approving the proposal, dispatched one Mr. Robert Turnour, an officer of the robes, into Flanders, furnished with money for the purpose; who took to his assistance William Caxton, a man of abilities, and knowledge of the country; and these two found means to bribe and entice over into England, one Frederick Corseillis, an under-workman in the printing-house at Haerlem, where John Gutenberg had lately invented the art, and was then personally at work. It was resolved, that less than 1000 merks would not produce the desired effect; towards which sum, the said archbishop presented the king 300 merks. The money being now prepared, the management of the design was committed to Mr. Robert Turnour, who was then master of the robes to the king, and a person most in favour with him of any of his condition. Mr. Turnour took to his assistance Mr. Caxton, a citizen of good abilities, who traded much into Holland; which was a creditable pretence, as well for his going, as to stay in the Low Countries.

Mr. Turnour was in disguise (his beard and hair shaven quite off); but Mr. Caxton appeared known and public. They, having received the said sum of 1000 merks, went first to Amsterdam, then to Leyden, not daring to enter Haerlem itself; for the town was very jealous, having imprisoned and apprehended divers persons who came from other parts for the same purpose. They staid till they had spent the whole 1000 merks in gifts and expenses; so as the king was fain to send 500 merks more, Mr. Turnour having written to the king that he had almost done his work; a bargain (as he said) being struck betwixt him and two Hollanders, for bringing off one of the under-workmen, whose name was Frederick Corseillis (or rather Corsellis), who late one night stole from his fellows in disguise into a vessel prepared before for that purpose; and so, the wind favouring the design, brought him safe to London. It was not thought so prudent to set him on work at London: but, by the archbishop's means (who had been vice-chancellor and afterwards chancellor of the university of Oxon), Corseillis was carried with a guard to Oxon; which guard constantly watched, to prevent Corseillis from any possible escape, till he had made good his promise in teaching them how to print. So that at Oxford printing was first set up in England, which was before

there was any printing-press or printer in France, Spain, Italy, or Germany, except the city of Mentz, which claims seniority, as to printing, even of Haerlem itself, calling her city, *Urbem Moguntinam Artis Typographice Inventricem Primam*, though it is known to be otherwise; that city gaining the art by the brother of one of the workmen of Haerlem, who had learnt it at home of his brother, and after set up for himself at Mentz. This press at Oxon was at least ten years before there was any printing in Europe, except at Haerlem and Mentz, where it was but newly discovered. This press at Oxford was afterwards found inconvenient to be the sole printing-place of England; as being too far from London and the sea. Wherefore the king set up a press at St. Alban's, and another in the city of Westminster, where they printed several books of divinity and physic; for the king (for reasons best known to himself and council) permitted then no law-books to be printed; nor did any printer exercise this art, but only such as were the king's sworn servants; the king himself having the price and emolument for printing books. By this means, the art grew so famous, that anno primo Rich. III. c. 9. when an act of parliament was made for restraint of aliens for using any handicrafts here (except as servants to natives), a special proviso was inserted, that strangers might bring in printed or written books to sell at their pleasure, and exercise the art of printing here, notwithstanding that act: so that, in that space of 40 or 50 years, by the indulgence of Edward IV. Edward V. Richard III. Henry VII. and Henry VIII. the English proved so good proficients in printing, and grew so numerous, as to furnish the kingdom with books; and so skilful, as to print them as well as any beyond the seas; as appears by the act 25 Hen. VIII. c. 15, which abrogates the said proviso for that reason. And it was further enacted in the said statute, that if any person bought foreign books bound, he should pay 6s. 8d. per book. And it was further provided and enacted, that in case the said printers or sellers of books were unreasonable in their prices, they should be moderated by the lord chancellor, lord treasurer, the two lords chief justices, or any two of them: who also had power to fine them 3s. 4d. for every book whose price should be enhanced. But when they were by charter incorporated with bookbinders, booksellers, and founders of letters, 3 and 4 Philip and Mary, and called, *The Company of Stationers*—they resisted the power that gave them life, &c.—Queen Elizabeth, the first year of her reign, granted by patent, the privilege of sole printing all books that touch or concern the common laws of England, to Tottel, a servant to her majesty, who kept it entire to his death; after him to one Yestweirt, another servant to her majesty; after him to Weight and Norton; and after them, King James granted the same privilege to More, one of the signet; which grant continues to this day, &c.

From the authority of this record, all our later writers declare Corseillis to be the first printer in

England; as likewise Mr. Anthony Wood, the learned Mr. Mattaire, Palmer, and one John Bagford, an industrious man, who had published proposals for an *History of Printing* (*Phil. Trans.* for April, 1707). But Dr. Middleton has called in question the authenticity of this account, and has urged several objections to it, with the view of supporting Caxton's title to the precedency with respect to the introduction of the art into this country. Atkins, who, by his manner of writing, seems to have been a bold and vain man, might possibly be the inventor: for he had an interest in imposing it upon the world, in order to confirm the argument of his book, that "*Printing was of the prerogative royal*;" in opposition to the *Company of Stationers*, with whom he was engaged in an expensive suit of law, in defence of the king's patents, under which he claimed some exclusive powers of printing. For he tells us, p. 3, "That, upon considering the thing, he could not but think that a public person, more eminent than a mercer, and a public purse, must needs be concerned in so public a good: and the more he considered, the more inquisitive he was to find out the truth. So that he had formed his hypothesis before he had found his record; which he published, he says, as a friend to truth; not to suffer one man to be entitled to the worthy achievements of another; and as a friend to himself, not to lose one of his best arguments of entitling the king to this art." But, if Atkyns was not himself the contriver, he was imposed upon at least by some more crafty; who imagined that his interest in the cause, and the warmth that he had shewed in prosecuting it, would induce him to swallow for genuine whatever was offered of the kind.

It may be asked, by way of reply, is it likely that Atkyns would dare to *forge* a record, to be laid before the king and council, and which his adversaries, with whom he was at law, could disapprove? He says, he received this history from a person of honour, who was some time keeper of the Lambeth library. It was easy to have confuted this evidence, if it was false, when he published it, April 25, 1664. John Bagford (who was born in England, 1651, and might know Mr. Atkyns, who died in 1677), in his *History of Printing at Oxford*, blames those who doubted of the authenticity of the Lambeth MS.; and tells us that he knew Sir John Birkenhead had an authentic copy of it, when in 1665 [which Bagford by some mistake calls 1664, and is followed in it by Meerman] he was appointed by the house of commons to draw up a bill relating to the exercise of that art. This is confirmed by the journals of that house, Friday, October 27, 1665, Vol. VIII, p. 622, where it is ordered that this Sir John Birkenhead should carry the bill on that head to the house of lords, for their consent. The act was agreed to in the upper house on Tuesday, October 31, and received the royal assent on the same day: immediately after which, the parliament was prorogued. See *Journal of the House of Lords*, Vol. XI. p. 700.

It is probable then, that, after Mr. Atkyns had published his book in April 1664, the parliament thought proper, the next year, to enquire into the right of the king's prerogative; and that Sir John Birkenhead took care to inspect the original, then in the custody of archbishop Sheldon; and, finding it not sufficient to prove what Atkyns had cited for, made no report of the manuscript to the house; but only moved, that the former law should be renewed. The manuscript was probably never returned to the proper keeper of it; but was afterwards burnt in the fire of London, September 13, 1666. That printing was practised at Oxford, was a prevailing opinion long before Atkyns. Bryan Twyne, in his *Apologia pro Antiquitate Academicæ Oxoniensis*, published 1608, tells us, it is so delivered down in antient writings; having heard, probably, of this Lambeth manuscript. And Charles I., in his letters patent to the university of Oxford, March 5, in the eleventh of his reign, 1635, mentions printing as brought to Oxford from abroad. As to what is objected, "that it is not likely that the press should undergo a ten or eleven years sleep, viz. from 1468 to 1479," it is probably urged without a foundation. Cornelis might print several books without date or name of the place, as Ulric Zell did at Cologne, from 1467 to 1473, and from that time to 1494. Cornelis's name, it may be said, appears not in any of his publications; but neither does that of Joannes Petershemis. See Meerman, vol. I.

Further, Shakspeare, who was born in 1564, and died 1616, in the *Second Part of Henry VI.* act iv. sc. 7, introduces the rebel John Cade,\* thus upbraiding lord treasurer Say: "Thou hast most traitorously corrupted the youth of the realm, in creating a grammar-school: and whereas, before, our forefathers had no other book but the score and the tally, thou hast caused printing to be used; and, contrary to the king, his crown, and dignity, thou hast built a

\* The rebellion of Jack Cade took place on the 1st of June, 1450, who assumed the name of *Mortimer*. This insurgent encamped on Blackheath, at the head of 30,000 followers of the very lowest description. On the 24th of this month was fought the battle of Seven Oaks, where Cade turning on his pursuers, put them to flight, killed Sir Humphrey Stafford their commander, and arrayed himself in the knight's panoply and spurs. On the 1st of July, he took possession of Southwark, and two days later, entered London, cutting with his sword the ropes of the draw-bridge as he passed. On the 4th he commanded lord Say and Sele to be beheaded, which sentence was immediately carried into effect in Cheselide.\* Another victim of this infuriated mob, was William Ascough, bishop of Salisbury, to which he had been consecrated in 1438. He was shamefully murdered on the altar in his cathedral, by Cade and his followers. Bishop Ascough was descended from an ancient family in Lincolnshire. On the 11th of July, Cade was slain near Lewes, in Sussex.

\* LORD SAY'S APOLOGY.

Justice, with favour, have I always done.  
Prayers and tears have moved me, gifts could never:  
When have I ought exacted at your hands?  
Kent to maintain, the king, the realm, and you;  
Large gifts have I bestow'd on learned clerks;  
Bogus my book prefer'd me to the king,  
And seeing, ignorance is the curse of God,  
Knowledge the wing wherewith we fly to heaven,  
Unless you be possess'd with devilish spirits,  
You cannot but forbear to murder me.

—Henry VI. p. 2, act 5.

paper-mill." Whence, now, had Shakspeare this accusation against lord Say? We are told in the *Political Register*, vol. ii. p. 231, ed. Lond. 1724, that it was from Fabian, Pol. Virgil, Hall, Hollingshed, Grafton, Stow, Speed, &c. But not one of these ascribes printing to the reign of Henry VI. On the contrary, Stow, in his *Annals*, printed at London, 1560, p. 686, gives it expressly to William Caxton, 1471. "The noble science of printing was about this time found in Germany at Magunce, by one John Guthamburgus, a knight. One Conradus an Almaine brought it into Rome. William Caxton of London, mercer, brought it into England about 1471, and first practised the same in the abbey of St. Peter at Westminster; after which time it was likewise practised in the abbeys of St. Augustine at Canterbury, Saint Alban, and other monasteries of England." What then shall we say, that the above is an anachronism arbitrarily put into the mouth of an ignorant fellow out of Shakspeare's head? We might believe so, but that we have the record of Mr. Atkyns confirming the same in king Charles II.'s time. Shall we say, that Mr. Atkyns borrowed the story from Shakspeare and published it, with some improvements of money laid out by Henry VI., from whence it might be revived by Charles II. as a prerogative of the crown? But this is improbable, since Shakspeare makes lord treasurer Say the instrument of importing it, of whom Mr. Atkyns mentions not a word. Another difference there will still be between Shakspeare and the Lambeth manuscript; the poet placing it before 1449, in which year lord Say was beheaded; the manuscript between 1454 and 1459, when Bourchier was archbishop. We must say then, that lord Say first laid the scheme, and sent some one to Haerlem, though without success; but after some years it was attempted happily by Bourchier. And we must conclude, that as the generality of writers have overlooked the invention of printing at Haerlem with wooden types, and have ascribed it to Mentz, where metal types were first made use of; so in England they have passed by Corsellis (or the first Oxford printer, whoever he was), who printed with wooden types at Oxford, and only mentioned Caxton as the original artist, who printed with metal types at Westminster.—Meerman, vol. 2.

The fact is laid quite wrong as to time—near the end of Henry VIth's reign, in the very heat of the civil wars; when it is not credible that a prince, struggling for his life as well as his crown, should have leisure or disposition to attend to a project that could hardly be thought of, much less executed, in times of such calamity. The printer, it is said, was graciously received by the king, made one of his sworn servants, and sent down to Oxford with a guard, &c., all which must have passed before the year 1459; for Edward IV. was proclaimed in London, in the end of it, according to our computation, on the 4th of March, and crowned about the midsummer following; and yet we have no

fruits of all this labour and expense until near ten years after, when the little book, before described, is supposed to have been published from that press.

Secondly; the silence of Caxton, concerning a fact in which he is said to be a principal actor, is a sufficient confutation of it: for it was a constant custom with him, in the prefaces or conclusions of his works, to give an historical account of all his labours and transactions, as far as they concerned the publishing and printing of books. And, what is still stronger, in the continuation of the *Polychronicon*, compiled by himself, and carried down to the end of Henry VIth's reign, he makes no mention of the expedition in quest of a printer; which he could not have omitted had it been true: whilst in the same book he takes notice of the invention and beginning of printing in the city of Mentz.

There is a further circumstance in Caxton's history, that seems inconsistent with the record; for we find him still beyond sea, about twelve years after the supposed transaction, learning with great charge and trouble the art of printing: which he might have done with ease at home, if he had got Corsellis into his hands, as the recorder imports, so many years before; but he probably learnt it at Cologne, where he resided in 1471, and where books had been first printed with a date the year before.

It is strange, that the learned commentators on our great dramatic poet, who are so minutely particular upon less important occasions, should every one of them, Dr. Johnson excepted, pass by this curious passage, leaving it entirely unnoticed. And how has Dr. Johnson trifled, by slightly remarking, "that Shakspeare is a little too early with this accusation!" The great critic had undertaken to decipher obsolete words, and investigate unintelligible phrases; but never, perhaps, bestowed a thought on Caxton or Corsellis, on Mr. Atkyns, or the authenticity of the *Lambeth Record*. But, independent of the record altogether, the book stands firm as a monument of the exercise of printing in Oxford, six years older than any book of Caxton's with a date.

Our first printers, in those days of ignorance, met with but small encouragement; they printed but few books, and but few copies of those books. In after-times, when the same books were reprinted more correctly, those first editions, which were not as yet become curiosities, were put to common uses. This is the reason that we have so few remains of our first printers. We have only four books of Theodorick Rood, who seems by his own verses to have been a very celebrated printer. Of John Lettou-William de Machlinia, and the schoolmaster of St. Alban's, we have scarce any remains. If this be considered, it will not appear impossible that our printer should have followed his business from 1468 to 1479, and yet time have destroyed his intermediate works. But, secondly, we may account still another way for this distance of time, without altering the date. The civil wars

broke out in 1469: this might probably oblige our Oxford printer to shut up his press; and both himself and his readers be otherwise engaged. If this were the case, he might not return to his work again till 1479; and the next year, not meeting with that encouragement he deserved, he might remove to some other country with his types.

Dr. Middleton concludes with apologising for his "spending so much pains on an argument so inconsiderable, to which he was led by his zeal to do a piece of justice to the memory of our worthy countryman William Caxton; nor suffer him to be robbed of the glory, so clearly due to him, of having first imported into this kingdom an art of great use and benefit to mankind: a kind of merit, that, in the sense of all nations, gives the best title to true praise, and the best claim to be commemorated with honour by posterity." The fact, however, against which he contends, but which it seems impossible to overturn, does by no means derogate from the honour of Caxton, who, as has been shown, was the first person in England that practised the art of printing with fusile types; and consequently the first who brought it to perfection; whereas Corsellis printed with separate cut types in wood, being the only method which he had learned at Haerlem.

It has been asserted, that it is of little consequence whether the record ever existed or not: the book stands firm as a monument, that printing was exercised at Oxford six years earlier than any of Caxton's works with dates. The case certainly appears strong; and would naturally induce many, at first sight, to give full credit to it. Dates, we know, though generally considered as a just criterion of the age of books, is not always to be depended upon; and we perfectly agree with Dr. Middleton, that the date in question appears to have been falsified by the printer, either by design or mistake, and an x to have been dropped or omitted in the age of its impression. Examples of this kind are not unfrequent in the early stages of the art; Dr. Middleton observes, that he has seen several dates altered very artfully after publication, to give them the credit of greater antiquity. They have at Haerlem, in large quarto, a Dutch translation of *Bartholomæus de proprietatibus rerum*, printed by Jacob Bellart, anon mccccxxv: this work is exhibited as a proof of their claim to the earliest printing. But Mr. Bagford, who had seen a copy of it with the genuine date, exposed the cheat: an l had been erased so cunningly, that it was not easy to perceive it. Besides the frauds of an after-contrivance, many false dates have originally been given by the printers; partly by design to enhance their value, but chiefly through negligence and blunder.—There is said to be a bible at Augsburg, of the year 1449, the two last figures being transposed, it should stand thus, 1494. Three other bibles are noticed by Chevillier, one at Paris, 1443; a second at Lyons, 1446; a third at Basil, 1450; though it is well known that the art was not

practised at any of these places till several years after. Orlandi describes three books from the Mentz press with similar mistakes: John Koelhoff, who first printed at Cologne, about 1470, has dated one of his books anno mcccc. with x omitted; and another 1458, which Palmer attributes to design, rather than mistake. But what is most to our point, is a work of Nicholas Jenson, intitled *Decor Puellarum*, anno mccccxli: now all Jenson's other productions are dated from Venice between mccccclxx and mccccclxxx; this justly raised a suspicion that an x had been omitted in the date, which ought to be advanced ten years forward. In confirmation of the above opinion, there is an edition of *Tully's Epistles* at Venice, anno mccccclxix, by the noted John de Spira; who has inserted the following lines at the end, in which he claims the honour of being the first who printed in that city:

Primus in Adriaca forma impressit aenis  
Urbe libros Spira genitus de stirpe Johanne.  
In reliquis sit quanta, vides, spes, Lector, habenda,  
Quam labor hic primus calami superaverit Artem.

The current opinion that Jenson was the first printer at Venice, although supported by cotemporary authority, must give place to this assertion of John de Spira; which being published in the very teeth of his rival Jenson, without any contradiction from him, carries with it sufficient weight to counterbalance whatever might be advanced in support of the claims of the former.

Upon this subject Dr. Middleton observes—

"But whilst I am now writing, an unexpected instance is fallen into my hands, to the support of my opinion; an *Inauguration Speech of the Woodwardian Professor*, Mr. Mason, just fresh from the press, with its date given ten years earlier than it should have been, by the omission of an x, viz. mcccxxiv; and the very blunder exemplified in the last piece printed at Cambridge, which I suppose to have happened in the first from Oxford."<sup>\*</sup>

\* The following curious remarks, on this passage of Dr. Middleton, appeared in *The Weekly Miscellany*, Saturday, April 30, 1735, in a letter, signed 'Oxonides':—

"I think the learned author has sufficiently exposed the idle story of *Frederick Corsellis*, and entirely concurs with him in rejecting it. But when he compliments *Caxton* with the name of our First Printer, notwithstanding the authority of a book printed at Oxford, and dated in the year 1468, I cannot go so far with him. We should not pretend to set aside the authority of a plain date, without very strong and cogent reasons; and I am afraid what the Doctor has in this case advanced will not appear, on examination, to carry that weight with it that he seems to imagine. There may be, and have been, mistakes and forgeries in the date both of books and of records too; but this is never allowed as a reason for suspecting such as bear no mark of either. We cannot, from a blunder in the last book printed at Cambridge, infer the like blunder in the first book printed at Oxford. Besides, the type used in this our Oxford edition seems to be no small proof of its antiquity. It is the *German* letter, and very nearly the same with that used by *Fust* (who has been supposed to be) the First Printer; whereas *Caxton* and *Rood* use a quite different letter, something between this *German* and our old *English* letter, which was soon after introduced by *De Worde* and *Pynson*. Lastly, the supposed year of this edition is much about the time that the printers at Mentz dispersed, and carried the art of Printing with them to most parts of Europe. This circumstance, joined to that of the letter, inclines me to think that one of these printers might then come over to England, and follow his profession at Oxford. These, I must own, are only con-

The fact is strong, not only what in ordinary cases passes for certain evidence of the age of books; but in this, there are such opposite testimonies to balance it, and such circumstances to turn the scale, that, to speak freely, makes the date in question to have been falsified originally by the printer, either by design or mistake, and an x to have been dropt or omitted in the age of its impression.

This instance, with others equally certain that might be adduced, shews the conjecture to be well founded; with regard to the probability of it, the book itself affords sufficient proof; for, not to insist on what is of far less consequence, the neatness of the letter, uniformity of the page, &c., above those of Caxton, it has one mark that puts the matter out of doubt, and makes it even certain, viz. the use of signatures, or letters of the alphabet placed, at the bottom of the page, to shew the sheets and leaves of each book—an improvement contrived for the direction of the bookbinders; which yet was not practised or invented at the time when this book is supposed to be printed; for we find no signatures in the books of Faust or Schoëffer at Mentz, nor in the more improved and beautiful impressions of John de Spira, and Jenson, at Venice, until several years later. There is a book in the public library at Cambridge that seems to fix the very time of their invention, at least in Venice; the place where the art itself received the greatest improvements: *Baldi Lectura super Codic, &c.*, printed by John de Colonia and John Manthen de Gherretzem, anno M.CCCC.LXXIII. It is a large and fair volume in folio, without signatures, until about the middle of the book, in which they are first introduced, and so continued forward: which makes it probable, that the first thought of them was suggested during the time of the impression. They were used at Cologne, anno 1475; at Paris, 1476; by Caxton, not before 1480;

jectural proofs, nor can we expect any other in the present case. We find most points of antiquity involved in obscurity; and, what is not a little surprizing, the art of Printing, which has given light to most other things, hides its own head in darkness.—But our ingenious Dissertator seems to think his proofs attended with more certainty. Let us then examine what he says: And first, the neatness of the letter, and the regularity of the page, prove, if any thing, the very reverse of what the Doctor asserts. The art of Printing was almost in its infancy brought to perfection: but afterwards debased by later printers, who consulted rather the cheapness, than the neatness of their work. Our learned Dissertator cannot be unacquainted with the labours of *Fust* and *Jenson*. He must know, that though other printers may have printed more correctly, yet scarce any excel them, either in the neatness of the letter, or the regularity of the page. The same may be observed in our English printers. *Caxton* and *Reod* were indifferently good printers: *De Worde* and *Pymon* were worse; and those that follow them most abominable. This our anonymous Oxford printer excels them all: and for this very reason I should judge him to be the most ancient of all."

Oxonides is certainly too severe upon our early printers; we agree with him that the art was soon brought to a certain degree of perfection, but we cannot admit that our printers descended from bad to worse, and then to abominable! He here makes the unknown Oxford printer, (though said to be only an under-workman) to excel all the proficient in the art! We differ with him, in respect to the beauty of the Oxford book being a proof of its antiquity.—*Johnson*.

but if the discovery had been brought into England, and practised at Oxford twelve years before, it is not probable that he would have printed so long at Westminster without them.\*

It has been asserted, that signatures are to be found in very ancient manuscripts, and which were very studiously imitated by the early printers; even Coeter is said to have used them in his block books; and some editions, we are informed, were printed at Paris with metal types, as in *Gasp. Pergamensis Epistola*, without date, but conjectured to have been printed in 1470. Meerman adduces *Mammectrectus*, printed by Helias de Llouffen, at Berne, in Switzerland, 1470; and in *De Tondeli Visione*, at Antwerp, 1472; upon which authorities he pronounces that Venice was not the birth-place of signatures, although they were first introduced into *Baldus* when half of it was printed: Meerman imagines, that the printers of *Baldus* were ignorant of their use till that period.

Amid this contrariety of evidence, what course can we steer? or how shall we draw a just and satisfactory conclusion? One gentleman advances one date; a second another; a third differs with both: thus do the different opinions multiply; till at length the whole is perplexed by an assertion, that signatures were used in ancient manuscripts, long prior to the origin of the art. Had this been the case, is it probable that the early printers could have been ignorant of it? and would they have dispensed with an article so useful and necessary? Admitting the first printers to have neglected them, can we believe, if they had been used in ancient manuscripts, that the art was exercised for at least thirty years before their introduction? is it not probable that some early works with signatures have been totally destroyed?

What further confirms the opinion is, that from the time of the pretended date of this book, anno 1468, we have no other fruit or production from the press at Oxford for eleven years next following; and it cannot be imagined that a press, established with so much pains and expense, could be suffered to lie so long idle and useless: whereas, if a conjecture

\* Oxonides, again combating the doctor's opinions, thus with confidence expresses himself.

"Our Dissertator lays great stress on the use of signatures. But I am afraid no certain conclusion can be drawn either from the use or non-use of these lesser improvements of Printing. They have in different places come in use at different times, and have not been continued regularly even at the same places. If Anthony Zarot used them at Milan in 1470, it is certain later printers there did not follow his example; and the like might also happen in England. But, what is more full to our purpose, we have in the Bodleian library an *Æsop's Fables* printed by Caxton. This is, I believe, the first book which has the leaves numbered. But yet this improvement, though more useful than that of the signatures, was disused both by Caxton himself and other later printers in England. It is therefore not at all surprizing (if true) that the signatures, though invented by our Oxford Printer, might not immediately come into general use. And consequently, this particular carries with it no such certain or effectual confutation as our Dissertator boasts of."

Oxonides is the only person who has given the Oxford printer the merit of the invention of signatures: an under-workman (according to Atkins) was not likely to have improved the art.—*Johnson*.

be admitted, all the difficulties that seem insuperable and inconsistent with the supposed era of printing there, will vanish at once. For, allowing the book to have been printed ten years later, anno 1478, then the use of signatures can be no objection; a foreign printer might introduce them; Caxton follow his example; and the course of printing and sequel of books published from Oxford will proceed regularly:—

Expositio Sancti Jeronimi in Simbolum Apostolorum, ..... Orom. 1478  
Leonardi Aretini in Arist. Ethic. Comment. .... lb. 1479  
Ægidius de Roma, &c., de Peccato Originall. .... lb. 1479  
Guido de Columna de Historia Trojana, per T. R. lb. 1480  
Alexandri ab Hales, &c., expositio super 8 Lib. de Anima per me Theod. Rood ..... lb. 1481  
Franc. Aretini Oratoris Phalaridis Epist. e Græco in Latin. Versio.—Hoc opusculum in Alma Universitate Oxoniæ, a natall Christiano ducentesima et nonagesima septima Olympiade feliciter impressum est. .... (That is) 1488

Hoc Theodoricus Rood, quem Collonia misit  
Sanguine Germanus, nobile pressit opus;  
Atque sibi socius Thomas fuit Anglicus Hunte:  
Dii dent ut Venetos exsuperare queant!  
Quam Jenson Venetos docuit vir Gallicus artem,  
Ingenio didicit terra Britannia suo.  
Celatos Veneti nobis transmissere libros  
Cedita, nos aliis vendimus, O Veneti.  
Quæ fuerat vobis ars primum nota, Latini\*  
Est eadem nobis ipsa reperta premens.  
Quamvis sejunctos toto cantu orbe Britannæ  
Virgilia, placet his lingua Latina tamen.†

These are all the books printed at Oxford, before 1500, that have hitherto made their appearance and we have any certain notice of. We have inserted the colophon and verses of the last, because they have something curious and historical in them. We know of but another instance of the date of a book computed by Olympiads—*Ænonii Epigrammatum libri, &c.* printed at Venice, 1472, with this designation of the year at the end—"A Nativitate Christi

\* In the 'Additional Remarks' at the end of Bowyer and Nichols's *Origin of Printing*, it is suggested that the reading of the word *Latini* might be the vocative case plural. *O Romanæ.*

† Translation.—This little work was auspiciously printed in the pious university of Oxford, in the two hundred and ninety-seventh Olympiad from the birth of Christ.

[Reckoning each Olympic term to consist of five years, instead of four, the date of this book will accord with the year 1483.]

Theodoric Rood, a German born,  
O' the city of Cologne,  
That he this curious book did print,  
To all men maketh known;  
And his good partner, Thomas Hunte,  
An Englishman he was:  
Now add them Heaven! that so they may  
Venetian skill surpass.

A man of France, named Jenson, taught  
The Venetians this fair art,  
Which Britain, by her industry,  
Did to herself impart.  
Engraved books to send to us,  
Which in deep love excel,  
Cease, O Venetians! yield to us—  
We to all others sell.

The language, Romans, which by you  
So long before was known  
Is now at length by us attained  
And used with our own.  
The Britons severed from the world  
Though Virgil truly sung,  
They now can well his works peruse  
In his own Latin tongue.

*ducentesima nonagesima quinta Olympiadis anno 2,*" where the printer, as in the present case, follows the common mistake, both of the ancients and moderns, of taking the Olympiad for a term of five years complete; whereas it really included but four, and was celebrated the fifth; as the Lustrum likewise of the Romans. In our Oxford book the year of the Olympiad is not distinguished, as in that of Venice, so that it might possibly be printed somewhat earlier, and nearer to the rest, in order of time: but as the 7th verse seems to refer to the statute of the 1st of Richard III. prohibiting the Italians from importing and selling their wares in England by retail, &c., excepting books written or printed, which act passed 1483; so that this book of Rood's could not be printed before that year. The third verse rescues from oblivion the name of an English printer, Thomas Hunte, not mentioned before by any of our English writers, nor discovered in any other book. But what is the most remarkable, and worthy the greatest stress, is, that in the sixth verse,\* the art and use of printing is affirmed to have been the first set on foot, and practised in this island by our own countrymen; which must consequently have a reference to Caxton, who has no rival of this country to dispute the honour with him. And so we are furnished at last from Oxford itself, with a testimony that overthrows the date of their own book.

Theodoric Rood, we see, came from Cologne, where Caxton had resided many years and instructed himself in the art of printing, 1471; and being so well acquainted with the place, and particularly the printers of it, might probably be the instrument of bringing over this or any other printer, a year or two before (if there really was any such) to be employed at Oxford; and the obscure tradition of this fact gave rise to the fiction of the record. But, however this may

\* The opinions of Dr. M. and Oxonides are again at variance: the latter expresses himself as follows:—

"Dr. Middleton's translation of the sixth verse is a sense, I believe, Rood never thought of. His verses seem rather designed to extol his own press than that of Caxton; and the meaning I take to be no more than this, that the Art of Printing, for which the Venetians, and particularly Jenson, had been so famous, was now practised with equal success in England. Our Dissertator's quotation from Caxton will prove but little, unless he can shew, that no printer, at any place, ever talked of the *society* of his art, without being the first importer of it. As to his citations from other later writers, who mention Caxton as our first printer, it may be sufficient to answer in his own words, that 'it is very unsafe to trust to common history, and necessary to recur to original testimonies, if we would know the state of facts with exactness.' Our ingenious author has himself detected several mistakes, which our writers have universally fallen into, and taken up from each other. If we consider that our Oxford Printer met with very small encouragement, printed probably but few books, and did not put his name to those, it is no wonder that his name and memory should be soon lost; nor will it be surprising that Caxton should run away with the credit of being the first printer here, who lived many years in great repute, printed a very considerable number of books, and flourished in the sunshine of the court."

That Rood should extol Caxton's press is not improbable; could he do less than compliment the man who invited him to England? Had the Oxford press been set up at the expense of the crown, would not the printer have basked in the royal sunshine, in preference to one who had no claim to court favour?—Johnson.

be, it seems pretty clear, that Caxton's being so well known at Cologne, and his setting up a press at home immediately after his return from that place, which could hardly be a secret to Rood, must be the ground of the compliment paid to our country, and the very thing referred to in the verses.

There is another book, in the public library at Cambridge, without the name of printer or place; which, from the comparison of its types with those of Rood, is judged to be of his printing, and added to the catalogue of his works; but the identity of the letter in different books, though a probable argument, is not a certain one for the identity of the press.

We shall now state, as briefly as we can, the positive evidence that remains of Caxton being the first printer of this kingdom; for what has already been alleged is chiefly negative or circumstantial. And here, as before hinted, all our writers before the restoration, who mention the introduction of the art amongst us, give him the credit of it, without any contradiction or variation. Stowe, in his *Survey of London*, speaking of the 37th year of Henry VI. or anno 1458, says, "the noble science of printing was about this time found at Magunze by John Gutenberg, a knight; and William Caxton, of London, mercer, brought it into England about the year 1471, and practised the same in the abbey of Westminster." Trussel gives the same account in the *History of Henry VI.*, and sir Richard Baker in his *Chronicle*: and Mr. Howell, in his *Londinopolis*, describes the place where the abbot of Westminster set up the first press for Caxton's use, in the Almonry or Ambry. As a confirmation of this opinion, Mr. Newcourt, in his *Repertorium*, tom. i. p. 721, has it thus: "St. Ann's, an old chapel, over against which the lady Margaret, mother to king Henry VII., erected an alms-house for poor women, which is now (in Stowe's time) turned into lodgings for singing-men of the college. The place, wherein this chapel and alms-house stood, was called the Eleemosinary or Almonry, now corruptly the Ambry [Aumbry], for that the alms of the abbey were there distributed to the poor; in which the abbot of Westminster erected the first press for book-printing, that ever was in England, about the year of Christ 1471, and where William Caxton, citizen and mercer of London, who first brought it into England, practised it." This chapel was in a retired place, and free from interruption; and from this, or some other chapel, it is supposed the name of chapel has been given to all printing-houses in England ever since. But above all, the famous John Leland, library keeper to Henry VIII., who, by way of honour, had the title of "The Antiquary," and lived near to Caxton's own time, expressly calls him the first printer of England, and speaks honourably of his works: and as he had spent some time in Oxford, after having first studied and taken a degree at Cambridge, he could hardly be ignorant of the origin and history of printing

in that university. We cannot forbear adding, for the sake of a name so celebrated, the more modern testimony of Mr. Henry Wharton, who affirms Caxton to have been the first that imported the art of printing into this kingdom; on whose authority the no less celebrated M. du Pin styles him likewise the first printer of England.

To the attestation of our historians, who are clear in favour of Caxton, and quite silent concerning an earlier press at Oxford, the works of Caxton himself add great confirmation; the rudeness of the letter, irregularity of the page, want of signatures, initial letters, &c. in his first production of the art amongst us. Besides these circumstances, notice has been taken of a passage in his *History of Troy*, which amounts to a direct testimony of it—"Thus end I this book," &c. (see page 139, ante.) This is the very style and language of our first printers, which every one knows who is the least conversant with old books; Faust and Schoeffer set the example from Mentz: by advertising the public at the end of each work,—"*That they were not drawn or written by a pen (as all books had been before,) but made by a new art and invention of printing or stamping them by characters or types of metal set in forms.*" In imitation of whom the succeeding printers, in most cities of Europe, where the art was new, generally gave the like advertisement; as may be seen from Venice, Rome, Naples, Verona, Basil, Augsburg, Louvain, &c. in a similar manner to Caxton.

In Pliny's *Natural History*, printed at Venice, we have the following verses:—

Quem modo tam ratum cupiens vix lector haberit;  
Quiq; etiam fractus pene legendus eram:  
Restituit Venetia me nuper Spira Johannes;  
Exscripsitq; libros are notante meos.  
Fessa manus quondam, monico, calamaq; quiescat:  
Namq; labor studio cessit & ingenio. M.CCCC.LXVIII.

At the end of Cicero's *Philippic Orations*:—

Anser Tarpell custos Jovis, unde, quod alis  
Constreperes, Gallus decedit; Ulter adest  
ULTRICUS GALLUS: ne quem poscantur in usum,  
Edocuit pennis nil opus esse tuis.  
Imprimi tibi die, quantum non scribitur anno.  
Ingenio, haud nocera, omnia vincit homo.

In a Spanish *History of Rodericus Santius*, printed at Rome, the following is given:—

"De mandato R. P. D. Roderici Episcopi Palentini Auctoritis hujus libri, ego ULTRICUS GALLUS sine calamo aut pennis eund. librum impressi."

In Eusebius' *Chronicon*, printed in Latin, at Milan:—

Omnibus at pateant, tabulis impressi ahenis  
Ut ille Lavanis gente Philippus opus.  
Hactenus hoc toto rarum fuit orbe volumen,  
Quod vix, qui ferret tædia, scriptor erat.  
Nunc opo Lavanis numerosa volumina nostri  
Ære perexiguo qualibet urbe legant.

In all the books translated by Caxton from the French, as the *History of Troy*, and others, he commonly marks the precise time of his entering on the translation, of his finishing it, and of his putting it afterwards into the press; which used to follow each other with little or no intermission, and were generally completed within the compass of a few months; so that in the

present case, after he had finished the translation, which must be in or soon after 1471, it is not likely that he would delay the impression longer than was necessary for the preparing his materials; especially as he was engaged by promise to his friends, who seem to have been pressing and in haste, to deliver copies of it to them as soon as possible.

But as in the case of the first printer, so in this of his first work, we have a testimony also from himself in favour of this book: for we have observed that, in the recital of his works, he mentions it the first in order, before *The Boke of Chesse*, which seems to be a good argument of its being actually the first. "*When I had accomplished dyvers werkysh and hystories translated out of Frenshe into Englyshe at the requeste of certayn lordes, ladyes, and gentylmen, as the Recuyell of the Hystories of Troye, the Boke of Chesse, the Hystorie of Jason, the Hystorie of the Mirroure of the World—I have submyed myself to translate into Englyshe the Legende of Sayntes, called Legenda Aurea in Latyn—and Wytlyam, Erle of Arondel, desyred me—and promysed to take a resonyble quantyte of them—sent to me a worshipful gentylman—promysing that my sayd lord should, during my lyf, give and graunte to me a yerely fee, that is to note, a buche in sommer and a doo in wynter.*" &c.

All this, added to the common marks of earlier antiquity, which are more observable in this than in any other of his books, viz. the rudeness of the letter, the incorrectness of the language, and the greater mixture of French words than in his later pieces, makes us conclude it to be his first work, executed when he came fresh from a long residence in foreign parts. Nay, there are some circumstances to make us believe that it was actually printed abroad at Cologne, where he finished the translation, and where he had been practising and learning the art; for, after the account given above, of his having learnt to print, he immediately adds, "*whiche boke I have presented to my said redoubtid lady Margrete, duchesse of Burgoyne, &c., and she hath well acceptid hit, and largely rewarded me,*" &c., which seems to imply his continuance abroad till after the impression as well as the translation of the book. The conjecture is much strengthened by another fact attested of him—that he did really print at Cologne the first edition of *Bartholomeus de proprietatibus rerum*, in Latin; which is affirmed by Wynkyn de Worde, in an English edition of the same book, in the following lines:—

And also of your charyte bear in remembrance  
The soule of William Caxton, first printer of this boke,  
In Latyn tongue at Coleyn, himself to advance,  
That every well disposed man may thereon loke.

And John Tate the Younger, joye mote he broke  
Whiche late hath in Englande do make this paper thynne  
That now in our English this boke is prynted inne.

It is certain that the same book was printed at Cologne, by Jo. Koellhoff, and the first that appears of his printing, 1470, whilst Caxton was at the place and busying himself in the art; and if we suppose him to have been the encou-

rager and promoter of the work, or to have furnished the expense of it, he might possibly, on that account, be considered at home as the author of it.

It is now time to draw to a conclusion, to avoid being censured for spending too much pains on an argument so inconsiderable; where the only view is to set right some points of history that have been falsely or negligently treated by our writers, and, above all, to do a piece of justice to the memory of our worthy countryman, WILLIAM CAXTON, and not suffer him to be robbed of the glory so clearly due to him of having first introduced into this kingdom an art of great use and benefit to mankind: a kind of merit that, in the sense of all nations, gives the best title to true praise, and the best claim to be commemorated with honour to posterity: and it ought to be inscribed on his monument, what is declared of another printer, Bartholomeus Bottonus of Reggio—"Primum ego in patria modo chartas ere signavi, et nunc bibliopola fui," &c.

To sum up the contradictory statements, which have been advanced by Atkins and Oxonides, it may be asked can any two statements possibly be more opposite? Atkins strengthens his opinion by an act of Henry VIII. which prohibits foreigners from exercising the art in this country: while Oxonides brings forward no other proof than the execution of the book, which (according to Atkins) was the production of an under-workman. Does this declaration carry probability on the face of it? Most assuredly not. Had Oxonides adhered to the account given by Atkins, he would have done more for the cause. It is my conviction, that the Oxford claim is entitled to no credit; and fully agreeing with Dr. Middleton, that the book in question must have been antedated. Whether Atkins was the inventor of this story, or dupe of others, cannot, perhaps, now be ascertained; but one thing is clear that he was an interested person, and had it not been from a private motive, he would not have published a work which bears improbability on the face of almost every sentence.

The glaring contradictions in the statements of Oxonides and Dibdin, are here given to show which is entitled to the greatest credit: the former asserts, that "Caxton and Rood were indifferently good printers: De Worde and Pynson were worse; and those that follow them most abominable!" While the latter maintains, that Caxton's successor, "Wynkyn de Worde, a printer of very considerable taste, and of infinitely more skill than his predecessor. The present is not the place to describe the peculiarities and the beauties of his press-work: but as connected with the subject of engraving, we may remark that he seems to have been rather partial to the mode of embellishing his books with cuts; and that one of the earliest and most magnificent of his productions, his edition of *Bartholomeus de Proprietatibus Rerum*, exhibits a combination of printing and engraving, of which, in this country, we have nothing before that deserves to be put

in comparison. His edition of the *Polychronicon* (1495) which is hardly less splendid for its typographical execution, and which, according to Herbert, was printed with a newly-cast type, is also curious on the score of engraving."

The following paragraphs are taken from the first note prefixed to the *Life of Caxton*, by that learned bibliographer, the Rev. T. F. Dibdin :

"Dr. Middleton's *Dissertation concerning the Origin of Printing in England*, was first separately published in a quarto pamphlet, 1735, and was afterwards incorporated into his works published both in quarto and octavo. It is a spirited performance; but it is filled chiefly with a refutation of Atkyns's ridiculous pamphlet on the *Original and Growth of Printing*, 1664, 4to.; wherein the laurel was intended to have been snatched from Caxton's brow and given to an ideal printer of the name of Corsellis. Middleton's pamphlet was rather popular at the time of its publication, and his attack upon Atkyns was ably seconded by a writer of the fictitious name of Oxonides; whose remarks, originally published in the *Weekly Miscellany*, April 26, 1735, (see page 148, ante,) were judiciously inserted, along with the substance of Dr. Middleton's *Dissertation*, by Messrs. Bowyer and Nichols, in their *Origin of Printing*."

"I will close this note by remarking, that, although Caxton is called by me the *first English printer*, yet I fully believe in the authenticity of the Oxford edition of the *Expositio sancti Ieronimi in simbolo apostolorum*, &c., of the date of 1468—which was printed by a foreigner at Oxford, who was afterwards interrupted in the prosecution of his typographical labours. I have seen two copies of this work; one in the Bodleian library; another in the public library at Cambridge. His Majesty has the only remaining copy known to be in existence. In my account of PRINTING AT OXFORD, (in a subsequent volume) a particular analysis of the book, and of the controversy relating to it, will be given: meanwhile the reader may see how the arguments of Oxonides have been strengthened by the luminous observations of Mr. Willet in his *Memoir on Printing in the Archeologia*."

Is not this sentence inconsistent? How can Mr. Dibdin call Caxton the first printer, when he acknowledges a prior book to have been executed at Oxford? We regret that his account of the Oxford press has not yet made its appearance; which would have spared us these remarks; there being no question that his able pen will satisfy all doubts. In the interim we anticipate his argument, by a supposition, that he means, *Caxton was the first Englishman who printed in this country*; but, that an unknown foreigner was the first who practised the art at Oxford! This would be one way of reconciling the above.

We shall now endeavour to explain the motives which induced so many of our countrymen to coincide with Atkyns. Upon the appearance of his pamphlet, after a lapse of near two hun-

dred years, (during which time Caxton had been universally considered as the first printer in England,) the literati were struck with amazement, that the substance was said to have been taken from a newly-discovered document then in the Lambeth library. Backed by such an assertion, no one presumed to question it; and our typographer would most probably have been robbed of his justly-earned fame, had it not been for the able pen of Dr. Conyers Middleton, who answered Atkyns in the most satisfactory manner, and thus changed the minds of several, who before had been decidedly against Caxton.

The learned Meerman, who has followed Junius through all the intricate mazes of hearsay tradition, (in favour of Coster and Haerlem) seized upon Atkyns' pamphlet with avidity, and endeavoured to account for and explain the numerous inconsistencies contained in that ridiculous work: this again created a sensation in the minds of many; because, coming from the pen of a foreigner, it was considered by John Bull (as most foreign productions now are) entitled to more credit than if it had been of English birth. Had one of the workmen been taken from Haerlem, as Atkyns asserts, would Junius, and all his successors, have omitted to notice that which would have been the strongest argument they could possibly adduce. We fully trust, that what is here advanced upon this subject will justly consign Atkyns' pamphlet to the shades of oblivion, although supported by the luminous observations of Meerman, and a portion of the literati of this country.—Johnson, *Typographia*. v. I.

The following extracts are given with a view of shewing the reader the high authorities in favour of Caxton, in none of which is mentioned a prior press at Oxford: had the circumstance taken place, as stated by Atkyns, it must have been known to some of these respectable characters:—

#### THOMAS FULLER.

*An historian and divine, author of the History of the Worthies of England, History of the Holy War, the Holy State, and other works, was born in Northamptonshire in 1606. Died in 1661.*

"Bale beginneth very coldly in his commendation, by whom he is character'd 'Vir non omnia stupida, sed ignavia torpes'; but we understand the language of his Libator, the rather because he praiseth his diligence and learning. He had most of his education beyond the seas, living thirty years in the court of Margaret Duchess of Burgundy, sister to King Edward the Fourth, whence I conclude him an Anti Lancastrian in his affection. He continued *Polychronicon* (beginning where Trevisa ended) unto the end of King Edward the Fourth, with good judgment and fidelity. And yet when he writeth that King Richard the Second left in his treasury money and jewels to the value of seven hundred thousand pounds, I cannot credit him, it is so contrary to the received character of that king's riotous prodigality. Caxton carefully collected and printed all Chaucer's works, and on many accounts deserved well of posterity, when he died in the year 1468."

#### ARCHBISHOP WILLIAM NICOLSON.

*A learned prelate, was born at Orton, in Cumberland, about 1633, and died in 1727. He published the English Historical Library, folio, 1740.*

"William Caxton was a menial servant, for thirty years together, to Margaret Duchess of Burgundy, sister to our King Edward IV. in Flanders. He afterwards returned into England; where flogging, as he says, an imperfect history (begun by one of the monks of St. Albans, says John Pitts very unadvisedly) he continued it in English, giving

it only the Latin title of *Fructus temporum*. How small a portion of this work is owing to this author, has been observed before; but he now usually bears the name of the whole, which begins with the first inhabiting of this island, and ends the last year of Edward IV. 1483. The opportunities he had of being acquainted with the court transactions of his own time, would encourage his readers to hope for great matters from him; but his fancy seems to have led him into an undertaking above his strength."

#### JOHN BAGFORD.

*An antiquary, and an eminent collector of curiosities. He compiled an History of Printing, &c. He died in 1716.*

"William Caxton took to the art and crafts of printing right well, altho' to his great expense of time and charges of money. Our Caxton was of ripe wit, and quick of apprehension in all he undertook; I mean in all the books he then translated into English: as may be seen by the prefaces he then put forth in print. He was so industrious a man, that the like hath not been seen in this our kingdom, to be the translator and printer of so many books with his own hands."

#### DR. CONYERS MIDDLETON.

*A celebrated divine and critic, was born at York in 1683. Author of the Life of Cicero, a Dissertation concerning the Origin of Printing in England, and many other works. He died in 1750.*

"Whoever turns over Caxton's printed works must contract a respect for him, and be convinced that he preserved the same character through life, of an honest, modest man: greatly industrious to do good to his country, to the best of his abilities, by spreading among the people such books as he thought useful to religion and good manners, which were chiefly translated from the French."

#### JOHN LEWIS.

*Minister of Margate, in Kent, author of the Life of Caxton, with an account of the Rise and Progress of Printing in England, 1737.*

"Mr. Caxton appears to have been a very humble, modest, and virtuous man. He often styles himself a rude and simple person, confesses his ignorance, and humbly beseeches the pardon of his readers, and the patience to correct his works; and expresses himself in other terms so submissive and self-abasing as are very uncommon, and more easily admired than imitated, &c. He was a man of no more learning than, as he ingeniously confessed, he had by his knowledge of the English and French languages, in which he modestly acknowledged, he remembered himself of his rudeness and unperfection. By the account which he has given of his printed books, it sufficiently appears in how great favour and request he was with the princes and great men of his own time."

#### S. PALMER, (or G. PSALMANAZAR.)

*A learned printer, and author of a History of Printing. He died in 1733. Mr. Palmer is supposed to have been assisted by Psalmanazar.*

"I can't but observe, that the faults of his English are owing more to his long continuance abroad, than to the place of his birth; which will easily appear from an accurate observation of his language, and manner of spelling, which discover a foreigner more than a broad-spoken Kentishman, &c. Besides his accomplishments as a merchant, Mr. Caxton acquired a great deal of politeness, partly by his travels for thirty years, and partly by his frequent residence at the court of the duchess of Burgundy, sister to King Ewd. IV. who caressed and patronized him very much, &c. As he was a person indefatigable and ambitious of applause, as well as earnest in promoting the glory of his own country, he read incessantly the histories of his own and other nations; which at proper times he digested into order."

#### WILLIAM OLDYS.

*Norrey King at Arms, well versed in English Antiquities, a correct writer, and good historian. Born 1687, died 1761.*

"And indeed, that a man should, for twenty years together, after age had crept over, and begun to make impressions upon him, when others naturally covet a cessation from labour, especially of the brain; that he, William Caxton, should still, after he had given between fifty and three score testimonies of his indefatigable diligence, in the publications he had made, which are computed to have amounted to that number, and now, as he could be little less than fourscore years of age, that he should be desirous of giving still fresh and farther instances of his zeal to promote or disperse the most virtuous examples and pious instructions among his countrymen; these, as they are no

ordinary proofs of the painful services he bestowed upon them, so they have deserved no common acknowledgements."

#### JOHN AMES.

*Secretary to the Society of Antiquaries. He devoted himself to the study of antiquities, in which he acquired great eminence, and published Typographical Antiquities, being an Historical Account of Printing in England, &c., 1749, and other works. He died in 1759.*

"Mr. Caxton was a citizen and mercer of London: at the death of his master he travelled abroad in the Low Countries, as an agent or merchant, for the space of thirty years; his good accomplishments, and great knowledge in foreign traffic, procured him so much esteem at home, that he was joined in a commission with Richard Whitehill, esq. to conclude a treaty of trade and commerce between King Edward IV. and the duke of Burgundy, whose son afterwards married the Lady Margaret, King Edward's sister, in 1466: this lady was our first printer's great friend and patroness."

#### ANONYMOUS, 1766.

"William Caxton, who first introduced printing into England, has, no doubt, been instrumental in preserving many things which otherwise would have been lost. But the misfortune was, that he was but an illiterate man, and of small judgment, by which means he printed nothing but mean and frivolous things, as appears from the catalogues of his impressions, given us by Mr. Lewis and Mr. Ames. Whereas, had he been a scholar, and had made a better choice of the works that were to pass by his press, it is probable many excellent performances, now lost, would have been secured to us, especially if he had recourse to some of the more ancient pieces; but, as it is, Caxton's works are valuable for little else than as being early performances in the art of printing, and as wrought off by him."

#### THOMAS WARTON.

*Poet Laureat, and Camden's Professor of Modern History, at Oxford, author of a History of English Poetry, and other eminent works. He died in 1790.*

"French versions enabled Caxton, our first printer, to enrich the state of letters in this country with many valuable publications. He found it no difficult task, either by himself or the help of his friends, to turn a considerable number of these pieces into English, which he printed. Ancient learning had as yet made too little progress among us, to encourage this enterprising and industrious artist to publish the Roman authors in their original language, and had not the French furnished him with these materials, it is not likely that Virgil, Ovid, Cicero, and many other good writers, would, by the means of his press, have been circulated in the English tongue, so early as the close of the fifteenth century."

#### DR. KIPPIS.

*A celebrated English divine and biographical writer, was born of Nottingham in 1727. He died in 1795.*

"Caxton, by translating, or procuring to be translated, such a number of the books from the French, greatly contributed to promote the state of literature in England. It was only in this way that he could introduce his countrymen to the knowledge of many valuable publications, at a time when an acquaintance with the learned languages was confined to a few ecclesiastics. Ancient learning had as yet made too little progress among us, to encourage him to publish the Roman authors in the original tongue."

#### DR. HENRY.

*Minister of the Church of Scotland, in Edinburgh, and author of the History of Great Britain, in 3 vols. 4to. Died Nov. 24, 1790.*

"All our historians and other writers, who flourished in or near those times, and mention the introduction of printing into England, unanimously, and without hesitation, ascribe that honour to Mr. William Caxton, mercer and citizen of London. This modest, worthy, and industrious man, hath been already noticed as an historian; he was also the translator of many books out of French into English; but he merited most of his country by introducing the art of printing."

#### EDWARD GIBBON.

*The eminent historian of the Decline and Fall of the Roman Empire, a work which will probably last as long as the language in which it was written. He died Jan. 16, 1794.*

"It was in the year 1474 that our first press was established in Westminster Abbey, by William Caxton: but to

the choice of his authors, that liberal and industrious artist was reduced to comply with the vicious taste of his readers, to gratify the nobles with treatises on heraldry, hawking,\* and the Game of Chess, and to amuse the popular credulity with romances of fabulous knights, and legends of more fabulous saints. The father of printing expresses a laudable desire to elucidate the history of his country.†

## THOMAS ASTLE.

*In English antiquary, was born in Staffordshire. He was the author of the Origin and Progress of Writing, as well Hieroglyphic as Elementary, and other works. He died in 1803.*

"William Caxton hath been generally allowed to have introduced and practised the art of printing in England in the reign of King Edward IV. He became a reputable merchant, and, in 1464, he was one of the persons employed by King Edward IV. In negotiating a treaty of commerce with the Duke of Burgundy, and was afterwards patronized by Margaret Duchess of Burgundy, sister to that king. Caxton having received a good education in his youth, had a taste for learning, and made himself master of the art of printing."‡

Having, as we conceive, fully set aside the claim of Oxford (*and her unknown printer*) and clearly established the unquestionable right of WILLIAM CAXTON, to the distinguished honour of having introduced the art of printing into this country; we shall now proceed to give some further notice of the labours of our first printer.

Caxton's first performances are very rude and barbarous. Lewis says, "he used a letter resembling the hand-writing then in use. His *d*, at the end of a word, is very singular. He used the characteristics which we find in English manuscripts before the Conquest. Instead of commas and periods, he used an oblique stroke, thus /, which the Dutch printers do to this day in their Gothic impressions. His letter was peculiar and easily known, being a mixture of Secretary and Gothic as to shape; and sometimes of great primer as to size; especially in printing proper names. He had a way of joining almost any two characters together. In his titles he used the German text, or what our printers call the Gothic, of the size of great primer, and sometimes he mixed it with his Secretary or common print, as our printers now do the italic. Like other printers of his time, he never used any direction or catch-word, but placed the signature where that now stands; and rarely numbered his leaves, and never his pages. In most of his books he only printed, as the custom then was, a small letter at the beginning of the chapters, to imitate what the initial or capital letter should be, and left that to be made by the illuminator, who wrote it with a pen, with red, blue, or green ink; but in some of his books he used two-line letters of a gothic kind. As he printed long before the present method of adding the errata at the end of books was used, his extraordinary exactness obliged him to take a great deal more pains than can easily be imagined; for, after a book was printed off, his method was, to revise it, and cor-

rect the faults in it with red ink; this being done to one copy, he then employed a proper person to correct the whole impression." His books are printed on paper made of the paste of linen rags, very fine and good, and not unlike the thin vellum on which they used to write their books at that time.

There is one mistake, however, worth the correcting, that the writers have universally fallen into and taken up from each other; that John Islip was the abbot who first encouraged the art, and entertained the artist in his house: whereas it is proved, that he was not the abbot until four years after Caxton's death; and that Thomas Milling was abbot in 1470, made bishop of Hereford a few years after, and held the abbey in commendam in 1485; in which John Estney next succeeded: so that Milling, who was reputed a great scholar, must have been the generous friend and patron of Caxton, who gave that liberal reception to an art so beneficial to learning.

This shews how unsafe it is to trust to common history, and necessary to recur to original testimonies, when we would know the state of facts with exactness. Mr. Echard, at the end of Edward IVth's reign, among the learned of that age, mentions William Caxton as a writer of English history; but seems to doubt whether he was the same with the printer of that name. Had he ever looked into Caxton's books, the doubts had been cleared; or had he consulted his *Chronicle of England*, which it is strange that an English historian could neglect, he would have learnt at least to fix the beginning of the art of printing in the abbey.

The productions of Caxton's press amount to sixty-four. Of the most interesting of these works, either from the anecdotes connected with them, from the insight they give into his life and character, or into the manner of the times, or from the specimens they afford of his talents and information, we shall give a short account, arranging them in chronological order:—

1474, March 31. *The Game and Playe of the Chesse*: Translated out of the French, and imprinted by William Caxton. Fynyshe the last day of Marche, the yer of our Lord God a thousand foure hundred lxxiiij.

This book, upon the authority of Mr. Bagford, in which opinion Mr. Lewis concurs, is considered the first work printed in England. The former says, "Caxton's first book in the abbey was the *Game of Chess*; a book, in those times, much in use with all sorts of people, and in all likelihood first desired by the abbot, and the rest of his friends and masters. It underwent two impressions if not more." "At all

\*This list of the books printed by Caxton cannot, perhaps, be better closed than by the following anecdote from Herbert: "At my first setting out (says he) in this arduous undertaking, I entertained hopes of being able to give a more correct and certain account of Mr. Caxton's works, having been informed that there were still existing complete copies of most, if not all, of Caxton's books, collected and preserved by the late Mr. Cheswell, a very eminent bookseller of the last age, and that they were then in the possession of a gentleman, who, no doubt, would favour me with the perusal of them, and be glad of the opportunity of communicating materials so curious, and necessary to illustrate and authenticate the memoirs of our first printer. Without delay I waited on the gentleman, who very politely promised me the use of them, but said they were sent over to Amsterdam, for the inspection of a friend there, but that he would write for them the first opportunity. A short time after, I took the liberty to write to him that I would with pleasure wait on him, in order to take extracts from his Caxtons, in such a manner as should be most agreeable to him. In a few days I was indulged with an answer, informing me 'he had received from Holland the very disagreeable intelligence, that all his fine Caxtons had met with the unfortunate accident (*Heu lamentabile dictu!*) of being burnt, and totally destroyed, as he understood, by the neglect of a servant in his master's absence, throwing down from a shelf a large bottle of aquafortis into the box where the said books were, and neglecting them in his fright, so that more mischief was done in the room." "I am very much afraid," concludes Herbert, "that my friend received but a *Flemish* account of his Caxtons."

events," observes Mr. Dibdin, "it is incontrovertible that the present work is the first work printed by Caxton to which the date of the imprint is affixed; and is in consequence, a great curiosity." The work opens with the following dedication to George duke of Clarence, the eldest surviving brother of Edward IV.

"To the right noble, right excellent and vertuous prince George, duc of Clarence, erle of Warwick and Salisburie, grete chamberlayn of Englonde and lieutenant of Ireland, oldest brother of kynge Edward, by the grace of God kynge of Englonde and of Fraunce, your most humble servant William Caxton, amonge other of your servantes, sends unto you peas, helthe, joye, and victorie upon your enemyes, right high puyssant and redoubted prince. For as much as I have understand and knowe, that ye are enclined unto the comyn wele of the kynge, our said sovereyn lord, and his nobles, lordes and comyn peple of his noble royaume of Englonde, and that ye save gladly the inhabitant of the same informed in good, vertuous, prouffitable and honeste maners, in whiche your noble persone, wit gudyng of youre hous, haboundeth, gynnyng lyght and ex-sampte unto all other. Therefore I have put me in decour to translate a lityll booke late comyn into myn handes, out of Frenshe into Englishe, in which I fynde thaurities, dictes of auncient doctours, philosophers, portes, and of other wyse men, which ben recounted and applied unto the moralite of the publike wele, as well of the nobles as of the comyn peple, after the game and playe of the Chesse, whiche booke, right puyssant and redoubted lord, I have made in the name, and under the shadow of your noble protection, not presumyng to correcte or enpoigne any thyng agens your noblesse; for God be thanked, your excellent renome shyneth as well in straunge regions, as within the royaume of Englonde, gloriously to your honour and laude, whyche God multiplye and encrease. But to thentent that of what estate and egress they stand in, may see in this said lityll booke, that they governed themself as they ought to doo; wherefor for my right dere redoubted lord, I requyr and supply your good grace not to desdaygne to resceyve this said lityll booke in gree and thanke, as well of me your humble and unknowne servant, as of a better and greater man than I am, for the right good wyll that I have had to make this lityll worke in the best wyse I can, ought to be reputed for the fyst and dede: and for more clerely to precede in this said booke, I have ordyned that the chapters been sete in the beginning, to thende that ye may see more playnly the matter wherof the booke treteth."

The contents begin thus:—

"This booke conteyneth iii traytees, the first traytee is of the invencion of this playe of the chesse, and conteyneth iii chapters," &c.—and ends thus: "And therefore, my right undoubted lord, I pray Almighty God to save the kynge our soverain lord, and to give hym grace to ysave as a kynge, and tabounde in all vertues, and to be assisted with all other his lordes, in such wyse, that his noble royaume of Englonde may prosper, and habounde in vertues, and that synne may be eschewid, justicc kept, the royaume defendid, good

men rewarded, malefactors punysshid, and the ylle peple to be put to labour, that he, wyth the nobles of the royaume, may regne gloriously in conqueringe his enheritaunce, that verray peas and charity may endure in both his royames, and that merchandise may have his course, in such wise that every man encheu synne, and encrece in vertuous occupacions, prayenge your good grace to resseyue this lityll and symple booke, made under the hope and shadowe of your protection, by hym that is your most humble servant, in gree and thanke. And I shall pray Almighty God for your long lyf and welfare, whiche he preserve, and send you thacomplishment of your hys, noble, joyous and virtuous desires, amen. *Fynysshid the last day of Marche, the yer of our Lord God a thousand foure hondred and lxxiii.*" In the first edition of this book there were no cuts, but in the second there are; and in the second and third chapters it is said, "*This game was invented by Philometer the philosopher, for the correction and instruction of a wicked king.*"\*

The second edition of the *Game of Chess*, "is rare to see except in the curious libraries of collectors of books," says Bagford, "contains only eighty-four leaves, has twenty-nine lines in a page, and is illustrated with twenty-four wood cuts.

1475. *A Boke of the hoole lyf of Jason*. Without date; but supposed to have been printed in this year. Folio.

Another production from the prolific pen of Le Ferre, who is said to have composed this, and three other books, prior to his *History of Troy*, in which he partially touches upon Jason's conquest of the golden fleece; the former were considered too great to insert in the latter. Caxton's prologue contains a curious description of the hangings set up in the castle of Hesden, in Artois, upon the river Canche, by Philip, duke of Burgundy, founder of the Order of the Knights of the Golden Fleece. Anstis says, that no other writer has described these hangings, which is said were destroyed in 1553, when the town and castle were demolished by Emanuel, duke of Savoy, one of the emperor Charles V's generals.

Caxton conclude the volume with a prayer to the young prince, (Arthur) begging him to accept his humble performance; he continues, "Whom I beseech God Almighty to save and

increase in virtue, now in his tender youth, that he may come unto his perfect age, to his honour and worship, that his *renome* may perpetually be remembered among the most worthy. And after this present, everlasting life in heaven, who grant him and us that bought us with his blood, blessed Jesus, Amen." The date of 1475 is fixed by Mr. Ames; and Mr. Dibdin thinks the romance of *Jason* was the earliest specimen of Caxton's press in England. Some writers assign the date of 1477 to this work.

We think it better to give a short account of what is most peculiar in the first production of the art; which, though a subject well known by the curious, and to the profession, it is presumed may not be unacceptable to several persons, into whose hands this work may chance to fall.

With respect to their forms, they were generally either large or small folios, or at least quartos: the lesser sizes were not in use.

The leaves were without running title,\* direction-word, number of pages, or divisions into paragraphs.

The character itself was a rude old Gothic mixed with Secretary, designed on purpose to imitate the hand-writing of those times; the words were printed so close to one another that it was difficult and tedious to be read, even by those who were used to manuscripts, and to this method; and often lead the inattentive reader into mistakes.

Their orthography was various and often arbitrary, disregarding method.

They had very frequent abbreviations, which in time grew so numerous and difficult to be understood that there was a necessity of writing a book to teach the manner of reading them.

Their periods were distinguished by no other points than the double or single one, that is, the colon and full-point: but they a little after introduced an oblique stroke, thus /, which answered the purpose of our comma.

They used no capital letters to begin a sentence, or for proper names of men or places.

They left blanks for the places of titles, initial letters, and other ornaments, in order to have them supplied by the illuminators, whose ingenious art, though in vogue before and at that time, did not long survive the masterly improvements made by the printers in this branch of their art. Those ornaments were exquisitely fine, and curiously variegated with the most beautiful colours, and even with gold and silver; the margins likewise were frequently charged with variety of figures of saints, birds, beasts, monsters, flowers, &c., which had sometimes relation to the contents of the page, though often none at all: these embellishments were very costly; but for those that could not afford a great price, there were inferior ornaments, which could be done at a much easier rate.

The name of the printer, place of his residence, &c., were either wholly neglected, or put

\* Athalus, who died two hundred years before Christ, and succeeded Eumenes as king of Pergamus, is supposed by some to have been the inventor of Chess.—Chess is mentioned in the *Romance of the Rose*, and in *Orlando Furioso*. Also we read in Chaucer,—

— Athalus that made the game  
First of the Chess, so was his name.

We also find in *The Works of Armorie*, by John Boese-well, printed by Richard Tottel, in Flete Street, London, 1572. 4to.

"This game was first invented by Athalus, as Master G. Chaucer reporteth in his dreame."

In "the olden time," says a modern writer, the Game of Chess was emphatically described as "the game of princes and ladies."

For a catalogue of the works on the Game of Chess, including notices of authors and anonymous publications, with an account of many manuscript and rare books on Chess, see the *Bibliographical and Retrospective Miscellany*, London, 1839.

\* Some of the early printed books of Caxton have no title pages.

at the end of the book, not without some pious ejaculation or doxology.

The date was likewise omitted or involved in some crampt circumstantial period, or else printed either at full length, or by numerical letters, and sometimes partly one and partly the other; thus, one thousand CCCC and lxxiii, &c., but all of them at the end of the book.

There were no variety of characters, no intermixture of roman and italic, they are of later invention, but their pages were continued in a Gothic letter of the same size throughout.

They printed but few copies at once, for 200 or 300 were then esteemed a large impression; though upon the encouragements received from the learned, they increased their numbers in proportion.

We shall here mention something concerning their book-binding, an account of which we find in Scaliger, who tells us, that his grandmother had a printed *Psalter*, the cover of which was two inches thick; in the inside was a kind of cupboard,\* wherein was a small silver crucifix, and behind it the name of Berenica Codronia de la Scala. This book seems to have been printed with blocks of wood, but probably bound the same way as the rest.

We conclude this portion with an observation of M. Monoye concerning the phrase, *Libri editi*, which we hope the curious will be pleased with: he tells us that this phrase was used before the invention of printing, and signified only books published and dispersed abroad in some considerable number, in opposition to those that were writ fair to be set up in libraries, which were called *Libri scripti*. Whether this observation be as certain as it is curious we shall leave to the judgment of our readers.—*Luckombe*.

1475. In this year appeared the *first separate* edition of the *New Testament* in Latin, in a small quarto form, for the convenience of general readers. Prefixed to the epistle of *St. Jerom*, which precedes the text, is a notice in Latin, by the printer, explaining the cause of the publication, of which the following is the substance: "It is the general cry, that every believer, who professes to have any knowledge of letters, is bound to have an acquaintance with the Holy Scriptures, and more particularly with that part of the bible, called the *New Testament*. It is certain, however, that but few persons have the means of procuring the *whole* of the bible, and that many, even of the rich, prefer portable volumes. Induced by these considerations, as well as by the influence of my superiors, professors of sacred theology, and overcome by the zeal of certain monks and secular clergy, I have attempted, I hope, under favourable auspices, to print the present convenient volume, containing the *whole* of the *New Testament*, with a view to the glory of God; and shall be satisfied, if it afford benefit to any one." It is printed in double co-

lumns, with a delicate Gothic type. To the *New Testament* is subjoined, "*Liber haymo de christianarum rerum memoria prolog.*—Dibdin's *Bibl. Spencer*. vol. I. p. 32, Note.

Haymo, the author, was the disciple of Alcuin, in the ninth century, a monk of Fulda, and afterwards bishop of Halberstadt. The work itself is an abridgment of ecclesiastical history.—*Cens.*

In this year, an edition of the Dutch bible was printed at Cologne, in 2 vols. folio; at Delft, in 1477, in 2 vols. folio, and also in 4to. Another at Goudo, in 1479. These translations are said to have been mixed with many fabulous narratives; and were probably made at an earlier period than that of their being printed. They are supposed to have been preceded by an edition of the *Four Gospels*, printed in 1472.

1475. Printing introduced into the following places in this year:—

Reggio, by Abraham Garton.

Barcelona, by Nicholas Spindeler.

Saragossa, by Matthew Flandrus.

Pièrre di Sacco, a small town belonging to the late republic of Venice, by R. Mescullam, surnamed Kotzi.

Pignerol, by James de Rouges, or Rubeis.

Vicenza, by Herman Lichtenstein.

Lubec, by Lucas Brandis de Schafz.

Burgdorf, printer unknown.

Blauburren, a small town in the kingdom of Wirtemberg, printer's name unknown.

Cagli, R. de Fano and Bernard de Bergamo.

Casole, John Fabri.

Modena, Joan Vurster.

Perugia, by Henry Clayn, of Ulm.

Placentia, John Peter.

1476. *Died*, JOHN MULLER, commonly called Regiomontanus, from his native place, Mons Regius, or Königsberg, a town in Franconia, was born in 1436, and became the greatest astronomer and mathematician of his time. Having first acquired grammatical learning in his own country, he was admitted, while yet a boy, into the academy at Leipsic; from whence he removed, at only fifteen years of age, to Vienna, to enjoy the superior advantages afforded to his pursuits, by the learned professors in that university. After some years the cardinal Bessarion arrived at Vienna, and soon formed an acquaintance with the youthful astronomer, who, in order to perfect his knowledge of the Greek tongue, accompanied the cardinal to Rome, where he studied under Theodore Gaza, a learned Greek. In 1463 he went to Padua, where he became a member of the University. In 1464 removed to Venice, to meet and attend his patron Bessarion.\* He returned the same year with the cardinal to Rome, where he made some stay, to procure the most curious books: those he could not purchase, he took the pains to transcribe, as he wrote with great facility and elegance: and others he got copied at a great

\* I had a book in my hands a few days since, in the cover of which was a recess for a relic; and the relic!—a human toe!!—*Hensard*.

\* Among other curiosities in the library of Louvain there is a manuscript *Bible*, given to the doctors of the university, by cardinal Bessarion, in grateful acknowledgment of their hospitable treatment of him.

expense; for as he was certain that none of those books could be had in Germany, he intended, on his return thither, to translate and publish some of the best of them. It was, probably, at this period, that he transcribed, in the most beautiful manner, the whole of the *New Testament* with his own hand, a labour which he undertook from the ardour of his attachment to the Divine volume, and which he is said to have rendered familiar to him by continued perusal.

Having procured a considerable number of manuscripts, he returned to Vienna, and for some time read lectures; after which he went to Buda, on the invitation of Matthias, or Mattheo, king of Hungary, the great patron of learned men. The breaking out of the war occasioned his withdrawing to Nuremberg, where he set up a printing-office, and printed several astronomical works. In 1774 he was prevailed upon by pope Sixtus IV. to return to Rome, to assist in reforming the calendar. He arrived at Rome in the year 1475, but died there a year after, at only forty years of age, not without suspicion of being poisoned.

Many authors have ascribed the invention of printing to this individual. It is said of Regiomontanus, that he made an iron fly spring from under his hand, fly round the room with a humming noise, and return to its first position: he is likewise reported to have made a wooden eagle, which flew from Nuremberg to meet the emperor, hovered over his head in a tonic motion, and went back the same way with him. It was no wonder that some authors should give so universal an artist, the repute of inventing printing. It is certain he was a very early printer, although not the inventor.

1476. Within the period of twenty years after the introduction of printing at Paris, we find the number of those who practised the art in that city, including Gering and his associates, increased to thirty-five: and the commencement of the succeeding century witnessed the enlargement of this list in an almost triple proportion. Of these artists, who varied greatly both in the number and value of their impressions, several distinguished themselves so eminently as to merit our particular notice. Amongst these were Pasquier Bonhomme, whose earliest impression, *Les Grands Chroniques de France*,\* in 3 vols. folio, bears this date: he was one of the four principal *libraires* of the university: and assumed for his *insigne* the image of St. Christopher.

\* This was distinguished from other early national chronicles by the title of *Chroniques de St. Denis*; having been compiled by several of the religious of that celebrated abbey. According to du Chesne, it was begun by Jean Chartier a monk of this society, and continued by others from the time of Charles VII. to the decease of Louis XII. To the industry of the same society, says de Bure, are owing the numerous and exquisitely ornamented manuscripts of the work which are existing both in public and private libraries. This work was reprinted by Verard in 1493, in 3 vols. folio, again by Eustache, with a continuation to the year 1514; which edition is in the highest request.

Louis XII. was surnamed the *Just*; he was born June 27, 1462; was married to the princess Mary of England, October, 1514; and died January 1, 1515.

1476. The first whole Greek book was the *Grammar* of Constantine Lasadis, printed at Milan, by Dionysius Palarisimus, in 4to. It was revised by Demetrius Cretensis.

1476. Printing was introduced into the following places during this year:—

Autwerp, by Theodore Martins, of Alost.

Bruges, by Colard Mansion.

Brussels, the Brethren of the Common Life.

Delft, by Jacob Jacobs and Maurice Yemants.

Nova Pizna, (New Pilsen,) in Bohemia, the printer's name not known.

Rostock, the Brethren of the Common Life.

Polliano, Innocent Ziletus and F. Antiquarius.

Trent, by Herman Schindeleyp.

1477. In glancing at the rapid extension of the valuable art of printing, it ought not to be forgotten, that Jews, as well as Christians, became at an early period convinced of its importance, and engaged in it with ardour. The *Psalms* in Hebrew, with the *Commentary* of Kimchi, were printed this year, in 4to., by Joseph and his son Chaim Mordecai, and Hezekiah Monro, who printed 300 copies of them. The *Pentateuch*, with the *Targum* and the *Commentary* of R. Jarchi, was printed at Bologne in Italy, in 1482, folio. *Ruth*, *Ecclesiastes*, *Song of Solomon*, and *Lamentations*, with the *Commentary* of Jarchi; and *Ezher*, with the *Commentary* of R. Abenezra, were printed also at Bologne, in folio, in the same year. The former and latter *Prophets* were first printed in Hebrew, at Soncino, in 1486, folio, with the *Commentary* of R. Kimchi. The *Hagiographa* were printed at Naples, 1487, in small folio, accompanied with several *Rabbinical Commentaries*.

1477. John Philip de Lignamine was the third in the chronological order of Roman printers. He was a learned and modest typographer; and many valuable works, almost entirely in prose, issued from his press; but in point of number and importance of publication, he must unquestionably yield to his cotemporaries. This printer rarely executed large works, and his *Laurentius Valla*, of 1471, is the noblest specimen of his press. He also, with one creditable and curious exception, namely, some *Opuscula* of Philipus de Barberis, 1481, used only one and the same fount of letter: but his zeal for literature, and his acknowledged modesty and learning, place him high in the estimation of competent judges. Before his commencing the art of printing, he is supposed to have practised physic. The next printers we find at Rome were named Sixtus Russinger, who printed at Naples from 1471 to 1478; when he quitted that city and printed at Rome with Georgius Allemannus. He also printed at Naples with Franciscus de Tuppo, Sachsal, and Golsch. These are very rare but very comely printers. George Laver first printed at the Eusebian monastery, at Rome; whither he was invited by cardinal Caraffa, from 1470 to 1472 inclusive. Laver printed under the auspices of two learned editors, Pomponius Lætus and Bartholomæus Platina. In 1473

Laver associated himself with Leonhard Pflugel, and these printed together till 1495. Laver was a native of Wurtzburg. John Schurener de Bopardia exercised the art about 1475. He was a printer of second-rate merit, on the score of beauty; yet much preferable to Laver. Panzer notices probably a brother of this printer of the name of Conrad de Bopardia, who printed at Cologne in 1486.—*Beloe*.

In what manner the invention of the art of typography was appreciated, is apparent from the high honour and distinction to which its professors were, in different places, advanced. Philip de Lignamine was of the equestrian order, and the favourite and confidential friend of the pope. Nicholas Jenson was made count Palatine of the Rhine. Sixtus Russinger was ennobled by Ferdinand, King of Naples. John Mentilus was ennobled by the emperor Frederic III. John Gutenberg was likewise ennobled by archbishop Adolphus, elector of Mentz. Aldus Manutius received the same honourable distinction and numerous other examples of the kind might be easily adduced. All of them of the higher class, bore arms, and many individuals among them were distinguished by the peculiar marks of favour of the sovereigns in whose times they flourished.

1477. Printing introduced into the following cities and towns:—

Deventer, by Richard Paffroet.

Gouda, by Gerard Leu (or Leuw.)

Angers, by Joann. de Turro & Joan de Morelli.

Palermo, by Andrew de Warmatia.

Ascoli, by William de Linis.

Seville, by M. de la Talle, B. Segura and A. del Puerto.

Bartholomew Buyer introduced the art of printing into Lyons, and printed the New Testament in French.

Titles and cyphers began to be employed about this period.—*Chevillier*.

1477. *The Dictes and Sayenges of Philosophes. Which Boke is translated out of Frenshe into Englyssh by the Noble and puissant lord Antoine Erle of Ryuyers lord of Scales and of the Isle of Wyght, Defendour and directour of the siege Apostolique, &c. Emprynted by me William Caxton at Westminster the yere of our lord m. cccc. lxxvij. Folio.*

This is the first book printed by Caxton with the year and place specified. It was translated out of Latin into French by M. Jehan de Teonville, and from the French by earl Rivers. This nobleman had left out some strictures on women, which were in the original French; these Caxton translated and added as an appendix in three additional leaves; of his reasons for doing so, he gives the following statement. Lord Rivers had desired him to look over the translation, and to correct it. Caxton observed that the *Dictes* of Socrates on Women was not there, and indulged in many conjectures respecting the reason of the omission. He supposed that some fair lady had used her influence with his lordship, or that he was courting some fair lady at the time, or that he thought Socrates said more than was true, or

that these *Dictes* were not in his lordship's copy: "or else peradventure that the wind had blown over the leaf at the time of the translation." As, however, his lordship had given him permission to correct the translation, Caxton thought he should not be going beyond due limits if he added these *Dictes*. But, he tells us, "I did not presume to put and set them in my said lord's book, but in the end apart, in the rehearsal of the works, that lord Rivers, or any other person, if they be not pleased, may with a pen erase it, or else read the leaf out of the book, humbly beseeching my said lord to take no displeasure on me so presuming." He then requests the reader to lay the blame on Socrates, not on him. From his insertion of these strictures on women, which are not the most courtly, it has been inferred that he was a womanhater; but that he was not so, appears from some of his prologues, especially from that to the *Knight of the Tower*. This work he was requested to translate and print by "a noble lady, who had brought forth many noble and fair daughters, which were virtuously nourished and learned."

Oldys states, that the work opens with the sayings of Sedechias, and continues with those of Homer, Solon, Hippocrates, Pythagoras, Diogenes, Socrates, Plato, Aristotle, Alexander, Ptolemy, Seneca, St. Gregory, Galen, and others: each occupying one chapter. The concluding chapter comprehends the sayings of several persons.

"Thus endeth this booke of the dyctes and notable wyse sayengis of the phylosophers, late translated and drauen out of Frenshe into our Englishe tonge by my foresayde lord therle of Ryuyers and lord Scales, and by his commandement sette in forme, and emprinted in this manner, as ye may here in this booke see, which was fynished the xviii. day of the moneth of Novembre, and the seventeenth yere of the reign of kyng Ewd. the IV."

It appears that Caxton printed two editions of this work; the one comprised in seventy-five leaves, and twenty-nine lines to a page, is considered the most ancient; the second contains sixty-six leaves, with thirty-one lines in each page.

1477. The pages were first numbered in *Sermonibus*, Leon de Ultino, in this year. These generally, as at present, were placed at the top of the page, though Thomas Anselmus, in his edition of *Hierychius*, published in 1521, placed the cyphers at the bottom, and recommended the practice in his preface. The custom of numbering the pages does not appear to have become at all popular, for few books are found with this distinction before the end of this century. What was termed the *Registrum Chartarum* was much more frequent. This custom was first introduced by Ulric Han and Simon de Laca, as early as in the *Philippics* of 1470. They occur, also, in the edition of *Virgil*, printed at Rome, 1473, a peculiarity which the accurate Audiffredi has not omitted to notice. The great convenience of this register was, that it

served as a guide to the bookbinders; but after the universal adoption of the signatures, catch-words, cyphers, and numbering the pages, registers were omitted as unnecessary.

1478. The first *Errata* which is known is a *Journal*, printed at Venice, with the notes of Merula, by Gabrielis Petrus. In this book the *errata* occupy two entire pages.

To the correctness of their impressions the earliest printers in general, and those of Paris in particular, appear to have been especially attentive. An impression of *Virgil* from the press of Gering and Rembolt, in 1498, 4to. is particularly specified as a work of great accuracy. It is in reality admitted, says Chevillier, to be *une tres belle edition*, printed in the finest Roman character, and agreeably to the testimony at the end of the volume, *Opus terrissime impressionum*. In an epigram, of which Jean Auber, a friend of the editor P. Maillet, was the author, it is asserted that the work is absolutely faultless.

Another "quadrain," or epigram, makes a similar assertion respecting the *Corpus Juris Canonici* from the press of Rembolt.

These, and similar assertions found at the close of other works specified by Chevillier, he is disposed to consider as "jeux des vers" and "licenses poetiques." It is entertaining to follow him through an ample chapter, in which, by the united testimony of authors, editors, and typographers, he undertakes to prove, that a book absolutely without errors of the press, is indeed a *rara avis*; and next to an impossibility. We of the typographic art, may indeed exclaim with Pope,

"Whoever thinks a faultless piece to see,  
Thinks what ne'er was, nor is, nor ne'er shall be."

In works of the remotest dates, *tables of errata* are seldom, perhaps never found: but the faults of the impression were corrected with the pen previously to the dispersion of the work. This is exemplified in the earliest editions of Gering, Caxton, and several others. A similar mode of correction appears to have been adopted, so late as the year 1534, by the editor of the *Discourses of Clitov*. But the labour of manual correction was of short duration. Through the ignorance of sordid printers, errors of the press soon became very numerous, and to correct them with the pen was but in other words to disfigure the volume throughout, and make a disgusting display of its imperfections. The custom was consequently adopted of affixing the most important corrections under the title of *errata*, at the end of the volume.

If indeed the lapse of time had brought any alleviation of this evil, the French bibliographer above cited would not have found occasion of filling up a great part of a chapter, with a kind of chronological enumeration of quarrels which have taken place between scholars and the contaminators of their lucubrations. He would not have recorded the charge brought against the printers of Geneva in particular, "execrable paper, and intolerable incorrectness." Joseph

Scaliger particularizes the celebrated *Lexicon Græcum* of Robert Constantine, as a work abounding in typographical errors. And, adds Chevillier, it must be acknowledged that this work has not fewer errors of the author, than of the printer. Lastly, he relates that cardinal Bellarmine was so much offended by the inaccuracies which negligent printers of his time had introduced into his controversial works, that he determined to write out a copy of the whole, so exactly, that not a single error should remain uncorrected. This he performed, and transmitted to a printer of Venice; hoping at length to procure an unperverted and perfect edition. But to his great disappointment, he found this impression, when completed, more erroneous than any of the former.

Besides the ordinary *errata*, which happen in printing a work, others have been purposely committed that the *errata* may contain what is not permitted to appear in the body of the work. Wherever the inquisition had any power, particularly at Rome, it was not allowed to employ the word *factum*, or *fata*, in any book. An author, desirous of using the latter word, adroitly invented this scheme: he had printed in his book *facta*, and, in the *errata*, he put, for *facta*, read *fata*.

Scarron has done the same thing on another occasion. He had composed some verses, at the head of which he placed this dedication—*A Guillemette, Chienne de ma Sœur*; but having a quarrel with his sister, he maliciously put into the *errata*, instead of *Chienne de ma Sœur*, read *ma Chienne de Sœur*.

Lully at the close of a bad prologue said, the word *fin du prologue* was an *erratum*, it should have been *fi du prologue*.

In a book there was printed, *le docte Morel*. A wag put into the *errata*, for *le docte Morel*, read *le docteur Morel*. This *Morel* was not the first *docteur* nor *docte*.

When a fanatic published a mystical work full of unintelligible raptures, and which he entitled *Les Delices de l'Esprit*, it was proposed to print in his *errata*, for *Delices*, read *Delires*.

The author of an idle and imperfect book euded with the usual phrase of *cetera desiderantur*, one altered it *non desiderantur sed denunt*; the rest is *wanting*, but not *wanted*.

At the close of a silly book the author, as usual, printed the word *FINIS*.—A wit put this among the *errata*, with this pointed couplet:—

FINIS! an error, or a lie, my friend!  
In writing foolish books—there is no End!

The baron de Grimm, in his *Memoirs*, mentions the extraordinary circumstance of an irritable French author having died in a fit of anger, in consequence of a favourite work, which he had himself revised with great care, having been printed off with upwards of three hundred typographical errors; half of which had been made by the corrector of the press.

A furious controversy raged between two famous scholars from a very laughable but acci-

dental *erratum*; and threatened serious consequences to one of the parties. Flavigny wrote two letters, criticising rather freely a polyglot Bible, edited by Abraham Ecchellensis. As this learned editor had sometimes censured the labours of a friend of Flavigny, the latter applied to him the third and fifth verses of the seventh chapter of St. Matthew, which he printed in Latin. Ver. 3. *Quid vides festucam in oculo fratris tui, et trabem in oculo tuo non vides?* Ver. 5. *Ejice primum trabem de oculo tuo, et tunc videbis ejicere festucam de oculo fratris tui.* Ecchellensis opens his reply by accusing Flavigny of an enormous crime committed in this passage; attempting to correct the sacred text of the evangelist, and daring to reject a word, while he supplied its place by another, as *impious* as *obscene*! This crime, exaggerated with all the virulence of an angry disclaimer, closes with a dreadful accusation. Flavigny's morals are attacked, and his reputation overturned by a horrid imputation. Yet all this terrible reproach is only founded on an *erratum*! The whole arose from the printer having negligently suffered the first letter of the word *Oculo* to have dropped from the form when he happened to touch a line with his finger, which did not stand straight! He published another letter to do away the imputation of Ecchellensis; but thirty years afterwards his rage against the negligent printer was not extinguished; the wits were always reminding him of it.

The number of typographical inaccuracies which abound in the bibles printed at different times and places, are remarkable; but of all the literary blunders none equalled that of the edition of the Vulgate, by pope Sixtus V. 1590. In an edition printed at London, in 1632, where "Thou shalt commit adultery" was printed, omitting the negation.

In the version of the Epistles of St. Paul into the Ethiopic language, which proved to be full of errors, the editors allege a good-humoured reason—"They who printed the work could not read, and we could not print; they helped us, and we helped them, as the blind helps the blind."

A printer's widow in Germany, while a new edition of the Bible was printing at her house, one night took an opportunity of stealing into the office, to alter that sentence of subjection to her husband, pronounced upon Eve in *Genesis*, chap. 3, v. 16. She took out the two first letters of the word *HEAR*, and substituted *NA* in their place, thus altering the sentence from "and he shall be thy lord," (*herr*), to "and he shall be thy fool," (*narr*). It is said her life paid for this intentional *erratum*; and that some secreted copies of this edition have been bought up at enormous prices.

The celebrated Campanus, bishop of Crotona, did not disdain to become the corrector to Ulric Han, the second Roman printer. It is alike honourable to the bishop and the printer to have formed a union, and so long to have prosecuted it together, which had the benefit of learning in

view. The most famous epigram, subjoined by Ulric Han to most of his books, was written by Campanus, in compliment to his friend:—

Anser Tarpeli custos Jovis unde quod alia  
Constreperes, Gallus decedit, alter adeest  
Uldrichus Gallus ne quem posantur in usum  
Educuit pennis nil opus esse tuis.

As much as to say, the art of Ulric Han rendered all use of goose quills, hereafter, superfluous. Fernus, the biographer of Campanus, relates a facetious story of his having heard the above epigram for the first time from a Turk, with whom he accidentally travelled, but whose desire of seeing Campanus, had caused him to visit Rome, where he obtained copies of his works. So incessant was the employment of Campanus, as corrector of the press to Ulric Han, that he allowed himself no more than three hours sleep in a night. This is given from Mattaire, who cites the authority of Zeltner. Campanus died at the early age of 50, at Siena. Of Ulric Han little is known; he was a German, a native of Ingoldstad, and a citizen of Vienna, and was also the second Roman printer, though it has been contended, but erroneously so, that he was the first.

It is not a little remarkable, that the two first printing presses established in the metropolis of Italy were superintended and corrected by two individuals of episcopal rank. But it may also be observed, that in the infancy of printing, and indeed long afterwards, the occupation itself was considered as highly honourable, and only undertaken by well educated persons—it became the glory of the learned to be correctors of the press to eminent printers. Physicians, lawyers, bishops, and even popes themselves, occupied this department. The printers frequently added to their names those of the correctors of the press; and editions were valued according to the abilities of the correctors. "Typography, if I may use the expression," says Mr. Beloe, in his *Anecdotes of Literature*, "had sent its colonies from Germany, to Subiaco, to Rome, to Venice, to all parts of Italy, to France, and even to this country, before even the laborious part of the profession had been delegated to ignorant mechanics. Its professors were distinguished by the kindness, and honoured by the familiarity of the great;" many of them were of illustrious families.

Chevillier, from whom many of these remarks are borrowed, tells a facetious story of Robert Gaguin, who having printed his first edition of the *History of France*, was so disgusted with the number of typographical errors which appeared, that he determined to print his second edition at Lyons, and accordingly did so. But the second edition was also so deformed by errors, that he expressed a wish to have the whole five hundred copies in his chamber, to burn or otherwise destroy them.

In the year 1561, was printed a work, entitled the *Anatomy of the Mass*. It is a thin octavo, of 172 pages, and it is accompanied by an *errata* of fifteen pages! The editor, a pious monk, in-

forms his readers that a very serious reason induced him to undertake this task; for it is, says he, to forestal the *artifices of Satan*. He supposes that the devil, to ruin the fruit of this work, employed two very malicious frauds; the first before it was printed, by drenching the manuscript in a kennel, and having reduced it to a most pitiable state, rendered several parts illegible; the second, in obliging the printers to commit such numerous blunders, never yet equalled in so small a work. To combat this double machination of Satan he was obliged carefully to reperuse the work, and to form this singular list of the blunders of printers, under the influence of the devil. All this he relates in an advertisement prefixed to the *errata*.

The following specimen of notice of *errata*, occurs in a work entitled the *Practice of Preaching*, printed in 1577. "An admonition to the reader, For thy better expedition and furtherance in reading of this book, I pray thee (gentle reader) take thy pen and (before all things) correct and amend these faults escaped in printing.

Folio	Page	Line	Faults	Corrections
14	x	17	for we arrest our hope	read we erect our hope

x Signifies the first side of the leaf.

♢ The second.

The book which is distinguished by the greatest number of errata on record, is that containing the works of Pica Mirandula, printed at Strasburg in 1507, by a printer of the name of Knoblench. The errata of this volume occupy no less than fifteen folio pages.—The subject might be very far extended, and many curious anecdotes might be introduced. These errors proceeded as often from ignorance as mistake.

One of the most remarkable complaints on *errata* is that of Edward Leigh, appended to his curious treatise *On Religion and Learning*. It consists of two folio pages, in a very minute character, and exhibits an incalculable number of printer's blunders. "We have not," he says, "Plantin nor Stephens amongst us; and it is no easy task to specify the chiefest errata; false interpunctions there are too many; here a letter wanting, there a letter too much; a syllable too much; one letter for another; words parted where they should be joined; words joined which should be severed; words misplaced; chronological mistakes, &c." This unfortunate folio was printed in 1656. Are we to infer by such frequent complaints of the authors of that day, that either they did not receive proofs from the printers, or that the printers never attended to the corrected proofs? Each single erratum seems to have been felt as stab to the literary feelings of the poor author!

It appears by a calculation made by the printer of Steevens's edition of Shakspeare, that every octavo page of that work, text and notes, contains 2680 distinct pieces of metal; which in a sheet amount to 42,880—the misplacing of any one of which would inevitably cause a blunder! With this curious fact before us, the accu-

rate state of our printing, in general, is to be admired, and errata ought more freely to be pardoned than the fastidious minuteness of the insect eye of certain critics has allowed.

Whether such a miracle as an immaculate edition of a classical author does exist, I have never learnt; but an attempt has been made to obtain this glorious singularity—and was as nearly realised as is perhaps possible in the magnificent edition of *As Lusitadas* of Camoens, by Dom Joze Souza, in 1817. This amateur spared no prodigality of cost and labour, and flattered himself that by the assistance of Didot, not a single typographical error should be found in that splendid volume. But an error was afterwards discovered in some of the copies, occasioned by one of the letters in the word *Lusitano* having got misplaced during the working of one of the sheets. It must be confessed that this was an *accident or misfortune*—rather than an *erratum*!

Many other curious anecdotes concerning the errors of printers and *errata*, will be given under the dates in which they occur.

1478. *Died*, Theodore Gaza, a learned Greek, was born at Thessalonica, and when that place was taken by the Turks in 1430, he escaped to Italy, where he studied the Latin language with so much assiduity that he became an elegant writer and speaker of it. He was for several years a professor at Ferrara, and at length rector of that university. From thence he went to

\* It becomes me, perhaps, to say something of the *Errata* that may occur in this work. I am aware that many will unavoidably arise, and they who have much to do with dates, with the transcript of books, or the labours of the printing-house, will know that these cannot, even with the utmost care, be avoided. To those who may collect these *Errata* of mine with a friendly care, I shall be very thankful, but to those, who with a contrary disposition, I can only make the same appeal that much greater men than myself have done before. Quoting the words of an old author, "I know I have herein made myself subject unto a world of judges, and am likest to receive most controulment of such as are least able to sentence me. Well I wote that the works of no writers have appeared in a more curious age than this; and that, therefore, the more circumspection and wariness is required in the publishing of any thing that must endure so many sharp sights and censures. The consideration whereof, as it hath made me the more heedly not to displease any, so hath it given me the less hope of pleasing all."

As a humble labourer in the vineyard of literature, and possessing little learning and less leisure, I do not pretend to approach near to the knowledge and industry of such eminent names as Dibdin, Horne, Beloe, Nichols, and many others, whose talents and researches have added so much to illustrate the beauties of Bibliography, and explore the deep and interesting mines of Typography. As a journeyman printer, compelled to labour for my daily means, the task I have undertaken may appear, perhaps to many, too much for my abilities: I would request such to defer their judgment until the completion of the work. To those who have witnessed my exertions, for the last nine years, in collecting the materials, no apology will, I hope, be necessary. Every means within my reach have been employed to elucidate the truth, and my only aim in the compilation, is an ardent desire to add something, however little, to the stock of typographical literature, and produce a work which every lover of the art, may refer to as a book of instruction and amusement. One more apology I must not forget to state, and one which is daily experienced, that the worst editor of an author's writings is himself. And

"He who madly prints his name  
Invites his foe to take sure aim." C. H. T.

Rome, under the patronage of pope Nicholas V. and cardinal Bessarion. He wrote a *Greek Grammar*, printed by Aldus Manutius, in 1495, and a *Treatise on the Grecian Months*. He also translated Hippocrates's *Aphorisms*, Aristotle on *Animals*,\* and other works into Latin. This latter work he dedicated to pope Sixtus IV. and received from his holiness no other recompense than the price of the binding, which this charitable father of the church munificently bestowed upon him. Gaza also translated some of Cicero's works into Greek.

"Authors," observes D'Israeli, in his *Curiosities of Literature*, "have too frequently received ill-treatment, even from those to whom they dedicated their works. Some who felt hurt at the shameless treatment of such mock mæcenases, have observed that no writer should dedicate his works but to his FRIENDS; as was practised by the ancients, who usually addressed those who had solicited their labours, or animated their progress."

"Every man believes," writes Dr. Johnson, to Baretti, "that mistresses are unfaithful, and patrons are capricious. But he excepts his own mistress, and his own patron."

Theocritus fills his *Idylliums* with loud complaints of the neglect of his patrons; and Tasso was as little successful in his dedications. Ariosto, in presenting his *Orlando Furioso* to the cardinal d'Este, was gratified with the bitter sarcasm of—"Where the devil did you find all this nonsense."

1478. *Ptolomæ Cosmographia ex emendatione Domitii Caldecini*. Rome, Arn. Buckenik, folio. It has already been stated that the celebrated Conrad Sweynheym left his profession of a printer, and dissolved his partnership with Arnold Pannartz, to follow the art of engraving. This edition of Ptolemy is the book which for three years occupied his time and his talents; and which after all he did not live to complete. The finishing hand was put to it by his associate in this new pursuit Arn. Buckenik, or 'Buking. It is a very rare and curious book. A copy in the La Vallier collection, which wanted many of the plates, sold for more than two hundred and forty livres. It is the second edition of the work. There are twenty-seven geographical plates.—One of the world, ten of different parts of Europe, four of Africa, and twelve of Asia.—Beloe.

Great efforts were made at Milan about this period to promote the revival of learning and the progress of the typographic art. This city produced many scholars, who exerted their abilities in correcting the press, and was celebrated for many individuals who, by defraying the expenses themselves effectually encouraged the labours of the printers. In the colophons of various books between the years 1475 and 1500, information is given, that they were printed at the private expense of different individuals. This will particularly be found in those works which came forth

from the presses of Valdarfer,\* Lavagna, and Scinzenzeler. Santander has enumerated many of these, but he has not mentioned the three secretaries of the duke of Milan, whose names appear to an edition of *Isocrates*.—Beloe.

It is curious to remark how great a multitude of editions of the works of St. Thomas Aquinas and St. Augustine were published towards the close of this century; which will of course, demonstrate the kind of learning which then prevailed. Belles lettres, however, were beginning to revive, and men of rank and fortune were not wanting who employed both their influence and wealth to procure for publication the venerable remains of the writers of Greece and Rome. Various examples of this liberal and munificent spirit have already been given, and many more will be introduced in the course of the work. The pages of Roscoe, of Gibbon, and others, point out many illustrious names of those, who at an enormous sum purchased manuscripts for the libraries which they founded. Literature, like virtue, is often its own reward, and the enthusiasm some experience in the permanent enjoyments of a vast library has far outweighed the neglect or the calumny of the world, which some of its votaries have received. From the time that Cicero poured forth his feelings in his oration for the poet Archias, innumerable are the testimonies of men of letters of the pleasurable delirium of their researches. Had not sovereigns and rich individuals formed libraries to which men of learning had access, knowledge could not have advanced, even at the very slow manner in which it did; as they in general, were too poor to purchase books, and had not sufficient leisure to find out where they were to be bought, or, while dispersed, where they were to be met with. "At this rate," observes Dr. Henry, "none but kings, bishops, and abbots, could be possessed of any books: which is the reason that there were no schools but in kings' palaces, bishops' sees, or monasteries." The same observations will apply also to printing. For when the secret became known it soon spread over divers nations, became patronized by popes and kings, and esteemed a divine blessing to mankind. The progressive change from school divinity to the cultivation of the studies of humanity, is strongly manifested from the prodigious number of editions of the various works of Cicero, which followed each other in rapid succession, from the three books *de Oratore*, printed at the Subiaco monastery, by Sweynheym and Pannartz, to the entire collection of all the works of this popular author, printed at Milan in 1498, by Alexander Minutianus, in 4 vols. folio. Panzer describes near three hundred editions of different works of Cicero, published before the close of this century, many which, either from their dedications or prefaces, or from some circumstance or other, involve something which tends to illustrate the revival of learning. For an enumeration of these

\* In the *Percy Anecdotes* (LITERATURE) this dedication is said to have been made by Theodore Beza, but which is an error.—See the year 1079, ante.

\* Valdarfer commenced his typographic labours, at the city of Venice, and afterwards removed to Milan.

editions of Cicero, see Beloe's *Anecdotes of Literature*, vol. 4.

1478. Printing introduced into the following cities and towns in this year:—

Cosenza, by Octavius Salamonius de Manfredonia.

Colle, by Joannes Allemanus de Medemblick.

Chablisi, by Pierre de Rouge.

Eichstett (Neustad) Michael Reyser.

Geneva, A Steinschawer, de Schuinfordia.

Oxford, Theodorice Rood.

Pavia, by Francis de St. Petao.

Prague, printer's name not known.

Monast. Sorten., printer's name not known.

1478. *The Morale Prouerbes of Christyne (of Pyse) Enprinted by Caxton. In feurer the colde season.* Folio.

This is a translation by earl Rivers, from a French work, intituled, *Les Prouerbes Moraux et la Prudence par Christine de Pisan fille de M. Thomas de Pisan, autrement dîc de Bologne*.<sup>\*</sup> It is a small poem, consisting of about 200 lines, and begins thus:—

*The Morale Prouerbes of Cristyne.*

The grete vertus of oure elders notable,  
Ofte to remembre is thing profitable,  
An happy hous is, where dwelleth prudence,  
For where she is, raison is in presence, &c.

The poem ends with the following homely couplets:—

There is noothing so riche I you enseur  
As the service of god oure createur.  
Litle availleth good exemple to see  
For him, that wole not the contrail see.  
Though that the deeth to us be lamentable  
Hit to remembre is thing most comenable:  
Thende dooth shewe every werk as hit is;  
Woo may he be that to god endeth my.

*Explicit.*

To these succeed the following stanzas by Caxton:—

Of these sayynges Cristyne was the autresse,  
Whiche in makyn hadde suche intelligence,  
That therof she was mirour and maiestee;  
Hire werkes testife the experience;  
In frensch language was writen this sentence,  
And thus englisht doth hit reherse  
Astola Widenytle, therie Ryuers.

Go thou litle quayer and recommaund me  
Unto the good grace of my special lorde  
Therle Ryuersis, for I have emprinted the  
At his commandement, following eury worde  
His coppye, as his secretarie can record,  
At Westmestre, of Feurer the xx day,  
And of kyng Edward the xvii yere vraye.

Emprinted by Caxton  
In Feurer the colde season.

The *Moral Proverbs* are in rhyme, and the *Book of Prudence* in prose. It is considered a very rare book, and is sometimes bound with the *Dictes*, &c.

1479. *Tractatus brevis et utilis de Originali Peccato. Editus a Fratre Egidio Romano, Ordinis Fratrum Heremitarum Sancti Augustini Impressus and finitus Oxonie, a Navitate Domini.*

This book is a very great rarity, represented to be the first that was printed at Oxford, in a catalogue of the first printed books at the end of Pancirollus; but it may be the second or third. That title above, taken from the colophon, at the end, is printed with red ink; and there is nothing more of that colour throughout the book, than a little dash of an ornament at the beginning of the first letter. The work is divided into six chapters; but the first letter of every chapter is left out, which should be a capital. It is printed on a good thick paper, with a short, strong, legible letter, much like the German cast; has signatures at bottom, which I think is somewhat earlier than Caxton had them; but no words of direction there, or numbers of the pages at top. Moreover, Theo. Rood used several marks and letters of abbreviation, and several combined letters; few stops, and they commonly ill shapen points.

1479. *Breviarium Parisiense.*—This is the earliest impression pertaining to the ecclesiastical ritual that occurs in the annals of the Parisian press. Missals, breviaries, heures, &c. are soon found amongst its most frequent productions. In such works the Gothic typography generally appears in all the splendour of rude magnificence. The exquisite glossiness of the inks, the striking contrast of the red and black, the boldness and magnitude of the letter, the ornamented capitals, the profusion of wood cuts which generally ornament the margins, and many quaint verses and devices, and wonderful notices of pardons expressed in the rubrics, constitute such books singular objects of modern curiosity. In fact, says Mr. Cresswell, many of the earliest productions of our English press can be satisfactorily illustrated only by a comparison with the cotemporary history of French typography. However numerous the impressions of these rituals and religious manuals were, well preserved printed specimens are not very frequent at present. Many highly ornamented missals in manuscript are indeed extant, and often present themselves to the notice of the curious, having perhaps been preserved more carefully than printed copies.

Printing in red and black was more especially appropriated to psalters, breviaries, and other works relating to the ecclesiastical ritual. This mixture of red and black, which gives a cheerful and pleasing variety to the page, is found in the *Psalterium* of Mentz, 1457, and the *Rationale Divinorum Officiorum* of 1459; at the end of which we read this subscription, *Præsent Codex venustate Capitalium decoratus, Rubricationibusque sufficienter distinctus, &c.* Gering

<sup>\*</sup> "The fair authoress of the original work," says M. De La Monnoye, "was born at Bologna (la Grasse) in the year 1364. At five years of age she was taken to Paris to live with her father, who was Grand Judiciary Astrologer; and who, on account of his celebrity, had been invited by Charles V., surnamed the Wise, to be near his person at court. Christina, in her fifteenth year, was married to Stephen Castel, a young gentleman of Picardy; who died at the age of thirty-four, A.D. 1399, and left her a widow with two sons and one daughter. Having received as good a literary education as the times could afford, she commenced authoress at the age of thirty-five, and seems to have enthusiastically devoted herself to all sorts of compositions, whether in prose or verse: so much so, that, in her book of *Visions*, she mentions that she had already composed fifteen volumes."

occasionally used red ink in other works; but in his *Psalterium*, 1494; his *Diurnale Ecclesie*, 1496; his *Breviarium Cameracense*, 1497; his *Missale*, folio, 1497; and his *Hora B. Virginis*, 1498; and also in his *Corpus Juris Canonici cum Glossis*, 3 vols. folio, and similar works, he used red and black inks in every page, in all their brilliancy. It is scarce necessary to mention the use of these *rubriques* in the rituals of the church. The name of rubric is still given to those directory sentences which are found in our *Common Prayer*; though the practice of distinguishing them by red letters has been long discontinued. Chevillier says that Antoine Zarot was the first who printed missals furnished with these distinctions, for the convenience of the clergy. He had seen a copy of the *Missale Romanum*,\* printed by him with rubrics (*rubriques rouges*) at Milan, 1478, in folio, with this subscription:—

"Antoni, Patria Parmensis, gente Zarote,  
Primus Missales imprimis arte libros.  
Nemo repertorem alium arte jactet. In arte  
Addere plus tantum quam perierat valet."

1479. Soon after the discovery of printing laws were made for subjecting books to examination: and the establishment of book-censors, and licensers of the press, was strenuously supported by many of the Romish clergy, who feared the circulation of publications inimical to their religious views, or their ecclesiastical domination. The earliest instance of a book printed with a permission from government, is commonly supposed to occur in the year 1480; but professor Beckmann mentions two books printed early in this year, with the approbation of the public censor. The first is, *Wilhelmi epis-*

*copi Lugdunensis Summa de Virtutibus*: the other is a *Bible*, with the following conclusion: "In the year of the incarnation of our Lord 1479, on the vigil of Matthew the apostle; when this notable work, of the Old and New Testament, with the canons of the Gospels, and their harmonies, to the praise and glory of the holy and undivided Trinity, and the immaculate virgin Mary, was printed in the city of Cologne, by Conrad de Homborch; allowed and approved by the university of Cologne."

Many centuries, however, before the invention of printing, books were forbidden by different governments, and even condemned to the flames. A variety of proofs can be produced that this was the case among both the antient Greeks and Romans. At Athens the works of Protagoras were prohibited; and all the copies of them which could be collected were burnt by the public crier. At Rome the writings of Numa, which had been found in his grave, were, by order of the senate, condemned to the fire, because they were contrary to the religion which he had introduced. As the populace at Rome were in times of public calamity more addicted to superstition than seemed proper to the government, an order was issued that all superstitious and astrological books should be delivered into the hands of the prætor. This order was often repeated; and the emperor Augustus caused more than twenty thousand of these books to be burnt at one time. Under the same emperor the satirical works of Labienus were condemned to the fire, which was the first instance of this nature; and it is related as something singular, that, a few years after, the writings of the person who had been the cause of the order for that purpose shared the same fate. The burning of these works having induced Cassius Severus to say, in a sneering manner, that it would be necessary to burn him alive, as he had got by heart the writings of his friend Labienus, this expression gave rise to a law of Augustus against abusive writings. When Cremutinus Cordus, in his history, called C. Cassius the last of the Romans, the senate, in order to flatter Tiberius, caused the book to be burnt; but a number of copies were saved by being concealed. Antiochus Epiphanes caused the books of the Jews to be burnt; and in the first centuries of our era the books of the Christians were treated with equal severity, of which Arnobius bitterly complains. We are told by Eusebius that Diocletian caused the sacred scriptures to be burnt. After the spreading of the Christian religion, the clergy exercised against books that were either unfavourable or disagreeable to them, the same severity which they had censured in the heathens as foolish and prejudicial to their own cause. Thus were the writings of Arius condemned to the flames at the council of Nice; and Constantine threatened with the punishment of death those who should conceal them. The clergy assembled at the council of Ephesus requested the emperor Theodosius II. to cause the works of Nestorius to be burnt;

\* The manuscript of the *Missale Romanum*, from which the above was printed, is of a description so dazzling, that words alone cannot convey the ideas requisite to form a conception of its singular attractions.—It commences with a portrait, and on the opposite leaf, armorial bearings, doubtless those of the individual whose likeness is represented, and for whom this magnificent volume was executed. Next appears the calendar, which occupies twenty-six pages, on the first of which occurs the date M.CCCC.X. Each leaf of this calendar is appropriately ornamented with miniatures, which display in the most delightful manner, such evocations or amusements as are peculiar to the different months, while the picturesque effect of the pages is admirably completed by borders which nothing but genius of the most refined order could have designed.—After the calendar follow the prayers, opposite the first of which appears a miniature, representing a full length figure of the person whose portrait previously occurs, on his knees, at the altar. This miniature is surrounded by a border to which the opposite page corresponds, thus forming a striking picture. There are eleven other large miniatures from scriptural subjects, with borders on both pages, and thirty small miniatures of saints and martyrs, with ornamental sides of flowers, &c. besides the decorations above described; and the initials, which are illuminated in gold and colours, are almost innumerable.—To dwell upon the peculiarities of this superb book, adequate to its deserts, would far outstrip our proper limits, but it may be finally observed, that the artist who has shewn so much skill in his outline of the figures, and knowledge of perspective, must have been far above the level of his fellow illuminators,—the brilliancy of colour and gold, the minute and correct finishing of the faces, the inventive skill displayed in the borders, in short, the un-relaxed display of excellence throughout this attractive volume, must ever rank it as a work of art, unexcelled by any missal which has yet been offered to the notice and admiration of the public. It was valued in a trade catalogue at £250.

and this desire was complied with. The writings of Eutyches shared the like fate at the council of Chalcedon; and it would not be difficult to collect instances of the same kind from each of the following centuries.—*Beckmann*.

1479. Printing introduced into the following places in the course of this year:—

Gouge, by Gerard de Leen.  
 Lerida, by Henry Botel.  
 Nimeguen, no printer's name.  
 Pignerol, by Jacob de Rubels.  
 Poitiers, by J. Bouyer and G. Bouchet.  
 Segorba, printer's name not known.  
 Tusculano, by Gabriel Petri.  
 Toulouse, by Johannes Teutonicus.  
 Wurtzburg, by S. Dold, J. Ryser, and J. Bekenhub.

Zwoll, by Johannes de Vallehoec.

1480. The second instance of a book printed with permission from government is commonly supposed to occur in this year; and Dom. Liron, a Benedictine monk, is the first person who made that remark. He was the author of a work entitled *Singularites Historiques et Litiraires*; in the last part of which, where he speaks of the Heidelberg edition of a work named *Noſce te ipſum*, printed in this year, he ſays "This is the firſt publication I found accompanied with ſolemn approbation and attestation in its favour." It has four approbations, the firſt and laſt of which are worth preſerving, as they will ſerve to ſhow the power of the clergy at this period:—

"I Philip Rota, doctor of laws, *though the laſt of all*, have read over carefully, and diligently examined, this ſmall work, *Noſce te*; and as I have not only found it compoſed devoutly and catholically, but abounding alſo with matter of wonderful utility, I do not hesitate, in testimony of the above, to ſubſcribe my name."

The laſt of the approbations is as follows:

"I Mapheus Girado, by the divine mercy patriarch of Venice, and primate of Dalmatia, conſiding in the fidelity of the above gentlemen, who have examined the above-mentioned book, do teſtify that it is a devout and orthodox work." Thus, it appears, that this divine cenſor gave his opinion of books without reading them.

1480. Printing introduced into the following places, in the course of this year:—

Genzano, printer unknown.  
 Oudenarde, by Arnold Cesaris.  
 Hasselt, no printer's name.  
 Heidelberg, first printer unknown. Jacobus Knobloeker, began to print in 1485.  
 Nonantola, by Geo. and Anselm de Mischinis.  
 Friuli, by Gerrard de Flandria, most probably the same person who printed at Treviso.  
 Caen, by J. Durandus and Egidius Quijouse.  
 St. Albans, the schoolmaster.  
 London, by John Lettou and William Machlinia.

Quilembourg, printer's name unknown.

1480. John Lettou, a foreigner, commenced the art of printing in the city of London. He is said to have come over to this country on the invitation of William Caxton. This, however,

is not likely, as his unskilfulness is such that Caxton would scarcely have invited or even encouraged such a bad workman. The types he employed in the only two books he is known to have printed himself, are rude and broken. After he had published them, he was taken into the printing office of William de Machlinia—first, it is supposed as a journeyman, and afterwards as a partner. Machlinia also was a foreigner; the only celebrity that can attach to the name of these partners, arises from their having printed the first edition of Littleton's *Tenures*, in a small folio, without date, title, numerals, or catchwords, the type barbarous and broken, and the text crowded with abbreviations. Five copies only are known to be extant. Their printing-office was near All-Hallows church; their letter, a coarse Gothic one. The partnership was of short duration; for, in 1483, Machlinia's name alone appears.

Sir Thomas Littleton, author of the *English Tenures*, was not only an eminent lawyer, but also holds a high place in the annals of literature. The celebrity and usefulness of this work, which was commented upon by Sir Edward Coke, have subsisted to the present day, and no work on the municipal laws is more esteemed by lawyers, for, notwithstanding the prodigious accession of statutes and reports, the large alterations both in the knowledge and practice of the law, and the accumulation of publications, Littleton, with Coke's *Commentary*, will ever continue to demand the attention and applause of our ablest advocates. Bishop Nicholson, in his *Historical Library*, speaking of Littleton's *Tenures* remarks, "That his book of *Tenures* is in every one's hand and head that pretends to the profession or study of the municipal laws of this kingdom, and has been more frequently printed than any other law book whatever. This distinguished lawyer and scholar died August 23, 1481, and was buried in the cathedral at Worcester.

In the public library at Cambridge, there are two manuscript copies of Littleton's *Tenures*, one on vellum and the other on paper, with a memorandum annexed to the last, that it was bought in Paul's church yard on the 27th of July, 20th of Edward IV. anno 1481.

As an author, and among men of literature in general, Sir John Fortescue, chief justice of the king's bench,\* will probably be regarded as en-

\* In the year 1461, (1st Edw. IV.) the chief justice of the king's bench had one hundred and seventy marks per annum, *£*75 6s. 6d. for his winter robes, and the same sum for whitsuntide robes. In the year 1485, (1st Hen. VII.) the chief justice had the yearly fee of one hundred and forty marks granted to him for his better support: further he had *£*5 6s. 11½d. and the sixth part of a halfpenny, (such is the accuracy of Sir William Dugdale, and the strangeness of the sum) for his winter robes, and *£*3 6s. 6d. for his robes at whitsuntide. Most of the judges had the honour of knighthood; some of them were knights bannerets; and some had the order of the Bath. Until the first year of the reign of Edward IV. the king's attorney was the only law officer of the crown; when we find Richard Fowier was made solicitor to the king; and in the 11th year of the same king's reign William Hume was appointed attorney-general in England, (the first mention of that title.) This officer was then appointed for life.

titled to the greatest commendation of any writer of this period. He was born in Devonshire, and educated at Oxford, from whence he removed to Lincoln's-inn. In 1442 he was appointed to the chief justiceship of the king's bench. He composed both in Latin and English; and the subjects he treated upon, together with the sentiments which were delivered by him concerning them, will always endear his memory to true Englishmen. In Latin he wrote upon the praises of the laws of England, and in English on the difference between absolute and limited monarchy. In these works he hath done justice to the excellence of our constitution and laws, and has shown himself to have been a firm friend to the cause of liberty. He was some time in Flanders, and while abroad wrote his famous book, entitled *De Laudibus Legum Angliæ*, which, however, was not published till the reign of Henry VIII. since which time it has been frequently printed. He returned to England with queen Margaret, and was taken prisoner at the battle of Tewkesbury, in 1471. Edward IV. granted him a pardon, on which he retired to his seat at Ebrington, in Gloucestershire, where he died at the advanced age of 90.

1480. *The Book named Cordiale: or Memorare Novissima: which treateth of The foure last Things.* Began on the morn after the Purification of our blisid Lady (2d Feb. 1478), &c. And finished on the even of thannucciacion of our said blisid Lady, falling on the wednesdaye the xxiiij daye of Marche In the xix yere of Kynge Edward the fourth. Folio.

This work opens with the following exhortation to the reader:

"Al ingratitude utterly setting apart, we once to calle to our myndes the manyfoldes gyftes of grace, with the benefaiths, that our lorde of his moost plentifulus donle hath ymen vs wretches, in this present transitoire lif, whiche remembrance of right directly shulde induce us to giue his Godhede therefore continale and immortale louingis and thankis, and in no wise to falle to thignorance or forgetfulness thereof." &c.

Mr. Dibdin calls this a rare production: the preface of which is said to have proceeded from the pen of earl Rivers. It is printed in long lines, with small capital letters in the spaces intended for the large ones; it has neither catchwords nor signatures: the leaves, consisting of seventy-six, are not numbered; the words are often differently spelt; in his punctuation he used a cross and little oblique dashes.

1480. *Ouyde his booke of Metamorphose Translated and fynnyshed by me William Caxton at Westmeire the xxii day of Apryll, the yere of our lord m. iiij. iiij. xx. And the xz yere of the Regne kynge Edward the fourth.* [A manuscript in folio.]

Of all our typographer's productions, not one of them (according to Mr. Dibdin) appears so difficult to investigate, as the subject before us. We are informed, that a manuscript copy of the latter part of the above is in the library of Magdalen college, Cambridge, but that a perfect

copy has not yet been brought to light. Mr. Dibdin concludes his remarks upon this subject, as follows:—"I cannot dismiss this curious article, without indulging the hope that the labours of some more successful bibliographer may bring a printed copy of the book to light; none of the kind has hitherto, I believe, been seen or heard of. It is not improbable that the love of the marvellous, which seems to have so strongly possessed our venerable typographer, and which was also the ruling literary passion of the day, might have induced Caxton to print, as well as translate, the *Metamorphoses* of Ovid.

1480. *The Chronicles of England &c. Enpnted by me William Caxton In thebby of Westmynstire by london &c. the v day of Juny the yere of thincarnacion of our lord god m.cccc.lxxx. &c.* Folio. With which is usually bound,

*The Description of Britayne &c. Fynnyshed by me William Caxton the xxii day of August the yere of our lord god m.cccc.lxxx &c.* Folio.

These two small volumes, it is said, are to be found in most collections of Caxton's pieces.

He concludes his *Chronicle* with this pious wish:—

"That there may be a very final peace in all christian realms; that the infidels and miscreants may be withstaunden and destroyed, and our faith enhauced which in these days is sore minished by the puissance of the Turks and heathen men. And after this present and short life, we may come to the everlasting life in the bliss of heaven, Amen."

In the following August, Caxton published his *Description of England*, which contains twenty-eight chapters; it is comprised of twenty-nine leaves, and has neither signatures, numerals nor catchwords. These were very popular, having been reprinted four times in this century, (twice, however, without the *Description*;) and seven times in the sixteenth century.

1480. This year exhibits the name and commencement of Antoine Verard, who with respect both to the variety and curious description of his impressions, may justly be considered as one of the most interesting of all the early typographers of Paris. Very numerous indeed were the impressions executed by this zealous printer, separately or in conjunction with others. De la Caille renders the same testimony. "Verard," says he, "was one of those who gave to the public the greatest number of works; and particularly of romances;\* of which" he adds, "there are extant more than a hundred volumes, printed upon vellum, ornamented with beautiful miniatures, and exhibiting the most studied and exact imitations of the manuscripts from which they were copied." Such very magnifi-

\* A very early edition of the *Romance of the Rose*, without date or place, or name of the printer; but printed by Verard, about 1496. This volume is a most brilliant and magnificent specimen of Verard's printing upon vellum. The work is ornamented with one large and one hundred small miniature paintings, very spiritedly executed, and heightened with gold. A copy, having the title and two pages supplied by fac-similes in manuscript, was sold by Wheatley and Adlard, Piccadilly, London, Dec. 9, 1829, for £16 10s.

cent, ingenious, and costly ornaments bestowed upon these Gothic productions of the French press, give a characteristic peculiarity to them, perhaps above those of most other countries. The letter indeed chiefly employed in them, though often denominated by the general term Gothic, is rather a species of semi-Gothic; and probably was cast in imitation of the character usually met with in exquisitely finished manuscripts which were of an age not very remote from the invention of printing; at which period, also, it is very probable that the art of illuminating, and embellishing with miniatures in gold and colours, was cultivated in its highest luxury. The impressions of Antoine Verard, and of several of his contemporaries, having often been taken off on the finest vellum, for the gratification of the rich, and at their liberal expense thus superbly ornamented; exhibit a most agreeable union between the labours of the printer, and of the scribe and illuminator. And since the art of the latter has long been lost through disuse, they are treasured up with the greatest care as monuments of former national magnificence, and the only remains of a species of art which was once so extensively and ingeniously practised.

Antoine Verard used for his device the arms of France, under which, in a compartment, is a cypher, probably intended to express the whole of his surname. These, with other minor ornaments, are included in a parallelogram, round the external margin of which is an inscription in Gothic characters.

1480. A printing-press was established in the Benedictine monastery at St. Albans, of which William Wallingford was at that time prior, but who the person was that introduced it, we have not been able to learn. Wynkyn de Worde informs us the printer was "sometime a school-master;" and most probably a monk. He is mentioned as a man of merit, and a friend of Caxton. The types of the book, which is a *Treatise on Rhetoric*, in Latin, are very rude. He continued his typographic labours from 1480 to 1486, and produced several works, from which time there is no account of any press in that place until the year 1536.

The *Boke of Seynt Albons*, which is otherwise entitled a *Treatise of Hawking, Hunting, Fishing, and of Court Armour*, is attributed to dame Juliana Berners, prioress of the nunnery at Sopewell, near St. Albans. Whether this celebrated book, which was first printed in the year 1486, and of which Wynkyn de Worde appears to have given an impression about the year 1496, in folio, was partially compiled from a French work printed at Chamberry, by Antony Neyret, in 1486, under this title, *Le livre du Roy Modus et de la Royne Racio*, &c. and other French works of a similar description, there are no means of ascertaining.

The *Boke of Blasyng of Armys*, the last of the treatises contained in the "*Boke of Seynt Albons*," which by some has been attributed to a different hand, seems to be confessedly a trans-

lation or compilation:—"Here now endyth the boke of blasyng of armys translatyt and compylt togedyr at Seynt Albons the yere, &c. M: cccc. lxxxvi.\*"

In the above work, the following singular passage occurs, concerning the kings of France, and one which may almost be deemed a prophecy, "Tharmes of the Kynge of Fraunce were certainly sent by an angel from heven, that is to saye, thre floures in manere of swerdes in a feld of azure, the whyche ceter armes were given to the forsayd Kynge of Fraunce in sygne of everlastinge trowble, and that he and his successors alway with batayle and swerdes sholde be punysshed."

The following record of a curious piece of heraldry is also given in this book:

"Of the offspring of the gentilman Jafeth come Habraham, Moyses, Aron, and the Proffettys, and also the Kyng of the right lyne of Mary, of whom that *Gentilman* Jhesus was born, very God and Man. After his Manhode, Kyng of the land of Jude and Jues. Gentilman by his Moder Mary, *Prynce of Cote Armure*," &c. &c. Wretched situation of intellect! Who reads but pities the condition of his forefathers? Warton mentions his having seen a copy of a will belonging to this period, which begun, "in the name of Almighty God, and Mary his Moder."

The book of *Hunting* is the only one written in rhyme.

Lady Juliana Berners, on account of her being one of the earliest English poetesses, is entitled to honorable notice in this work. She is frequently called Juliana Barnes, but Berners was her more proper name. She was an Essex lady, and, according to Ballard, was, probably, born at Roding, in that county, about the beginning of the fifteenth century; being the daughter of Sir James Berners, of Berners Roding, and sister of Richard, Lord Berners. If, however, as is generally agreed, Sir James Berners was her father, her birth could have been very little after 1388; for, in that year, Sir James Berners was beheaded, together with other favourites and corrupt ministers of king Richard II.

The education of Juliana seems to have been the very best which that age could afford, and her attainments were such, that she is celebrated by various authors for her uncommon learning and her other accomplishments, which rendered her every way capable and deserving of the office she afterwards bore; which was that of prioress of Sopewell Nunnery. This was a cell attached to, and very near St. Albans; and the remains of it are still standing. Here she lived in high esteem, and flourished about the year 1460, or perhaps, somewhat earlier.

She was very beautiful, of great spirit, and

\* Perfect copies of this work are in the possession of Earl Spencer and the Earl of Pembroke.—A perfect copy is estimated by Dr. Dibdin at £420, and a very imperfect one at the Roxburghe sale produced £147.—resold at the sale of the White Knights' library, for £84. A copy very nearly perfect is in the library of Mr. Pheips, of Lincoln's Inn.—*Louder.*

loved masculine exercises, such as hawking, hunting, &c. With these sports she used to recreate herself; and so skilled was she in them, that she wrote treatises on hawking, hunting, and heraldry. "From an abbess disposed to turn author," says Warton, "we might more reasonably have expected a manual of meditations for the closet, or select rules for making salves, or distilling strong waters. But the diversions of the field were not thought inconsistent with the character of a religious lady of this eminent rank, who resembled an abbot in respect of exercising an extensive manorial jurisdiction, and who hawked and hunted in common with other ladies of distinction." So well esteemed were Juliana Berners's treatises, and, indeed, so popular were the subjects on which they were written, that they were published in the very infancy of the art of printing. Perhaps the conformity between dame Juliana's book and *Le Livre du Roi Modus*, may be found to consist chiefly in the miscellaneous maxims or *moralities* in which each work abounds. These dame Juliana, like queen Racio, scatters profusely; and sometimes in a strain of coarseness alike incompatible with modern notions of female delicacy. Some, however, of the remarks of the lady prioress evince strong sense and accurate observation. Witness her celebrated poetical effusion which commences thus:—

"A faythful frende wolde I layne fynde  
To fynde hym there, he myghte be founde  
But now is the worlde, wext vnkynde  
That frenship is fall, to the grounde  
Now a frende I have founde  
That I wold nother, banne ne curse  
But of all frendes, in felde or towne  
Ever gramercy, myn owne purse, &c."

1481. Geoffroy or Godefroy, Enguilbert, and Jean Marnef, three brothers, and who were associated together, at least on some occasions, commenced their typographic labours in the city of Paris. Their earliest impression, according to Panzer, bear this date.

Jean Dupre, or Joannes de Pratis or de Prato, commenced his zealous labour, in the city of Paris, by the impression of two *Missals*, bearing date 1481 *Missale ad usum Ecclesiæ Romanæ*, folio; and *Missale Parisiense*, are the only two specimens at present known to bibliographers. A copy of the *Missale ad usum ecclesiæ Romanæ*, is in the library of T. W. Coke, Esq. of Holkham,\* in Norfolk. This splendid book, says Mr. Gresswell, who had inspected it, fully justifies

\* The Holkham library abounds not only in books which combine the perfection of early typography with the superb embellishment usually bestowed upon the most highly valued *Codices manus scripti*, but also in ancient manuscripts: many of which will probably be found very valuable and highly interesting to literature. Amongst such literary curiosities I observed manuscripts of Livy; of Tacitus; of various parts of the works of Cicero; of Ovid; a fine Codex of the IV Evangelia, Græcæ; the *Oracula Sibyllina*, Græcæ; many of the opuscula of the Greek fathers; besides numerous manuscripts of works of the most esteemed early authors of Italy, &c. These are in general beautifully illuminated and well preserved, and constitute a comparatively small part only of the Holkham collection; which is said to possess almost six hundred *Codices manus scripti* of these singular and interesting descriptions.—Gresswell's *Parisian Typography*.

every thing that can be said of the magnificence of the Parisian Gothic press. It is printed upon the finest vellum, in a bold Gothic character, and double columns: and with the aid of its splendid illuminations and paintings exhibits the most exact resemblance of a beautiful manuscript. In this fine volume the capitals are supplied by the illuminator in inks of various colours: the rubrics or directory sentences are not printed *en rouge* but are distinguished in the column merely by a smaller Gothic character.

The volume in the Holkham library is splendidly bound in crimson velvet, and decorated with the crest of the respectable proprietor; and its preservation is so perfect that it might be supposed but recently to have issued from the press.

1481. Printing introduced into the following places in the course of this year:—

Salamanca, by L. Alemanus and Lupus Sanz. Leipsic, by Marcus Brand.

Casal, G. de. Canepa Nova de Campanilibus. Urbino, by Henry de Colonia.

Vienne (in France) Peter Schenck.

Aurach, (in Wirtemberg) Conrad Fyner.

John Amerbach, one of the most excellent and learned printers of his time, began to exercise the art at Basil, where he continued printing until the year 1528, in which year he died.

From the invention of the art, to about this period, printed books were, generally speaking, without *title-pages*; and when first introduced, a simple line, or a line and a half, or at most three or four lines, towards the top of the page, constituted the whole of the decoration, till about the year 1490, when ornamental *title-pages* came into use, the most common of which was the representation of the author or writer at his desk; but subsequently, other devices were invented, some of them of the character of vignettes, others displaying the monogram, &c. of the printer.

1481. *Thymage or Myrrour of the Worlde*. Emprysed and Fynyshed in the xxi yere of the regne of the most crysten kyng, kyng Edward the fourth. Folio. With cuts.

Our venerable printer in his prologue, says that the book was translated "out of latyn into frenshe by the ordynance of the noble duk, Johan of Berry and Auvergne the year of lordes m.cc.xlv, and now (he adds) at this tyme rudely translated out of frenshe in to Englishe by me synple persone Wyllm Caxton, &c."

The following is the conclusion of the work:—

"And where is it so, that I have presumed and emprised this forsayd translation into our Englishe and maternal tonge, in whiche I am not wel parfayght, and yet lasse in Frenshe; yet I have endeoured me therein, atte request and desyre, coste and dispence of the honourable and worshipful man Hugh Bryce, cytezen and alderman of London, which hath sayd to me that he entended to present it unto the puissant, noble, and vertuous lord, my lord Hastinges, chamberlayne unto our soverayn lord the kyng, and his lieutenant of the town of Calais and marches there. In whiche translation I knowleche my

self symple, rude, and ygnorant, wherfor I humbly beseeche my sayd lord chamberlayn to pardon me of this rude and simple traslation. How be it, I lye for myne excuse, that I have, to my power, followed my copie, and as nyghe as to me is possible I have made it so playn, that every man resonable may understonde it, yf he aduysedly and ententyfly rede or here it. And yf ther be faulte in mesuryng of the firmament, sonne, mone, or of therthe, or in any other meruaylles herein conteyned, I beseeche you not tarette the defaulte in me, but in hym that made my cople; whiche book I began first to translate the second day of Janyuer, in the yer of our Lord m.cccc.lxxxz, and fynnyshed the viii day of Marche the same yere. And the xxi yere of the regne of the most christen kyng, kynge Edward the fourth, under the shadow of whos noble protection I have empyed and fynnyshed this sayd tytil werke and boke, beseeching almyghty god to be his protector and defendour agayn alle his enemyes, and gyue hym grace to subdue them, and inespaciall them that have late enterprysed agayn right and reon to make warre wythin his royaume, and also to preserve and mayntene hym in longe lyf and prosperous helthe, and after this short and transitorye lyf he brynge hym and us into his celestyal blyse in heuene. Amen. *Caxton me fieri fecit.*"

It appears that Caxton printed two editions of the above, the first being upon the best paper, with blanks for the initial capitals; it contains one hundred leaves, and has twenty-nine lines in a page. The second is printed with the same type, and capital initials; it contains eighty-four leaves, with thirty-one lines in a page, and concludes with the addition "*Caxton me fieri fecit.*" His large device is on a separate leaf at the end. This is said to have been the first work in which he used signatures; but it appears that he first adopted them in the second edition of the *Dictes*.

This work is copiously described by Mr. Dibdin, in his *Typographical Antiquities*, with facsimilies of the engravings, which he observes are the first known engravings, with a date, produced in England. The duke of Roxburghe's copy produced the sum of £351 15s. A copy of the second edition, with two leaves of the table, and a portion of two other leaves supplied by manuscript, was offered in a trade catalogue for £50.

1481. *The Historie of Reynart the Foze, &c.* Which was in dutche, and by me, willm Caxton translated in to this rude and symple englysh in thabbey of Westmestre fynnyshed the xj day of Juny the yere of our lord m.cccc.lxxxz and the xxi yere of the regne of kynge Edward the iiijth.

This curious and exceedingly scarce volume is called a quarto by some, and a folio by others; the copy in His Majesty's library is said to be the only one known in this country. Hearne called this work "an admirable thing, and the design very good; viz. to represent a wise and politic government." Mr. Douce thinks this "celebrated and interesting romance" was composed long before the twelfth century. The name of the original Dutch author has not yet been brought to light.

1481. *The Boke of Tulle of old age &c.* Emprynted by me symple persone William Caxton into Englyshe at the playsir solace and reverence of men growing into olde age the xij day of August the yere of our lord m.cccc.lxxxz. To which are added,

*Tullius his Boke of Friendship; and the Declaracyon, shewing wherein Honour shold reste.* Printed by the same: in the same year.

Oldys observes, respecting the above, that "this threefold work is sufficiently explained in the prefaces and conclusions of its several parts." After eight leaves of contents, it closes thus—

"Thus endeth the boke of Tulle of Olde Age, translated out of Latyn into Frenshe by Laurence de primo Facto, at the comendement of the noble pryncce Louys, duc of Burbon, and emprynted by me symple persone, William Caxton, into Englyshe, at the playsir, solace, and reverence of men growyng into old age, the 12 day of August, the yere of our Lorde 1481."

Caxton has not given us the name of the translator of the foregoing. Leland attributes it to Tiptoft: but Mr. Anstis informs us, that it was done by Wyllyam de Wyrcestre, alias Botaner, and presented by him to Wyllyam Waynflete, bishop of Winchester. This is confirmed by a Latin memorandum in the manuscript library of Bennet college, thus entitled—"Lunarium Will Worcestre de Bristol ad Montem S. Michaelis in An Christ 1478"—"The 20th day of August I presented to Wyllyam Waynflete, bishop of Winchester, the boke of Tully of Old Age, translated by me into English."\*

Then follows the declarations of Publius Cornelius Scipio and Gayus Flamyneus, competitors for the love of *Lucrece*, explaining wherein true honour and nobleness consists; the former placing it in blood, riches, and the worshipful deeds of his ancestors, without urging any thing of his own life or manners; the latter insisting, that nobleness cannot be derived from the glory or merits of another man, or from the flattering goods of fortune, but must rest in a man's own proper virtue and glory. These orations, with the argument or introduction, take up nineteen leaves:—and afterwards Caxton adds (what has been overlooked by Herbert,) "*This little Volume, a thin 4°. I have emprised t'imprint under the Umbre and shadow of the noble protection of our most dread sovereign, and most christian king, Edward the fourth; whom I most humbly besought to receive the said book of me, William Caxton, his most humble subject and little ser-*

\* "This William Wyrcestre," says Lewis, "was an antiquary and physician, and perhaps on that account had the name of Botaner, or herbalist; and an astronomer of great abilities for the age he lived in. He was born in the city of Bristol, in the year 1415, and 'sometime seraunte and soget wythe his reuerent master John Fastolf chevallier, and exercised in the werres above 44 yeres,' and in so great favour with Sir John, that he left him one of the executors of his last will. He wrote a particular treatise of sir John's life, but whether in Latin or English is altogether uncertain. But, however, this English translation, by whomsoever made, is not from the original Latin, but, as Mr. Caxton has acquainted us, from the French, &c."

vant, and not to disdain to take it of me, to poor, ignorant, and simple a person."

This volume of three tracts, which is rather elegantly printed, contains 120 leaves.

1481. *Godefroy of Bologne; or the last Siege and Conqueste of Jherusalem.* Fynyshyd the vii day of Juyn, the yere of our lorde mccccxxxi, and the xxi yere of the regne of our sayd Souerayn, kyng Edward the fourth. And in this maner sette in forme and Enprinted the xx day of Novembre the yere aforaysyd, in thabby of Westmester by the sayd Wylliam Caxton. Folio.

This book, which is divided into two hundred and twelve chapters, is comprised in 146 leaves.

1482. *The Polycronycon; conteynynge the Berynges and Dedes of many Tymes, in eyght Books, &c.* Imprinted by William Caxton, after having somewhat chaunged the rude and old Englyshe, that is to wete, certayn Wordes which in these Dayes be neither wyd ne understanden. Ended the second Day of Juyll, the xxij Yere of the Regne of Kynge Edward the fourth, and of the Incarnacion of oure Lord a thousand four Hundred four Score and tweyme. Folio.

This translation was made at the request of Thomas, lord Berkeley, by John de Trevisa,\* vicar of Berkeley, (who ranks among the earliest of our English poets) from the Latin of Ranulph Higden;† one of the monks of St. Werberg's monastery (now the cathedral in Chester), who died in 1360, at the advanced age of between eighty and ninety.

Trevisa's translation of Higden closes in the year 1357, to which Caxton added the eighth book, thereby extending the history to the year 1460. The work opens with a preface of four pages; 2dly, an alphabetical table of persons, places, and principal things, containing thirty-two pages; 3dly, a dialogue between a clerk, the lord, and the vicar of Berkeley, comprising four pages and a half; 4thly, the epistle of John

Trevisa unto Thomas of Berkeley, consisting of thirty-five lines. At the end, he observes—

"God be thanked of al his dedes, this translacion is ended on a thursdaye, the eightenthe daye of Apryll, the yere of our lord a thousand three honderd and lviii, the xxxi yere of kyng Edward the thyrde, after the conquest of Englonde, the yere of my lordes age, Sir Thomas lord of Berkley, that made me make this translacion, fyne and thyrty."

Then follows Caxton's addition, in which he informs us, that the original was "made and compiled by Ranulph, monke of Chestre," &c.

The *Polycronicon* is a large volume, and seems to have been intended by Caxton as a helpmate to his *Chronicle*. The printing must have occupied him the whole year, as no other publication came from his press in 1482. Besides printing it, however, he added an eighth book, bringing the history down from 1357 to 1460; "because," he says, "men, whyles in this time ben oblivious and lightly forgotten, many things deyne to be put in memory; and also there cannot be founden in these days but few that wryte in their regystrs such things as daily happen and fall." He was also obliged to take the trouble of altering many parts of Trevisa's language; for, though only 124 years had elapsed, many words were quite obsolete and unintelligible. This, Caxton particularly notices in the *Polychronicon*; and at greater length in the following curious passage in the preface to his *Eneid*, a work from his press, that will be afterwards noticed.

"After divers works, made, translated, and atchieved, having no work in hand, I, sitting in my study, where as lay many divers pamphlets and books, it happened that to my hand came a little book, in French, which late was translated out of Latin, by some noble clerk of France, which book is named *Eneid*, as made in Latin by that noble person and great clerk, Virgil, which book I saw over, and read therein. (He then describes the contents.) In which book I had great pleasure by cause of the fair and honest terms, and words, in French, which I never saw tofore like, ne none so pleasant nor so well ordered: which book as me seemed should be much requisite to noble men to see, as well for the eloquence as histories; and when I had advised me in this said book, I deliberated, and concluded to translate it into English, and forthwith took a pen and ink, and wrote a leaf or twain, which I oversaw again, to correct it; and when I saw the fair and strange terms therein, I doubted that it should not please some gentlemen, which late blamed me, saying, that in my translations, I had over curious terms, which could not be understand of common people; and desired me to use old and homely terms in my translations; and fain would I satisfy every man, and so to do, took an old book, and read therein; and certainly the English was so rude and broad, that I could not well understand it; and also, my lord abbot of Westminster, did do shew to me late certain evidences, written in old

\* John de Trevisa, who flourished towards the close of this century, has also been enumerated among the first translators of the *Bible* into English. He was born at Caradoc, in the county of Cornwall, and educated at Oxford. His learning and talents gained him the patronage of earl Berkeley, who appointed him his chaplain, and presented him to the vicarage of Berkeley, in Gloucestershire. He was also canon of Westbury, in Wiltshire. Warton, in his *History of English Poetry*, vol. i. p. 343, speaks of him as having been a great traveller; and Ant. Wood (*Antiq. Oxon.*) says, "He was a man of extensive erudition, and of considerable eloquence; and one of the first who laboured to polish his native language, and rescue it from barbarism."—Writers are divided on the subject of Trevisa's translation of the *Bible*. Some maintain that he was the author of a translation; while others obstinately deny the assertion, and state that he did no more than translate certain sentences, which were painted on the walls of Berkeley castle.—Trevisa finished his translation of the *Polychronicon* in 1367; and is said to have died in the year 1415, at a very advanced age.

† This work contains the transactions of many ages, and is said to border upon the marvellous and fabulous, the first chapter describes all countries in general, particularly Britain. The other six comprise a concise account of civil history, from the creation down to the author's own time: viz. the reign of Edward III. terminating in 1357. It has been asserted that Higden was not the real author, but that he borrowed it from the *Polygenicon* Temporum of Roger Cestrensis, (a Benedictine monk of the above monastery,) without making the least acknowledgment of the source from whence he derived his materials.

English, now used; and certainly it was written in such wise, that was more like to Dutch than to English. I could not reduce, nor bring it to be understanden."

Again: "Certainly the language now used varieth far from that which was used and spoken when I was born; for we, Englishmen, been borne under the dominacion of the moone, which is never stedfaste, but ever wavering." In his time, the inhabitants of one county hardly understood those of another: "The most quantity of the people understand not Latin nor French, in this royaume of England." The intermixture of French words and idioms, of course, was most prevalent in the capital. "That common English, that is spoken in one shyre varyeth from another—in so much that in my dayes happened, that certain merchants were in a ship, in Thamys, for to have sailed over the sea to Zeeland; and, for lack of wind, they tarried att Forland, and went to land for to refresh them; and one of them, named Sheffield, a mercer, came into an hous, and axed for mete, and especially he axed after egges; and the good wyfe answerde, that she could speke no Frenche, and the merchant was angry, for he also could speke no Frenche, but would have had egges, and she understood him not. And then at last another sayd, that he would have eyryn. Then the good wyfe sayd, that she understood him well.\*" Caxton seems to have been a good deal puzzled and perplexed about the language he should use in his translations; for, while some advised him to use old and homely terms: "Some honest and great clerks," he adds, "have been with me, and desired me to write the most curious terms that I could finde—and thus, betwixt plain, rude, and curious, I stand abashed." There can be no doubt, however, that either by following the advice of those honest and great clerks, or from his long residence abroad—in his translations, as Dr. Johnson observes, "the original is so scrupulously followed, that they afford us little knowledge of our own language; though the words are English, the phrase is foreign."

The great scarcity of books, prior to the invention of printing, it is conjectured by Oldys and Mr. Burnett, gave our typographer cause for the foregoing complaint. The fifteenth century has not been accounted a very fruitful one in historical writers; and Mr. Lewis, in his *Life of Caxton*, thus remarks upon the above subject: "Particularly of the reign of Edward IV. that even the favourers of justice and his cause, have not known what account to give of the times, or how to form a regular history from such a heap of confusion." Yet in this century lived such manuscript authors as Froissart, R. Avesbury, Roese, Knyghton, Walsingham, Otterburne, and others, of whom, had Caxton known of their

existence, or could have gained access to them, it is probable that he might have obtained far more ample materials for his history. It appears that he was censured for the liberty he had taken in changing the obsolete language.\*

This volume is comprised in 428 folios, and is considered by Mr. Dibdin as one of the most curious and interesting productions of Caxton's press.

1482. Printing introduced into the following places in the course of this year.

Aquila, by Adam de Rotwil.

Erfurt, by Paul Wider de Hornbach.

Memmingen, by Albert Kunne.

Passau, by Conrad Stabel and Benedict Mayr.

Vienna, by John Winterberg.

Promentour, by Louis Guerin.

Reutlingen, by John Otmar.

1482. Erhardus Ratdolt, a German printer, has the credit of inventing ink of a golden colour, of which a specimen may be seen in some of the copies of the *Euclid* printed by him. In some copies of the *Simplicius*, of 1499, and of the *Ammonius*, of 1500, by Caliergus, the titles are in letters of gold.

1482. John Lettou and William Machlinia have already been mentioned as introducing the art of printing into the city of London, and we now give some notices of their works. Lettou is considered, from his name, to have been a foreigner, and most probably a German; but neither Ames, Herbert, nor Dibdin, have been able to discover any thing relating to his life. The first of these authors supposes that he came to England, with others, from the continent, on the invitation and encouragement of Caxton and Hunt, to work at the newly-established presses of Britain. He appears to have been first employed in the office of Machlinia, as a pressman, but he afterwards was received into partnership with his master, and his name is even placed first in the colophons of those books which they printed in connection. It does not appear that Lettou ever printed abroad; and there are probably but two volumes now existing to which his name is affixed alone;—

1. *Questiones Antonii Andrea Ord. Minor. super xii libros Metaphysica emendate per Ven. fratrem Magistrum Thomam Penketh Ord. fr. Augustin. m.cccc.lxxz. Folio.*

2. *Expositiones Super Psalterium. London. m.cccc.lxxxi. Folio.*

\* Lewis, in his *Life of Caxton*, thus commends his modesty, and justifies his alteration of the obsolete terms:—"One cannot help observing here, the great modesty and humility of Mr. Caxton, how mean an opinion he had of himself and his works, and with what deference and respect he treated others and their learned labours. It is likewise obvious to remark what Mr. Caxton says of the alteration of the English language in his time; which was so great, that there were many words in Trevisa's translation of the *Polychronicon*, which, in his days, were neither used nor understood. Now it was but 154 years since that translation was made; whereas archbishop Parker noted it as very strange, that our language should be so changed in 400 years from his time, that the manuscript book of the *Lives of the Saints*, written about A.D. 1300, in old English verse, now in Bennet college library, was no written that people could not understand it."

\* If Caxton is correct in this story, the language of this part of Kent (in the world of which, where he was born, he acknowledges English is spoken broad and rude) must have borrowed the word for egg from the Teutonic, and not from the Anglo-Saxon; *egg*, being the Anglo-Saxon, and *ei* the German, for an egg.

In connection with Machlinia, Letton printed two volumes of law, one of which was—

*Tenores. Nouelli Impressi per nos Johannem letton et Wilhelmum de Machlinia in Civitate Londoniarum juxta ecclesiam omnium Sanctorum. Folio.*

This was the first edition of Littleton's *Tenures*, which was without a title-page, the above forming the colophon. Herbert gives the following detail of the arrangement of this book. On the reverse of the first leaf appears, *Incipit tabula hujus libri*, which is divided into three parts:—

"This table gives the beginning *Tenure* by the directing letter or signature to the binder, for folding the sheet at the bottom of the leaf, as, a i, a ii, a iii, a iiij. then four leaves blank, after b i, b ii, b iii, b iiij, &c. to the end. No leaves numbered nor catchword; the initial letters are left for the illuminator to colour. The letters are very much combined together as Caxton's, but many more abbreviations are used."

It is supposed that this edition was superintended by Lord Littleton himself.

Ames supposes that William Machlinia might originally have come from the city of Mechlin, which, at the period when he printed, belonged to the emperor of Germany. The colophon to Littleton's *Tenures*, seems to warrant such a conclusion, as he there evidently calls himself William of Mechlin, which was afterward corrupted into a surname. His letter-press, paper, and types, were superior to those of Letton; but his books are all without dates, and consisted only of law and religious publications. Before entering on a list of Machlinia's works, it should be stated, that he lived in Holborn, near the Fleet-bridge, but while in connection with Letton, their dwelling was by All Saints Church. The volumes supposed to have been printed by Machlinia alone, are as follow:—

1. *The Year-Book 33rd and 36th Henry VI.*
2. *Ditto. 34th. Henry VI. Folio.*

Year-Books, says Jacob, are "Reports, in a regular series, from the reign of King Edw. II., inclusive, to the time of Hen. VIII. which were taken by the prothonotaries, or chief scribes of the court, at the expense of the crown, and published annually; whence, they are known under the title of Year-Books."

*Incipit liber qui vocatur Speculum Xpistiani.* No date. Quarto. London. William Machlinia.

Chiefly in Latin, but also containing some English verse. The former consists of an exposition of the divinity of the period in which it was written; the unprofitable nature of which may be conceived, when it is stated, that the *Creed* is commented upon by assigning to each apostle that article of faith which he is said to have contributed; as in the following translation:—"Peter the Apostle: I believe in God, the Father Almighty, creator of heaven and earth.—Andrew: And in Jesus Christ his only Son our Lord.—James the Great: Who was conceived of the Holy Ghost, born of the Virgin Mary," &c.

The English verses commence with these lines:—

"In heven shall dwelle alle christen men,  
That knowe & kepe Goddes bydynges ten."

There are also many more verses, and some pages of prose in English; of the former, Herbert has given a specimen, in *A devout prayer to the blessed Mary*, which may remind the poetical reader, of Ellen's *Hymn to the Virgin*, in Sir Walter Scott's *Lady of the Lake*, as in each she is addressed as Mary, mother, and maiden mild. An extract from the present poem will be sufficient for a specimen.

"Mary Moder wel thou bee  
Mary Moder thanke on me  
Mayden and Moder was never none  
Togeder lady saf thou alone

Swete lady Mayden cleane  
Schilde me fro ille schame and tene\*  
And onte of synne lady schilde thou me  
And onte of dette for charite

Swete lady, Mayden mylde,  
From alle fomen thou me schilde  
That the feende me not decee  
Swete lady thou me weere  
Both be daye and be night  
Help me lady with alle thy myght."

At the close of the *Speculum Christiani*, follows: "An exposition of the Lord's prayer, and seven chapters on Sins, with their branches," in Latin; and, succeeding this, comes "The Admonitory words of the blessed Isidore, extracted to instruct men in the quality of vice, how to avoid it, and of the good of which they should be informed." The whole concludes with this colophon:—"Iste Libellus impressus est in opulentissima Cinitate Londoniarum per me Wilhelmum de Machlinia ad instantiam necnon expensas Henrici Vrakenberg mercatoris." The author's name is supposed to have been John Watton.

*Liber Aggregationis seu liber secretorum Alberti Magni de virtutibus herbarum lapidum et animalium quorundam.* No date. Quarto.

Mr. Dibdin states this to be the most elegant of Machlinia's press with which he is acquainted. The book is without catchwords or numerals, and consists of 41 leaves. Three pages are occupied by directions for finding the changes of the moon, and moveable feasts of the church. The work itself consists, as the title states, of the properties and virtues of stones, herbs, and animals, a knowledge of which was, at one period, denominated natural magic. A single translated extract will give a perfect conception of the whole.

"And if any be willing that a cock should not crow, anoint his head and forepart with oil. And in the book of Archigenes it is said, that when one suffereth the cholice, the windpipe of a hare should be hung over him: and it is said by Aristotle that whoever sitteth upon a lion's skin the hæmorrhoides will depart from him. And the philosophers have said that if the head of a goat be suspended over those who suffer the scrofula they shall be by it restored unto health."

\* Loss.

Besides seven acknowledged productions of Machlinia, there are five other books without name, date, or place of imprint, but which, from a variety of evidence, have been ascribed to him; of which the following is a list:—

*Here begynneth a litill Boke necessarye and behoeful agens the Pestilence.* Quarto. Without name, date, or place of imprint.

By the introduction to this book, the reader is informed that Ramieus—

"The bishop of Arusiens in the royalme of Denmark, Doctour of Phisique will write by the moost experte and famous doctours auctorised in Phisike somme thynges of the infirmite of pestilence which dayly enfecteth and sone suffereth us to departe of this lyfe. First I wil write of the tokens of this infirmite, the second the causes whereof yt cometh, the thirde remedies for the same, the fourth comfort for the herte and the principal membes."

On the recto of the fourth leaf, in the *remedies for the pestilence*, it is thus remarked:—

"Now it is to wete by what remedies a man may pserve him self fro pestilence first see the writing of Jeremy the pphete that a man ought to forsake evil thynges and do gode dedes and mekely to confesse his synnes for whi it is the biest remedie in that time of pestilence penance and cofession to be pferred to al other medicines."

This singular production consists of nine leaves, and was first introduced into the *Typographical Antiquities*, by the Rev. T. F. Dibdin.

*Revelacion of a Monke in the Abbey of Evesham.* Quarto.

This most singular volume commences on the recto of the first leaf; and on the reverse, "*Here begynneth a meruelous revelacion that was schewyd of almyghty god by sent Nycholas to a monke of Eveshamme yn the days of kynge Richard the fyrst, and the yere of our lord, m.c.lxxxvi.*"—Ca primum, lviii chap. in all.

The story which then ensues, states that the monk who was favoured with this vision, was a young man who had been converted from the world to a religious life, and that soon after his being entered in Evesham monastery he was afflicted with an illness which lasted fifteen months. After medical skill had been found in vain, and his sickness had increased to a great height, toward the feast of Easter, he somewhat recovered, and on the Thursday in Passion-week, joined his brethren in the church, where he behaved with peculiar fervour and devotion. His weakness however again increases, and with it his religious zeal, and at length, on Good Friday morning, he is found prostrate before the abbot's seat in the chapter-house.

"As a man lyfetes," says the story, "*without any mocyon of any membre of his body.—Trewly his yea were falle down depe into his hede & tho yea & nose of him were bloody or as a manne had over lede hem with mekyl bloode.*"

In this state he continues, notwithstanding the endeavours of his brethren to restore him, until the following afternoon, when he slowly recovers, and about the time when the resurrec-

tion took place, he leaves his bed and goes to the church. After this he relates to the convent, "*in the colloke the which ys a place where the may speke to geder,*" all the wonderful things he had seen and heard. This curious book contains 65 leaves, four of which are double, and 30 lines on a full page. There are neither title-page, signatures, pages, catchwords, nor colophon.

*Chronicle of England.* Folio.

Of this exceedingly rare volume, Herbert gave only the following very unsatisfactory account: "*A Chronicle of England*, partly written, and partly printed, on paper and vellum; was in the possession of the late John Anstis, Garter. It is a miscellaneous piece, and has printed in it, first, *The promise of Matrimonie*; second, *The Lettre annuelle port*; third, *The obligation of Nisi*; fourth, *Tharicles of the convencion bitwene the Frenshe king and the duc of Austrie, late called duc of Bourgoigne.*"

Mr. Dibdin has considerably improved upon the above, and from him we learn, that this book is printed with worn and broken types, and that the printing is executed in a rude unfinished manner. As all the copies he had met with were imperfect, he is able only to state his supposition, that it originally commenced with the table on sign. a. i., which at present occupies ten leaves. The number of chapters is cc. lxxiii, and the chronicle begins with—"How the lande of Englonde was fyrst named Albion and by what encheson it was so named," which is printed in a stout square German-text type, similar to the titles in Caxton's books, and the earlier ones by Wynkyn de Worde. The text commences; "*In the noble lande of Surre ther was a noble kyng and myhty a man of grete renome:*" which comprehend the first two lines. Mr. Dibdin mentions, that the most perfect copy he has seen, terminated on sign cc. liii.

Herbert also mentions one other work from Machlinia's press, which is

*A Book of Devotion.*

Printed on vellum, in Latin, and with the same type as the *Nova Statuta*.

Neither Letton nor Machlinia appear to have used any device, but only to have printed their names in the colophons to their respective works.

1483, April 9. Died King Edward IV. at Windsor. He was born at Rouen, in France, April 29, 1441. On March 4, 1471, he was proclaimed king of England, and crowned on the 28th of June; upon which august occasion his brothers George and Richard were created dukes of Clarence and Gloucester. On the 1st of May, 1464, he was privately married to the lady Elizabeth Woodville, widow to Sir John Grey, at Grafton Regis. Being compelled to fly the kingdom, he fled to Flanders, from whence he returned and landed at Ravenspur, on the 14th of March, 1471; in his bonnet he wore an ostrich feather, as prince of Wales; his Fleming followers carried hand-guns which is the earliest account of them in England.

On the 4th of May, 1483, Richard duke of

Gloucester, youngest brother of Edward IV. was acknowledged by the chief nobility, *protector* of the realm, and of the person of his nephew, Edward V. son of the last monarch, which event took place in the palace of the bishop of London. The duke assumed the style, on this occasion, of "brother of kings, protector and defender, great chamberlain, constable, and lord high admiral of England." On June 22, he ascended the throne as Richard III. It was that memorable Sunday when Dr. Shaw, a brother of the lord mayor preached at St. Paul's cross, from this singular text, "Bastard slips shall not strike deep roots;" and thence proceeded, by the appointment of Gloucester, to show the illegitimacy of the infant princes sons of Edward IV.

At this period instead of a pamphlet being published, to furnish the advocates of the administration with plausible arguments on great political measures, it was usual to announce the court creed from the pulpit at St. Paul's cross—so we find that Richard III. employed Dr. Shaw to support his claim to the crown; and about fifteen years before, the great earl of Warwick employed his chaplain, Dr. Goddard, to convince the people that Henry VI. ought to be restored, and that Edward IV. was an usurper. In it Jane Shore, the mistress of Edward IV. did penance; there the cause of queen Catharine, the first wife of Henry VIII. was assailed; and the titles of the princesses Mary and Elizabeth were disputed.

William Collingbourne, Esq. who has given his name to two places in Wiltshire, was tried and executed for posting some satirical rhymes upon the church doors against Richard III. and his ministers.

1483. An act of parliament was made for prohibiting the Italians from importing and selling their wares in England by retail, &c. excepting books written or printed: this act runs thus—

"Provided always, that this act, or any parcel thereof, or any other act made, or to be made in this said parliament, shall not extend, or be in prejudice, disturbance, damage, or impediment, to any artificer, or merchant stranger, of what nation or country he be, or shall be of, for bringing into this realm, or selling by retail, or otherwise, any books written or printed, or for inhabiting within this said realm for the same intent, or any scrivener, illuminator, reader, or printer of such books, which he hath, or shall have to sell by way of merchandise, or for their dwelling within this said realm, for the exercise of the said occupations; this act, or any part thereof notwithstanding." This act was revoked by Henry VIII. in the year 1535.

1483. Gvido Mercator or Guy Marchand is said to have commenced the art of printing in this year. His impressions were numerous; but Chevillier has assigned to him a distinguished place amongst the most ignorant printers of his day. In reality a book was printed by him in this year with this title—"Elegantiarum viginta Præcepto;" which title is reprinted on the second leaf; and the volume thus concludes, *Eleganti-*

*arum viginta Præcepto*. Instead of this printer's name, his impressions sometimes have merely this notice, *in domo Campi Gaillardii*. Some of them exhibit on the reverse of the final page the representation of a *Cordwainer* at work, with all the implements of his profession about him: which this printer may therefore be supposed to have adopted as his whimsical device. He continued to exercise the profession till 1505, and his press gave birth to various interesting Gothic impressions.

1483. Printing introduced into the following places in the course of this year:—

Magdeburg, by A. Rauenstein and J. Westral.  
Stockholm, John Snell, a German printer, invited into Sweden by the administrator Stein Sture, and produced his first book in this year.  
Ghent, by Arnold Cesaris.

Troyes, by William le Rouge, his name first appears to a work in the year 1492.

Schiedam, no printer's name.

Haerlem, by John Andriesson. *Formula Notitorum*, 1483, is the most ancient book, with a date, printed at Haerlem; Santander is of opinion that this was the first book printed in that city.

Culemborg by John Veldener.

Leyden, by Henry Heynrici.

Pisa, by Laurentius and Angelus Florentini: produced their first work in 1484.

Gironne, by Matthew Vendrell.

1483, Aug. 30, died Louis XI., commonly called the Tiberius of France. St. Foix informs us, that kings were usually addressed by the titles of *most illustrious*, or *your serenity*, or *your grace*, but that the custom of giving them that of *majesty* was only established by Louis XI., a prince the least majestic in all his actions, his manners, and his exterior—a severe monarch, but no ordinary man. The manners of this monarch were most sordid; in public audiences he dressed like the meanest of his people, and affected to sit on an old broken chair, with a filthy dog on his knees. In an account found of his household, this *majestic* prince has a charge made him for two new sleeves sewed in one of his old doublets.

For a particular account of this singular monarch see the novel of *Quentin Durward*, by Sir Walter Scott, in the second volume of which the following beautiful eulogium on the art of printing is expressed by Galeotti Martivalle the astrologer, in an interview with Louis. It must, however, be premised that judicial astrology was one of the prevailing delusions of the age. "Believe me that, in considering the consequences of this invention, I read with as certain augury, as by any combination of the heavenly bodies, the most awful and portentous changes. When I reflect with what slow and limited supplies the stream of science hath hitherto descended to us; how difficult to be obtained by those most ardent in its search; how certain to be neglected by all who regard their ease; how liable to be diverted, or altogether dried up, by the invasions of barbarism; can I look forward without wonder and astonishment, to the lot of a suc-

ceeding generation, on whom knowledge will descend like the first and second rain, uninterrupted, unabated, unbounded, fertilizing some grounds, and overflowing others; changing the whole form of social life; establishing and overthrowing religions; erecting and destroying kingdoms. This invention may be likened to a young tree, which is now newly planted, but shall, in succeeding generations, bear fruit as fatal, yet as precious, as that of the Garden of Eden, the knowledge, namely, of good and evil."

1483. Caxton printed more books this year than any other; among which are the following:—*The Pylgremage of the Sowle*, &c. Folio. finished June 6.

This is a translation from the French of a work entitled *Le Pelerinage de l'Ame*, and is divided into five books: the first treateth of the soul from its departure out of the body, to its being sentenced to purgatory. The second, of the soul being brought to purgatory: these contain 65 chapters. The third, of an angel shewing the soul hell, and describing the pains thereof by the causes; 10 chapters. The fourth, of the green tree and the dry, and by the other wonderful sights; 38 chapters. The fifth, of the soul taken out of purgatory, and led up through the heavenly spheres; with a description thereof, and of the calendar of heaven, &c. 14 chapters.

Mr. Dibdin is of opinion that this work, and not *Bernard's Isle of Man*, laid the foundation of John Bunyan's *Pilgrim's Progress*: it is a curious work, and full of devout matter touching the soul. Caxton has not given the name of the translator: his colophon begins thus—"Here endeth the dreme of pylgremage of the soule," &c. The work is comprised in 110 leaves, and numbered with running titles. It is a poetical work. Caxton's translation has the addition of various curious songs.

*The Liber Festivalis*, or *Directions for keeping Feasts all the Yere*; and the *Quatuor Sermones*; both of them printed in folio, by William Caxton; and frequently bound together. Of the first, Hearne observes, that "it consists of a course of homilies, in which are many odd stories; that it goes by no other name than that of *Festivale*, among curious men, who are very inquisitive after copies of it." Oldys adds, "that some of these odd stories are such, that the papists are now ashamed of them." "The fact is," says Mr. Dibdin, "whatever be the nature of these stories, all 'curious' theological scholars may be well inquisitive after the *Liber Festivalis*, as it is the origin or substratum of the *English Common Prayer Book*." The prologue tells us, that "For the help of such clerks, this book was drawn to excuse them for default of books, and for simpleness of cunning, and to shew unto the people what the holy saints suffered and did for God's sake, and for his love; so that they should have the more devotion to God's saints, and with the better will come to church to serve God, and pray the saints of their help." That it was principally taken from the

*Legenda Aurea*, or *Golden Legend*, is proved by the prologue of an ancient edition, in which the writer states, "this treatise is drawn out of *Legenda Aurea*, that he that list to study therein, he shall find ready therein of all the principal feasts of the year, on every one a short sermon, needful for him to teach, and for them to learn; and for that this treatise speaketh of all the feasts of the year, I will and pray that it be called *Festivale*."

Then follow, says Lewis, sermons on nineteen Sundays and ferials, beginning with the first Sunday in advent, and ending with Corpus Christi day. Next are discourses or sermons on forty-three holy-days. Then follows a sermon *De dedicatione Ecclesie*, or on the church holiday.

The *Quatuor Sermones*, which was a translation from the Latin, was most probably the Roman Catholic formulary of the day, respecting the religious topics of which it treats, namely, *The Lord's Prayer*, *Belief*, *Ten Commandments*, and *Articles of Faith*. In the translation of the creed, which we have in the first sermon, the fourth article is thus expressed, *I byleve, that he suffered payne under Ponce Pilate*," &c.\*

1493,† *Sep. 2. Confessio Amantis*; That is to saye in Englyshe, *The Confessyon of the Lover*, maad and compyled by John Gower, Squyer; &c. Folio.

This work was written by John Gower the poet, (see p. 84 ante.) It treateth how he was confessed to Genius, priest of Venus, upon the causes of his five wits, and seven deadly sins, as appeareth in the said book; in which is comprised divers histories and fables touching every matter. Caxton observes, that he has ordained a table of all such histories and fables. It contains 211 leaves, which are numbered.

1483. *The Golden Legende*—*Accomplished at the commaundement and requeste of the noble and puyssaunte erle, and my special good lorde, wylliam erle of arondel*; and fynnyshed at Westminster the twenty day of Novembre. Folio.

This work, which has many wooden cuts, contains an account of all "the high and great fates of our Lord, the fates of our blessed Lady, the lives, passions, and miracles of many other Saints, and other histories and acts." St. George being our English patron, we shall extract the following from the close of his life:—

\* According to this manner of writing, excepting sometimes Ponce for Ponnce, was this article of the creed expressed in English, from the fourteenth century down to A.D. 1532, when in the *Primer of Salisbury* use, it was altered to Pontius Pilate, which was followed by archbishop Cramer, in his notes on the *King's Book*, 1538.

† By mistake for 1483, as the designation of this king's reign clearly testifies.

‡ Gower wrote some Latin verses on the rebellion of Wat Tyler,—which are humorously translated by Andrews,—part of which we insert, as a specimen of the literature of the age:—

WAT cries, Tom dies, nor SYMSEIN stays aside;  
And BATT and GRAB, and HYNN, they sammon loud,  
COWLIN and BOB combustibles provide,  
While WILL the mischief forwards in the crowd  
GREG bawls, HOM bawls, and DAVV joins the cry,  
With LARV, not the least among the throng;  
HODOR scrubs, JUNE scrubs, while TIS stands grinning by,  
And JACK with sword and fire-brand madly strides along.

"*Thys bleasyd and holy martyr, saynt George, patron of thys royaume of Englonde, and the crye of men of warre, in the worship of whom is founded the noble ordre of the garter, and also a noble college in the castle of Wyndesore, by kynghes of Englonde, in whiche is the herie of saynt George, whyche Sygysmond, the emperor of Almayn, broughte and gaf for a grete and a precious relique to kyng Harry the fyfthe; and also the sayd Sygysmonde was a broder of the sayd garter; and also there is a pyece of his heed: which college is nobly endowed to thounoure and worship of almyghty God, and hys bleasyd martyr saynt George. Thenne lete us praye unto hym, that he be special protectour and defendour of thys royaume. Thus endeth the lyf of saynt George. And folio cccclxxxix. Thus endeth the lyf of saynt Saturnine. Thys feste is the last feste of the yere, for to begynne at the feste of saynt Andrewe, and hereafter shall folowe dyuers feestes, whiche been added and sette in thys sayd book, called the Golden Legend."*"

This work is printed in double columns, contains 404 folios, and is, Mr. Dibdin observes, "without exception, one of the most elaborate, skilful, and magnificent specimens of printing which ever issued from Caxton's press." Jacobus de Voragine, Archbishop of Genoa,\* first composed it in Latin, about 1260. In the subsequent century Jean de Vignay translated it into French, from which our typographer's translation was taken.

A second edition of the *Golden Legend* is said to have been printed soon after the other, with wood cuts, but without date.

A third edition was finished the 20th of May, 1483. Folio.

At the beginning and end of this work it is observed respecting the title, the *Golden Legend*; "for like as passeth gold in value all other metals, so this *Legend* exceedeth all other books." This work was translated at the request of the earl of Arundel. The date of 1493 appears irreconcilable. Herbert remarks, "This is a knot I must acknowledge myself unable to untie, or reconcile with the account of Mr. Caxton's death in 1493, as mentioned in *Lewis's Life of Caxton*." Mr. Dibdin believes the work to have been printed by William Caxton, and the colophon added by Wynkyn De Worde, who

affixed his master's name out of respect to his memory.

Mr. Dunlop observes that *Le Tresor de l'Ame* is a work somewhat of the same description with the *Legenda Aurea*, and that it was composed or compiled nearly two hundred years before its first appearance from the press. It consists of a collection of histories; but more frequently reports the miracles wrought by the posthumous intercession of saints, than the prodigies performed in the course of their lives. The longest article contained in it is the account of St. Patrick's purgatory; which is mentioned in the *Legenda Aurea*, but is here minutely described by a Spanish knight, who had been sent thither to expiate his crimes. (*Hist. of Fiction*, vol. 3.)

I have noticed the *Legenda Aurea*, (rubansis 1475, 1490, and 1496,) which does not consist solely of the biography of saints, but is interspersed with other strange relations, probably extracted from the *Gesta Longobardorum*, or other more obscure sources. I was inclined, with Mr. Warton in one part of his *History of English Poetry*, to consider the *Legenda Aurea* of J. de Voragine as the only source from which Caxton drew his *Golden Legend*.\* But Mr. Warton afterwards says "this is not strictly true. Caxton informs us in his preface to the first edition, anni 1487, that he had in his possession a *Legend* in French, another in Latin, and a third in English, which varied from the other two in many places; and that many histories were contained in the English collection which did not occur in the French and Latin. 'Therefore,' says he, 'I have wrytten one oute of the sayd three bookes, which I have orderred otherwyse then in the sayd Englyshe Legende which was so to fore made.'" I have a species of Latin *Legenda* from the press of Johan de Westfalia, Lovanii, 1485, folio, unknown to Panzer.—*Grenswell*.

Those ecclesiastical histories entitled *Legends* are said to have originated in the following circumstance:

Before colleges were established in the monasteries where the schools were held, the professors in rhetoric frequently gave their pupils the life of some saint for a trial of their talent at amplification. The students, at a loss to furnish out their pages, invented most of these wonderful adventures. Jortin observes, that the Christians used out of Ovid, Livy, and other pagan poets and historians, the miracles and por-

\* Jacobi de Voragine was a native of the Genoese territory; born about 1230. Became provincial of the order of the Dominicans, and in 1293 archbishop of Genoa. He has the character of a virtuous and zealous prelate; but his *Aurea Legende*, abounds so much with fictions and absurdities, that perhaps from thence the term *legendary* became synonymous with fabulous. The first edition is said to be that of Cologne 1470.—*Grenswell*.

Legendary poetry was sometimes sung to the harp, by the minstrels, on Sundays, instead of the romantic subjects usual at public entertainments. In the British museum there is a set of legendary tales in rhyme, which appears to have been solemnly pronounced by the priest to the people on Sundays and holidays.—*Warton*.

† Three imperfect copies of the *Golden Legend* are in the public library at Cambridge, but the Rev. C. H. Hartshorne, in his account of the *Book Rarities in the University of Cambridge*, does not mention which of the three editions the above consists of.

\* In 1449, Walter lord Hungerford bequeathed to lady Margaret, wife of Sir Robert Hungerford, his son, "my best *Legend of the Lives of the Saints*, in French, and covered with red cloth."—*Nichols*.

A magnificent, and perhaps the original French manuscript of this work was sold among the duplicates Mr. R. Heathcote's books in 1803, said to be "near 500 years old" and executed for the queen of Philip de Valois. It is described as being "an immense folio volume, perhaps the most curious work of the kind in the world, every leaf of the finest vellum, all the capital letters illuminated with gold, and rich colours; with upwards of two hundred miniatures of the different saints, &c." It was purchased by the duke of Norfolk for £64. A copy of the English version of the same work by Caxton was, December 24, 1814, sold at Mr. Bransley's sale for ninety-three guineas.

tents to be found there, and accommodated them to their own monks and saints. The good fathers of that age, whose simplicity was not inferior to their devotion, were so delighted with these flowers of rhetoric, that they were induced to make a collection of the miraculous compositions; not imagining that, at some distant period, they would become matters of faith. Yet, when James de Voraigue, Peter Nadal, and Peter Ribadeneira, wrote the *Lives of the Saints*, they sought for their materials in the libraries of the monasteries; and awakening from the dust these manuscripts of amplification, imagined they made an invaluable present to the world, by laying before them these pious fictions with all imaginable simplicity, and these are adorned by a number of cuts, the miracles were perfectly intelligible to their eyes. Tillemont, Fleury, Baillet, Launoï and Bollandus, cleared away much of the rubbish; the enviable title of *Golden Legend*, by which James de Voraigue called his work, has been disputed; iron or lead might more aptly describe its character.\*

When the world began to be more critical in their reading, the monks gave a graver turn to their narratives; and became penurious of their absurdities. The faithful Catholic contends, that the line of tradition has been preserved unbroken; notwithstanding that the originals were lost in the general wreck of literature from the barbarians, or came down in a most imperfect state.

Baronius has given the lives of many apocryphal saints; for instance, of a Saint *Xinoris*, whom he calls a martyr of Antioch; but it appears that Baronius having read in Chrysostom this word, which signifies a couple or pair, he mistook it for the name of a saint, and contrived to give the most authentic biography of a saint who never existed! The Catholics confess this sort of blunder is not uncommon, but then it is only fools who laugh!

I give a miraculous incident respecting two pious maidens. The night of the Nativity of Christ, after the first mass, they both retired into a solitary spot of their nunnery till the second mass was rung. One asked the other, "Why do you want two cushions, when I have only one?" The other replied, "I would place it between us, for the child Jesus; as the Evangelist says, where there are two or three persons assembled I am in the midst of them." This being done, they sat down, feeling a most lively pleasure at their fancy; and there they remained from the Nativity of Christ to that of John the Baptist; but this great interval of time passed with these saintly maidens as two hours would appear to others. The abbess and her nuns were alarmed at their absence, for no one could give any account of them. In the eve of St. John, a cowerd passing by them, beheld a beautiful child seated on a cushion between this pair of

run-away nuns. He hastened to the abbess with news of these stray sheep, who saw this lovely child playfully seated between these nymphs, who, with blushing countenances, inquired if the second bell had already rung? Both parties were equally astonished to find our young devotees had been there from the Nativity of Jesus to that of St. John. The abbess asked after the child who sat between them; they solemnly declared that they saw no child between them, and persisted in their story.

Such is one of these miracles of "the Golden Legend," which a wicked wit might comment on, and see nothing extraordinary in the whole story. The two nuns might be missing between the Nativities, and be found at the last with a child seated between them.—They might not choose to account either for their absence or their child—the only touch of miracle is, that they asseverated, they saw no child—that I confess is a little (child) too much.—*D'Israeli*.

The too curious reader may perhaps require other specimens of the more unlucky inventions of this *Golden Legend*; as characteristic of a certain class of minds, the philosophers will not condemn these grotesque fictions.

The monks imagined that holiness was often proportioned to a saint's filthiness. St. Ignatius, say they, delighted to appear abroad with old dirty shoes; he never used a comb, but let his hair clot; and religiously abstained from paring his nails. One saint attained to such piety as to have near three hundred patches on his breeches; which, after his death, were hung up in public as an incentive to insinuation. St. Francis discovered by certain experience that the devils were frightened away by such kind of breeches, but were animated by clean clothing to tempt and seduce the wearers; and one of their heroes declares that the purest souls are in the dirtiest bodies.

Another anecdote from the *Golden Legend*, of St. Macarius, which relates that it "happened on a tyme that he kyllid a flec that bote him; and whan he sawe the blode of this flec, he repented hym, and anone unclothed hym, and wente naked in the deserte vi monethes, and suffred hymselfe to be byten of flyes." But the same authority exemplifies the fact, that saints are not alike forbearing; for the apostle of England, St. Austin, came to a certain town, inhabited by wicked people, who "refused hys doctryne and preaching utterly, and drove hym out of the towne, casting on hym the tayles of thornback, or lyke fysshes; where he besought Almyghty God to shewe hys jugement on them; and God sent to them a shamefull token; for the chyldren that were born after in the place, had tayles, as it is sayd, tyll they had repented them. It is said comynly that this fyll at Strode in Kente; but blyssed be Gode, at this daye is no such deformyte."

A story from the English translation may entertain the reader. "There was a man that had borrowed of a Jew a sum of money, and swore upon the altar of Saint Nicholas, that he would

\* In the year 1555, the learned Claude D'Espence was obliged to make a public recantation for calling the *Legenda Aurea*, or *Golden Legend*, the *Legenda Ferrea*, or the Iron Legend.

render and pay it again as soon as he might, and gave none other pledge. And this man held this money so long that the Jew demanded and asked his money, and he said that he had paid him. Then the Jew made him to come before the law in judgment, and the oath was given to the debtor, and he brought with him an hollow staff, in which he had put the money in gold, and he leaned upon the staff; and when he should make his oath and swear, he delivered his staff to the Jew to keep and hold whilst he swore, and then swore that he had delivered to him more than he owed to him. And when he had made the oath he demanded his staff again of the Jew, and he nothing knowing of his malice delivered it to him. Then this deceiver went his way, and laid him in the way, and a cart with four wheels came with great force and slew him, and brake the staff with gold, that it spread abroad. And when the Jew heard this, he came thither sore moved, and saw the fraud. And many said to him that he should take to him the gold. And he refused, saying, but if he that was dead were not raised again to life by the merits of Saint Nicholas, he would not receive it. And if he came again to life he would receive baptism, and become a Christian. Then he that was dead arose, and the Jew was christened.—*Beloe's Anecdotes of Literature.*

The *Lives of the Saints*, by Alban Butler is the most sensible history of these legends; Ribade-neira's *Lives of the Saints* exhibit more of the legendary spirit, for wanting judgment and not faith, he is more voluminous in his details. The antiquary may collect much curious philosophical information, concerning the manners of the times, from these singular narratives.

Oldham, in his *Satires upon the Jesuits*, a work which would admit of a curious commentary, alludes to their legends, and the innumerable impositions they practised on the credulous. We quote a few lines, in which the amours of the Virgin Mary are detailed:—

Tell, how blessed Virgin to come down was seen,  
Like play-house punk descending in machine,  
How she writ billet-doux and love discourse,  
Made assignations, visits, and amours;  
How hosts distrest, her smock for banner ware,  
Which vanquished foes:  
— how she in conventicles met,  
And mackerel were with bait of doctrine caught:  
How cattle have judicious hearers been!—  
How consecrated bines with bells were hung,  
And bees kept mass, and holy anthems sung,  
How pigs to the roasty kneel'd, and sheep were taught  
To blurt *Te Deum* and *Magnificat*;  
How fly-flap, of church-censure houses rid  
Of insects, which at curse of fryar died.  
How ferrying crows religious pilgrims bore  
O'er waves, without the help of sail or oar;  
How zealous crab the sacred image bore,  
And swam a catholic to the distant shore.  
With shame like these the giddy rout mislead,  
Their folly and their superstition feed.

All these are allusions to the extravagant fictions in the *Golden Legend*. Among other gross impositions to deceive the mob, Oldham likewise attacks them for certain publications on topics not less singular. The tales he has recounted, Oldham says, are only baits for chil-

dren, like toys at a fair; but they have their profounder and higher matters for the learned and the inquisitive. He goes on:—

One undertakes by scales of miles to tell  
The bounds, dimensions, and extent of hell;\*  
How many German leagues that realm contains!  
How many childrons Hell each year expends  
In coals for roasting Hagonots and friends!  
Another frights the rout with useful stories  
Of wild chimeras, limbo's, rucatoarais  
Where bloated souls in smoky durance hung  
Like a Westphalia gammon or neat's tongue,  
To be redeem'd with masses and a song.

Such were the inventions that created and gratified the cravings of bigotted ignorance before the art of printing was given as a divine blessing to mankind, "to dispel the gloom of superstition; to wrest the world from the hands of ecclesiastics, who too often superseding the Christianity of the gospels by that of tradition, policy, half-delirious bigotry, feelings often fantastic, and unenlightened enthusiasm, pursued too often a spurious plan of forcing mankind to become technical automatons of rites and dreams, words and superstitions."<sup>†</sup> "Until the time of Luther," says Mr. Hone, "religion, which in principle is a pure science, was regarded as an art; it was the occupation of the clergy, who taught it as mystery, and practised it as trade."

1483, Dec. 23. *The Booke callyd Cathon, (Magnus).* Folio.

Caxton's preface, which is both curious and interesting, after informing us that this work had been translated out of Latin into English, by Master Benet Burgh, late archdeacon of Colchester, &c. But, that his translation was made from the French, which he presents to the city of London. He says, "And by cause of late cam to my hand a booke of the said Caton in Frensshe, which reherceth many a fayr lernynge and notable ensamples, J have translated it out of Frensshe in to Englishshe, as al along here after shalle appiere, whiche J presente vnto the Cyte of london."

Next follows Caxton's very loyal address to the "Cyte of london," of which he styles himself "Cytezeyn, &c." Of *Catho*, he says "in my Judgement it is the best boke for to be taught to yonge children in scole." Afterwards he relates the following story: "There was a noble clerke named pogius of Florence, And was secretary to pope Eugenye, & also to pope Nycholas which had in the cyte of Florence a noble and well stuffed lybrary, which all noble straungers comynge to Florence desyred to see, And therein they fonde many noble and rare bookes And whanne they had axyd of hym which was the best booke of them alle, and that he helde Cathon glosed for the best booke of his lyberarye, &c."

\* Treatises and topographical descriptions of hell, purgatory, and even heaven, were once the favourite researches among certain zealous defenders of the Romish church, who exhausted their ink-horns in building up a hell to their own taste, or for their particular purpose. We have a treatise of cardinal Bellarmine, a Jesuit, on *Purgatory*; he seems to have the science of a surveyor, among all the secret tracks and the formidable divisions of "the bottomless pit."

† Turner's *History of the Anglo Saxons*. Vol. 2, p. 516.

This volume is divided into four books, containing 72 heads. Mr. Dibdin having never seen a printed French edition of it before the publication of Caxton's, therefore conjectures that our typographer made his translation from a manuscript. It was held in great esteem by Poggius of Florence.

*Pareus Chato* (Cato) *Euplicit Chato*. Without printer's name or date; but evidently the production of Caxton's press. Folio.

This may be considered as a supplement to the foregoing; it was originally written by Daniel Church (or Ecclesiensis), a domestic in the court of Henry II. about 1180, and translated by De Burgh. It closes with the following verse—

Beholde my maistre this litel tretise,  
Whiche is full of wit and sapience.  
Enforce the this matere to accomplye,  
Thenke hit is translated at your reverence;  
Enrolle hit therefore in your adverteance,  
And desire for to knowe what Cathon mente.  
When ye it rede let not your hert be thense,  
But doth as this saith with al your hole entente.

Mr. Dibdin says it contains twenty-six unnumbered pages; Mr. Ames states twenty-seven.

1484. Printing introduced into the following places in the course of this year:—

Soncino, by Joshua Salamon and partners.

The honour of the first Hebrew editions is due to the Italians; these were executed about the same time as the Greek, at Soncino, a little city in the duchy of Milan, under the direction of two Jewish rabbins, Joshua and Moses; they are dated in the year of the world 5244, which agrees with 1484 of the Christian era.

Bois-le-duc, by G. L. de Noviomago.

Winterberg (or Winterberg) by John Alacraw.

Chamberri, by Anthony Neyret

Breand-Loudehac (or Loudeac) by R. Fouquet.

Rennes, by Pierre Bellesculée and Josses.

Sienna, by Henry de Colonia.

Novi, by Nicol Girardengus.

1484. This year Caxton printed the following four books:—

1484, June 1. *The Knyght of the Toure*. Folio.

Caxton's prologue affords no bad specimen of his courteousness towards the fair sex, from which the following is an extract:—

"In the yere of our Lord a m. 3 c. 71, as I was in a garden, under a shaddow, as it were in thyssue of Apryll, all moorning and penyfy, but a lytel I rejoyced me in the sowne and songe of the fowles sauvage, whiche songe, in theyr langage, as the merle, the many, the thrustell, and the nyghtyngale, whiche were gay and lusty; this swete songe enlustyed me, and made myn herte all temoye, &c."

Mr. Dibdin informs us, that this work derived its title from the name of the author, De la Tour Laundry; and seems to have been printed from a manuscript of the fourteenth century, written in 1371.

1484, March 24. *The subtyl histories and of Esop. Fables*. Folio.

Mr. Dibdin, who has seen and examined

more early editions of *Esop*, in different languages, than most people, considers Caxton's edition, on the whole, as the rarest of all those in the fifteenth century. His Majesty's copy of it, he adds, is the only perfect one known.

On the first leaf is a wood-cut of *Esop*, surrounded with birds and beasts. It commences with his life, in which we are informed, that he was born in Greece, in a town named Amones, not far from Troy; that he was much deformed, having "a great head, large visage, long jaws, sharp eyes, a short neck, curb-backed, great belly, great legs, and large feet; and yet that which he was worse, he was dumb and could not speak; but notwithstanding all this, he had a great wit and was greatly ingenious; subtle in cavillations, and joyous in words."

Then follows his life, fortune, and death,\* to which is prefixed a cut of him, his master, and the two servants that had stolen the figs.

This volume contains 142 leaves, which are numbered, but there are no catchwords.

1484. *The Book of the Ordre of Chyvalry, or Knyghthode*. No printer's name or date, but undoubtedly the production of Caxton's press; and supposed to have been printed in this year. Folio.

In the *Order of Chivalry*, which he translated out of French, he gives a curious picture of the manners of his age; and at the same time laments, in strong and feeling language, the decline of chivalry: "O! ye knights of England, where is the custom and usage of noble chivalry that was used in those days. What do you now, but go to the thaynes (bas), and play ath dyse; and some, not well advyised, use not honest and good rule again all order of knyghthode. Leve this—leve it! and read the noble volumes of St. Graal, of Lancelot, of Galaad, of Trystram, of Perseforest, of Percival, of Gavaine, and many more. There shall ye see manhode, curtsys, and gentleness. And look in latter days of the noble actes sith the Conquest; as in King Richard dayes, Cuer de Lion; Edward I. and III. and his noble sonnes; Syr Robert Knowles, &c. Rede Froissart. Also, behold that noble and victorious King Hary the Fifth. I would demand a question, if I should not displese: How many knyghtes ben ther now in England, that have th' use and th' exercise of a knyghte. That is to wit, that he knoweth his horse, and his horse him. I suppose, an a due serche sholde be made, there sholde be

\* The death of *Esop*, we are told, happened as follows:—"And as they were all come to the place for to cast down *Esop*, he said to them another fable, saying in this manner:—'A man which was enamoured on his daughter, the which by force he took and defoured her; and the daughter said to the father, 'Ha, father, thou art an evil man and out of thy wit that hast done to me such shame and vergour! for rather I should have suffered this crime and loathly deed of an hundred other men than of thee, of whose blood I am made and formed.' Semblably is of me: for I had leave and rather I should suffer all the perill of the world of noble men, than to be put of you churls so villanously to death. But I render and yield thankings and mercy to the gods, praying to them that he punish you of the evil which ye have, and will do to me.' And then they cast and threw him down from the top of the hill to the foot of it. And thus died *Esop* miserably."

many founden that lacke. The more pyte is. I would it pleased our soverayne lord, that twyse or thyrce a year, or as the lest ones, he wold do cry justes of pies, to th' ende, that every knyghte sholde have hors and harneys, and also the use and craft of a knyghte; and also to tornay one against one, or two against two, and the best to have a prys—a diamond or jewels, such as shoulde plesse the prynces.”\*

*The Book of Chivalry* has been considered by Oldys, whose words have been repeated by Ames and Herbert, as “one of the scarcest books now remaining of our first printer;” and Mr. Dibdin adds, that it is also one of the most amusing.

Caxton informs us, that the translation was made out of French into English, in such manner as God had suffered him; which book was not necessary for every common man, but only for such as intend to enter into the noble order of chivalry, the decay of which, in his day, he much laments, because the noble acts of the knights of old had spread renown throughout the universal world.

Caxton concludes with presenting his little work to king Richard the Third, praying that he may command it to be read to all young lords, knights, and gentlemen, to induce them to imitate the example of the worthy knights of old, for which he shall have his prayers for a prosperous reign on earth, and everlasting bliss in heaven.

1484, Sep. 13. *The Ryal book; or a Book for a Knyg.* Folio.

Mr. Dibdin states, that Herbert has given a correct account of this book, which was unknown to Ames, but that he had seen five copies of it†

\* Mr. Lewis, in his *Life of Caxton*, thus explains our typographer's view of this subject:—“The design of these diversions belong, as has been intimated, in part to please the ladies, and recommend to their favour the combatants, for their dress and manhood. But Mr. Caxton seemed to have another view in advising their encouragement, namely, the employing the nobility and gentry, that they might not spend their time worse, in gaming and debauchery, and preserving their ancient courage and valour, that the honour and security of the English nation might not suffer through their sinking and degenerating into delicacy and effeminacy.”

† Mr. D. gives this curious extract from signature f. j. recto:—“They that live after their jollity will hold company with fools: such folk can not, may not, ne will not, hold ne keep measure ne reason. They that live after hypocrisy be they that be martyrs to the devil: such hypocrites have two measures: for the two devils that torment the hypocrite be much contrary that one to that other. That one saith, eat enough, so that thou be fair and fat: that other saith, thou shalt not, but thou shalt fast, so that thou be pale and lean, to the end that the world hold thee for a good man; and that it may appear that thou doest much penance. Now it behoveth that the hypocrite have li measures; one little and one great: of which they use the little measure tofore the people, and the great measure they use so that no man can see them. They retain not the true measure that be avaricious. In such manner as the mouth will; which is the lady of the house and commander. Then between the belly and the mouth of the glutton be three disputacions. The belly saith, I will be full; the mouth saith, I will not be full; the belly saith to him, I will that thou eat, and take enough, and *dispend* largely; the mouth saith, I shall not, I will thou restrain thee!—and what shall the sorry califf do which is servant to his two evil lords? Two measures make the peace. The measure of the belly in an other man's house good and large; and the measure of his mouth in his own house sorrowful and over scarce.”

The volume is a thin folio, with printed initials, and has rude wood cuts. The leaves are unnumbered.

1484. The Inquisition established in Spain, during the reign of Ferdinand and Isabella, by John de Torquemada, a Dominican monk and confessor to the queen. Torquemada, indefatigable in his zeal for the holy chair, used every means to extirpate heresy and heretics, in the space of fourteen years that he exercised the office of chief inquisitor, is said to have prosecuted near eighty thousand persons, of whom six thousand were condemned to the flames. Voltaire attributes the taciturnity of the Spaniards to the universal horror such proceedings spread. “A general jealousy and suspicion took possession of all ranks of people: friendship and sociability were at an end! Brothers were afraid of brothers, fathers of their children.”\*

The Inquisition punished heretics by fire, to elude the maxim, *Ecclesia non novit sanguinem*; for burning a man, they say, does not shed his blood. Otho, the bishop at the Norman invasion, in the tapestry worked by Matilda queen of William the Conqueror, is represented with a mace in his hand, for the purpose that when he despatched his antagonist he might not *spill his blood*, but only break his bones! “Religion” says Mr. D’Israeli “has had her quibbles as well as law.”

In the cathedral at Saragossa is the tomb of a famous inquisitor; six pillars surround his tomb; to each is chained a Moor, as preparatory to his being burnt. On this St. Foix ingeniously ob-

\* Innocent the third, a pope as enterprising as he was successful in his enterprises, having sent Dominic with some missionaries into Languedoc, these men so irritated the heretics they were sent to convert, that most of them were assassinated at Toulouse in the year 1200. He called in the aid of temporal arms, and published against them a crusade, granting, as was usual with the popes on similar occasions, all kinds of indulgences and pardons to those who should arm against these Mahometans, so he styled these unfortunate Languedocians. Once all were Turks when they were not Romanists. It was then he established that scourge of Europe, *The Inquisition*.—Dominic did so much by his persecuting inquiries, that he firmly established the inquisition at Toulouse.—*D’Israeli*.

The inquisition, since its foundation, has burnt at the stake above 100,000 persons of both sexes, besides destroying twice that number by imprisonment. Religious wars among Christians, for differences in opinion, on points now unintelligible, have cost the lives of above two millions in direct slaughters; and the wars to establish Christianity, and those waged against the Turks about the Holy Land, &c. have cost fifty millions of lives. The wars of Charlemagne, &c. to Christianise the Saxons, &c. and of the Spaniards to Christianise the Moors and Americans, cost, at least, fifteen millions.—In all cases of martyrdom, or punishment for opinions, the prosecutors and persecutors do not allege actual mischief committed, but proceed prospectively, under an hypothesis that the opinion has a tendency to produce some alleged or imaginary mischief.—The inquisition and the Spanish vulgar make no distinction between a Moorish Mahomedan, a Jew, and a Protestant Christian. In 1480, the books and manuscripts of each were burnt throughout Spain, and all science was confounded with the sciences of the hated Arabians.

Even in the reigns of the two last kings of Spain, four were burnt and fifty-six condemned to worse than death. The French abolished the inquisition, but the English armies, under Wellington, restored Ferdinand, and, at the same time, this infernal tribunal.—*Sir Richard Phillips*.

The establishment of this despotic order was resisted in France; but it may perhaps surprise the reader that Sir John Howell, (recorder of London in 1676,) in a speech, urged the necessity of setting up an inquisition in England!

serves, "if ever the Jack Ketch of any country should be rich enough to have a splendid tomb, this might serve as an excellent model."

One of the most interesting anecdotes relating to the inquisition, exemplifying how the use of the diabolical engines of torture forces men to confess crimes they have not been guilty of, was related to Mr. D'Israeli by a Portuguese gentleman. A nobleman in Lisbon\* having heard that his physician and friend was imprisoned by the inquisition, under the stale pretext of Judaism, addressed a letter to one of them to request his freedom, assuring the inquisitor that his friend was as orthodox a christian as himself. The physician, notwithstanding this high recommendation, was put to the torture; and, as was usually the case, at the height of his sufferings confessed every thing they wished. This enraged the nobleman, and feigning a dangerous illness he begged the inquisitor would come to give him his last spiritual aid. As soon as the Dominican arrived, the lord, who had prepared his confidential servants, commanded the inquisitor in their presence to acknowledge himself a Jew, to write his confession, and to sign it. On the refusal of the inquisitor, the nobleman ordered his people to put on the inquisitor's head a red-hot helmet, which to his astonishment, in drawing aside a screen, he beheld glowing in a small furnace. At the sight of this new instrument of torture, "Luke's iron crown," the monk wrote and subscribed the abhorred confession. The nobleman then observed, "See now the enormity of your manner of proceeding with unhappy men! My poor physician, like you, has confessed Judaism; but with this difference, only torments have forced that from him which fear alone has drawn from you!"

A man of letters declared that, having fallen into their hands, nothing perplexed him so much as the ignorance of the inquisitor and his council: and it seemed very doubtful whether they had read even the scriptures.

The Inquisition has not failed of receiving its due praises. Macedo, a Portuguese Jesuit, has discovered the origin of the inquisition in the terrestrial paradise, and presumes to allege that God was the first who began the functions of an inquisitor over Cain and the workmen of Babel!

The history of the Inquisition enters into that of the human mind; and that by Limborch, translated by Chandler, with a very curious introduction, loses none of its value with the philosophical mind. This monstrous tribunal of human opinions aimed at the sovereignty of the intellectual world, without intellect.

1485, Aug. 22. The battle of Bosworth Field, and the death of Richard III. The Tudor race were indebted to this day for their regal inheri-

tance. Richard lost his life by defection: his courage and foresight were worthy of a better cause. He was born at the castle of Fotheringay, October 2, 1452; and during the contention of the roses was present in nearly every engagement of those unnatural wars. Richard with his consort (Ann Beauchamp, widow of Edward prince of Wales) was crowned at Westminster July 6, 1483, on the 8th of September following they were again crowned at York.\* After the death of Richard, the duke of Richmond was saluted king, by the title of Henry VII.

1485. Printing introduced into the following places in the course of this year:—

Heidelberg, by Fridericus Misch: his name appeared to his first work in 1488.

Ratisbon, by J. Sensenschmidt and J. Bekenhaub.

Vercelli, in Peidmont, by Jacob Suigus.

Pescia, by Franc. Cenni.

Udino, by Gerard de Flandria.

Burgos, by Frederic de Basilea.

1485. The press of Caxton was entirely occupied this year with printing romances.

*A Book of the noble hystories of kynge Arthur and of certeyn of his knyghtes.*†

Different opinions have been entertained respecting the original author of this work: it is said to be a translation of a French romance, intitled, *Lancelot*. Caxton's preface commences with informing us, that, "having completed the translation of divers histories of great conquerors and princes," as well as "certain books of good examples and doctrine," he was solicited by

\* In what odious colours has Shakspeare made Richard III. describe himself, in the first scene of the first act of the celebrated tragedy of that name.

But I, that am not shap'd for sportive tricks,  
Nor made to court an am'rous looking glass,  
I, that am rudely stamp'd, and want love's majesty,  
To strut before a wanton, smiling nymph;  
I, that am curtail'd of this fair proportion,  
Cheated of feature by dissembling nature,  
Deform'd, unfinish'd, sent before my time  
Into this breathing world, scarce half made up,  
And that so lamely, and unfashionably,  
That dogs bark at me, as I halt by them.—Act 1, Sc. 1.

Tetehy and wayward was his infancy;  
His school-days frightful, desperate, wild, and furious;  
His prime of manhood, daring, bold, and venturous;  
His age confirm'd, proud, subtle, sly, and bloody.

Act 4, sc. 4.

In this description what a monster of blended deformity and villainy do we behold! The deformity of person announcing the depravity of soul! But Horace Walpole, in his ingenious treatise entitled *Historical Doubts*, has given a variety of reasons to support the opinion of Rapin, that Richard was neither hunched backed nor deformed; and that personal ugliness was imputed to him, by the historians of the time, with many crimes of which he was entirely innocent, merely to flatter his bitter enemies, his two immediate successors, Henry VII. and VIII.

Richard III. was killed at the foot of a declivity in the ground at the east of the well, in Bosworth Field. The bedstead and travelling treasury of Richard is still shewn at Rothley, near Leicester. It was hollow, and full of gold pieces, not discovered till 120 years afterwards. His stone coffin was for many years in the possession of Sir Richard Phillips, then a bookseller at Leicester, and afterwards actually served as a horse trough, at the White Horse Inn. "Sit frontis glorie mædæ."

† A perfect copy of this work is in the library at Osterley Park, belonging to the earl of Jersey. Another (unfortunately defective) is in earl Spencer's library.

\* In 1539, one Saavedra appeared at Lisbon as legate a latere, from the pope, to establish the inquisition in Portugal. The king conceded the necessary powers, and Saavedra caused two hundred to be burnt, and collected 300,000 crowns. He then departed for Spain, but being discovered to be an impostor, he was seized, but let off with a whipping and ten years in the gallees. The inquisition was then established in Portugal.—Phillips.

"many noble and divers gentlemen to print the *History of the Saint Greal*," &c.

Mr. Dibdin speaks of the popularity of this work, even so late as the reign of Charles the first, in proof of which he gives the following extract, which was written in the reign of king Henry the eighth: "Roger Ascham, in his *Toyophilus and Schoolmaster*, severely reproaches this and similar 'bookes of fayned chevalrie; wherein a man, by readinge, should be led to none other ende, but onely to manslaughter and baudrye.' He says, the whole pleasure of this work standeth 'in these two special points;' and after asking whether 'this is good stuff for wise men to laugh at, or honeste men to take pleasure in?' He concludes by saying that, 'he knew the time when God's *Bible* was banished the court, and *La Morte d'Arthur* received into the prince's chamber!"

The above gentleman observes, that the book has a handsome margin, that the press work is exact, and that it is one of the finest specimens of Caxton's press. It consists of about 550 pages.

1485, Dec. 1. *The Luf of Charles the Great*. Folio.

The preface begins with an exhortation to good deeds and noble acts; and Caxton closes the work with a most pious exhortation to the memory of Edward the fourth; and also praying his readers to pardon him of the simple and rude translation, beseeching them that should they find fault to correct it; in doing which they should not only have his thanks, but also his prayers to God for them, that he may bring both them and him, after this short and transitory life, to everlasting bliss, &c.

Oldys, informs us that the scarcity of this work has prevented its having been sufficiently described in the histories of our first printed books.

The volume is a thin folio, in double columns, which extends to n 7 in octavos, and it is conjectured that his cypher was printed on the eighth leaf, to complete the sheet.

1485, Dec. 19. *Thystory of the noble and ryght valyaunt and worthy knyght Paris and of the fayr Vyene* &c. Folio.

The Harleian catalogue informs us, that this is 'a very scarce book.' It appears that this romance has been slightly noticed by our early writers, but its author's name lies buried in obscurity. It is said to be of provincial growth, and to have been translated into French by Pierre de la Sippade.

Mr. Dibdin observes, that this is a small folio, printed in double columns, with capital initials, and contains E 5. A, B, C, &c. in octavos; v has only six leaves, and e five. The last page is generally blank. The leaves are not numbered.

In the year 1486, Caxton's press seems to have been idle;—none of his works bear this date.

1486. The oldest mandate for appointing a *book-censor*, with which we are acquainted, is that issued by Berthold, archbishop of Mentz, in this year, which the curious reader will not be displeased to see at full length; with the instructions given to the censors.

*Penal Mandate, forbidding the Translation into the Vulgar Tongue, &c. of Greek, Latin, and other Books, without the previous approbation of the Doctors, &c.*

"Berthold, by the grace of God, archbishop of the holy see of Mentz, arch-chancellor of Germany, and electoral prince of the holy Roman empire.

"Although, by a certain divine art of printing, abundant and easy access is obtained to books on every science necessary to the attainment of human learning; yet we have perceived that certain men, led by the desire of vain glory or money, do abuse this art; and that what was given for the instruction of human life, is perverted to purposes of mischief and calumny. For, to the dishonouring of religion, we have seen in the hands of the vulgar certain books of the divine offices and writings\* of our religion, translated from the Latin into the German tongue. And what shall we say of the sacred laws and canons, which though they have been written in the most suitable and careful manner, by men acquainted with law, and endowed with the greatest skill and eloquence, yet the science itself is so intricate, that the utmost extent of the life of the wisest and most eloquent man is scarcely equal to it? Some volumes, on this subject, which certain rash unlearned simpletons have dared to translate into the vulgar tongue, whose translation, many persons who have seen it, and those, too, learned men, have declared to be unintelligible, in consequence of the very great misapplication and abuse of words. Or what is to be said of works on the other sciences with which they sometimes even intermingle things that are false; and which, in order the more readily to find purchasers for them, they inscribe with false titles, and attribute to notable authors what are merely their own productions?"

"Let such translators, whether they do this with a good, or with a bad intention, let them, if they pay any regard to truth, say, whether the German tongue be capable of expressing that which excellent writers, both Greek and Latin, have most accurately and argumentatively written on the sublime speculations of the Christian religion, and on the knowledge of things? They must acknowledge that the poverty of our idiom renders it insufficient; and that it will be necessary for them to invent from their own minds, new terms for things; or, that supposing them to make use only of the old ones, they must corrupt the sense of the truth, which from the greatness of the danger attendant upon it, in the Sacred Writings, we greatly dread: for who would leave it to ignorant and unlearned men, and to the female sex into whose hands copies of the Holy Scriptures may have fallen, to find out the true meaning of them? For instance, let

\* It is probable that by the terms "*libros de divinis officis et aplice Rikgionis nostre*," the archbishop referred to the vernacular translations, not only of the *Service-books* of the Romish church, called the *Divine Offices*, but also of the *Holy Scriptures*; the word *aplice* being generally used, in the middle ages, for *writings, epistles*, &c. See Du Cange, *sub voce*.

the text of the Holy Gospels, or of St. Paul's Epistles, be examined, and no one of any knowledge will deny that there is a necessity for many things to be supplied or understood, from other writings."

"These things have occurred to our minds, because they are the most common. But what shall we think of those which are pending in very sharp disputes amongst writers in the Catholic church? Many other instances may be brought forward, but it is sufficient for our purpose to have named a few."

"But, since the beginning of this art arose *divinely*, (to give it its proper appellation) in this our golden city of Mentz, and continues in it to this day, in its most improved and perfect state; it is with the greatest justice that we defend the glory of the art, and it becomes our duty to preserve the unspotted purity of the Divine Writings. Wherefore, with a view of meeting and restraining as with a bridle, the aforesaid errors, and the daring attempts of shameless or wicked men, as far as we are able by the will of God, whose cause is in question;—we do, by strictly charging the observance of these presents, command all and every the ecclesiastical and secular persons subject to our jurisdiction, or transacting business within its limits, of whatever degree, order, profession, dignity, or condition, they may be, that they translate no works on any science, art, or knowledge whatsoever, from the Greek, Latin, or other language, into the vulgar German; nor, when translated, either dispose of, or obtain copies, publicly or privately, directly or indirectly, by any kind of barter, unless before their impression they shall have been admitted, by patent, to be sold, by the most noble and honourable our beloved doctors and masters of the university in our city of Mentz, John Bertram de Nuremberg, in theology; Alexander Diethrich, in law; Theodoric de Meschede, in medicine; and Alexander Eler, in arts: the doctors and masters deputed for this purpose in the university of our city of Erfurt; or if in the town of Frankfort, the books exposed for sale shall have been seen and approved of by an honourable, devout, and beloved master in theology, belonging to the place, and one or two doctors and licentiates, annually paid for that purpose by the governor of the said town. And whoever shall treat with contempt this our provision, or shall lend his counsel, assistance, or savour, in any way, directly or indirectly, in opposition to this our mandate, let him know that he has by so doing incurred the sentence of excommunication; and beside the loss of the books exposed for sale, a penalty of 100 florins of gold, to be paid into our treasury; from which sentence none may absolve him without special authority."

"Given at the chancery of St. Martin, in our city of Mentz, under our seal, on the fourth day of the month January, mccccxxvi."

The following are the *Instructions* issued to the censors, and accompanying the above mandate:—

"Berthold, &c., to the honourable, most learned, and beloved in Christ, Jo. Bertram, doctor in theology; Al. Diethrich, doctor in law; Th. de Meschede, doctor in medicine; and Al. Eler, master of arts; health and attention to the things underwritten."

"Having found out several scandals and frauds, committed by certain translators of literary works, and printers of books, and wishing to counteract them, and according to our power to block up their way, we command that no one in our diocese, or under our jurisdiction, translate any books into the German tongue, or print, or sell them when printed, unless, in our city of Mentz, such works or books, have first, according to the form of the mandate above published, been by you seen, and as to their matter approved of, both for translation, and for sale."

"We do, therefore, by the tenor of these presents, (having great confidence in your prudence and circumspection,) charge you, that if at any time, any works, or books, intended to be translated, printed, or sold, be brought to you, you shall weigh their matter, and, if they cannot be easily translated according to the true sense, but would rather beget errors and offences, or be injurious to modesty, you shall reject them; and whatever books you shall judge worthy to be allowed, two of you, at least, shall sign them, at the end, with your own hand, in order that it may more readily appear, what books have been seen and allowed by you. In so doing you will perform an office pleasing to our God, and useful to the state."

"Given at the chancery of St. Martin, under our privy-seal, the 10th day of January, mccccxxvi."—*Beckmann's Hist. of Inven.*

1486. John of Tritenheim, abbot of Spanheim, in his exhortations in this year, after many injunctions against idleness, observes that he has "diminished their labour out of the monastery, lest by working badly you should only add to your sins, and have enjoined on you the manual labour of writing and binding books." And again, urging them to their duty, he says, "It is true that the industry of the printing art, lately, in our day, *discovered at Mentz*, produces many volumes every day; but is impossible for us, depressed as we are by poverty, to buy them all."—*British Magazine.*

1486. Printing introduced into the following places in the course of this year:—

Abbeville, Jean Du Pré and Pierre Gerard.

Brunn, by C. Stahel and M. Preinlein, though their name does not appear until 1491.

Munster, by John Limburgus.

Sleswic, by Stephen Arndes.

Casale Maggiore, no printer's name.

Chivasio, by Jacob Suigus.

Viqueria, by Jacob de S. Nazario.

Toledo, by John Vasqui (Vasquez.)

Rimini, by a Jew, who printed Hebrew only.

Thoulouse, by John James Colomiez.

1487. Only one book appeared from the press of Caxton, which was entitled the *Book of Good Manners*. Enprinted the 21 day of Maye. Folio.

A copy of this work appears to have been rarely seen: the prologue commences thus, "When I consider the conditions and manners of the common people, which, without information and learning, be rude and not mannered, like unto beasts brute; according to an old proverb, he that is not mannered is no man," &c.

Caxton informs us, that this work was "compiled by the venerable frere Jaques le Graunt, in Latin *Jacocus Magnus*, lycencyat in theology, religious of the order of St. Austin; and, that the book is of auctorite, or as moche as there is nothyng sayde therin, but for the moost part it is alledged by scripture, or ellis by sayeng of holy seyntes, doctours, philosophes, &c."

It appears that the original French work was delivered to Caxton "by a special friend of his, a mercer of London, named William Praat." Le Grand, the author, was a native of Thoulouze, and confessor of Charles VII: he is said to have refused the archbishoprick of Bourdeaux. It is comprised in four books.

1487. Printing introduced into the following places in the course of this year:—

Besançon, supposed by John Comtel. The work *Liber de Pestilentia*, 4to. printed here in this year, has no printer's name.

Gaeta, by A. F. (Andreas Fritag.)

Valeria, by Juan de Roca.

Rouen, by William Tailleux.

Ischar, (Ixar, in Arragon,) Eliezer filius Alanta.

Nantz, by Stephen Larcher.

1487. Court of STAR CHAMBER founded.—

The authority of this court, which was before founded on common law and ancient practice, was in some cases confirmed by an act of parliament. This court assumed a power over the press, incompatible with the least notion of liberty of the subject, and of printing or publishing any thing which it might construe into a libel; and what did it not do? it often exercised the most inquisitorial jurisdiction over the human mind, which is not yet abolished. Many of its enactments will be noticed in the course of this work.

The preamble is remarkable, and shews the state of the nation at this time. "The king, our sovereign lord, remembereth how by our unlawful maintenance, giving of liveries, signs and tokens, retainders by indentures, promises, oaths, writings, and other embraceries of his subjects, untrue demeanings of sheriffs in making panals, and untrue returns, by taking money, by juries, &c. the policy of this nation is most subdued." Lord Bacon extols the utility of this court. It must indeed be confessed, that such state of the country required great discretionary power in the sovereign; nor will the same maxims of government suit such a rude people, that may be proper in a more advanced state of society. The establishment of the Star Chamber, or the enlargement of its powers at this time, might have been as wise as the abolition of it in that of Charles I.

1487. While Henry VII. kept his residence at the castle at Winchester, on occasion of the birth of prince Arthur, he was entertained on a

Sunday, during the time of dinner, with a religious drama, called *Christ's Descent into Hell*. It was represented by the choir boys of Hyde abbey, and St. Swithin's priory, two large monasteries at Winchester. And in the same reign, 1489, there were shows and ceremonies, and (religious) plays exhibited in the palace at Westminster. An entertainment of a similar nature was furnished, in 1503, at the marriage of king James of Scotland, with the princess Margaret of England, daughter of Henry VII. On the first Sunday of the magnificent festival, celebrated with high splendour, at Edinburgh, "After dynnar, a *Moralite* was played by master Inglyshe and hys companyons, in the presence of the kyng and qwene." So late as the reign of Elizabeth, and even so late as that of Charles I. plays continued to be acted on Sundays, by the choristers, or singing boys, of St. Paul's cathedral, and of the royal chapel.

At this time the profession of the church was the one which abounded amongst all ranks of people, and one that was very often embraced by persons of the lowest station: for we find by a clause of a statute, that all clerks or students of the university were forbidden to beg, without permission from the vice chancellor.—*Keith*.

1488. A very great inconvenience of the Gothic impressions of this period arose from the numerous and continual abbreviations in which a great part of them abound. But this disadvantage is not chargeable exclusively on Gothic, but is sometimes found in early editions of the Roman character. Chevillier particularizes an edition of the *Logic* of Ockham, printed at Paris in this year, in folio, in a handsome letter; but in which scarce a single word is found unabbreviated. He adduces for instance, two lines taken at hazard from folio 121. They are printed in the following manner:—

"*Sic hic e fal im qd ad simplr a e pducibile a Deo g a e & silr hic a n e g a n e pducibile a Deo.*" At length thus—"Sicut hic est fallacia secundum quid ad simpliciter. A est producibile a Deo. Ergo A est. Et similiter hic. A non est. Ergo A non est producibile a Deo."

Another difficulty in reading these early works, was the desire of the printers to compress as much as possible within a given compass; they never divided the words at the end of lines, and made use of vowels with a mark of abbreviation, as for instance, *dño* for *domino*; *c'* for *cum*; *quib'* for *quibus*; *argetoq* for *argentoque*; &c. The vowels and consonants *u* and *v*, *i* and *j*, are confounded together, and used one for the other; the diphthongs *æ* and *æ* were generally supplied by the simple *e*: *e* was often used for *t*, as *nacto* for *nation*; *f* for *ph*, as *fantasma* for *phantasma*; *michi* was sometimes spelled *michi*; *somnum*, *sompnum*; *quotidiana*, *cotidiana*; the orthography was consequently various, and often arbitrary.

Works on the civil and canon law, both printed and manuscript, were peculiarly overcharged with abbreviations; and that to such a degree, that a treatise was printed to point out the method of reading such perplexing works, entitled

"*Modus legendi Abbreviaturas in utroque Jure*," printed at Paris, by John Petit, in 1498. To avoid abbreviations, and at the same time not too much to augment the size of the volume, Aldus Manutius invented the *italic* letter.

The following literal rendering of Matthew v. 1, 3, according to the *Codex Beza*, or Cambridge manuscript of the four Gospels and Acts, will convey some idea of the manner in which manuscripts were anciently written and printed:

AND SEEKING THE MULTITUDE HE WENT UP INTO A MOUNTAIN  
AND WHEN HE WAS SET DOWN HE CAME TO HIM  
BESIDE A CIRCLE\* AND OPENED HIS MOUTH  
SAYING DOTH HEARSAYING  
BLESS'D ARE THE POOR IN SPIRIT\* FOR THE KINGDOM OF HEAVEN.

1488. In this year appeared the first edition of the *Works of Homer in Greek*, which was executed at Florence, in 2 volumes, folio, under the care of Demetrius Chalcondylas. It is a most elegantly printed book, and measures thirteen inches by nine inches. Now in the Royal library in the British museum.

1488. Printing introduced into the following places in the course of this year:—

Virtherbo, no printer's name.  
Brunswick, no printer's name.  
Eichstedt, by Michael Reiser.  
Pescia, by Sigismund Rodt.

1488. Caxton printed no books during this year.

1489. In this year Caxton published two books, the first of which was the *Doctrinal of Sapience*, translated out of French, and finished the 7th of May. Folio.

This book has no title, it commences with a preface of two parts, the former accounting for its being translated into English, and the latter gives some account of the original. It has two wood cuts, the first of our Saviour with the doctors in the temple, the other exhibiting the crucifixion. The table contains the heads of 93 chapters, though in reality it consists of 94. It has capital initials and signatures: the leaves are unnumbered.

The Harleian catalogue contains the following memorandum relative to this work:—"This book was written in the year 1388, by Guy de Roye, archbishop of Sens; but the year after, a religious brother, of the order of Clugny, enriched it with divers historical examples, parables, &c. as what would move the people more to devotion, than great authority of science. Which argument, of the force of examples, is proved in the prologue, by examples themselves."

A priest of the province of Otranto, as it is said, translated this work out of French into Greek verse about 1370. The manuscript is in the Vatican, at Rome.

1489, July 14. *The Fayt of Armes and Chyvalre*. Folio. "This was delivered to me, William Caxton, by the most Chrystir King and redubted Prince, my natural and sovereign lord, Kyng Henry the 7th, Kyng of England and of France, in his palace of Westmestre, the

23 day of Janyure, the 4th yere of his regne; and desired and willed me to translate this said boke, and reduce it into our English and natural tongue, and to put it in imprint." It is a compilation by Christine of Pisa, from the *Military Treatises of Vegetius Frontinus*, and the *Arbee des Batailles*. It appears that the fair authoress was blamed for meddling with this subject; it was said, "that the handling of her distaff and spinning wheel are occupations more suitable to a woman than concerning herself with the feats of arms, and the battles of heroes:" in her preface she quotes the examples of Minerva, whom she addresses, in her justification.

During this century, and especially towards the close of it, Germany, and the neighbouring states, produced several eminent men, who endeavoured to create an attention to literature in general, and laboured to promote an acquaintance with the Greek and Hebrew languages. Amongst many eminent names who flourished about this period, that of John Herman Wesselus, of Groningen, deserves to be recorded. He was born about the year 1419; and studied first at Zwoll and Cologne, and afterwards at Paris, where he was so celebrated for his talents and attainments as to be denominated *the light of the world*. His extraordinary religious knowledge, and truly christian spirit, were so indisputable, and his views of gospel doctrine so clear, that he has justly been called the *forerunner of Luther*. Wesselus not only studied the Greek language by the help of the Dominican friars, who about this time passed over to the west, from Constantinople, after its subjection to the Mahomedan government,—but obtained from certain learned Jews, a knowledge of the Hebrew, Chaldee, and Arabic tongues. Having been early instructed in the scholastic disputes, and having, by his industry, acquired an uncommon share of biblical learning, he taught philosophy and philology with great applause, at Groningen, Paris, Cologne, Heidelberg, and especially at Basil, where he had the famous Reuchlin for a hearer. On the advancement of Cardinal Francis de Rovere to the papal chair, under the name of Sixtus IV. he sent for him to Rome, and promised to grant him whatever he would ask: Wesselus answered, "Holy father, and kind patron, I shall not press hard upon your holiness. You well know I never aimed at great things. But as you now sustain the character of the supreme pontiff, and shepherd on earth, my request is, that you would so discharge the duties of your elevated station, that your praise may correspond with your dignity; and that when the great shepherd shall appear,\* whose first minister you are, he may say, 'Well done, good and faithful servant, enter into the joy of thy Lord:' and, moreover, that you may be able to say boldly, 'Lord, thou gavest me five talents; behold, I have gained five other talents.'" The pope replied, "That must be my care. But do you ask something for yourself." "Then," rejoined Wesselus, "I beg you to give me out of the Vatican library, a Greek,

\* Spirit.

and an Hebrew Bible." "You shall have them," said Sixtus, "but foolish man, why don't you ask for a bishoprick, or something of that sort?" "For the best of reasons," said Wesselus, "because I do not want such things." The Hebrew Bible thus presented, was long afterwards preserved in his native city of Groningen. He died in 1489, aged 70.

His works have been several times printed, but the most complete edition was published in 1614, 4to., with a short account of his life by Albert Hardenberg.

1489. Michel le Noir (Niger) commenced the art of typography in the city of Paris. He was a printer of very considerable interest, whose impressions are held in high estimation by the admirers of early Parisian typography. He continued his labours to a late period, and was succeeded by his son Philippe, a printer also of considerable estimation. Felix Baligaut, Berthold Rembolt, probably a son of the ancient printer of that name, Wolfgang Hopyl, George Wolfe, and Durand Gerlier, began to print about the same period.

1489. Printing introduced into the following places in the course of this year:—

Lisbon, by Samuel Zorba and Raban Eliezer.

The first book printed in Portugal is of this date; it is a *Commentary on the Pentateuch* in Hebrew, and from the printers' names, they appear to have been Jews.

Hagenau, by Henry Gran.

Kuttenberg, by Martin Van Tschiniowa.

Lerida, no printer's name.

San Cucufate del Valles, near Barcelona, no printer's name.

1490. This year Caxton printed two works, of which the following was the first—

*The Arte and Crafte to knowe well to dye. Translated out of frenshe in to englyshe by Willm Caxton the xv day of Juyn the yere of our Lord a m iiii<sup>th</sup>. lxxxix.* Folio.

The following article, which was given in the Harleian catalogue, is partly copied from Lewis:—"This important subject, of such universal behoof, was wisely undertaken by Master Caxton, at the age he was now arrived at, and under the decay he might feel upon him, which put an end to his laudable labours, before he was a twelvemonth older. It is the more to be regarded, in that he chose, by this work, to set himself the example of the doctrine therein inculcated. It is divided into six parts; treating, of the praise of death; and how we ought to die gladly; of the temptations we are under at the point of death; of the questions that ought to be made at that time; of the instructions that ought to be given; of the remembrance of God's doings and sufferings for us; of certain devout prayers that ought to be said by, or for, the dying person. From all which articles it may evidently appear, as the author concludes, that to every person who would die well, it is necessary that he learn to die, before death comes, and prevents him."

The commencement of the work is thus given

by Mr. Dibdin:—"When it so, that, what a man maketh or doeth, it is made to come to some end, and if the thing be good and well made it must needs come to good end; then by better and greater reason every man ought to intend in such wise to live in this world, in keeping the commandments of God, that he may come to a good end. And that out of this world, full of wretchedness and tribulations, he may go to heaven unto God and his saints into joy perdurable."

"The origin of this performance, (one of the most popular works in the 15th and 16th centuries)" Mr. Dibdin observes, "was probably the celebrated *Ars Moriendi*: the composition of a Polish monk, and printed, as it is supposed, before the middle of this century."

This work ranks amongst the rarest of Caxton's printed books; it contains thirteen leaves, with capital initials, the leaves are not numbered.

1490, June 22. *The Boke of Eneydos, compyled by Vyrgyle: by me Wyllm Caxton.* Folio.

This work is a translation from the French; it is a mere compilation in prose of the principal events recorded in Virgil's poem, and has no pretension to an imitation of that poet, in any one respect. It does not, therefore, deserve the contemptuous and sarcastic notice taken of it, by Gawain Douglas,\* in the preface to his Scotch translation of the works of Virgil. The bishop of Dunkeld says—

Thoch Wyllame Caxton had no compassoun  
Of Virgil in that buk he prent in prois,  
Cleand it Virgili in Kneados  
Quhilk that he sayis of Frenche he did translat,  
It has nothing ado therwith, God wate,  
Nor na mare like than the deuil and saint Austin,  
Have he na thank therfore, bot iols his pyce:  
So schamefully the storie did peruerte,  
I reld his werk with harmes at my bert.—  
His buk is na mare like Virgil, dar I say,  
Than the nyght oule resemble the papingay.

Caxton's work was dedicated to Arthur, eldest son of Henry VII. He represents himself as at this time well stricken in years; and if the date usually assigned to his birth (1412) be accurate, he must have been seventy-seven years old.

Caxton's edition was never reprinted, it was doomed to sink into silent oblivion, being eclipsed by the popular versions of Douglas, Phaer, Twine, and Stanyhurst. The original from which this was taken, is supposed to be a French edition published at Lyons, in 1483, by Guillaume le Roy, who was both translator and printer. It has signatures, but no catchwords, it contains 48 leaves.

In Caxton's preface to this work, our word pamphlet is first found in the English language, and it is written *pamphletis*. That it is ancient see Lambard's *Perambulations of Kent*, Hall's

\* Gawain Douglas, a Scotch poet and bishop, was the younger son of the sixth earl of Angus, and was born at Brechin, in 1471. He obtained the bishopric of Dunkeld, to which was added the rich abbey of Aberbrothick. He died in 1522. His works are—1. A Translation of Virgil's *Eneis*—2. *The Palace of Honour*, a poem.—3. *Aeneas Narrationes*, *Comedie aliquot Sacre*.—4. *De Rubus Scoticis Liber*.

*Chronicles*, and in Skelton's *Poems*. In a preface of Nash, he has the phrase to "pamphlet on a person," and pamphleteer.

In the *Philobiblion* of Richard de Bury, the following passage is found in the eighth chapter.

"Sed revera libros non libras maluimus; codicesque plus dileximus quam flores: *Pamphletos* exiguos phaleratis prestulimus palescedis."

"But, indeed, we prefer books to pounds; and we love manuscripts better than florins; and we prefer small pamphlets to war-horses."

In Lydgate's works, quoted by Warton, is a poem "translated from a pamphlete in French."

The French have not the word pamphlet, and yet it seems to be of French extraction, and no other than *palm-feuillet*, a leaf to be held in the hand, a book being a thing of greater weight; so the French call it now *feuille volante*, retaining one part of the compound.

Robert Copeland, in his poetical prefix to Chaucer's *Assembly of Fools*, 1530, says

Chaucer is dede, the which this pamphlete wrote.

Myles Davies, in his *Icon Libellorum; or, a Critical History of Pamphlets*, a work which affords much curious information, says, "In pamphlets lawyers will meet with their chicanery, physicians with their cant, divines with their Shibboleth. Pamphlets become more and more daily amusements to the curious, idle, and inquisitive; pastime to gallants and coquettes; chat to the talkative; catch-words to informers; fuel to the envious; poison to the unfortunate; balsam to the wounded; employ to the lazy; and fabulous materials to romancers and novelists. With pamphlets the booksellers and stationers adorn the gaiety of shop-gazing. Hence accrues to grocers, apothecaries, and chandlers, good furniture, and supplies to necessary retreats and natural occasions." This author sketches the origin and rise of pamphlets. He deduces them from the short writings published by the Jewish Rabbins; various little pieces at the time of the first propagation of Christianity; and notices a certain pamphlet which was pretended to have been the composition of Jesus Christ, thrown from heaven, and picked up by the archangel Michael at the entrance of Jerusalem. It was copied by the priest Leora, and sent about from priest to priest, till pope Zachary ventured to call it a *forgery*. He notices several such extraordinary publications.

Mr. D'Israeli, in the *Curiosities of Literature*, says, "The only proper Latin term for a pamphlet is *libellus*, or little book;" and that "this word indeed signifies in English an abusive paper or little book, and is generally taken in its worst sense." Again, he says, "The French have borrowed the word *pamphlet* from us, and have the goodness of not disfiguring its orthography. *Roast Beef* is also in the same predicament. I conclude that *pamphlets* and *roast beef* have therefore their origin in our country."

Dr. Johnson has pamphlet, [*par un filet*, Fr.] a small book; properly a book sold unbound, and only stitched.

1490. The name of one of the earliest book-binders that has been found is *Iohannes Gvilebert*. It was discovered in a *Missal* bound in this year, and was in the possession of the late Mr. Henry Ferrily, who resided near Hull. Of the birth, parentage, and education of this early artist in bookbinding, perhaps, nothing can now be known. A cover in the Bodleian library, of nearly the same date, bears the name of Jehan Norris.

A manuscript of the Epistles of St. Jerome, bearing the following inscription:—*Liber ligatus erat Oxonii in Castre, ad instantiam Reverendi Domini Thome Wybarum, in sacra theologia Baccalarii Monachi Rossensis anno domini, 1487*, has the earliest date which is known to have existed on the cover of a book.—*Bib. Decam.*

1490. The munificent patronage afforded to literature by Mattheo Corvini, king of Hungary and Bohemia, who died of an apoplexy in this year merits particular notice. He succeeded his father to the throne of Hungary in 1457, and extended his reputation as a soldier throughout Europe, by the captures of Vienna and Nieustadt. But his love of literature, and patronage of learning, have transmitted his name with more tranquil and delightful recollections to posterity, than any warlike feats could possibly have done. Animated by an ardent thirst for knowledge, he became a most diligent collector of books, and during the last thirty years of his life spared no expense in the acquisition of a library, which placed him among the most illustrious patrons and guardians of literature. He purchased innumerable volumes of Greek and Hebrew writers at Constantinople, and other Grecian cities, at the period of the conquest of the Eastern empire by the Turks; and as the operations of the typographical art were yet but slow and imperfect, and the number of books thereto printed but few, he maintained four learned transcribers at Florence, to multiply the copies of such classics as he could not procure in Greece. He erected three libraries in the citadel of Buda, in which he placed 30,000, or, according to others, 50,000 volumes. The principal one, in which the chief part of his magnificent collection was placed, was a sort of vaulted gallery, divided into three parts: a fourth part forming a kind of convenient appendage for the reception of visitors. In this fourth part were two stained glass windows, and two doors; one of the doors opening immediately into the library, and the other leading to the monarch's private apartment. In these libraries he established thirty amanuenses, skilled in writing, illuminating, and painting, who, under the direction of Felix Ragusinus, a Dalmatian, consummately learned in the Greek, Chaldee, and Arabic languages, and an elegant designer and painter of ornaments on vellum, attended constantly to the business of transcription and decoration. The librarian was Bartholomew Fontius, a learned Florentine, the writer of several philological works, and a professor of Greek and oratory, at Florence. The books were placed upon shelves according to their classes; and in this

manner were covered with silk curtains, or hangings, adorned with silver and gold, or brocade. The lower recesses next to the floor, were appropriated to something like cupboards, which contained manuscripts too large for their proper places, or of a character not easily admitting of classification. The exterior of this lower division, or probably the cupboard doors, were skilfully and curiously carved. The books were chiefly vellum manuscripts bound in brocade, and protected by knobs and clasps of silver, or other precious metal; and were ornamented or marked with the device or insignia of the owner, which was that of a black crow with a ring in his mouth, in allusion to the etymon of his name, *Corvus*, a crow, or raven. The library was likewise celebrated for the magnificent celestial globe it contained, and for the silver and marble fountains which played in the adjoining gallery, or court. When Buda was captured by the Turks, under Solymán II. in 1526, cardinal Bozmanni offered for this inestimable collection 200,000 pieces of the imperial money, but without effect, for the barbarous besiegers defaced or destroyed most of the books, for the sake of their splendid covers, and the silver bosses and clasps with which they were enriched. Those which escaped the rapacity of the Turkish soldiery, were thrown into a sort of subterranean vault, there to moulder or perish, as it might happen. In 1666, Lambecius, the learned librarian of the imperial library at Vienna, was sent to Buda, for the purpose of recovering the remains of the Corvinian library. He found there, in a crypt of the citadel, barely lighted with one window, and ventilated with one door, about 400 volumes in number, lying upon an earthen floor, and covered with dirt and filth. Three manuscript copies of the *Fathers* were all that he was permitted to carry away. But in the year 1686, Buda was captured by the Austrian arms, when the remainder, though comparatively of little value, were removed to Vienna. Some of the most valuable volumes formerly belonging to this library, have been discovered in the imperial library at Vienna, in the Wolfenbützel library, and in that of Morelli, the learned librarian of St. Mark's, at Venice. In the public library of Brussels, there are two exquisitely finished manuscripts which once graced the library of Corvinus. The first is a Latin *Evangelistarium*, written in letters of gold, upon the most beautiful vellum, and not inaptly called the *Golden Book*. It had become the property of Philip II. of Spain, who kept it in the Escorial library, under lock and key; and is said to have been formerly shown to strangers with great ceremony, and by torch light! The other is a magnificent *Missal*, highly illuminated.

Alexander Brassicanus, who saw the library at Buda before it was dispersed, noticed, amongst an immense number of other valuable works, the whole of the writings of Hyperides, the Grecian orator, with valuable scholia; a large book of the apostolical canons; the com-

mentary of Theodoret on the *Psalms*; the works of Chrysostom, Cyril, Nazianzen, Basil the Great, Gregory of Nyssa, Theophanus, &c.—*Dibdin's Bib. Decam. vol. 2.*

1490. The earliest exclusive privilege of printing books, is that which was granted by Henry Bishop of Bamberg, to the following work, "*Libri missalis secundum ordinem ecclesie Bambergensis.*"—*Beckmann.*

1490. Printing introduced into the following places in the course of this year :—

Orleans, by Matthew Vivan.

Porto, in the Venetian territory, by Barthol. Zanni.

Zamora, no printer's name.

1491. Died WILLIAM CAXTON, the Father of the British Press.

Having treated at some length on the works of Caxton, and given such extracts, as, we trust, may prove interesting; we must, in conclusion, state that twenty-eight of his known publications are without dates. Some of these have been already noticed; a few of the remainder will supply some interesting matter. Caxton printed Chaucer's *Canterbury Tales* twice; each edition is without date, but the first is supposed to have been one of the earliest productions of his press. Mr. Warton regards it as much more to his honour, than it can be to his discredit, that he printed them very incorrectly. "He probably took the first manuscript that he could procure to print from, and it happened unluckily to be one of the worst in all respects that he could possibly have met with." As soon, however, as he found out these imperfections and errors, he began a second edition "for to satisfy the author, whereas tofore, by ignorance, I had erred in hurting and defaming his boke." Caxton's extreme and conscientious desire to fulfil one of the most important duties of an editor and printer, (and he acted as both) by giving the works as the author himself wrote them, as well as his candour and ingenuousness, are depicted in a clear and interesting manner, in the preface to his second edition.

He seems to have had a veneration for the memory of this poet, and to have formed, with sound judgment and good taste, a most correct and precise estimate of the peculiar merits of his poetry. As a proof of the former, we may mention that Caxton, at his own expense, procured a long epitaph to be written in honour of Chaucer. In the *Boke of Consolacion of Philosophie*, he thus expresses himself:—*I, William Caxton, have done my debwoir and payne tennprynte it in fourme, as is here afore made, in hoping that it shall prouffite moche peple, to the wele and helth of their soules, and for to lerne to haue and keep the better pacience in adversitee. And furthermore, I desire and require you, that of your charite ye wold pray for the soule of the sayd worshipfull man, Geoffrey Chaucer, first translatur of this sayd boke into English and embellisher in making the sayd langage ornat and fayr, whiche shal endure perpetually, and therefore he ought eternally to be remembred, of whom the body*

and corps lieth buried in thabbay of Westmestre, beside London, to fore the chapele of seynt Benet, by whos sepulture is wreten on a table, honging on a pylere, his epitaphye maad by a poete laureat, whereof the cōpye followeth, &c.

"Epitaphium Galfridi Chaucer, per poetam laureatum Stephanum Surigonum Mediolanensem in decretis licenciatum."

Beginning:

"Pyrides muse si possunt numina fectus;  
Fudere, diuinas atq; rigare genas  
Galfridi vatis chaucer crudelia fata  
Plangite, &c.

Concluding:

Post obitum Caxton voluit te uisere cura  
Willelmi, Chaucer clare poeta tui.  
Nam tua non solum compressit opuscula formis  
Hæc quoq; sed laudes iussit hic esse tuas."

This was inscribed on a tablet, hung on a pillar near the poet's grave, in the south aisle of Westminster Abbey. The following remarks will amply justify what we have stated respecting Caxton's ability, fully to understand, and thoroughly to relish, the merits and beauties of Chaucer's poetry. "We ought to give a singular land unto that noble and great philosopher, Geoffrey Chaucer, the which, for his ornate writings in our tong, may well have the name of a laureate poet. For, to fore that he embellished and ornated and made fair our English, in this royaume was had rude speech and incongrue, as yet it appeareth by old books, which, at this day, ought not to have place, ne be compared among unto his beauteous volumes and ornate writings, of whom he made many books and treatises of many a noble history, as well in metre as in rhyme and prose: and then so craftily made, that he comprehended his matters in short, quick, and high sentences, eschewing perplexity; casting away the chaff of superfluity, and shewing the picked grain of sentence, uttered by crafty and sugared eloquence."

And speaking of Chaucer's *Book of Fame*, which he also printed, he says, "Which work, as me seemeth, is craftily made and digne to be written and known; for he toucheth in it right great wisdom and subtle understanding; and so in all his works he excelleth, in mine opinion, all other writers in our English, for he writeth no void words, but all his matter is full of high and quick sentence, to whom ought to be given laud and praise for his noble making and writing."

Chaucer's translation of Boethius was also printed by Caxton, without date. It is alternately in Latin and English, but the former is not given entire; a few verses of a period in Latin being succeeded by the whole of the corresponding period in English, and so through the whole volume: the Latin type is large compared with the English.

A curious volume was printed by Caxton, about the period when the French, which had hitherto been spoken almost exclusively at court, was giving place to the English language; it is entitled the *Book for Travellers*. It contains the corresponding terms in both languages, for those

things most commonly talked of at court, especially such as relate to dress.

Having given a sketch of the life of Caxton, little remains, but to award to him that praise which his perseverance and ingenuity so highly deserves for establishing in his native land, an art so vast and important, that "the productions of men of genius and learning; the records of literature and of science; of whatever is either brilliant in imagination or profound in thought; whatever may either adorn or improve the human mind,—thenceforth became imperishable. The light of knowledge cannot again be quenched—it is free, and open, and accessible as the air we breathe. The future history of the world may, indeed, disclose enough both of misery and of vice; but it cannot again present an universal blank, or be disgraced by another age of utter and cheerless ignorance."\* The character of William Caxton may be collected from the account we have given of his labours, and the extracts we have made from his prefaces; he was possessed of good sense and sound judgment; steady, persevering, active, zealous, and liberal in his services for that important art which he introduced into this kingdom; labouring not only as a printer, but as translator and editor. It has been objected that he was too much given to admire and print romances; but in this he only partook of the spirit of the age; perhaps, indeed, it survived in him longer and with more power, than in most of his cotemporaries; but that his love of romance did not blunt his judgment and taste for real talent is evident by his printing Chaucer's works, and his criticisms on them. It should be recollected, also, that in the selection of works for the press he was necessarily guided by public opinion, and by the probability that what he did print would repay him for his labour and expense. The remarks of Gibbon on this point are sensible and candid: "In the choice of his authors, that liberal and industrious artist was reduced to comply with the vicious taste of his readers, to gratify the nobles with treatises of heraldry, hawking, and the game of chess, and to amuse the popular credulity with romances of fabulous knights, and legends of more fabulous saints. The father of printing expresses a laudable desire to elucidate the history of his country, but instead of publishing the *Latin Chronicle* of Ralph Higden, he could only venture on the English version by John de Trevisa; and his complaint of the difficulty of finding materials for his own continuation of that work, sufficiently attests, that even the writers which we now possess of the fourteenth and fifteenth centuries, had not yet emerged from the darkness of the cloister." If we reflect, too, on the state of England at this period, that he established his press soon after the murder of Henry VI., and that he carried on his works during the remainder of the reign of Edward IV., and the reigns of Edward V. and Richard III., when the minds of those

\* *Life of Caxton, Library of Useful Knowledge.*

most likely and able to encourage him were seldom free from alarm for their own safety, their time much occupied, and their means necessarily reduced by the distracted and wasted state of the country; and when little attention or money could be spared for literature; we must give Caxton great credit for having done so much; for having in the midst of confusion persevered in his labours, and succeeded in establishing the art of printing in his native land. That England at this period was much behind France in literature, is proved by the fact that Caxton was obliged to have recourse to the French language for most of the works which he printed. He thus, it may be supposed, employed his press profitably to himself, and certainly with advantage to our literature; for, as Mr. Warton truly observes, "had not the French furnished him those materials, it is not likely that Virgil, Ovid, Cicero, and many other good writers, would, by means of his press, have been circulated in the English tongue, so early as the close of the fifteenth century."

There was, perhaps, at that time, no man in England, whose talents, habits, and character, were so well fitted to introduce and establish the art of printing as those of William Caxton: to have succeeded in this enterprise, the benefits of which, in a national point of view, we may even now be enjoying, is praise enough; for it is the praise of having been a useful citizen of the state and member of society,—the highest that man can bestow or receive. At the period of Caxton's birth learning of all kinds was at a much lower ebb in England than in most of the continental states of Europe; in consequence, principally, of the civil wars in which the nation was embroiled, the habits of restlessness thus produced, and the constant pre-occupation of men's time and thoughts in promoting the cause they espoused, and in protecting their lives and property. Under these circumstances the most plain and common education was often neglected. Caxton's parents, however, performed their duty to him: "I am bounden," he says, "to pray for my father and mother's souls, that in my youth sent me to school, by which, by the sufferance of God, I get my living, I hope truly."

Caxton's printing is inferior, in many respects, to the printing executed on the continent during the same period. The types employed in the latter have a squareness, fineness, and brilliancy not in those of Caxton; the paper and press-work are much superior; the order and symmetry of the press-work are qualities which appear in very few of his productions. He seems not to have been able to procure, or to have rejected, the roman letter, even after it had been employed with excellent effect by the continental printers. On the other hand, as Mr. Dibdin remarks, "whenever we meet with good copies of his books, his type has a bold and rich effect, which renders their perusal less painful than that of many foreign productions, where the angular sharpness of the letters somewhat dazzles and hurts the eye." His ink is of an inferior qua-

lity; his paper is fine and good, resembling the thin vellum on which manuscripts were then generally written; his letter is a mixture of secretary and Gothic, also resembling that used in manuscripts at that period; his leaves are seldom numbered, his pages never. When the impression was finished, Caxton revised a single copy, and corrected the faults with red ink; the copy thus corrected was then given to a proper person to correct the whole impression; as he was extremely exact, this operation occasioned him much troublesome and minute labour. He used two devices in his printing, one of which is here given, and another much smaller, having a different border, and a flourish inserted above and below the letters.

The device itself consists of the initials W. C. within an upper and lower border of rude foliage and lozenges, upon black and white grounds. Between the letters is an arbitrary sign meant to convey the date 74, as 1474 is usually supposed to have been the year when Caxton commenced printing in England. The earliest impression of the large device now known, is in the copy of *The Dictes and Sayings of the Philosophers*, 1477, preserved in the Lambeth Library, where it occurs on the recto of the first leaf.

Mr. Dibdin, in his *Typographical Antiquities*, and *Bibliographical Decameron*, has shewn, that most of the portraits of the early English printers may be considered as spurious. The portrait of Caxton has been copied from a head introduced in La Zucca, of A. F. Doni, to illustrate a particular kind of cap and streamer, which has been supposed to represent the Italian poet, Burchiello Domenico: as the same engraving is to be found in the early editions of his works. This portrait was originally engraved by W. Faithorne, for Sir Hans Sloane, as the head of W. Caxton; it was then re-copied on a copper-plate, with some alterations, for the Rev. John Lewis's life of that printer, and afterwards by Marchand, Ames, and Herbert. The Rev.

T. F. Dibdin, from whose works we are indebted for the above information, thus relates the circumstance in his *Bibliographical Decameron*, vol. II. page 288. "Would you believe it, a portrait of Burchiello, an Italian of the XIVth century, was most wickedly foisted into the public notice, by Ames, as that of William Caxton? Yet Ames, on second thoughts, must not be too severely criticised. As an antiquary in the art of engraving, his knowledge was exceedingly limited; and it was sufficient for him that the name of Faithorne was subscribed to a book of drawings in the Harleian Collection, purporting to be portraits of printers—in which this identical portrait appeared! and so, a draped head (as the phrase is) of Master Burchiello, aforesaid, came forth as that of the venerable and our well beloved William Caxton!"

The first biography of Caxton appeared under the following title:—"The Life of Mayster Wylliam Caxton of the Weald in Kent; \* the first Printer in England. In which is given an Account of the Rise and Progress of the Art of Pryntynge in England, during his Time, till 1493. Collected by John Lewis, Minister of Mergate in Kent. London: Printed in the Year m.dcc.xxxvii." Royal 8vo. 150 copies. To the title-page succeed these verses:—To the Rev. Mr. Lewis, upon his writing the *Life of Caxton*:

Industrious CAXTON's name in time to come  
Had buried been in dark oblivion's tomb,  
Had you withheld your generous aid to save  
That name which now will never find a grave.  
Sacred the labour, righteous is your pains,  
Thus to collect the artist's true remains,  
Knew owes to you her thanks upon this score:  
And not on this alone, but many more.  
More watchful you than Egypt's boasting seers;  
For there a pyramid now huge appears;  
Yet lost for ever is its builder's name,  
To our surprise, and their eternal shame. W. H.

Ames records the following, as written in a very old hand, in an edition of *Fructus Temporum*,—"Of your charite pray for the soul of Myster Wylliam Caxton, that in hys tyme was a man of moche ornate and moche renommed wysdome and cunnyng, and deceased full crystenly the yere of our Lord mccccxxxxi

"Meder of Mercel shyld hym from thorrribal fynd.  
And tryng hym to lyff eternal that neyur bath ynd."

"But these superstitions," says Mr. Hansard, "may rather be considered as characteristic of the age in which Caxton lived, than as peculiarities exclusively applicable to himself. The books which he published were almost wholly of a moral tendency, and the prefaces to several, that he occasionally wrote, partook of the same spirit." His attachment to the doctrines and ceremonies of the church of Rome, seemed always to partake of sincerity. In the crusades he found much to commend, and little to blame; and to the pilgrimages of his day, and to those of his ancestors, he was much devoted.

\* Carter, in his *History of Cambridgeshire*, says, "Caxton was a Cambridgeshire man, born at Caxton, in that county, from which he takes his name." What can exceed in absurdity such proof as this?

Notwithstanding that Caxton had printed for the use of Edward IV. and Henry VII. there are no grounds for the notion which Palmer takes up, that the first printers, and particularly Caxton, were sworn servants and printers to the crown; for Caxton gives not the least hint of any such character or title: however, it seems to have been instituted not long after his death; for of his two principal workmen, Richard Pynson, and Wynkyn de Worde, the one was made printer to the king; the other to the king's mother, the lady Margaret.

If, however, the art, or those who practised it, sought the royal favour and countenance, it was a privilege which monarchs might glory to confer. The benevolent of mankind, and more especially kings, as the fathers of their people, cannot bestow more valuable gifts on their wide extended family, than by encouraging among them the exercise of an investigation so adapted to their instruction; so calculated for their improvement in social and in public virtue.

None of our English printers, during this century, attempted to print the *Bible*, either in the Latin, or the vernacular tongue. In the application of printing to the purposes of sacred literature, the palm must be yielded to Germany, which as it had the honour of the invention of printing, so it was the first to apply it to the diffusion of biblical knowledge. For not only were numerous editions of the Latin *Bible*, and several of the German version printed there, but editions also were published in the Saxon and Bohemian dialects. And, in reply to what has been urged by some writers, against Caxton not printing the *Bible*, it is sufficient to remark, that the danger attending it in his time, was such, that it would have required the utmost religious intrepidity to have attempted it; and that it is therefore highly probable, that whatever preference our printer might have for the scriptures, he would not place his life in jeopardy for its publication. Sir Thomas More, in his *Dyalogues*, 1529, thus defends the early printers in England for not printing the *Bible*: "That an account of the penalties ordered by archbishop Arundel's constitution, though the old translations that were before Wiclif's days remained lawful and were in some folks handys had and red, yet he thought so prynter would lyghtly be so hote to put any byble in prent at hys owne charge, whereof the loss should lie wholly on his own necke, and then hange upon a doubtfull tryal why the fyrst copy of his trans-lacyon was made before Wiclif's dayes or synnes. For yff yt were made synnes, yt must be approued before the pryntynge." But such an approbation, Sir Thomas intimates, was not to be had.

Dr. Dibdin, with that genius and talent which ever marks his veneration for our first printer, observes:—"That our typographer met death with placidity and resignation there is every reason, from the testimony of his own pious ejaculations, but more from the evidence of a usefully spent life, to believe. If his funeral

was not emblazoned by 'the pomp of heraldry,' and 'the great ones of rank' were not discoverable among his pall bearers, yet Caxton descended into his grave in full assurance of a monument, which, like the art that he had practised, would bid defiance to decay. Accept! O venerable and virtuous shade, this tribute of unfeigned respect to thy memory! Thou shalt be numbered hereafter, not with the witty, the vain, or the profligate—the Nashes, Greens, and Rochesters of the day!—but with the wise, the sober, and the good; with those who have unceasingly strove to meliorate the condition of mankind."

Although the nation have thus neglected to call in the sculptor's aid to perpetuate his memory; we are highly gratified on finding that a few highly respected and exalted characters, associated under the title of *The Roxburghe Club*, (long acknowledged as lovers and admirers of ancient lore) have performed that duty, which more properly belonged to the nation: in executing this act of justice to the memory of so worthy a man, they have not only perpetuated the remembrance of him, but they have also raised a monument for themselves. It is thus described:

The tablet erected to the memory of Caxton, by *The Roxburghe Club*, is composed of the finest dove-coloured marble, enclosing an oblong panel of white, delicately veined with blue. Above the panel rises a pediment, having the device of Caxton engraved in the centre; and on either side of the inscription are two small pillars. The words of the inscription are as follows—

TO THE MEMORY  
OF  
WILLIAM CAXTON,  
WHO FIRST INTRODUCED INTO GREAT BRITAIN  
THE ART OF PRINTING;  
AND WHO, A. D. 1477, OR EARLIER,  
EXERCISED THAT ART  
IN THE ABBEY OF WESTMINSTER.  
THIS TABLET,  
IN REMEMBRANCE OF ONE  
TO WHOM  
THE LITERATURE OF THIS COUNTRY  
IS SO Largely INDEBTED,  
WAS RAISED  
ANNO DOMINI MDCCCXX.  
BY THE ROXBURGHE CLUB.  
EARL SPENCER, K. O. PRESIDENT.

The above monument was resolved upon at the anniversary meeting of the Roxburghe club, held in June, 1819, and is erected in the church of St. Margaret, Westminster.

In the churchwardens' books of St. Margaret's parish, Westminster, the death of William Caxton is thus recorded: "1491. Item, atte buryng of William Caxton, for iiij. torches vjs. viijd. Item, for the belle atte same buryng, vjd."

In the same book, for the year 1498, occur these items, "Receyved by the handes of William Royott for oon of those printed boks that were bequothed to the church behove by William

Caxton, vjs. viijd. Item, in boks called Legends, of the bequest of William Caxton, iiij. s."

Again, for the year 1506, "Item, iiij. prynted bokes, ij. of the Lyfe of Seynt Kateryne, and other ij. of the Byrthe of our Ladye, of the gift of the executors of Caxton."

The following is a curious specimen of the style of advertisements of this period, relative to Caxton, and shews the situation of his press at Westminster:—

"If it plesse any man spiritual or temporel, to hye any pyes of two or thre commemoracio's of salisbury use, empyntid after the forme of this preste's lettre, which ben wel and truly correct, late hym come to westmonaster, in to the almonestirpe, at the resse pale, and he shal haue them good chepe.

*Supplicat stet cedula.*"

1491. In this year Bernard's *Homilies on the Canticles* were pawned for twenty shillings.

1491. Printing introduced into the following places in the course of this year:—

Dijon, by Peter Metlinger; his first work was entitled *Cisterciensis ordinis privilegia*, 4to.

Angoulême, printer unknown.

Hamburg, by John and Thomas Borchard; their first work was *Laudes beate Marie virginis*.

Nozani, by Henry de Colonia and Henry de Harlem, who printed *Pauli Turretini Disputatio juris*. Folio.

1492. It is told of Pope Innocent VIII., that during his pontificate a book was published, vehemently arraigning the conduct of the Court of Rome. The Pope called a council of his cardinals, and read to them some passages out of the author; adding these remarkable words, "This book speaks truths, therefore we ought immediately to reform ourselves in order to make this fellow a liar." Pope Innocent VIII. died July 28, 1492.

1492. *Pentateuchus Hebraice*, printed on vellum, at Venice. This volume, appears to be the third printed copy of the Pentateuch, and the first in so small a compass, is noticed by bibliographers as being still more rare than either of its predecessors. At the end of the work is the following singularly expressed account of its editor, printer, &c. copied verbatim from the original:—"Here ends the whole of the work—the work of the Lord and his law. The law of the Lord, accurately performed with the five books of ceremonies, according to the rites of the sons of our faith among Germans and Gauls, this day, 24th of the month, in the year 1492, by me Brixius, who am under the government of the Republic of Venice, by whose exalted authority the work has been printed by me Gerscham and revised by R. Moses, of the seed of Israel, a man well known in the town of Germany, called Mentzlan Schonzin. The whole is committed to (God.)"

From the introduction of the art of printing into the city of Venice by John de Spira, in the year 1469 to the end of this century, upwards of

\* Ames says, xij. copies.

two hundred other persons had commenced the profession, the principal of whom were, Vinde-line de Spira, 1470-1477; Nicholas Jenson, 1470-1488; Christopher Valdarfer, 1470-1471; John de Colonia, 1471-1487; John de Colonia and J. Manthen de Ghernetzern, 1473, &c.; Francis Renner de Hailbrun, 1471-1494; Leon Achates, 1472-1478; Gabriel Peter de Tarvisio, 1472-1478; Christopher Arnold, 1472-1479; Jacob Rabeus, 1472-1481; and Nicholas de Franckfordia, 1473-1500.

1492. *Died* Lorenzo de Medicis, surnamed the Great, and the Father of Letters, was an illustrious grandson of Cosmo de Medicis, and born in the year 1448. He was a great merchant, and as great a statesman, equally fit to entertain an ambassador as a factor. His public services so recommended him to the Florentines, that they declared him chief of the republic; and he was so universally esteemed by the princes of Europe, that they often made him the arbiter of their differences.—There was a time when the arts and sciences rendered Florence “the brightest star of star-bright Italy,” but that time is gone, the Medici, Dante, Michael Angelo, and Leonardo da Vinci, are no more; nevertheless Florence, on account of her glorious monuments of art, and the remembrances of former times, is still one of the most interesting places in Europe. Besides the library belonging to the university, there are the Medicean gallery and library, with 120,000 volumes, among which are 3,000 of the earliest specimens of the typographical art, and 8,000 manuscripts; and the Marciana with 60,000 volumes, and a select collection of engravings. There are many splendid private galleries and libraries. In the English burying ground the remains of Smollet and Horner repose.

1492. Printing introduced into the following places in the course of this year:—

Ingolstadt, by Peter Applan, who was so great an astrologer, that the emperor Charles V. made him a present of 5000 crowns of gold, for writing *Opus Caesarum Astronomicum*.

Leiria, by Abraham, son of Don Samuel Dortas, a Hebrew printer.

Tzena, or Zinna, in Saxony, no printer's name.

1493. *Liber Festivalis, Westminster*. Quarto. This is the first production of Wynkyn de Worde, who had succeeded to the press and materials of Caxton, at Westminster.—Wynkyn de Worde was a foreigner, born in the dukedom of Lorraine, as appears by the patent-roll in the Chapel of the Rolls. Our first printer, Caxton, when resident abroad, might probably have met with him there, and engaged him to come over to England as a servant or assistant, as John Faust at Mentz had his lad, or servant, Peter Schoeffer, whom they chose for their ingenuity and promising parts; and their after works shew they were not mistaken in their choice.

He continued in some capacity with Caxton till his master's death, 1491, and printed at his house in Westminster afterwards. He finished

some volumes which had been begun by Caxton, viz. the *Canterbury Tales*; and Hilton's *Scale of Perfection*. The last, Mr. Maittaire dates in the year 1494, and Mr. Bagford, in 1495, who gives it as the first impression done in Wynkyn de Worde's name. By living with Caxton he naturally fell into the company and acquaintance of the learned and noble of this kingdom, on account of this new art, as soon appeared by the first works he printed, and styled himself, “Printer to Margaret, &c., the king's grandmother.” In the 7th of Henry VII. 1491, he printed the acts of parliament with the king's arms, &c., and dwelt at his master's house at least six years, as may be seen by several books mentioned as printed by him at Westminster, in Caxton's house, till the acts printed in the 11th and 12th of Henry VII. when he printed at the end, with the same cut, and a similar cipher to Caxton's; “also in Fleet-street, at the sygn of the Sonne, by Wynken de Worde.”

Afterwards he probably kept both shops for some time, where, by himself and his servants, he performed all the parts of the business, and furnished others dwelling in London. Mr. Palmer, in his *History of Printing*, says, he printed several Latin, as well as English, volumes, but no Greek. He continued printing with great applause till 1533, if not beyond that time. He was a person of great accomplishments in learning, as well as strictness in morals; and though he was the immediate successor to Caxton, the improvements he made were very considerable; for by his genius, and great scope of fancy, he formed such a variety of sorts and sizes of letter, that for several years after few equalled, none excelled, him therein. For it may be observed, the most ancient printers did every part of the business belonging to books by themselves, or under their direction, even to the binding and selling them. His skill in the art is much commended: and at his setting up for himself, his first care was to cut a new set of punches, which he sunk into matrices, and cast several sorts of printing letters, which he afterwards used. If he was the manual operator in cutting and casting in his own foundry, it is an incredible improvement which he made in the art; or, if he had his types from abroad, notwithstanding it robs him of the glory of the letter, yet his excellent method of disposition, composition, and press-work, shews him to have excelled his master, and even to rival any of his cotemporaries abroad. There is one circumstance that induces many to think that he was his own letter-founder;\* which is, that in some of his first printed books, the very letter he made use of is the same used by all the printers in

\* Mr. Palmer, the printer and author, says, the same were used by all the printers of his day, and believes they were struck from the punches of Wynkyn de Worde. I have no doubt but that they are still in existence: the old specimen-book of William Caslon, now before me (edit. 1785), confirms this opinion; and old English, real old English, would have been still in use, but for the modern-cut, non-descript, sui generis, radical-reformed old-English black, which is forced upon printers of our day.—*Hansard*.

London at this time; and is imagined to be struck from his punches. He is the first printer who introduced the Roman letter into England, which he made use of to distinguish any thing remarkable. His letter is different from most other printers, and is cast so true, and stands so well in line, as not to be since excelled. Upon the whole, he was a very curious, laborious, and indefatigable printer.

Most of his books now remaining were printed in Fleet-street, London, in St. Bride's parish, at the sign of the Sun.\* We have observed no sign of his while at Westminster, unless he had the same cipher which his master, William Caxton, used for a sign, in memory of the year when he brought printing first into England. He was a stationer by company, but we cannot find any charter granted them before that of Philip and Mary, in 1556, which will be inserted under that year.

Four hundred and eight books are known to have been printed by him, and they are remarkable for their neatness and elegance. We shall not have space to describe the whole of them, but such as are deserving of particular notice will be found under their respective dates. His edition of the *Polychronicon* is deemed uncommonly well executed. Dr. Dibdin calls it "one of the most beautiful folio volumes of that skilful artist:" its date is 1495. Several grammarians of repute, Stanbridge, Garlandea, Whittinton, Holt, and Lilye, lived at the period of the introduction of printing into England; and Wynkyn de Worde, who appears to have been a man of good education as well as talents, printed some of their works. He printed the *Accidence* of Stanbridge, "in Caxton's house in Westminster." The date unknown. His *Vocabulary*, in 1500. This De Worde continued to republish till 1532. The *Multorum Vocabulorum Equivocorum Interpretatio*, by Garlandea, was printed in 1500, by De Worde, and at least as late as 1517. He also printed repeatedly the grammatical works of Whittinton. Holt's *Lac Puerorum*, or *Milk for Children*, was printed by him in 4to., without date. No impression of the grammar of Lilye (but which, in reality, was

drawn up by several persons,) by De Worde, or in Lilye's lifetime, has been discovered. The first Greek letters used in England are found in a grammatical treatise of Whittinton, by De Worde, in 1519: they are cut out of wood. We have gone into this detailed mention of those works chiefly in order to show the assistance which the press was already giving, in its earliest days, to elementary education. *Accidences*, *Lucidaries*, *Orchards of Words*, *Promptuaries for Little Children*, were published in great numbers.

Richard Pinson, or Pynson, was brought up under Caxton, as well as Wynkyn de Worde; and having become a good proficient in the business, went and set up a press of his own at Temple-bar, as the inscription on his first works shew. The friendship which he had contracted with De Worde, whilst these two wrought under Caxton, was so far from being disturbed by any emulation or rivalry, that it continued to their death. He is said to have been born in Normandy, and appears to have been an early servant to our first printer, Caxton, whom he calls, in his edition of Chaucer's *Canterbury Tales*, (without a date, and imagined to be his first printed book,) his "worshipful master;" and tells the reader, that this book had been diligently overseen, and duly examined by his politic reason and oversight. He was in such esteem with the lady Margaret, king Henry VIII's mother, and other great personages, that he printed for them all his days. He styled himself king's printer; but it is doubtful whether he had any patent. Pinson's known productions are two hundred and ten; and his types are clear and good; but his press-work is hardly equal to that of De Worde. Most of the works he printed are of a higher character for merit and usefulness than those either of William Caxton or Wynkyn De Worde. In 1499, the first edition of the *Promptorium Peurorium* came from Pynson's press. He used a new cut English letter, "equalling, if not excelling, in beauty, any produced by modern foundries." He had a correspondence with, and employed William Tailleux, a printer at Rouen, to print some pieces of law; the laws being, a little before that time, till the beginning of Henry VIII's reign, made in the Norman French tongue. And probably the reason why he sent them over to be printed was, that they, understanding the language better, might be capable of printing it more correctly. However, he had such helps afterwards, that all statutes, &c. were printed here at home. He printed many books, which were also printed by his friend and fellow servant, Wynkyn de Worde, who survived him about six years. He caused many pretty devices to be stamped on the covers of his books.

1493. The first book printed by Pynson, with a date, was—*Diues and Pauper. fynished the v. day of Juyl. the yere of oure lorde god. m.cccc.lxxxiii. Empryntyd by me Richard Pynson at the Temple-barre. of london. Deo gracios.* Folio.—In this work we find the fol-

\* It may be difficult at this time to determine the exact situation of his residence in Fleet-street, which is usually said to have been "over against the conduit." A map of London of the date of queen Elizabeth, shows the conduit to have been at the south end of Shoe-lane, in Fleet-street. It was founded by sir William Eastfeld, who was mayor of London, about 1471; and was decorated by images, chimes, &c., which went by water, about 1478. Though rebuilt in 1583, this conduit, with all the rest, gave way to the laying on of water from the New River; and their remains were quite effaced by the great fire of London. Sorbiere describes them as little, mean-looking, square buildings, resembling small towers, having an archway or door in the centre where the water ran.—Bagford, in mentioning the establishment of Wynkyn de Worde, in Fleet-street, says, "over against the conduit, and there set up at the sign of the Golden Sun, which I do suppose is that which is now the Globe Tavern at the end of Shoe-lane; which had been a large timber-house, and let for his purpose for a printing-house."—Stow is not a whit more precise: and Pennant lodges him rather nearer to St. Bride's church.—In one of his colophons he describes himself as "dwellynge in flete strete at the sygne of the sonne agaynst the condyth."

lowing remarkable passage of fair Rosamond:—  
 “We rode that in Englonde was a kinge that  
 had a concubine, whose name was Rose, and  
 for her grete bewte he cleped hyr *Rosamunde*,  
 that is to say, Rose of the Worlde; for him  
 thought that she passed al women in bewte. It  
 befel that she died, and was buried whyle the  
 kinge was absent, and whanne he came ayen,  
 for grete love that he had to hyr, he would se  
 the bodie in the graue, and whanne the grane  
 was opened there sat an orrible tode upon hyr  
 breste, bytween hyr teetys, and a foule adder  
 bigirt her bodie aboute the mydle, and she stank  
 so that the kynge ne non other, might stonde to  
 se the orrible sight. Thanne the kynge dyde  
 shette agen the graue, and dyde wryte these two  
 veersis upon the graue,

Hic jacet in tumba Rosa mundi, non Rosa-munda;  
 Non redolet, sed olet, quæ redolere solet.”

Here lies not Rose the chaste, but Rose the fair,  
 Her scents no more perfume, but taint the air.

1493. Printing introduced into the following  
 places in the course of this year:—

Copenhagen, by Gothofridus de Ghemen; his  
 first work was a treatise on *Grammar*.

Alba, no printer's name.

Clugny, by Michael Wenssler; he printed  
 the *Missale Cluniacense*, in folio. This town was  
 then famous for its Benedictine abbey.

Dole, no printer's name.

Friburg, by Kilian Piscator.

Lunenburg, by John Luce; who printed  
 Thomas à Kempis, *De imitatione Christi*, &c. 8vo.

Nantes, by Stephen Larcher.

Valladolid, by John de Francour. Only one  
 book was printed here during this century.

A beautiful edition of Isocrates was printed at  
 Milan in folio, by Henry Germon and Sebastian  
 Ex Pantremulo. Philip de Lavagnia, Antony  
 Zarot, Christopher Valdarfer, Leonard Pachel,  
 and Ulric Scinzenzeller, were printers at Milan,  
 from 1469 to 1500, and to whom the republic of  
 letters is not a little indebted.

1493. The *Chronicle of Nuremberg*, illustrated  
 with more than two thousand wood-cuts, reckon-  
 ing those that are given more than once over,  
 was published and embellished by Michael  
 Wohlgemuth, a celebrated engraver and painter.  
 It professes to furnish figures from the beginning  
 of the world, and contains views of scripture his-  
 tories, and of cities and scenery, the latter bear-  
 ing scarcely any resemblance to the places men-  
 tioned. Michael Wohlgemuth was born at Nu-  
 remberg in 1435, and died in 1519. He is  
 thought to have invented etching; but the chief  
 honour of Wohlgemuth is that of his having  
 been tutor to Albert Durer, the most celebrated  
 artist in the annals of engraving. His mark is  
 M. W. or W. only.

It appears to have been the ancient practice  
 of those masters who furnished designs for the

wood-engravers to work from, carefully to avoid  
 all cross hatchings, which it is probable, were  
 considered as beyond the power of the xylogra-  
 phist to represent. Wohlgemuth perceived that,  
 though difficult, this was not impossible; and in  
 the cuts to the *Nuremberg Chronicle*, the execu-  
 tion of which, besides furnishing the designs, he  
 doubtless superintended, a successful attempt  
 was first made to imitate the bold hatchings of  
 a pen-drawing, crossing each other, as occasion  
 prompted the designer, in various directions. To  
 him belongs the praise of having been the first  
 who duly appreciated the powers of this art;  
 and it is more than probable that he proved with  
 his own hand, to the subordinate artists employ-  
 ed under him, the practicability of that style of  
 workmanship which he had acquired.—*Outley*.

1494. *Scala Perfectionis*: *Englyshed: the  
 Ladder of Perfection. Impressus anno salutis  
 m.cccc.lxxxxiiii. Folio*. Both Herbert and Dib-  
 din agree that Wynkyn de Worde was the original  
 printer of this singular volume. The following  
 poetical colophon at the end notices Caxton:—

Infynte lade with thankynges many folde

I yelde to God me accouryng with his grace

This boke to synyshe whiche that ye beholds

Scale of Perfection calde in every place.

Whereof th euctor Walter Hilton was

And Wynkyn de Worde this hath sett in print

In William Caxtons hows so fylle the case

God rest his soule. In joy ther mot is stynt.

Impressus anno salutis m.cccc.lxxxxiiii.

Walter Hilton, was, according to Herbert, a  
 Carthusian monk of Syon Monastery, although  
 bishop Tanner supposes him to have been of  
 Shene: he flourished between 1390 and 1433,  
 and is thought to have filled the office of canon  
 of Thorgoto.

1494. Printing introduced into the following  
 places in the course of this year:—

Oppenheim, no priater's name.

Several Hebrew works are said to have been  
 printed at Constantinople from 1484 to 1494;  
 but, says Dr. Adam Clarke, they may be con-  
 sidered either apocryphal or forgeries.

Marchand mentions a work entitled, *Janonis  
 oratio in sanctissimum Matrimonium Maximili-  
 liani Regis, et Blance Mariæ Reginae*. Inspruc,  
 1494, die xvi. Martii, 4to. but the date and place  
 seem rather to refer to the time and place of the  
 marriage of Maximilian with Blanch Mary,  
 daughter of Sforza, duke of Milan, than to the  
 place and time of the impression of the *Oration*.

Amongst many others who practised the art of  
 printing in the city of Augsberg, from its intro-  
 duction by Gunther Zainer, in 1468, to the end  
 of this century, may be enumerated John Schis-  
 sler, 1470; Christman Heyny, 1471; Monastery  
 of S. S. Ulric and Afra, 1474; Anthony Sorg,  
 1475; John Wiennner, 1475; John Keller, 1478;  
 John Baember, 1479; Ambrose Keller, 1479;  
 Herman Kaestlin, 1481; John Froschaver, 1481;  
 Erhard Ratdolf, 1487; John Schensperger,  
 1493; John Schauer, 1494.

1495. The mercers of London seem to have  
 been great encouragers of literature. Prefixed to  
 Wynkyn de Worde's reprint of Caxton's *Poli-*

\* Rosamond Clifford, or Fair Rosamond, the favourite  
 mistress of Henry II., died August, 1177, and was buried  
 at Godstow, a small island formed by the divided streams  
 of the Isis, in the parish of Wolvercot, near Oxford.

chronicon, of this date, are the following poetical stanzas, in which one Roger Thoornye, a mercer, is praised for ordering and encouraging the printer to undertake so laborious a performance:—

Prayed be god whyche hath so well enduyd  
The anctor wyth grace de proprietatibus  
To see so many natural thynges renewyd  
Which in his boke he hath compyled thus  
Where thrugh by redyge we may comfort us  
And wyth conceytes dyners fede our mynde  
As boke empyrnted shewyth ryght as we fynde  
By Wynkyn de Worde whyche thrugh his dylligence  
Emprentyd hath at prayer and desyre  
Of Roger Thoornye mercer and from thens  
This motion sprang to sette the hertes on fyre  
Of such as looke to rede in enery shire  
Dyvers maters in voydage ydylnesse  
Lyke has this boke hath showed to yon expresse.

1495. Printing introduced into the following places in the course of this year:—

Porti, by Jerome Medesanus and P Guarinus.

Freisingen, by John Schæffier.

Schoenhoven, no printer's name.

Limoges, by John Berton.

Scandiano, by Peregrinus de Pasqualibus. An error is found in the date of the first work printed here:—M.CCCC.LXXV. for MCCCC.XCV. which induced Marchand and some others to suppose the date M.CCCC.LXXV. but as the subscription states *scandiani Camillo Boyardo Comite impress est*, and Camillus was not count of Scandiano till after the death of his father Matthew Maire Boyardo, author of *Orlando Innamorato*, 1494, consequently the work in question could not have been printed before 1495, which is unquestionably its true date.—A. Clark.

During this and the following century, no town was more famous for its learned printers, or the correctness of its works than Basil, in Switzerland; the principal of whom was Berthold Rodt, who is supposed to have carried on the printing business here from 1460 to 1465, and printed *Joannis Calderini repertorium juris*, folio. Mich. Wensler, 1476; Bern. Richel, 1475; Frederick Blé, sin. an.; Eberhard Fromolt, 1481; John Amberbach, 1481; John Besickein, 1483-1489; Peter Kolligker, 1484; John Meister, 1484; Nicholas Kessler, 1486; James de Pforzen, 1489; Mich. Furter, 1490; John Froben, 1491; John Petri, 1494; John Bergman, 1494, and Wolfgang Lachner, 1495.

From the singular circumstance that a very large proportion of the early printers bore the name of JOHN, (which the reader can scarcely fail to notice) the printers of Leipsic, and other towns of Germany, chose the festival of St. John for the celebration of their anniversary.

1496. To Aldus Manutius, a Roman by birth, we are indebted for the invention of the italic letter. In this year he erected a printing-office in Venice, where he introduced the roman types of a neater cut, and gave birth to that beautiful letter which is known to most of the nations in Europe by the name of italic; though the Germans, and their adherents, show themselves as ungenerous in this respect as they did with the roman, by calling it *curvin*, in order to stifle the

memory of its original descent, and deprive the Romans of the merit due to their ingenuity.

In the first instance it was termed *venetian*, from Manutius being a resident at Venice, where he brought it to perfection; but not long after it was dedicated to the state of Italy, to prevent any dispute that might arise from other nations claiming a priority, as was the case concerning the first inventor of printing.

Italic was originally designed to distinguish such parts of a book as might be considered not strictly to belong to the body of the work, as *prefaces, introductions, annotations*, &c. all which sub-parts of a work were formerly printed in this character; so that at least two-fifths of a fount was comprised of italic letter.

Aldus was extravagant in the use of his italic; for he printed whole volumes in it. An edition of the works of Virgil, in octavo, was the first book in this letter. Several eminent printers inserted short quotations in it; but rejected it when they were long, and substituted double commas (thus “) at the beginning of the line, to distinguish the quoted matter from the body of the work. It is affirmed that Aldus also added the semicolon.

As soon as Aldus perfected this fount, he obtained a privilege from three several popes, for the sole use of it during the space of fifteen years; and these pontiffs give him great encomiums on the invention.

1496. In this year Wynkyn de Worde laid the first step to classical typography in England, by printing *Ortus Vocabulorum: alphabeticus*, &c.

This work was the original foundation of Ainsworth's *Latin and English Dictionary*.

Thus while the learned Italians were printing the best Greek and Latin classics, we were amusing ourselves with childish works, such as *Hilton's Scale of Perfection*, &c. Foreign nations led us more than fifty years.

1496. Printing introduced into the following places in the course of this year:—

Barco, by Gerson fil. Rab. Mosis Mentzian.

Granada, by Mainard Ungut, who printed *Francisci Ximenii de vita Christiana*, folio.

Offenburg, no printer's name.

Provins, by William Tavernier.

Mirandula, no printer's name.

Tours, by Matthew Lateron who printed *La vie et les miracles de Monseigneur de St. Martin*, folio.

Pampeluna, by Arnold Guillelmus de Brocario.

A *Hebrew Grammar* is supposed to have been printed at Ortona de Mare, in Sicily, in this year, but the best bibliographers allow this to be apocryphal.

1496. The first work upon *Phrenology* (which Gall asserted he had discovered) is of this date, printed at Heidelberg, a city of Germany. For the origin of the phrenological system, it is proved undeniably, that we are indebted to an Irishman of the name of Johannes Scotus Eri-gena, (or John the Irish Scot,) who wrote a work entitled *Margarita Philosophica*, or, *de divisione naturæ*, (the *Pearl of Philosophy*, or, of the divi-

tion of Nature.) This was the celebrated person who assisted Alfred the great, in the foundation, or re-establishment of Oxford university, and was the first instructor of the English people in the sciences of geometry, astronomy, &c.\*

In Enfield's *History of the Philosophy of the Middle Ages*, book 7, speaking of Erigena, he says that he wrote a book on the *Nature of Things*; which Gale disturbed from its quiet repose, and published under the title of *Joanni Scoti Erigenae de Divisione Naturæ Libri quinque, dñi desiderali*. Printed at Oxford 1681; folio. Gale could not have known of the edition of 1496.

1497. The following anecdote, shewing the introduction of illiterate men of rank into the church through the influence of those in power, we find in Jortin's *Life of Erasmus*:—"At this time he (Erasmus) refused a large pension, and larger promises, from a young illiterate Englishman, who was to be made a bishop, and who wanted to have him for a preceptor. This youth seems to have been James Stanley, son of the earl of Derby, and son-in-law to Margaret, the king's mother, and afterwards made bishop of Ely by her interest. However, it appears that the young gentleman, though ignorant, had a desire to learn something, and to qualify himself, in some measure, for the station in which he was to be placed."

So far were the clergy, in general, from attempting to circulate the scriptures, or instruct the people in the knowledge of their contents, that except such portions of them as were recited in the offices of the church, there was scarcely a *Latin Testament* in any cathedral church in England, till the time of the learned John Colet, dean of St. Paul's, in London, though the Latin was the only authorized language for the scriptures and service books. Instead of the Gospel of Christ, the spurious *Gospel of Nicodemus* was affixed to a pillar in the nave of the church; which Erasmus says, he had himself seen with astonishment in the metropolitan church of Canterbury.

We give the following curious account of the *Gospel of Nicodemus* from Townley's *Illustrations of Biblical Literature*:—"The *Gospel of Nicodemus*, or *Acts of Pilate*, above mentioned, is a work supposed to have been forged, towards the close of the third century, by Leucius Charinus. It treats chiefly of the *Crucifixion* and *Resurrection* of our Lord, and of his *Descent into Hell*. It contains many trifling, foolish, and ludicrous relations, such as the standards or

colours bowing to Christ, as he passed: Jesus appearing to Joseph of Arimathea, after his resurrection, wiping his face from the dew, kissing him, and commanding him to remain in his own house for forty days; and a supposititious narrative of the events attending Christ's descent into hell, by Lentius and Charinus, two saints raised from the dead, at the resurrection of the Saviour. The following extracts from this impudent forgery, will enable the reader to judge of the kind of instruction afforded by these substitutes for the Gospel of Christ. The relation of Christ's descent into hell, is introduced by Joseph of Arimathea, addressing Annas and Caiaphas, who were astonished to hear that Jesus was risen from the dead; and that others were risen with him; "We all," says he, "knew the blessed Simeon, the high-priest, who took Jesus, when an infant, into his arms, in the temple. This same Simeon had two sons of his own, and we were all present at their death and funeral. Go, therefore, and see their tombs, for these are open, and they are risen; and behold, they are in the city of Arimathea, spending their time together, in offices of devotion. Some, indeed, have heard the sound of their voices, [in prayer,] but they will not discourse with any one, but they continue as mute dead men. But come, let us go to them, and behave ourselves toward them with all due respect and caution. And if we can bring them to swear, perhaps they will tell us some of the mysteries of their resurrection." Annas, Caiaphas, Nicodemus, and Gamaliel, proceeded to Arimathea, they find Charinus and Lentius, at their devotions, and adjuring them by the law, to relate what they had seen, they tremble, look up to heaven, make the sign of the cross upon their tongues, and then calling for paper, write the account of what they profess to have seen. "When we were placed with our fathers, in the depth of hell," say they, "in the blackness of darkness, on a sudden there appeared the colour of the sun like gold, and a substantial purple coloured light enlightening (the place.) Presently upon this, Adam, the father of all mankind, with all the patriarchs and prophets, rejoiced and said, 'That light is the author of everlasting light, who hath promised to translate us to everlasting light.' And while we were all rejoicing, our father Simeon came among us, and congratulating all the company, said, 'Glorify the Lord Jesus Christ - - -' "Afterwards there came forth one like a little hermit, and was asked by every one, 'Who art thou?' To which he replied, 'I am the voice of one crying in the wilderness John the Baptist.' - - - But when the first man our father Adam heard these things, that Jesus was baptized in Jordan, he called out to his son Seth, and said, 'Declare to your sons, the patriarchs and prophets, all those things which thou didst hear from Michael the archangel, when I sent thee to the gates of paradise, to entreat God that he would anoint my head when I was sick.' Then Seth said,—'I Seth, when I was praying to God at the gates of paradise, behold! the angel

\* This singular book was found in the house of a gentleman in Cannemarra!!—In the *Dublin Penny Journal*, vol. i, number 8, is a sketch of the phrenological mapped head, on a reduced scale, copied from the original.—Johannes, by the boldness of his opinions, incurred the displeasure of pope Nicholas I. who wrote to Charles the Bald, in whose court he was residing, either to send him to Rome, or banish him the university of Paris. Charles, being unwilling to offend the pope, advised Johannes to return to his native country, which he did in the year 864.—In 884 he came to England, and obtained the friendship of Alfred. His portrait, as well as that of his patron, was formerly (and is perhaps still) preserved over the door of the refectory of Bezesnoone college, sculptured in stone.

of the Lord, Michael, appeared unto me, saying—'I tell thee Seth, do not pray to God in tears, and entreat him for the oil of the tree of mercy, wherewith to anoint thy father Adam, for his head-ache, because thou canst not by any means obtain it, till the last day and times.' A dialogue then ensues between Satan, the prince and captain of death, and Beelzebub, the prince of hell, in which they are interrupted by suddenly hearing a voice, "as of thunder and the rushing of winds, saying, 'Lift up your heads, O ye princes; and be ye lift up, O everlasting gates, and the King of glory shall come in.'"

This is succeeded by the appearance of the King of glory enlightening the regions of darkness, and throwing the devils into confusion. "Then the King of glory trampling upon death, seized the prince of hell, deprived him of all his power, and took our earthly father Adam with him to his glory." A quarrel takes place between Satan and Beelzebub, in which the prince of hell reproaches the prince of death, with being the occasion of the ruin of his kingdom, by urging the Jews to the crucifixion of Christ. Jesus then places Satan under the power of Beelzebub; and delivers the saints out of hell. On the entrance of the saints into paradise, they meet Enoch and Elias, and after a conversation betwixt the liberated saints and them, the narrative proceeds, "Behold there came another man in a miserable figure, carrying the sign of the cross upon his shoulders. And when all the saints saw him, they said to him, 'Who art thou? For thy countenance is like a thief's; and why dost thou carry a cross upon thy shoulders?' To which he answering, said, 'Ye say right, for I was a thief, who committed all sorts of wickedness upon earth. And the Jews crucified me with Jesus; and I observed the surprising things which happened in the creation at the crucifixion of the Lord Jesus, and I believed him to be the Creator of all things, and the Almighty King, and I prayed to him, saying, 'Lord remember me when thou comest into thy kingdom.' He presently regarded my supplication, and said to me, 'Verily, I say unto thee, this day thou shalt be with me in paradise.' And he gave me this sign of the cross, saying, 'Carry this, and go to paradise; and if the angel, who is the guard of paradise, will not admit thee, shew him the sign of the cross, and say unto him, Jesus Christ, who is now crucified, hath sent me hither to thee.' When I did this, and told the angel, he presently opened the gates, introduced me, and placed me on the right hand in paradise, saying, 'Stay here a little time, till Adam, the father of all mankind, shall enter in with all his sons, who are the holy and righteous [servants] of Jesus Christ, who is crucified.'" The relation concludes with the thanksgivings of the patriarchs; and Charinus and Lenthius, after professing to have revealed all they were permitted, each deliver in a separate account, written on "distinct pieces of paper," which, on examination, "are found perfectly to agree, the one not containing one letter more or less than

the other." Charinus and Lenthius immediately change "into exceeding white forms," and are seen no more. Joseph and Nicodemus afterwards relate the account to Pilate, who enters it in the public records, and going to the temple, summons all the rulers, and scribes, and doctors of the law, and says to them, "I have heard that ye have a certain large book in this temple; I desire you, therefore, that it may be brought before me." And when the great book, carried by four ministers, [of the temple,] and adorned with gold and precious stones, is brought; Pilate adjures them to declare whether the scriptures testify of Christ. Annas and Caiphas dismiss the rest, and then avow their conviction that "Jesus Christ is the Son of God, and true and Almighty God."

"Such is the nature of a work," says Townley, "which was deemed of sufficient merit and importance, to be translated into various languages, to be one of the earliest specimens of typography; and to be placed in the churches for the edification of the people." In the universities and cathedral churches, it was to a late period a general custom for the public lecturers to read upon any book, rather than upon the scriptures. The works of Scotus, Aquinas, and the *Sentences* of Lombard; the *Golden Legend*, with miracles and mysteries, were the means the clergy employed in corrupting human reason, and the christian faith. The ignorant and careless clergy imagined that the safest means to retain the populace, was by miracle plays, ridiculous pageants, and profane festivals, such as the *Feast of Fools*; *Feast of the Ass*; *Feast of the Bull*; *Feast of the Innocents*, &c.\*

1497. Erasmus was the first person who publicly taught the Greek grammar in the university of Cambridge; though, when he first came into England in this year, he had so incompetent an acquaintance with that language, that our countryman, Linacre, who was just returned from Italy, perfected him in the knowledge of it.

Cornelius Vitellius, an Italian, was the first

\* Du Cange notices several of these grotesque, profane and licentious feasts, under different terms in his *Glossary*.—A curious collection has also been made by the Abbe Artigny, in the fourth and seventh volumes of his *Mémoires d'Histoire*, &c. Du Radier, in his *Recreations Historiques*, vol. i. p. 109, has noticed several writers on the subject, and preserves one on the hunting of a man, called Adam, from Ash-Wednesday to Holy-Thursaday, and treating him with a good supper at night, peculiar to a town in Saxony.—In Turner's second volume of his *History of England*, p. 367, will be found a copious and a curious note on this subject.—We had in Leicester, in 1411, what was called a *glutton-mass*, during the five days of the festival of the Virgin Mary. The people rose early to mass, during which they practised eating and drinking with the most zealous velocity, and, as in France, drew from the corners of the altar the rich puddings placed there. Francis Douce, Esq. supposes that many of the grotesque figures in the illuminated religious manuscripts, generally, but erroneously, called *missals*, are allusive to the ceremonies which arose out of the Roman *saturnalia*,—which resembled, in a great degree, the excesses of a modern carnival, and that the archbishops and bishops degraded themselves by joining in these sports with the inferior clergy. An illumination in the Bedford missal, representing several men feasting in a church-yard, as referring to an ancient festival of the Romans called the feast of the dead.

who taught Greek in the university of Oxford; and from him the famous Grocyn learned the first elements of it, which he afterwards perfected in Italy under Demetrius Chalcondyles, a learned Greek, and Politian, an Italian, professor of Greek and Latin at Florence.

D'Israeli, in his highly amusing and instructive work the *Curiosities of Literature*, gives the following anecdote, (amongst many others) of *Literary Follies*. "About the latter end of the fifteenth century Antonio Cornezano wrote a hundred different *Sonnets* on one subject, 'the eye of his mistress!' to which possibly Shakespeare may allude, when Jaques describes a lover, with his

Woful ballad  
Made to his mistress' eyebrow.

Not inferior to this ingenious trifler is Nicholas Franco, well known in Italian literature, who employed himself in writing two hundred and sixteen *satiric Sonnets*, chiefly on the famous Aretin. This lampooner had the honour of being hanged at Rome for his defamatory publications.

1497. The first *Grammar* printed in England, was published by John Holt, of Magdalen college, and usher of Magdalen school, in Oxford. It was entitled *Lac Prierorum*, and dedicated to Norton, archbishop of Canterbury.

1497. Printing introduced into the following places in the course of this year:—

Avignon, by Nicholas Lepe. Dominic Anselmus, 1500.

Carmagnole, no printer's name.

Tubingen, by John Otmar. Frederic Meynberger, 1499.

1498, May 25. In Bacon's *History of Henry VII.* is the following curious note:—*Item*, for a reward given at the paper mylle, 16s. 9d. This is remarkable, because it is generally asserted that there was no regular paper mill established in England till 1588, by John Spilman, jeweller to queen Elizabeth, at Dartford in Kent.

In *Bartholomeus de proprietatibus rerum*,\* printed by De Worde, (see p. 152 ante) mention is there made of a paper mill near Stevenage, in the county of Hertford, belonging to John Tate the younger. The water mark which he used was an eight-pointed star, within a double circle.

Water-marks has at various periods been the means of detecting frauds, forgeries, and impositions in our courts of law and elsewhere—but this evidence is bad. The following is introduced as a whimsical example of such detection: The

monks of a certain monastery at Messina exhibited, with great triumph, a letter written by the Virgin Mary with her own hand. Unluckily for them this was not, as it easily might have been, written on the ancient papyrus, but on paper made of rags. On one occasion, a visitor to whom this was shewn, observed with affected solemnity, that "the letter involved also a miracle, for the paper on which it was written was not in existence till several hundred years after the mother of our Lord had ascended into heaven."—*Beloe*.

The following lines, on a paper-mill, appeared some years ago, and may not be inappropriately inserted in this place:

#### THE PAPER MILL.

Far from the public road, remote and still,  
Stands a neat edifice,—the PAPER MILL;  
Caught by the rural splendour of the place,  
My willing muse would fain its use retrace.  
'Tis there, amidst the willows foliage green,  
Wanders the peaceful rivulet serene;  
Its silver stream from springs meandering runs,  
And with a constant pace the mill-wheel turns.  
Hail! useful structure, hail! to thee is due,  
Unbounded praise, past ages never knew;  
Thanks to the first ingenious artisan,  
Whose schemes thus benefit enlighten'd man.  
Paper! to thee the world indebted stands,  
From Andes tide, to fair Columbia's lands;  
In this improving age—accounted wise,  
Fair learning with thine aid begins to rise.  
By thee is handed down, from age to age,  
The sacred truths of Revelation's page;  
By thee we trace the pilgrim's sacred dream,  
Or muse o'er Hervey's pure enlighten'd theme;  
To thee Religion owes her gratitude,  
Salvation now o'er heathen lands is strew'd;  
'Mongst Afric's rude and wild ungovern'd clan  
To free from ignorance our fellow man!  
To lands remote the joyful blessing give,  
In mercy thus proclaim—believe and live!  
Hail! paper, hail! your humble bard essays  
To give his boon in tributary lays;  
The improving art this paper does fulfil,  
Perhaps it came from Sawston paper mill.

1498. John Petit, a native of Paris, began to print this year. He was more of a bookseller than a printer, yet kept a greater number of workmen than any of his contemporaries: he had no less than fifteen presses constantly employed. He printed with the gothic character; but his impressions were so correct and beautiful, that he was sworn printer and bookseller to the university of Paris, and chosen master of the company. The words *petit a petit* (by little and little) he used in his titles, alluding to his own name.

The women of France have distinguished themselves in the art of printing, particularly Charlotte Guillard, the widow of Berthold Rembolt, Uldric Gering's partner, who, for the space of fifty years, kept several presses at work, and printed a great number of large and very correct editions, both in Latin and Greek. Her best impressions were published after she became a widow the second time, namely, the *Bible*, the *Fathers*, and the works of *St. Gregory*, in two volumes, which were so accurate as to contain but three faults.

Charlotte Guillard's fame as a printer at length spread so much abroad, that the learned

\* This work was originally composed by Bartholomeus de Glanville, otherwise quaintly denominated Barthelmew Glanville, descended of the noble family of the earls of Suffolk. He was a Franciscan friar, and wrote this work about the year 1360, and seems to have been the Flin of his time. His present work, the *History of the Properties of Things*, is a general history of nature, and was first written in Latin. It became exceedingly popular, and was many times printed abroad from 1479 to 1494. It was also translated into the English, French, Dutch, and Spanish languages. Of the Latin work there were many early editions, but Panzer notices none before 1480. The edition of Wynkyn de Worde was printed from a translation by John Trevisa. Jehan Corbichon, an Augustine monk, translated it into French, by order of Charles V.

Lewis Lippoman, bishop of Verona, made choice of her to print his *Catena SS. Patrum in Genesim*, which he finished in Portugal. This edition she performed so much to his satisfaction, that when he assisted at the Council of Trent, he came on purpose to Paris to return her thanks, and prevailed upon her to print likewise his second volume, viz. *Catena in Exodum*, which she performed with equal beauty and correctness. These, with many other particulars relating to that admirable woman, may be seen in Chevillier's works.

Of other names of Parisian printers, which occur from 1490 to 1500 inclusively, it will be sufficient to mention some of the principal. Those were Denis Roce: Jehan Trepperel, who printed both in his own name, and occasionally in conjunction with Jehan Jehannot; but as Trepperel did not long survive to exercise the art, the name of his widow (Veuve Trepperel) is far more conspicuous in the annals of the Parisian press: Guillaume Eustace, many of whose impressions are curious and estimable: Pierre le Dru: Thielman Kerver distinguished himself much amongst coteremporary printers; especially by his beautiful impressions in red and black, in which he was probably exceeded by none. Under his direction, and at his charge, some of the painted windows which ornament two of the finest churches of Paris were designed and executed: Francois Regnault was probably the last of the series whose commencement was not later than the year 1500. He was also a most industrious printer; and his impressions are numerous. The well known device of this artist is an elephant, upon the back of which is placed a castle, bearing the initials of his name: which appears also in full on a scroll beneath. Jodocus Badius, and Henry Stephens, the elder, both belong to this period; but a more particular notice will be given of these celebrated printers.

1499. Printing introduced into the following places in the course of this year:—

Bamberg, by John Pfeil.

Treguier, in Bretagne, no printer's name.

Montserrat. A very high mountain in Spain, on which is an ancient monastery, dedicated to the Virgin Mary, and where John Luchner, printed the *Missale Benedictinum*, in this year.

Tarragona, by John de Rosembach.

1499. *Psalterium: Impressum apud Westmonasterium per me uynandum de worde. Anno dni. mccc.lxxxix. xx die Maii. Folio.*

First edition of the *Psalter* printed in England. It has no title-page, but commences with a calendar on signature A, which is contained in twelve leaves. The first *Psalm* begins a new series of signatures, which extends to s in octaves. At the end of the *Psalm*, are the hymns of the *New Testament*; and the colophon is given above. On the last page, is Caxton's small device, enclosed by four ornamental head-pieces. The *Psalter*, however, had been previously printed abroad, by Faust and Schoeffer, in 1457. It was also reprinted in 1459, 1499, &c.; and in these editions, which are of singular magni-

ficence, the Gregorian musical notes are inserted.—Another edition of this *Psalter* was printed in England in 1502.

1499. The invention of that species of engraving distinguished by the appellation of *chiaroscuro*, seems to be claimed by the Germans, and first practised by Mair; one of whose prints of this kind is dated this year. The operator takes two, three, or more blocks of wood; the first having the outlines cut upon it; the second is reserved for the darker shadows; and the third for the shadows which terminate upon the lights; and these are substituted in their turn, each print receiving an impression from every block. This mode of engraving was designed to represent the drawings of the old masters. Many excellent works in *chiaroscuro* have been produced in France; and in Italy it was honoured with the performances of Titian and Parmigiano; but the attempts of Jackson, Kirkall, and others in England, have not been equally successful. A set of excellent prints in this way was published by J. Skippe, esq.; a connoisseur and dilettanti.

1500. Printing introduced into the following places in the course of this year:—

Cracow, the capital of Poland, by John Haller, who printed *Ciceronis ad Herennium Rhetoricor.*

Munich, by John Schobser.

Amsterdam, by D. Pietersoen.

Olmutz, by Conrad Bomgathem.

Pfortzheim, in Suabia, by T. Ansel. Radensis.

Perpignan, by John Rosembach.

Jean, or Gein, no printer's name.

Savillano, by Christopher Beyam de Beggiamo and John Glein.

Albia, printer unknown; the first work was *De Remedio Amoris*, 4to. by the celebrated Eneas Sylvius, pope Pius II.

Rhenen, no printer's name.

The first work printed in Moravia, was in this year; it is a *Treatise against the Waldenses*.

Wynkyn de Worde, Richard Pinson, Julian Notery, and John Barbier, commenced the art of printing, and William Wilecock, as a bookseller, in London, before the end of this century.

1500, July 6. Extract from an inventory of the goods of Thomas Kebbitt, serjeant-at-law, appraised by Valentine Mason, general appraiser unto the most reverend father in God the lord cardinal and archbishop of Canterbury:—A book written in French, on parchment, called *La Abuse in Court*, valued at 10s.; a book in French, of the *Chronicles*, on parchment, £2 13s. 4d.; a book imprinted, called, *Ludovicus de Vite Christi*, 10s.; a book in French, wrote on parchment, £1. These are all the books belonging to a serjeant-at-law in those days. The plate was valued at £278, and the cattle at £140.

In an edition of the *Pragmatic Sanction*, printed at Paris, by Andrew Bocard, the following handsome couplet in Latin, is placed at the end of the book:—

May this volume continue in motion,  
And its pages each day be unfurl'd—  
Till an ant has drank up the ocean,  
Or a tortoise has crawl'd round the world.

## SIXTEENTH CENTURY.

" Now floods of day Cimmerian gloom succeed ;  
 The clergy think, and laymen dare to read.  
 Fair tomes enrich the cultur'd student's room,  
 And the trimm'd lamps their midnight oil consume  
 Now, to invent new arts, or old to find,  
 Becomes the glory of th' ingenious mind.  
 Learn'd critics rise, explore the sense perplex,  
 And re-establish the collated text ;  
 Prescribing rules to judge the old, the new,  
 The just, the false, the spurious, and the true.  
 Now libraries are search'd through clouds of dust ;  
 And medals prove historic truths in rust.  
 Hence, for assurance that the sacred code  
 Wears the Chaldean, not its native mode.  
 On vet'ran shelves antiquaries pore,  
 Studious primeval Hebrew to restore."

HAVING arrived at the sixteenth century, we find that the press had extended itself over a great portion of Europe ; and also that it had been, in most cases, introduced by the clergy, who thought, by confining it to the cloister, it would ever remain at their bidding ; but, in the course of this century, it will be found that the professors of the " Divine Art " maintained a severe warfare with their former patrons, and arbitrary princes. Toleration was not admitted into the vocabulary of the priesthood ; the right which every man had to utter his sentiments was dreading as if its recognition was the forerunner of plague and pestilence. The invention of printing, to which we owe so much, even to this day, was held as a judgment inflicted upon them for their sins. Such was its power, that when it threw off the shackles of intolerance, and men began to avail themselves of their privileges, by avowing sentiments which in Germany had been propagated under the cloud of night—which had been nursed in silence and solitude, and burst forth in the Reformation, it was then, that the awful dread of confiscation of property, of imprisonment in loathsome dungeons, and loss of life, compelled the humble typographer often to work in concealment. The press had but a precarious existence. The light of liberty began to dawn upon it, and that was all. The rays of knowledge it diffused were fitful, feeble, languishing, and sometimes apparently extinguished altogether. But still the embers remained—the flame was fanned afresh—the minds of men became enlightened—inveterate prejudices and revolting superstition no longer held them in bondage. The press acquired strength unobserved ; it obtained an ascendancy over ignorance and injustice, which no earthly power would be rash enough now to attempt to destroy. It must, however, be admitted, and we have given many instances to prove, that a great number of individuals, eminent for their literary attainments and exemplary piety, nobly stepped forward and

devoted their talents to the propagation of knowledge, by means of the press. Many considered the advantages resulting from this incomparable invention, like Fox, the martyrologist, who thus enumerates them,—“ Hereby tongues are known, knowledge growth, judgment increaseth, books are dispersed, the scripture is seen, the doctors be read, stories be opened, time compared, truth discerned, falsehood detected, and with finger pointed, and all (as I said) through the benefit of printing.”

The press found a sure asylum in Britain ; and a great deal was done for public instruction by the course which our early printers took ; for, as one of them says, “ Divers famous clerks and learned men translated and made many noble works into our English tongue. Whereby there was much more plenty and abundance of English used than there was in times past.” The English nobility, with many of the clergy, were, probably, for more than the first half century of English printing, the great encouragers of our press : they required translations and abridgements of the classics—versions of French and Italian romances—old chronicles, and helps to devout exercises. Caxton and his successors abundantly supplied these wants : and the impulse to most of their exertions was given by the growing demand for literary amusement on the part of the great. Caxton, speaking of his *Boke of Eneydos*, says “ This present book is not for a rude uplandish man, to labour therein, nor read it ; but only for a clerk and a noble gentleman, that feeleth and understandeth in feats of arms, in love, and in noble chivalry.” But soon afterwards, a new source of employment for the press arose—A. B. C's, or *Absies*, *Primers*, *Catechisms*, *Grammars*, and *Dictionaries*, were multiplied in every direction to supply the wants of the people.

A new demand very soon followed upon the first demand, which was even more completely the demand of the people. The doctrines of the reformation had proclaimed the bible as the best

spiritual guide and teacher,—and the people would have bibles. The first English bible was bought up and burnt; those who bought the bibles contributed capital for making new bibles, and those who burnt the bibles advertised them; and so great was the rush for this new supply of the most important knowledge, that we have existing three hundred and twenty-six editions of the English bible, or parts of the bible, printed between the years 1526 and 1600. Books became, also, during the first fifty years of English printing, the tools of professional men. There were not many works on medicine, but a great many on law. The people, too, required instruction in the ordinances they were called upon to obey;—and thus the statutes, mostly written in French, were translated and abridged by Rastell, our first law-printer. Our early printers did not attempt what the Alduses, and Stephensses, and Plantins, with other continental printers, were doing for the ancient classics. Down to 1540 no Greek book had appeared from an English press. Oxford had only printed a part of Cicero's *Epistles*, executed at the expense of cardinal Wolsey; Cambridge, no ancient writer whatever:—only three or four old Roman writers had been reprinted at that period throughout England. The exclusive privileges that were given to individuals for printing all sorts of books, during the reigns of Henry VIII. Mary, and Elizabeth,—although they were in accordance with the spirit of monopoly which characterised that age,—were often granted to prevent the spread of books:—but to the honour of our country, the laws of England have never violated the freedom and the dignity of the press. "There is no law to prevent the printing of any book in England, only a decree of the star chamber,"\* said the learned Selden. Proclamations were occasionally issued against authors and books; and foreign works were, at times, prohibited. But now, the professors of the art, enjoy

"Kind equal rule, the government of laws,  
And all protecting freedom, which alone  
Sustains the name and dignity of man."

1501. Pope Alexander VI., whose policy and whose private life were equally strangers to morality and religion, published a bull, relative to the censure of books. After lamenting that Satan sows tares amongst the wheat of Christ's church, the papal pontiff proceeds thus: "Having been informed, that by means of the said art, [of printing,] many books and treatises, containing various errors, and pernicious doctrines, even hostile to the holy christian religion, have been printed, and are still printed, in various parts of the world, particularly in the provinces of Cologne, Mentz, Triers, and Magdeburg; and being desirous, without further delay, to put a stop to this detestable evil;—We, by these presents, and by the authority of the apostolic chamber, strictly forbid all printers, their

servants, and those exercising the art of printing under them, in any manner whatsoever, in the above said provinces, under pain of excommunication, and a pecuniary fine, to be imposed and exacted by our venerable brethren, the archbishops of Cologne, Mentz, Triers, and Magdeburg, and their vicars general, or official in spirituals, according to the pleasure of each, in his own province, to print hereafter any books, treatises, or writings, until they have consulted on this subject, the archbishops, vicars, or officials, above mentioned, and obtained their special and express licence, to be granted free of all expense; whose consciences we charge, that before they grant any licence of this kind, they will carefully examine, or cause to be examined, by able and catholic persons, the works to be printed; and that they will take the utmost care that nothing may be printed wicked and scandalous, or contrary to the orthodox faith." The rest of the bull contains regulations, to prevent works already printed from doing mischief. All catalogues, and books printed before that period, are ordered to be examined, and those that contain any thing prejudicial to the catholic religion, to be burnt.

1502. One of the most impudent literary forgeries that was ever practised on mankind, was by a Dominican monk and master of the sacred palace under pope Alexander VI. He wrote a work entitled *Liber Idem*, which pretends to be the genuine works of Sanchoniatho, Manetho, Berosus, the lost works of Xenophon, Philo, Fabius, Pictor, &c. The learned soon detected the imposture, for he had no manuscript to produce in his defence. He died in this year, and his name is now handed down to posterity as the first on the list of impudent impostors. The work was printed at Antwerp, 1545, 8vo.

1502. *Died*, PETER SCHOEFFER, who may be justly considered as the father of letter founding. When he was born, who were his parents, and what were his circumstances, are points wholly unknown, and perhaps likely to continue so. But this much is certain: Schoeffer was a young man of no mean talents; and appeared, in the estimation of Faust, of so much importance to the complete success of the discovery of printing, that, as an inducement to incorporate him in the concern with himself and Gutenberg, he offered him the hand of his daughter (Christina) in marriage: an offer which seems to have been readily accepted. Of the age, person, and dowry of Christina, it were now in vain to make inquiries. Previous to his partnership with Faust, it is proved, from an original document of the date of 1449, that he had formerly lived at Paris, and was a calligraphist; or, "one who taught writing in public schools." Schoeffer's fame, however great, and once generally acknowledged as a *calligraphist*, becomes merged (to borrow a law phrase) in that of a *printer*. He tells us, in the colophon of the *Palter* of 1457, simply that he was of Geirnszheim; and in that of the *Durandus*, 1459, he describes himself "a clerk in the diocese of Mentz."

\* Sir Thomas Crew's collection of the Proceedings of the Parliament, 1628.

† Roderic Borgius, Alexander VI. died August 8, 1503.

After the death of Gutenberg and Faust, Schoeffer continued the establishment by himself for thirty years; and as Lipsius said afterwards of Moretus, the son-in-law and successor of Plantin the typographical wonder of Antwerp, he was the heir of his skill and constancy, his merit and his fame.

Whether Conrad Henlif was a printer in partnership with Schoeffer, is very doubtful; as he is only mentioned, as presenting, in conjunction with Schoeffer, a copy of the edition of the *Epistles of St. Jerome*, of the date of 1470, upon vellum, to the abbey of St. Victor at Paris, in order, on the anniversary of the gift, "that the souls of John Faust, of themselves, and of their respective families, might be prayed for." This is noticed by Palmer and Bowyer. Dibdin says that he had never seen the name of Conrad Henlif introduced into any colophon which he had examined.

We have already shewn what honours were conferred upon the early professors of typography by kings and supreme pontiffs, and to those must be added the name of Peter Schoeffer, who had both honours and privileges conferred upon him by Louis XI. king of France.

During the time that Schoeffer conducted the business alone, he published an edition of the *Latin Bible*, and two editions of the *Latin Psalter*. The *Bible* was printed in 1471, 2 vols. folio, and the *Psalter* in 1490 and 1502, folio. Many editions of the *Latin Bible* were, about this period, executed by other printers in different places, most or all of whom had learnt the art of printing from the original inventors; and so indefatigable were these early typographers, that nearly one hundred editions of the *Latin Bible* were printed before the end of the fifteenth century, sixteen of which were accompanied with the *postilla*, or commentary, of De Lyra. Besides these, there were upwards of thirty editions of the *Latin Psalter*, many of them with commentaries; three editions of the *Latin New Testament*, with Lyra's notes; and several editions of the *Prophets*, the *Gospels*, or other parts of the sacred volume.—*Horne*.

The typographical fame of the city of Mentz, seems to have been entirely confined to Faust's family; and that no farther than his grandson, John Schoeffer, who was likewise an excellent printer. This individual was the source of all the disputes upon the origin of typography. His father and grandfather had never arrogated to themselves the glory of absolute inventors, but only that of promoters, in union with Gutenberg, whom they even acknowledged to be the original author of printing. However, John Schoeffer, in the colophons to his first editions, asserted the contrary, and among others, in his edition of *Livy*, folio, 1505. But in the *Missal*, printed at the Mayence press in 1509, and afterwards in other books, he began to say: "*cujus Avus*" (Jo. Faustus) "*primus Artis impressorie fuit inventor et auctor*." In the colophon of the work *Trithemii Breviarium Historia Francorum*, 1515, he completed the imposture, by giving all

the glory of the invention to his father and grandfather; asserting, that the art was kept inviolably secret in his house till the year 1462, after which time only, it began to be divulged out of Mentz. This relation he published in all the successive editions; but finally in *Livy*, 1518, he discovered to every one who considered the subject, what the object of his artifice was; viz. to procure by this imposture the honourable and lucrative privilege from the emperor Maximilian, in which may be read the motive for granting it, expressed in the same terms as the fabrication of Schoeffer. This solemn imperial privilege, authenticating Schoeffer's relation, imposed so far upon the learned world, that afterwards the imposture was received as an incontrovertible truth; and hence arose numberless typographical controversies.

1502. *Missale ad Usun, &c. Helfordensis*. Folio. This very rare book, printed by William Faques, is perhaps the earliest impression of the *Hereford Missal*. It contains the following curious form of matrimony, printed partly in the Saxon character.

*I. N. underfygne the N. for my wedded wyf, for beter, for worse, for richer, for poorer, yn seknes, and yn helthe, tyl deth us departe, as holy church hath ordeyned, and thereto y plyght the my trovthe. Et iterum accipiat cam per manum dextram in manu sua dextra, et ipsa dicat sacerdote docente.*

*I. N. underfygne the N. for my wedded housbunde, for beter, for voores, for richer, for poorer, yn seknes, and yn helthe, to be bozum to the tyl deth us depart, as holy church hath ordeyned, and therio y plyght the my trovthe. Vel dicat in materna lingua hoc modo sacerdote docente. Wyth thys ryng y veeede, and thys gold and seluer ych the geue, and wyth myne body ych the honoure.*

1503. In the early stages of the art, great complaints were made of the frequent falsification, pirating, and forgeries of literary works. This evil gave occasion to those privileges of impression which were granted by kings, princes, and supreme pontiffs, in order to guarantee to the industrious printer, the due reward of his labour and enterprise. But these *diplomata* were often found a very inadequate remedy for the injury. Frequently whole works were clandestinely reprinted in cities or countries remote from the place of their first appearance; and the author and original publisher were very often defrauded of their just advantages. Sometimes books were reprinted in an abridged and mutilated form; and often with little attention to accuracy, or to the credit and feelings of those authors or annotators whose names they bore. Sometimes the price of obscure and worthless publications were enhanced by a false date, place, or subscription; for as the art was cultivated with superior accuracy in some cities of Italy, and at Venice more especially, the names of such places appearing in the title, were often found to give superior sale and currency to the impression. Whatever might be the original

intention of such private and peculiar marks, rebusses, or devices, adopted by early printers, after these literary frauds began to prevail, they became at least, so far useful, as to render such frauds less practicable. It was, however, by no means impracticable for one printer to counterfeit the device of another, in addition to the fraudulent assumption of his name and designation. A ludicrous instance is upon record of such an attempt, which betrayed itself like a counterfeit coin, by the clumsiness and inaccuracy of its execution. Certain printers who were so disingenuous as to counterfeit a popular production of the Aldine press, were exposed to public ridicule in the preface to the *Aldine Livy*, 1518.

Renouard has also observed that many others of those printers who were cotemporary with the Aldi of Venice, hoping by this mark of the *anchor* and *dolphin* to recommend their own impressions, were eager to avail themselves of such an advantage. Some fraudulently counterfeited the mark itself, others invented something analogous to it. Various Italian printers of considerable eminence disgraced themselves by these disingenuous artifices. But the printers of Lyons carried such audacious forgeries to a far greater length than any others, and Renouard has cited a particular memorial drawn up by Aldus himself on the subject, and published at Venice in 1503.

It can, however, be scarce pretended that this precautionary use of the mark was actually in the contemplation of its original inventors. Some even of the impressions of Faust and Schoeffer, and other printers of the earliest periods, have such marks subjoined to their subscriptions. The device here given is from the *Mentz Psalter*, of 1457, by Faust and Schoeffer; it consists of two *ecus* or shields, exhibiting the arms of these respective artists.

As many of the early printers have omitted to subjoin their names to most of their works, such marks have often enabled bibliographers to ascertain with certainty their place and origin. Where both the mark, note of the place, date, and printer's name have been omitted, a like use has sometimes been made even of the *paper marks*; which appear to have been of an usage perhaps almost as remote as the manufacture, of that article. Amongst other notices of this kind, the reader may consult the work last mentioned.

The marks used by learned printers, afterwards became more miscellaneous and general, and exhibited an amusing display of the inge-

nuity, erudition, piety, or, as we may venture to add, sometimes of the fanciful caprice of the inventor. Thus John Schoeffer adopted the *arms* used by his father, but with a variety of whimsical changes; for in the *champ* or field of the device, he introduced *shepherds* with their dog and sheep, in allusion to the name Schoeffer, which signifies shepherd. The classical origin of the *anchor* and *dolphin* of Aldus is well known. It was borrowed from a medal of the emperor Titus; and the hieroglyphic is supposed to correspond with that adage is said to have been the favourite motto of Augustus: *αγκυρα βοαδευς*. On the subject of this mark the reader will find much entertainment in the *Adagia* of Erasmus, under the title *Festina lente*; and that scholar embraces the same opportunity of explaining the rebus or device of his favourite printer John Frobenius, of Basil. "If," says he, "princes on this side the Alps would encourage liberal studies with as much zeal as those of Italy, the *serpents* of Froben would not be so much less lucrative than the *dolphin* of Aldus. The latter *lente festinans* has deservedly gained for himself no less wealth than reputation. As to Frobenius, whilst he constantly carries his *baculus* or staff erect, with no other view than the public advantage; whilst he departs not from the *simplicity* of the *dove*; whilst he exemplifies the *prudence* of the *serpent* not more by his device than by his actions; he is rich rather in reputation than in an estate."

The following beautiful lines on the *Aldine Anchor*,\* cannot fail of being admired by the lovers of typography, as the production of that venerable and eminent bibliographer Sir Egerton Brydges.

#### THE ALDINE ANCHOR, AN IMPROMPTU,

"Let your emblems, or devices, be a dove, or a fish, or a musical lyre, or a naval anchor."

Would you still be safely landed.

On the *Aldine anchor* ride,

Never yet was vessel stranded

With the *dolphin* by its side.

Fleet is *Wachet's* flying courser,

A bold and brideless steed is he;

But when winds are piping hoarser,

The *dolphin* rides the stormy sea.

*Stephen's* was a noble printer

Of knowledge firm he fixt his tree;

But time in him made many a splinter,

As, old *Elzevir*, in thee.

Whose name the bold *Dicamnia* hallows,

Knows how well his page it decks;

But black it looks as any gallows

Fitted for poor authors' necks.

Nor time nor envy e'er shall canker,

The sign that is my lasting pride,

Joy, then, to the *Aldine anchor*,

And the *dolphin* at its side.

To the *dolphin*, as we're drinking,

Life, and health, and joy we send;

A poet once he saved from sinking,

And still he lives—the poet's friend.

The device of Vindelinius Ribelius of Strasburg, which to a superficial observer, might

\* Mr. Pickering, the eminent bookseller of Chancery-lane, London, has adopted the *ALDINE ANCHOR* as his mark.

seem the offspring of mere caprice, is in reality an emblematical representation of *Nemesis*, and may be classically illustrated by a reference to the epigram of Xenocrates:—

Warn'd by the goddess, with her squares and beam,  
Measure thy actions, and thy tongue's restraint.

The *hand and compasses* of Christopher Plantin, with his motto *Labor et Constantia*, include a moral not less useful. The same thing may be said of the fine image of *time*, conspicuous in the impressions of Simon Colinaeus; and in Robert Stephen's choice of the apostolic emblem of the *olive tree*, with its broken and insidious branches, and his motto *Noli altum sapere, sed time*, Maittaire discerns an evidence of the humility and christian piety which characterized that distinguished typographer.

There is a work extant, by Orlandi, intitled *Notizia delle Marche degli Antichi e moderni Impressori*; but the author of *L'Histoire de l'Imprimerie* before cited, gives no favourable account of it. He says these notices are very ill executed: that even the names are given in a mutilated and unintelligible manner; and that in the explanation of the marks of printers, the author frequently falls into ludicrous errors, of which the following instance is given. In the two *storks*, the motto of Cramoisy, of which the younger is represented bearing food to the parent bird, which even children might understand to be an appropriate emblem of filial piety and affection, this author discovers a battle of *cranes* in the air, without having paid the smallest attention to the motto; *Honora Patrem tuum, and Matrem tuam, ut longævus sis super terram*; and to other emblems of kindred signification, with which the angular points of the *insigne* are furnished. He refers to pages 237 and 242 of this inaccurate work.

Besides the symbols already enumerated, the following were used by some of the ancient foreign printers:—The *anchor* is the mark of Rephelengius at Leyden; the *arion* denotes a book printed by Oporinus at Basil: the *caduceus*, or *pegasus*, by the Wechelius's at Paris and Frankfurt; the *fountain*, by Vascosan at Paris; the *sphere*, by Janson, or Bleau, at Amsterdam; the *city*, by the Juntas at Venice, Florence, Lyons, and Rome; the *mulberry-tree*, by Morel, at Paris; the *olive-tree*, by the Elzevirs at Amsterdam and Leyden; the *truth*, by the Commelins at Heidelberg and Paris; the *saturn*, by Colinaeus; the *printing-press*, by Badius, Ascensius, &c.

Such marks or rebuses of the early English printers, as are deserving of notice, will be given with the sketches of their lives.

On the subject of marks it may be proper to add, that the earliest bookbinders, a race of men who at these times probably considered their vocation of no mean importance, affected also to distinguish themselves by devices of a similar nature. Very rude and singular designs cut on blocks of wood, and impressed upon the exterior superficies of the volume, are sometimes found on well preserved specimens of ancient

binding; to which the names or initials of the ingenious artist are annexed; whence it evidently appears that ornament was not the sole motive for using them. For various and singular specimens of this nature, it may suffice to refer the reader to those libraries which abound in early printed books, and to the cabinets of diligent and curious collectors.

In the public libraries of the continent, German, French, Italian, Dutch, Spanish, &c. many early specimens of binding, richly studded with gems, ornamented with silver and gold, still exist, and in the less pretending ones of the monasteries, the oaken boards of the fourteenth century covered with vellum, are found attached to a great number of the books, and still in a good state of preservation. In the libraries of Germany are particularly rich in bindings of almost every age and description. In the Imperial library of Vienna, an early specimen exists on a fine *Evangelistarium*. The binding is of the time of Frederic III. The ornaments consist of a lion's head in the centre of the board, surrounded by golden rays, and having a lion's head in each corner of the square. An arabesque border surrounds the whole, giving an effect both splendid and tasteful.\* In the public libraries of Ausburgh, Stuttgart, Landshut, and some others, specimens, clothed in every variety of material, are preserved.

1604, July 11. In the British museum there is a very curious book of *indentures* which was made between Henry VII. and the abbot and convent of St. Peter's, Westminster, for the celebration of certain masses, &c. to be performed in Henry VII.'s chapel, then intended to be built. It is indeed a most noble and curious book; the cover is of crimson Genoese velvet, edged with crimson silk and gold thread, and with tassels of the same material at each corner. The inside is lined with crimson damask; on each side of the cover are five bosses, made of silver, wrought and gilt; those in the middle have the arms and supporters of the king, with his crown and supporters of silver, gilt and enamelled; in the others, at each corner, are so many portcullises, also gilt and enamelled. It is fastened by two hasps, made of silver, and splendidly enamelled with the red rose of the house of Lancaster. The counterpart of these indentures, bound and decorated in all respects like the original, is preserved in the Record office in the chapter house, at Westminster.—*Horne*.

From the wardrobe accounts of Edward IV. and Henry VII. there can be no doubt that both these sovereigns, by their purchasing books abroad, by their encouragement of printing, and the splendour of the binding of their books, pro-

\* Those who are desirous of knowing more of the early history of bookbinding are referred to the following works:—Dibdin's *Bibliographical Tour*, and *Bibliographical Decameron*; Pritch's *Dissertation on Bookbinders*; Watton's *History of English Poetry*; Wardrobe accounts of our early sovereigns; Horne's *Introduction to Bibliography*; Hartshorne's *Book Rarities of Cambridge*; *Gentleman's Magazine*; *Papers on the Dark Ages*, in the *British Magazine*, vol. 16; Arnett's *Books of the Ancients*, &c.

moted the cause of learning in England. A few items from the wardrobe accounts of Edward IV. as regards the binding of books, will illustrate this subject: "To Piers Baudduyn stationer for bynding, gilding, and dressing of a booke called *Titus Livius* xxs; for bynding, gilding, and dressing of a booke of the *Holy Trinite* xxs; for bynding, gilding, and dressing of a booke called *the Bible* xxs; to Alice Claversylkwoman for an unce of sowing silk xivd. Velvet cremysyn figured with white, viijs. per yard. The copersmythe for iij paire of claspes of coper and gilt with roses upon them price of every paire iijs."

In the privy-purse account of Elizabeth of York, for the year 1505, the following items occur, "paid twenty-pence for a *Primer* and *Psalter*." At this time, twenty-pence would have bought half a load of barley, and was equal to six days work of a labourer. Wheat was seven shillings and sixpence a quarter; malt three shillings and fourpence; oats, one shilling and tenpence; eight or nine pounds of beef, pork, or veal, one day's labour; seven pounds of cheese, or four pounds of butter, the same. The wages of a labourer was threepence halfpenny a day; various workmen from fourpence to sixpence a day.

Inscriptions first collected for publication.

1506. With regard to the poet laureate of the kings of England, an officer of the court remaining under that title to this day, he is undoubtedly the same that is styled the king's versifier, and to whom one hundred shillings were paid as his annual stipend, in the year 1251. But when or how that title commenced, and whether this officer was ever solemnly crowned with laurel at his first investiture, cannot now be determined, after the searches of the learned Selden on this question have proved unsuccessful. It seems most probable, that the barbarous and inglorious name of *versifier* gradually gave way to an appellation of more elegance and dignity: or rather, that at length, those only were in general invited to this appointment, who had received academical sanction, and had merited a crown of laurel in the universities for their abilities in Latin composition, particularly Latin versification. Great confusion has entered into this subject, on account of the degrees in grammar, which included rhetoric and versification, anciently taken in our universities, particularly at Oxford: on which occasion, a wreath of laurel was presented to the new graduate, who was afterwards usually styled *poeta laureatus*. These scholastic laureations, however, seem to have given rise to the appellation in question. Thus the king's laureate was nothing more than "a graduated rhetorician employed in the service of the king." That he originally wrote in Latin, appears from the ancient title *versificator*: and may be moreover collected from the two Latin poems, which Baston and Gulielmus, who appear to have respectively acted in the capacity of royal poets to Richard I. and Edward II., officially composed on Richard's crusade, and Edward's siege of Striveling castle.

One John Watson, a student in grammar, obtained a concession to be graduated and laureated in that science; on condition that he composed one hundred Latin verses in praise of the university, and a Latin comedy. Another grammarian was distinguished with the same badge, after having stipulated, that, at the next public act, he would affix the same number of hexameters on the great gates of Saint Mary's church, that they might be seen by the whole university. This was at that period the most convenient mode of publication. About the same time, one Maurice Byrchensaw, a scholar in rhetoric, supplicated to be admitted to read lectures, that is, to take a degree in that faculty; and his petition was granted, with a provision, that he should write one hundred verses on the glory of the university, and not suffer Ovid's *Art of Love*, and the *Elegies* of Pamphilus, to be studied in his auditory. Not long afterwards, one John Bulman, another rhetorician, having complied with the terms imposed, of explaining the first book of Tully's *Offices*, and likewise the first of his *Epistles*, without any pecuniary emolument, was graduated in rhetoric; and a crown of laurel was publicly placed on his head by the hands of the chancellor of the university. About the year 1489, Skelton was laureated at Oxford, and in the year 1493, was permitted to wear his laurel at Cambridge. Robert Whittington afforded the last instance of a rhetorical degree at Oxford. He was a secular priest, and eminent for his various treatises in grammar, and for his facility in Latin poetry: having exercised his art many years, and submitting to the customary demand of an hundred verses, he was honoured with the laurel in the year 1512. This title is prefixed to one of his grammatical systems: *Roberti Whittingtoni, Lichfeldiensis, Grammatices Magistri, Protovatis Anglie, in florentissimis Oxoniensi Academia Laureati, de Octo Partibus Orationis*. In his *Panegyric* to cardinal Wolsey, he mentions his laurel,

Suscipe LAURICOMI munuscula parva Roberti.

The first mention of the king's poet, under the appellation of laureate, was John Kay, who was appointed poet laureate to Edward the Fourth. It is extraordinary, that he should have left no pieces of poetry to prove his pretensions in some degree to this office, with which he is said to have been invested by the king, at his return from Italy. The only composition he has transmitted to posterity is a prose English translation of a Latin history of the siege of Rhodes: in the dedication addressed to king Edward, or rather in the title, he styles himself *hys humble poete laureate*. Although this our laureate furnishes us with no materials as a poet, yet his office, which here occurs for the first time under this denomination, must not pass unnoticed in the annals of literature.

Andrew Bernard, successively poet laureate of King Henry VII. and his successor, who received a salary of ten marks (£8 13s. 4d.) affords a still stronger proof that this officer was

a Latin scholar. He was a native of Toulouse, and an Augustine monk. He was not only the king's poet laureate, as it is supposed, but his historiographer, and preceptor in grammar to prince Arthur. He obtained many ecclesiastical preferments in England. All the pieces now to be found, which he wrote in the character of poet laureate, are in Latin. These are, *An Address to Henry the Eighth for the most auspicious beginning of the tenth year of his reign*, with an *Epithalamium on the marriage of Francis the Dauphin of France with the King's Daughter*.—*A New Year's Gift* for the year 1516. And verses wishing prosperity to his majesty's thirtieth year. He has left some Latin hymns: and many of his Latin prose pieces, which he wrote in the quality of historiographer to both monarchs, are remaining.

John King, his successor, was followed by Skelton, upon whose testimony we learn that Gower, Chaucer, and Lydgate enjoyed no such distinction: *they wanted nothing but the laurel*. Then came a splendid train of names: Spenser, Daniel, Jonson, Davenant, and Dryden.—Shadwell united the offices of poet laureate and historiographer, and by a manuscript account of the public revenue, it appears that for two years salary he received £600. At his death Rymer became historiographer, and Tate the laureate; who was succeeded by Rowe, Eusden, and Cibber. William Whitehead was the forerunner of Thomas Warton; and Henry Pye, the harbinger of Mr. Sonthey, known no less for his vast literary attainments and poetic genius, than for his exemplary virtues.

The form of creation of three laureate poets at Strasburg, in 1621, is very remarkable: "I create you, being placed in a chair of state, crowned with laurel and ivy, and wearing a ring of gold, and the same do pronounce and constitute poets laureates in the name of the Holy Trinity, the Father, Son, and Holy Ghost.—Amen."

1506, Nov. 10. Pope Julius II. enters triumphantly the captured city of Bologna: and upon this important occasion Michael Angelo modelled a statue of him. The air and attitude of the statue is said to have been grand, austere, and majestic: in one of the visits he received from his holiness, the pope making his observations and remarks with his accustomed familiarity, asked if the extended right arm was bestowing a blessing or a curse on the people? To which Michael Angelo replied, "The action is only meant to be hostile to disobedience;" and then asked the pontiff whether he would not have a book put into the other hand? Julius facetiously answered, "No, a sword would be more adapted to my character; I am no book man." Julian de le Rovere, pope Julius II. died Feb. 21, 1513.

1506. *The Ordynarye of Crysten Men*. Engrprinted in the Cyle of London in the flete strete at the sygne of the sonne by Wynkyn de Worde, the year of our lorde m.ccccxvj. Quarto.

The Rev. T. F. Dibdin, in his *Bibliomania*, second edition, page 169, describes this singular

work. The title is cut on wood, in large square letters over a print representing the inside of a gothic church, with three persons at confession, one of whom is a female receiving absolution. On sign. a. j. is a supposed portrait of the author, a priest sitting at an ancient reading desk with books; but this engraving is common to many volumes of the fifteenth and sixteenth centuries. This edition contains 218 leaves. A single specimen is all that we can give of the contents of this extraordinary volume:—the decalogue is thus summed up in one of the engravings—

One only God thou shalt love and worship perfytely.  
God in vayne thou shalt not sweare by nor other lyke.  
The Sondays thou shalt kepe and serve God devoutly.  
Fader and moder thou shalt honor to thende that thou  
lyve longe.

No man thou shalt sle in dede nor wyllyngly.  
Lachery thou shalt not do, of body ne of consente.  
No menes godes thou shalt not stele, nor witholde.  
Pals wytnes thou shalt not bere nor lye in any wyse.  
The werkes of the flesh thou desyre not but in maryage.  
Other menes godes thou shalt not coeet to hane unjustly.

1506. Bagford, in his *manuscripts*, mentions one John Disle, a printer in London, without naming any work done by him.

1507, March 3. The following instance will show what incredible pains were taken to collect books, at immense expense; and to avoid the thunders of the church, that were directed against any persons who should purloin or disperse the volumes belonging to the various monastic institutions. This fact is afforded by an epistle, addressed by the cardinal legate, George of Ambasia, to the canons of Bruges, from whom he had borrowed *Hiliary on the Psalms*.

"George of Ambasia, presbyter of St. Sixtus, cardinal of Rouen, legate of the apostolic see, to his dear friends the venerable the fathers, the canons, and chapter, of the sacred chapel of Bruges; wisheth peace.

"Having been informed that in the library of your sacred chapel, there was an ancient copy of *Hiliary of Poitiers on the Psalms*; and taking great delight in literary pursuits, especially those which regard our holy religion, so far as our weak abilities will permit; we requested from your paternal kindness the loan of that book for a few days, to which you courteously acceded, notwithstanding the *Pontifical Bull*, which forbade any books being taken away from the library under pain of excommunication.

"Wherefore, having read the book with considerable pleasure, we have resolved to have it copied; for which purpose it will be requisite to have it in our possession for some months, though we intend, after it has been transcribed, to return it uninjured to your paternal care. We, therefore, absolve you from whatever censures or punishments, you might incur by lending the book; and by the authority with which we are invested, do hereby pronounce and declare you absolved, notwithstanding any thing to the contrary, contained in the aforesaid bull, or in any other.

"Given at Bruges, the third day of March m.d.vii. George, cardinal-legate of Rouen."

1507. In this year preparations were com-

menced for establishing a Greek press in the city of Paris. Francis Tissard, one of the most eminent scholars of his time, superintended this important undertaking; and prevailed upon Ægidius or Gilles Gourmount to set up a Greek press; and the first specimens of impressions, entirely Greek, appeared in the university of Paris, in this year. The first Greek book, which issued from Gourmount's press, was a small elementary work, containing a Greek alphabet, rules of pronunciation, &c. This work came forth under the especial patronage of the Prince de Valois, (afterwards Francis I.) and of John d'Orleans, archbishop of Toulouse, afterwards cardinal de Longueville. Three other Greek works made their appearance in the same year, and these were the first Greek impressions that were executed in the whole kingdom of France. Gourmount having, in conjunction with Tissard, thus surmounted the formidable difficulties of such a first undertaking, and merited the title which he assumed of *Primus Græcarum litterarum Parisiis impressor*. In 1508 he established his claim to the like honourable distinction for the Hebrew, by his impression of two works from the zealous pen of Tissard. Gilles de Gourmount did not confine himself to the employment of his Greek press, but printed various other works of different descriptions.—After the example of this artist, the printers of Paris, encouraged by the university, made it a point of honour to enrich their respective typographic establishments with Greek characters. Gilles Gourmount appears to have survived till the year 1528, or longer. His usual mark or device consisted of his own arms, surrounded by this motto;

Tôt on tard près ou loin  
A le fort du faible desoin.

In addition also to the above, he frequently added certain Greek adagia.

1507. At this period, besides the books that were printed in England, there were several printed for us abroad, by the encouragement of English merchants, and others, as well as for the advancement of learning, as their own profit and advantage. Among others was Mr. Bretton, a merchant of London, who seems to have bore the character of a faithful and honest man, as appears by the books printed at his expense.

In this year several of the prayer books in English, were sold at the sign of the Trinity, in St. Paul's church yard.

John of Doesborowe, a printer at Antwerp, about this time, executed many works in the English tongue. Among others, Mr. Warton says "There is an old book (or as he elsewhere terms it, an old black-lettered history) of the necromancer Virgil, printed in 1510." This booke (intituled Virgilius) treateth of the lyfe of Virgilius, and of his deth, and many marvayles that he did in hys lyfe tyme, by witchcraft and nigromancy, thorough the help of the dryylls of hell.

The colophon—Thus endeth the lyfe of Virgilius, with many dyvers consaytes that he dyd. Emprynted in the cyttye of Andewarpe by me John

Doesborche dwelling at the Camer Porte, with cuts, 8vo. Mr. Warton also says that this enchanter Virgil is introduced in the fifty-seventh chapter of the *Gesta Romanorum*. This fictitious personage, however, seems to be formed of the genuine Virgil; because of the subject of the eighth eclogue he was supposed to be an adept in the mysteries of magic and incantation.

1508. The most ancient specimen of printing in Scotland extant, is a collection entitled the *Porteus of Nobleness*, Edinburgh. A patent had been granted by James IV. to Walter Chapman, a merchant of that city, and Andrew Mollar, a workman, for establishing a press there in 1507. Mr. Watson, in his *History of Printing*, says, that the art of printing was introduced into Scotland from the Low Countries, by the priests who fled thither from the persecutions at home. Mr. Robertson, keeper of the records in Scotland, discovered the patent of James IV. which renders it certain that printing was exercised in Scotland thirty-five years after Caxton in England.

In 1509, a *Breviary of the Church of Aberdeen* was printed at Edinburgh. A second part, was printed in the following year. Very few works, however, appear to have issued from this or any other Scotch press for the next thirty years.

The following amusing extract, containing the ancient method of punctuation, is from a work entitled *Ascensius declynsons with the Plain Expositor*. Without date, place, or printer's name, 4to. This work is ascribed to Wynkyn de Worde from a peculiar type which is found in the *Ortus Vocabulorum*, by the same printer.

"Of the craft of Poynting.

"Ther be five maner poyntys, and divisions most vnde with cunning men: the which, if they be wel vnde, make the sentens very light, and ery to vnderstonde both to the reder, & the herer, & they be these: virgil, come, parenthesis, playnt poynt, and interrogatif. A virgil is a sclender stryke: lenynge fyrrward thynnyse, be tokymynge a tytyl, short rest without any perfetnes yet of sentens: as betwene the five poyntis a fore reheraid. A come is with tway titills thynnyse: betokymynge a longer rest: and the sentens yet ether is vnperfet: or els, if it be perfet: ther cummith more after, longyn to it: the which more comynly can not be perfet by itself without at the lest summat of it: that gothe a fore. A parenthesis is with tway crokyd virgils: as an olde mone, & a new bely to bely: the whiche be set on theton afore the begynnyng, and thetother after the latyr ende of a clause: comyn within an other clause: that may be perfet: thof the clause, so comyn betwene: wer away and therefore it is sonndyde comynly a note lower, than the vther clause. yf the sentens cannot be perfet without the ymner clause, then stede of the first crokyde virgil a streight virgil wol do very wel: and stede of the later must nedis be a come. A playne point is with vcom titill thynnyse. & it cumeth after the ende of al the whole sentens betokymynge a longe rest. An interrogatif is with tway titills: the upper ryrynge this wyse? & it cumeth after the ende of a whole reason: wheryn ther is rum question axside. the whiche ende of

the reson, trying as it were for an answere : risyth  
 upwarde. we have made these rulis in englishe :  
 by cause they be as profitable, and necessary to be  
 kepte in every mother tounge, as in latin. Sethyn  
 we (as we wolde be god : every precher wolde do)  
 have kept owre rulis bothe in owre englishe, and  
 latyn : what nede we, sethyn owre own be suffi-  
 cient enogh : to put any other exemplis."

1509. *The Shyp of Folyys of the Worlde*. In-  
 prentyd in the Cyte of London in Fletestre[te] at  
 the signe of Saynt George By Richard Pynson,  
 to hys Coste and charge. Ended the yere of our  
 Saviour, m.d.ix. The xiiiiij day of Decembre.

The bibliographical arrangement of this cu-  
 rious volume is, Pynson's seventh device on the  
 recto of the first leaf; and on the reverse the  
 translator's dedication to "Thomas Cornishe,  
 Bishop of Tine, and Suffragan Bishop of  
 Wells," written in Latin. Beneath the dedica-  
 tion is the following title:—"This present boke  
 named the shyp of folys of the worlde was trans-  
 lated in the Colledge of saynt mary Otery in the  
 counte of Deuonshyre: out of Latyn, Frenche,  
 and Doche into Englysshe tonge by Alexander  
 Barclay Prestre: and at that tyme Chaplen in  
 the sayde Colledge, translated the yere of our  
 Lorde god. m.cccc.viiij. Inprentyd &c."

Through the volume, which is written in a  
 measure similar to the above, the left hand pages  
 have the word "Folivm," and on the right is  
 the number in roman capitals: they extend to  
 cclxxiiiij. The volume closes with a ballad in  
 honour of the Virgin, of twelve eight-line stanzas,  
 after which is the following colophon:—

Our Shyp here levyth the sees brude  
 By helpe of God almyght and quyetly  
 At Anker we lye within the rode  
 But who that lysteth of them to bye  
 In Flete strete shall them fynde truly  
 At the George: in Richarde Pynsonnes place  
 Prynter vnto the kynge nobis grace  
 Deo Gratias.

Our author's stanza is verbose, prosaic, and  
 tedious: and for many pages together, his poe-  
 try is little better than a trite homily in verse.  
 The title promises much character and plea-  
 santry: but we shall be disappointed, if we ex-  
 pect to find the foibles of the crew of our ship  
 touched by the hand of the author of the *Can-  
 terbury Tales*, or exposed in the rough yet strong  
 satire of Pierce Plowman. He sometimes, how-  
 ever, has a stroke of humour: as in the following  
 stanza, where he wishes to take on board eight  
 secondaries, or minor canons, of his college:—

Soft, Fools, soft, a little slacke your pace,  
 Till I have space you to order by degree:  
 I have eyght neighbours, that first shall have a place  
 Within this my shyp, for they most worthy be.  
 They may their learning receyve costles and free,  
 Their waies abutting and joining to the schooles;  
 Nothing they can, yet nought will they learn nor see,  
 Therefore shall they guide this one ship of foolles.

The ignorance of the English clergy is one of  
 the chief objects of his animadversion. He says,

For if one can flatter, and beare a hawke on his fist,  
 He shall be made parson of Honington or of Clift.

\* To the collegiate church of Saint Mary Ottery a school  
 was annexed, by the munificent founder, Grandison,  
 bishop of Exeter. This college was founded in the year  
 1237.

These were rich benefices in the neighbourhood  
 of Saint Mary Ottery.

And in another place, he thus censures the  
 fashionable reading of his age: much in the  
 tone of his predecessor Hawes.

For goodly scripture is not worth an hawe,  
 But tales are loved ground of ribandry,  
 And many are so blinded with their folly,  
 That no scriptur thinks they so true nor gode  
 As is a foolish jest of Robin hode.

As a specimen of his general manner we select  
 his character of the student or bookworm: whom  
 he supposes to be the first fool in the ship.

That in this ship the chiefe place I governe,  
 By this wide sea with follis wandering,  
 The cause is plaine and easy to discernen;  
 Still am I hury bookes assembling,  
 For to have plentie it is a pleasant thing,  
 In my conceyt, to have them ay in hand,  
 But what they meane do I not understande.

But yet I have them in great reverence  
 And honour, saving them from filth and ordure;  
 By often brushing and much diligence,  
 Full goodly bounde in pleasant coverture  
 Of damas, sattin, or els of velvet pure:  
 I keepe them sure, fearing least they should be lost,  
 For in them is the cunning wherein I me boast.

But if it fortune that any learned man  
 Within my house fall to disputation,  
 I drawe the curtaynes to shewe my bokes then,  
 That they of my cunning should make probation:  
 I love not to fall in altercation:  
 And while the commen, my bookes I turne and winde,  
 For all is in them, and nothing in my minde.

Ptolemeus the riche caused, lone agone,  
 Over all the worlde good bookes to be sought,  
 Done was his commandement, &c.

Lo in likewise of bookes I have store,  
 But few I reade, and fewer understande;  
 I folowe not their doctrine, nor their lore,  
 It is enogh to beare a booke in hande;  
 It were too much to be in such a lande;  
 For to be bounde to lye within the boke  
 I am content on the fayre coveryng to looke.

Each is not letted that now is made a lorde,  
 Nor eche a clerke that beth a benefice;  
 They are not all lawyers that ples do recorde,  
 All that are promoted are not fully wise;  
 On such chance now fortune throwes her dice:  
 That though one knowe but the yrlish game  
 Yet would he have a gentleman's name.

So in likewise, I am in such a case,  
 Though I nought can, I would be called wise;  
 Also I may set another in my place  
 Which may for me my bookes exercise;  
 Or els I will ensee the common guile,  
 And say *concedo* to every argument,  
 Lest by much speech my Latin should be spent.

All ancient satirical writings, even those of an  
 inferior cast, have their merit, and deserve at-  
 tention, as they transmit pictures of familiar  
 manners, and preserve popular customs. In this  
 light, at least, Barclay's *Ship of Fools*, which is  
 a general satire on the times, will be found

\* That monks and students were writers and binders of  
 books, many instances have been given, and a many more  
 might be adduced. But two names must not be overlooked,  
 because they were both eminent in the annals of literature  
 and in the binding and ornamenting of books, in gold,  
 silver, and precious stones:—Dagmar, abbot of Inisakil-  
 ling, in Ireland, who died in 367; and Ulfon, the first  
 bishop of Ardubaccan, in the county of Meath, in the same  
 country.—In the first page of a manuscript *Life of Concu-  
 brance*, this note occurs, "Ex conjunctione dompni Wy-  
 leلمي Edys monasterii B. Marie S. Modwense virginis de  
 Burton super Trent monachi, dum esset studens Oxonie.  
 mxxvii." The word conjunction is *signatura*. The book is  
 much older than this entry.

entertaining. Nor must it be denied, that his language is more cultivated than that of many of his contemporaries, and that he contributed his share to the improvement of the English phraseology. His author, Sebastian Brandt, a German, who was born at Strasburg in 1458, and died 1521, appears to have been a man of universal erudition; and his work, for the most part, is a tissue of citations from the ancient poets and historians.

Mr. Warton, in his *History of English Poetry*, takes a general view of the progress of modern learning through the reigns of Edward IV., Richard III., Henry VII. and VIII., and concludes with the following judicious and ingenious observations; which we cannot refrain from quoting at length:—

“The customs, institutions, traditions, and religion, of the middle ages, were favourable to poetry. Their pageants, processions, spectacles, and ceremonies, were friendly to imagery, to personification and allegory. Ignorance and superstition, so opposite to the real interests of human society, are the parents of imagination. The very devotion of the Gothic times was romantic. The catholic worship, besides that its numerous exterior appendages were of a picturesque and even of a poetical nature, disposed the mind to a state of deception, and encouraged, or rather authorised, every species of credulity: its visions, miracles, and legends, propagated a general propensity to the marvellous, and strengthened the belief of spectres, demons, witches, and incantations. These allusions were heightened by churches of a wonderful mechanism, and constructed on such principles of inexplicable architecture as had a tendency to impress the soul with every false sensation of religious fear. The savage pomp and the capricious heroism of the baronial manners, were replete with incident, adventure, and enterprise: and the intractable genius of the feudal policy, held forth those irregularities of conduct, discordances of interest, and dissimilarities of situation, that framed rich materials for the minstrel-muse. The tacit compact of fashion, which promotes civility by diffusing habits of uniformity, and therefore destroys peculiarities of character and situation, had not yet operated upon life: nor had domestic convenience abolished unwieldy magnificence. Literature, and a better sense of things, not only banished these barbarities, but superseded the mode of composition which was formed upon them. Romantic poetry gave way to the force of reason and inquiry; as its own enchanted palaces and gardens instantaneously vanished, when the Christian champion displayed the shield of truth, and baffled the charm of the necromancer. The study of the classics, together, with a colder magic and a tamer mythology, introduced method into composition: and the universal ambition of rivaling those new patterns of excellence, the faultless models of Greece and Rome, produced that bane of invention, *imitation*. Erudition was made to act upon genius. Fancy was weakened by reflec-

tion and philosophy. The fashion of treating every thing scientifically, applied speculation and theory to the arts of writing. Judgment was advanced above imagination, and rules of criticism were established. The brave eccentricities of original genius, and the daring hardness of native thought, were intimidated by metaphysical sentiments of perfection and refinement. Setting aside the consideration of the more solid advantages, which are obvious, and are not the distinct object of our contemplation at present, the lover of true poetry will ask, what have we gained by this revolution? It may be answered, much good sense, good taste, and good criticism. But, in the mean time, we have lost a set of manners, and a system of machinery, more suitable to the purposes of poetry, than those which have been adopted in their place. We have parted with extravagancies that are above propriety, with incredibilities that are more acceptable than truth, and with fictions that are more valuable than reality.”

1509. Printing introduced into the city of YORK, by Hewe Goes, a printer from Antwerp: his first production was the *Pica or Vic*, (an old book of liturgy for the cathedral). The last of his works in York bears the date of 1516, in which year he removed to Beverley; and printed a broadside; being a wooden cut of a man on horseback, with a spear in his right hand, and a shield, with the arms of France, in his left, with the following imprint:—Emprynted at Beverlay in the Hyegate, by me Hewe Goes; to which is added his mark or rebus of a great  and a goose. He afterwards removed to London, and there printed a Latin Grammar, in quarto.

Matthias Goes, a printer at Antwerp, and who printed a book entitled *Cordiale de quatuor novissimis*, 8vo. 1483, perhaps was father to the above Hewe Goes.

1509, April 22, died Henry VII.—The reign of this king was barren in literature; the muses, if muses they might be called, produced nothing more than homilies in rhyme, and were ministerial only to make creeds halt on lame feet, and controversy jingle. The spirit, the humour, the genius of Chaucer were no more. And what should occasion the miserable change? What, but turning the yet scanty streams of science into the channel of school divinity, were its waters were lost, and its current obscured, in the most noxious weeds. One solitary versifier is all that Mr. Warton has noticed in this considerable reign. His name was Hawes; and his principal performances were called the *Pastime of Pleasure*, and the *Temple of Glass*; the only valuable part of the latter is the imagery, which is chiefly borrowed from Chaucer's *House of Fame*. Robert Fabian, an eminent merchant, and in 1493, sheriff of London, where he died February 26, 1512, is the only historian worthy of our notice in this reign. His *Historiarum Concordantie* consists of seven parts, of which the six first bring down the history of England from Brutus to William the Conqueror, and in the seventh he gives the history of our kings

from the Conqueror to Henry VII. He is very particular in the affairs of London, many things concerning the government of it being noted by him which are not to be met with any where else. This author, speaking of the invention of printing, speaks thus, "This yere (35th Henry VI.) after the opynyon of dyverse wryters, began in a cite of Almaine, namyd Mogunce, the crafte of empryntunge bokys, which sen that tyme hath had wonderfull encrease."

Henry VII. while he asserted his authority over the clergy, found it consistent with his policy to employ them rather than his nobles in state affairs, and suffered them to proceed against the Lollards, or followers of Wiclif, with the utmost rigour. Amongst many who suffered for their adherence to the opinions of Wiclif, was Joan Boughton, "the first female martyr in England;" she was more than eighty years of age, and was held in such reverence for her virtues, that, during the night after her martyrdom, her ashes were collected, to be preserved as relics for pious and affectionate remembrances. Bishop Pecock, who is said to have been the most learned man of his age and country, was another victim to the tender mercies of the church of Rome. After making a *public recantation*, he was put in close confinement in Thorney abbey, and was to have only the meanest provisions; he was also deprived of the use of pens, ink, and paper; and to be allowed no books, except a mass book, a psalter, a legendary, and a bible.—Lady Young, daughter to Joan Boughton, followed her mother through the flames, and met death with equal constancy.—William Tylsworth was burnt at Amersham, and his only daughter, being suspected of heresy, was compelled with her own hands to set fire to the fagots which consumed her parent.—A correspondent of Erasmus wrote to him, that the price of wood was considerably advanced about London, in consequence of the quantity required for the frequent hyperboles. The statement is one of those hyperboles which, in the familiarity of letter writing, are understood as they are meant, and convey no more than truth.—For a further account of early martyrdoms, see Southey's *Book of the Church*.

The reign of Henry VII. produced so many beneficial changes in the condition of England, and the manners of its people, that many historians have attributed to this monarch a larger share of wisdom and virtue than is justly his due. He was a faithless friend, a bitter enemy, a cruel husband, an undutiful son, a careless father, and an ungenerous master. An inordinate love of money, and unrelenting hatred of the house of York, were his ruling passions, and the chief sources of all his vices and all his troubles. As a proof of Henry's attention to the smallest profits, Bacon tells us, that he had seen a book of accounts kept by Empson, and subscribed in almost every leaf by the king's own hand. Among other articles was the following:—*Item*, Received of such a one five marks for a pardon, which if it do not pass, the money to be repaid, or the party otherwise satisfied.—Oppo-

site to the memorandum the king had written, "Otherwise satisfied."—Bacon, p. 630.

1509. *Quincuplex Psalterium, Gallicum, Romanum, Hebraicum, Vetus, Conciliatum*, folio. Henry Stephens, the first of the celebrated family of typographers, printed the *Quincuplex Psalter*, of Le Fevre, at Paris, the first publication in which the verses were distinguished by *Arabic numerals*; and as being probably the most magnificent production of that celebrated artist. It is indeed a fine specimen of the typographic art, printed *en rouge et noir, litteris rotundis*, on excellent paper; and exhibited an occasional use of Greek characters.

This work is remarkable as the production of a divine enlightened far beyond the measure of this barbarous period; as having been severely stigmatised in the *Index Librorum prohibitorum & expurgatorum*. The sentiments of Le Fevre, not agreeing with the bigotry of the times, soon rendered him obnoxious to the Sorbonne, as a favourer of heretical opinions. A fierce persecution was consequently excited against him, which would probably have cost him his life, had he not escaped by the special interference of Francis I. himself; by whom his learning and merits were held in high estimation. He died at Navarre in 1537, some say at the extreme age of one hundred and one years.

This edition of the *Psalter* appears to have been a work of considerable attention and labour, since we find that for the old, or *italic* version, Le Fevre made use of a most valuable manuscript copy written with gold and silver letters upon purple parchment, in uncial characters, in folio; supposed to have been part of the spoils of the city of Toledo, obtained by Childebert I. king of the Franks, about the year 542, and afterwards to have been made use of by St. Germanus, bishop of Paris, who died in 576.

1509, Oct. 23. Dr. Thomas Linacre, an eminent and most learned English physician, by whose exertions the *College of Physicians* was founded and incorporated, of which he held the office of president, was, in the decline of life, resolved to change his profession for that of divinity, entered into early orders, and was collated on this day to the rectory of Mersham; and obtained afterwards several preferments. An anecdote is related of him, which proves, that however accurate and extensive his grammatical knowledge of Latin and Greek might be, his ignorance of the scriptures was so great, as to render him totally unfit for the sacred functions he assumed. Being ordained priest, at an age when his constitution was broken by study and infirmity, he, for the first time, took the *New Testament* into his hand, and having read the fifth and sixth chapters of St. Matthew's Gospel, threw away the book, swearing, "Either this is not the Gospel, or we are not Christians!" This, however, will appear the less extraordinary, when it is remarked, that the study and use of the scriptures was at that time so low, even in the university of Oxford, "that the being admitted a bachelor of divinity gave only liberty to read

the master of the sentences, (Peter Lombard;) and the highest degree, that of doctor of divinity, did not admit a man to the reading of the scriptures."—*British Biography*.

In the year 1510, the university of Wittemberg registered in its acts, Andrew Carolostad, afterwards one of the reformers, as being *sufficentissimus*, fully qualified for the degree of doctor, which he then received; though he afterwards acknowledged, that he never began to read the *Bible* till eight years after he had received his academical honours. Albert, archbishop and elector of Mentz, having accidentally found a *Bible* lying on a table, in 1530, opened it, and having read some pages, exclaimed, "Indeed, I do not know what this book is; but this I see, that every thing in it is against us."

1510, Aug. 23, Died ULRIC GERING, who for a period of forty years had exercised the profession of a typographer in the city of Paris, and whose labours we have already noticed under the year 1470, see page 131 *ante*. To show the industry and zeal of Gering and his early associates in the progress of typography, Panzer has enumerated seven hundred and fifty-seven titles of Parisian impressions before the close of the 15th century; and at the end of the year 1507, in which the first Greek press was established at Paris, the foregoing number appears to have been increased by two hundred additional impressions, exclusive of a few which this diligent bibliographer has enumerated in the supplementary volumes of his extensive work. From Panzer's list Mr. Gresswell has selected those articles which appear most curious and interesting; and illustrated them by such notices as in the course of his own reading he had been enabled to collect.

Gering bequeathed to the college de Montaigu\* the half of his property, and the third part of his debts, amounting together to upwards of 25,000 livres—a sum sufficient to purchase, not indeed a village, but the estate or farm of Dannes or Annet; and in addition to that "la maison de Veseley," adjoining the site of the college, where they afterwards erected their Grammaticorum classes.—Gering had, on his first exercising the art, no Greek characters; nor did he afterwards provide more than were sufficient for the introduction of single words, or at the most of some few lines of Greek, into his impressions. Of the third series of Gering's impressions, as given by Chevillier, the earliest date is 1489, and the latest 1598. In those which bear the date of 1494, and the subsequent ones, the name of Rembolt is united with his. In the year 1409 Rembolt began to print in his own separate name; and continued the establishment till 1519, in which year he died.

\* In the year 1496, Erasmus became a pensioner or scholar of this college; and by his account, it was then a miserable place indeed! His wretched apartment was in a most disgusting situation. He was fed on rotten eggs and sour wine. The discipline was as cruel as the diet was abominable; and he is said to have contracted there a diseased habit of body, which continued during the remainder of his life.—*Jortin*.

After the exertion of Gering, and his contemporaries, the printers of Paris appear for a time to have declined rather than increased in ardour for the diffusion of classical literature. Yet on other accounts the Gothic press of Paris, by which it may be designated, to distinguish it from the more learned *imprimeries* established there in after times, will be found an interesting subject of inquiry. Many of its productions are strongly indicative of the national manners and character. Those which pertain to the ecclesiastical ritual, and devotional subjects, possess, says Mr. Gresswell, a singularity of embellishment, and magnificence of execution which are almost peculiar to them. The early poetry of the French—their chronicles—their romances of chivalry—and the kindred fruits of their Gothic press are equally characteristic: and to the English reader, the connexion of their literature with our own, rather the influences which it had upon the speculations and manner of our own country, and the direction and tone which it gave to our pristine habits and pursuits, must render early French typography a subject of particular curiosity.—*Parisian Typography*.

1511, Sept. Died WILLIAM FAQUES, a printer in the city of London, who states himself to have been a native of Normandy, and that he learned the art of printing at Rouen, with John de Bourgeois, from whence he came over to this country for the improvement of his fortune. He is supposed to have resided in England for little more than five or six years; and although Ames could not discover any patent constituting him king's printer, yet it will be found that he was certainly possessed of that office, since he mentions it in the colophon to the *Psalter* which he printed in 1504. He was excellent in his profession; and his types, which were peculiarly good, are thought to have been used by Wynkyn de Worde after his death, which it is imagined took place at this period. His name does not appear to any books printed abroad, and seven is all that is known in this country.

William Faques used one principal device, which consisted of two triangles crossed, the one white and the other black, with an inscription upon each. The words upon the white triangle are taken from *Psalms* xxxvii. 16, given according to the Latin Vulgate, in which the *Psalms* stands, as xxxvi. "A morsel with the righteous man, is better than the riches of many of the wicked ones." The passage inscribed on the black triangle is from *Proverbs* xvi. 32, "Better is the meek than the strong man; and he who ruleth his soul than he that taketh a city." Besides this device, Faques had also a cypher, consisting of a black-letter capital G., containing a small l in the centre of it; and an arrow cut in outline, pointing to the left, passing horizontally through it.

1511. On the feast of St. Margaret, the miracle play of the holy martyr St. George, was acted on a stage in an open field at Bassingborne, in Cambridgeshire, at which were a minstrel and three waits hired from Cambridge, with a pro-

party-man and a painter; the following disbursements were made; and are here given to show the expenses before the regular drama was introduced. The whole sum for the three nights did not amount to forty shillings:—

	£	s.	d.
To musicians (for which however they were bound to perform three nights).....	0	5	6
For players, in bread and ale.....	0	3	1
For decorations, dresses, and play books.....	1	0	0
To John Hubbard, priest, and author of the piece for the place in which the representation was held.....	0	1	0
For furniture.....	0	1	4
For fish and bread.....	0	0	4
For painting three phantoms and devils.....	0	0	6
Four chickens for the hero.....	0	0	4

1512. Dr. Burney, in his *History of Music*, referring to the *Northumberland Household Book*, as his authority, states that about this year the nobility, in imitation of royalty, had, among other officers of their household, a *master of the revels*, "for the overseeing and ordering of *Plays and Interludes* and dressing, that is plaid in the twelve days of *Crestenmas*." Of these, the gentlemen and children of the chapel seem to have been the principal performers; for which, and for acting upon other great festivals, they were assigned particular rewards:—"Item, my Lorde vseth to gyf yerely, when his lordshipe is at home, in reward to them of his lordshipe chapel, that doith play upon *Shroftewesday*, at night, *xx*." And when they performed in the dramatic mysteries, such as "the playe of the *Nativity* at *Crestenmas*, or of the *Resurrection* upon *Esturday*," they were allowed *xxx*.

Bishop Percy cites several particulars of the regulated sums payable to 'parsones' and others for these performances. The exhibiting scripture dramas on the great festivals entered into the regular establishment, and formed part of the domestic regulations of our ancient nobility; and what is more remarkable, it was as much the business of the chaplain in those days to compose plays for the family, as it is now for him to make sermons.—*Reliques*, vol. i. p. 139.

The following curious notice, from the *Northumberland Household Book*, will shew the hour at which the nobility breakfasted at this period:—"My lord and lady have set on their table for breakfast, at seven o'clock in the morning, a quart of beer, a quart of wine, two pieces of salt fish, six red herrings, four white ones, or a dish of sprats. On flesh days, half a chyne of mutton, or a chyne of boiled beef. Mass was ordered to be said at six o'clock in the morning.

From the same source, we find that the earl pays an annual pension, of a groat a year, to my lady of Walsingham, for her interest in heaven; the same sum to the holy blood, at Hales.

We also make the following extract, relative to the price of provisions, at this period:—"Oats 1s. 8d. per quarter; beans, 2s.; malt, 4s.; load of hay, 2s. 8d.; sheep, 1s. 8d. each; fat beere, 13s.; lean ditto, 8s.; calf, 1s. 8d.; hog, 2s.; young pig, 4d.; geese, 4d.; hen, 2d.; chicken, 1d.; woodcock, 1d.; partridge, 2d.; pheasant, 1s.; peacock, 1s. A servant on board wages, or

on a journey, 5d. per day in summer, 8d. in winter. Gascony wine was £4 13s. 4d. per ton. The daily wages of a master carpenter, mason, bricklayer, tyler, or plumber, were 6d. per day, without diet, from Easter to Michaelmas; other labourers 4d. per day. The price of a Bible was 20s., and many persons gave a load of hay for a few chapters of *St. James* or *St. Paul* in English.

1513. *The Hystory sege and dysturccyon of Troye. Emprynted at the commaundement of oure Souraygne Lorde the kynge Henry the viii. By Richarde Pynson prynter Unto his most noble grace. The yere of our Lorde god. am.cccccc and xiii. Folio.*

"The history sege and the dysturccyon of Troye." This title is above a large wooden cut of the king's arms crowned, with a rose over it, &c. On the reverse is a cut of the city of Troy, with soldiers before it firing great guns, &c. Then, "the table or rubryshe of the Content of the chapitres shortly of the Firste booke." It is divided into five books, and in the whole thirty-seven chapters. To which is added another, "Of the most worthy kynge Henry ye fyth. Here after foloweth, the Troye boke otherwyse called the Sege of Troye, translated by John Lydgate monke of the monastery of Bury, and Emprynted at the commaundement of oure Souraygne Lorde the kynge Henry the viii. By Richarde Pynson prynter unto his most noble grace. The yere of our Lorde god a m.cccccc. and xiii." Then "The Prologue of the Translature." Over a fine wooden cut of king Henry V. sitting in a large room, with officers attending him receiving this book from Lydgate, the monk kneeling. There are many other cuts dispersed throughout the book. It is in verse, printed in double columns, without numbers or catchwords, to sheet D 4 in the second alphabet; and closes, "Explicit liber quintus et Ultimus. Lenuoye."

Go lytell boke, and put the in the grace  
Of hym that is, most of excellence  
And be nat hardy, to appeare in no place  
Without supporte, of his magnyficence  
And who so ener, in the fynde offence  
Be not to bolde, for no presumpcion  
Thy self ename, eye in pacyence  
And thes submytte [to] theyr correcyon,

*Verba translatoris ad librum suum.*

And for thou art, enlymned with no flowres  
Of Retoryke, but with whyte and blacke  
Therefore thou muste, abyde all shewres  
Of them that lyst, set on the a lacke  
And when thou art, most lykely go to wracke  
Agyne them, theys Erroure not defende  
But humbly, withdraw and go a becke  
Requeryge them, all yt is anyse to mende.

"Here endeth the Troye booke otherwyse called the Sege of Troye, translated by John Lydgate monke of the Monastery of Bery. And Emprynted the yere of our Lorde" &c.

1513. *Died* ANTONY KOBURGER, one of the most celebrated printers of the fifteenth century. He introduced the art of printing at Nuremberg, in 1472, see p. 139, ante. A copy of the splendid German bible, printed by Koburger in 1483, in folio, is in the library of Earl Spencer. See *Bib. Spenc.* vol. i. p. 54.

1514. Peter de Triers, or de Treveris, who is supposed to have derived his name from Triers, or Treveris, a city of Germany, in which he was born, erected the first press in SOUTHWARK, and his earliest work was the *Moral Disticha of Cato*, with Erasmus's *Scolia*, in Latin. His press was employed by John Reynes and Lawrence Andrew; and he sold or published books for William Rastell, Robert Copeland, and others, in the city of London. He lived at the sign of the Widows, and continued his labours till 1562. Anthony Wood imagined that this artist printed some of Wittington's works at Oxford, in 1527. The list of his known typographical productions amount to twenty-seven.

1514. Pope Leo X. having purchased the five books of *Tacitus*, for five hundred zechins of Angelo Arcemboldo, who had brought them from the abbey of Corvey, in Westphalia, committed them to the care and editorship of the learned Beroaldo, and in order to secure to him the reward of his labour as editor and collator of the manuscripts, he denounced sentence of excommunication, besides the penalty of two hundred ducats and forfeiture of the books, against any person who should reprint the work within ten years of its publication by Beroaldo, without his express permission. This is generally considered as the earliest instance of the positive protection of literary property.

Notwithstanding these serious prohibitions of Leo X. the work was pirated and printed at Milan in the same year, by Alessandro Manuziano, who had established himself as a printer in opposition to Aldus Manutius, and who contended with him in the publication of the works of antiquity. Manuziano was cited before the pontiff to answer for his offence; but owing to the interference of some powerful friends, he was excused the weightiest portion of his punishment, namely, excommunication. A compromise was subsequently entered into between Manuziano and Beroaldo, and the former permitted, under certain restrictions, to vend his spurious edition.

1515. In the 10th session of the council of Lateran, held under Leo X. in this year, it was decreed, under pain of excommunication, that for the future no book should be printed at Rome, nor in the other cities and dioceses; unless, if at Rome, it had been examined by the "vicar of his holiness," and the "master of the palace;" or, if elsewhere, by the bishop of the diocese, or a doctor appointed by him, and had received the signature of approbation.

In Rome, the compilers of the catalogues, or indexes, of prohibited books, are still continued, and called the *congregation of the index*. The works noticed in the indexes are divided into three classes, the first containing a list of condemned authors, the whole of whose writings are forbidden, except by express permission; the second enumerating works which are prohibited, till they have been purged of what the inquisitors deem erroneous; the third comprehending those anonymous publications which are either partially, or totally forbidden. The

manner in which the Romish literary inquisitors formerly decided upon the works presented to them, was sometimes criminally careless, and the results sufficiently curious. Gregory Capuchin, a Neapolitan censor, informs us, that his practice was to burn such *Bibles* as were defective in the text; and that his mode of ascertaining the accuracy or inaccuracy of the Latin *Bibles* was, to examine the third chapter of Genesis, and "if I find," says he, "the words, 'in sudore vultus tui, vesceris pane tuo,' instead of 'in sudore vultus tui, vesceris pane donec,' (thus adding the word *tuo*,) I direct such copies not to be corrected, but to be committed to the flames." As the indexes were formed in different countries, the opinions were sometimes diametrically opposite to each other, and what one censor, or inquisitor, allowed, another condemned; and even in some instances, the censor of one country had his own works condemned in another. Thus the learned Arias Montanus, who was a chief inquisitor in the Netherlands, and concerned in the compilation of the *Antwerp Index*, had his own works placed in the *Index of Rome*; while the inquisitor of Naples was so displeased with the *Index of Spain*, as to persist in asserting, that it had never been printed at Madrid. This difference in judgment produced a doubtful and uncertain method of censure, and it became necessary for the inquisitors to subscribe their names to the indexes, in the following manner: "I, N.—inquisitor for such a diocese, do say, that this present book, thus by me corrected, may be tolerated and read, until such time as it shall be thought worthy of some further correction." But these *prohibitory* and *expurgatory indexes* were reserved only for the inquisitors, and when printed, delivered only into their hands, or those of their most trusty associates. Philip II. in his letters patent, for the printing of the first Spanish index, acknowledges, that it was printed by the king's printer, and at his own expense, not for the public, but solely for the inquisitors, and certain ecclesiastics, who were not to be permitted to communicate the contents of it, or give a copy of it to any one. And Sandoval, archbishop of Toledo, in the edition of 1619, prohibits, under pain of the greater excommunication, any one to print the index, or cause it to be printed; or when printed, to send it out of the kingdom, without a special license. So difficult, indeed, were they to be obtained, that it is said the Spanish and Portuguese indexes were never known till the English took Cadiz; and the index of Antwerp was accidentally discovered by Junius, who afterwards reprinted it.

1515. *DIED ALDUS MANUTIUS*, one of the most celebrated names in the annals of typography. A modern writer\* has justly remarked, "that the name of Aldus will live in the memory of man as long as there survives in the world the love of literature, of which he has shewn himself so de-

\* *Bibliographical and Retrospective Miscellany*. London, John Wilson, 1830, post 8vo. pp. 160.

serving by his honourable labours.—Whether Aldus was descended from a noble family or not is of little consequence; if he were really the son of a converted Jew, the greater honour doth it confer on him, who, in that case, was the founder and architect of his own fame: and the remark made by Lipsius of the two Scaligers, will apply with equal truth to the Alduses—that if they were not princes they deserve to be, on account of their extraordinary genius and wonderful erudition. For every man of superior talent and learning we must expect to find an envious Scoppius; yet were all that Ciofani has urged on this point against Aldus Manutius, strictly correct, how entirely is this pardonable vanity eclipsed by his patient and unwearied assiduity in rescuing the literature of Greece and Rome from the dark oblivion of the middle ages; devoting the best years of his life, and the whole of his fortune to the accomplishment of this grand object. Let any person who entertains for one moment the aspersions of a writer but little known, compare the undoubted compositions of the Venetian printer,—both the friend and companion of the great and the learned,—with the charge of ignorance and plagiarism, contained in the letters of Ciofani, and we feel assured that the suspicion against Aldus will immediately vanish. Mr. Hartshorne\* declares these letters to be genuine:—we have examined their authority, and are convinced that they are atrocious libels, unworthy of the slightest credit.

Aldus Manutius was born in the year 1446, or 1447. His christian name Aldus was a contraction of Theobaldus. His surname was Manutius,—to which he sometimes added the appellation of Pius, or Bassianus, or Romanus. The first of these appellatives was assumed by Aldus, from his having been the tutor of Albertus Pius, a prince of the noble house of Carpi, and to whom the grateful printer dedicated the *Organon* of Aristotle, in 1495. The second of these appellatives was derived from the name of the birth-place of the printer—namely, Bassian, a small town in the duchy of Lermonetta.—The name of Pius was not assumed till 1503.

It appears that Aldus first conceived the idea of setting up a printing office, while he was on a visit at Mirandola, with the celebrated Picus† of that place, in conjunction with his noble pupil Albertus Pius. About the year 1488, he is supposed to have taken up his residence at Venice, as the favourite city in which to mature his plans; and about the year 1494, or 1495, he put forth there the first production of his press: and while he paid the most sedulous attention to his printing office, carried on a very extensive correspondence with the literati of Europe, explained the classics to a numerous auditory of students, and also found time to compose various works, which are characterized by profound

learning and extensive variety; and to his genius and efforts we are indebted for the various improvements in the typographic art. He invented the beautiful letter known by the name of *italic*, which has been already noticed.

In the year 1500, Aldus married the daughter of Andrea d'Asola; and about this time, or probably a year or two earlier, he printed the first leaf, in folio, of a proposed edition of the *Bible* in the *Hebrew, Greek, and Latin languages*; so that, as Renouard justly observes, Aldus has the honour of having first suggested the plan of a *Polyglott Bible*, however the plan failed of being carried into effect. The only known copy of this exquisitely precious fragment is in the royal library at Paris.

In 1501, Aldus wrote and printed an Introduction to the Hebrew tongue; and, Justin Decadius says, he made him a promise that he would print a *Bible* in *Hebrew, Greek, and Latin*; but it is not known that he performed it with respect to the *Hebrew*.

The honour of the first Greek press has by some writers been ascribed to Aldus Manutius, it must, however, be understood to have been so done *κατ' ἔκληψιν*, and not with any strict correctness. The zeal which Aldus evinced in the progress of Greek typography, and the number and variety of Greek authors which he gave to the public, certainly entitle him, by way of eminence, to the distinction by which Henry Stephens characterises him, when speaking of Greek works, he says of Aldus—

Qui graphicis primis tradidit ille typis.

Aldus generally printed his editions in Greek solely to re-establish the study of the language, and to induce scholars to read the originals.

Mattaire, speaking of Aldus's Greek, says, “his characters were large, round, beautiful and elegant, adorned with frequent ligatures, which added great beauty to his editions.” In some of his editions he gave the Greek text, and then the Latin translation. He invented a method of imposing a work in such a manner, that the purchaser could bind them up singly or together, that is, the matter was imposed in such a manner, that one language interleaved the other. Chevillier, who remarks this, had seen few other specimens of such an arrangement; but it has been revived in modern times by the family of Foulis at Glasgow. The way of printing two languages in opposite columns was not invented until the year 1530.

The learned Zuinger informs, that the mind of Aldus was entirely engaged in the care of his printing-house; for, as soon as he had ordered his other necessary affairs, he shut himself up in his study, where he employed himself in revising his Greek and Latin manuscripts, reading the letters which he received from the learned out of all parts of the world, and writing answers to them. To prevent interruption by impertinent visits, he caused the following inscription to be placed over his door:—“*Whoever you are ALDUS earnestly entreats you to dispatch your business*”

\* *Book Rarities of the University of Cambridge.*

† The works of Picus Mirandola were printed at Strasburg, in the year 1467, by a printer named Knobloch. The errors of this volume occupy fifteen folio pages.

as soon as possible, and then depart; unless you come hither, like another Hercules, to lend him some friendly assistance; for here will be work sufficient to employ you, and as many as enter this place." These words were afterwards used for the same purpose by the learned Oporinus, a printer of Basil.

It ought not, however, to be forgotten, that Aldus, conscious that his single labours were inadequate to the diffusion of literature, assembled around him a circle of the most learned men of the age, some of whom lived in his house, and were entirely supported by him. The re-union of these eminent scholars was by himself termed *Aldi Neacademia*: the academy was formed about the year 1500. The members met, for a few years only, at stated times, and discussed various literary questions. During the short continuance of this literary society, (which was broken up by the death of its members and other circumstances) it rendered the most essential services to the interests of literature.

Not a volume is known to have issued from the Aldine press from the years 1510 to 1515, chiefly from the state of public affairs; and in that year, both the republic of literature, and his own family, sustained an irremediable loss by the death of this great printer and promoter of literature, who spared neither labour nor expense,—and equally prodigal of his purse and his life—sacrificed private to public considerations.—On the death of Aldus, Andrea d'Asola, his father-in-law, conducted his printing concerns with great ability, (aided by his two sons Francesco and Federico) during the minority of Aldus's children, from 1516 to 1529: and on the decease of Asola in that year, the printing-office continued closed till 1533, when the sons of Aldus and Asola re-opened it, in partnership; their works are dated in *edibus heredum Aldi Manutii Romani et Andreae Asolani Soceri*. The direction was confided to Paul Manutius, the third son of Aldus, who was born in 1512, and was in no respect inferior to his father in learning and typographical skill.

Peter Alcyonius, Marcus Musurus, Demetrius Chalcondylas, and Alexander Bondinus, were the learned correctors to the Aldine press.

We have already described the mark of Aldus, and have only to add, that Cardinal Bembus presented him with a silver medal, which had the head of the emperor Titus on one side, and on the reverse a dolphin twisting itself round an anchor.

An interesting account of this celebrated family, of which the lineal descendants continued for upwards of a century to carry on the business of printing, together with a most minute and accurate description of the books executed by them, may be found in Renouard's *Annales de l'imprimerie des Aldes*, 3 vols. 8vo. Paris 1803-1809, *ibid*, 1825. A copy of the first book printed by Aldus in *italic type*, with the following title, *Virgilius; Venet: apud Aldum*, 8vo. 1501, was sold at Mr. Dent's sale for £21 2s.

We cannot conclude our notice of this eminent printer, without taking (from Greswell's *Early Parisian Greek Press*,) a cursory view of the origin and progress of GREEK TYPOGRAPHY in Italy; and to bring the inquiry down to that period at least when, by the labour and enterprise of Aldus Manutius, Greek impressions, which had been antecedently very rare, were brought into comparatively general usage: for to the example of that meritorious typographer it is doubtless principally to be attributed, that the art of Greek printing became familiar to many of the Cisalpine cities and universities early in the sixteenth century, and was practised by individual typographers of that age too numerous for our present distinct mention.

It is agreed that the oldest specimens of Greek printing consist of detached passages and citations, found in a very few of the first printed copies of Latin authors, such as *Lactantius*, in *Monast. Sublacensi*, anni 1465; the *Avulus Galii* and *Apuleius* of Sweynheim and Pannarts of 1469; and some works of Bessarion, *Rome, sine anno*. In all these, it is remarkable that the Greek typography is legibly and creditably executed, whereas the Greek introduced into the *Officia* and *Paradoxa* of Cicero, *Mediolani*, per *Ani. Zarotum*, anni 1474, is so deformed as to be scarcely legible. The first printed entirely-Greek book is *Laecarius Grammatica Gr. Mediolani, ex recognitione Demetrii Cretensis, per Dionysium Paravisinum*, 4to. The character of this rare volume is elegant and of a moderate size; resembling that in which the same *Grammar* again appeared anno 1499. The same work, or a portion of it, was repeated *Greece, et cum Latina interpretatione*, at Milan, anno 1480, 4to: and the next year, viz. anno 1481, from the same place and press issued *Psalterium Græcum cum Latina recognitione*, both these under the revision of Joannes Crestoni, a monk of Placentia. Mattaire believes the printer of these several impressions of Milan to have been the same Dionysius Paravisinus.

Venice, which had hitherto vied with other cities both in the number and skill of its Latin typographers, had indeed sufficient cause of jealousy on observing the palm of earliest Greek printing thus borne away by Milan; yet she suffered ten years to elapse before the commencement of an actual rivalry in the same department. In 1486, that city produced in sacred literature a *Psalterium Græcum*, in profane, *Homeri Batrachomyomachia*. The first was executed by Alexander, and the latter by Leonicus, both Cretans. Mattaire describes the character of the Psalter as exhibiting a very antique and singular appearance. The *Batrachomyomachia*, nothing more legible than the former, is however furnished with accents and breathings. It also exhibits certain Greek scholia found in no early edition besides; and what is more singular, they are arranged between the lines of the poem, *ut singulis carminibus interlinare superaret scholium*. Both these scholia and the title page are printed *en rouge*. Such

an intermixture of red and black in every page Mattaire thinks not unpleasing. Of this rare volume he procured in his own time a kind of fac-simile impression, which is known to collectors.

Milan and Venice, then, produced the earliest Greek impressions; but whilst they were satisfied with such as were of a minor description, Florence contemplated a gigantic project, which was to throw all past efforts into the shade. It was nothing less than that noble edition of the whole works of Homer, *Homeri Opera Omnia, Græcæ*; which was finished anno 1488, in two fine volumes, folio, by the skill and industry of the same Demetrius of Crete, (who appears now to have transferred his residence from Milan to Florence,) under the special revision of Demetrius Chalcondyles, and at the expense of two patriotic Florentine citizens. Here then was an instance of art, starting as it were from its first rudiments into sudden and absolute perfection. Whether, says Mattaire, one regards the texture and colour of the paper, the agreeable form of the characters, the regular intervals of the lines, the fine proportion of the margins, or the *tout ensemble*, the combined execution and effect of the whole, even in later times nothing more elegant and finished has appeared.

Thus Greek typography seemed already to have attained in a measure its *âpex* and maturity; as was evinced by the specimens which we have enumerated. It had already forced its way through the difficulties of so novel and extraordinary an undertaking. Nothing now remained but to secure and amplify the glory which had been acquired: and this object was effected by a new series of adventurers, who soon began to display an honourable emulation in the same career.

In the year 1488, which was signalized by the noble impression of the works of Homer last mentioned, we find that the *Grammatica Græca* of Lascaris, together with the *Interpretatio Latina* of John the monk of Placentia, issued from the press of Leonardus de Basilea, at Vicenza, in 4to. The operations of the Greek press, however, continued as yet very slow: and it was not till after a further interval of about five years, that another Greek impression appeared. In 1493, a splendid addition was made to the typographic glory of Milan by a magnificent impression of *Isocrates, Græcæ*. The editor of this fine book, which is said to exhibit a remarkably pure and correct text, was Demetrius Chalcondyles; the printers, Henricus de Germanus and Sebastianus ex Pontremulo. Before the conclusion of the fifteenth century the same city also distinguished itself by the earliest edition of Suidas: *Suidæ Lexicon, Græcæ, Mediolani, per Joann. Bissolum et Benedictum Mangium*, 1499: to which is prefixed an amusing Greek dialogue between a bookseller and a student, from the pen of Stephanus Niger, a native of Cremona and disciple of Demetrius Chalcondyles.

In 1496, Florence produced the celebrated *Editio primaria* of the works of Lucian, *Luciani*

*Opera, Græcæ*; of which the printer's name is not specified.

To Joannes Lascaris the verification and introduction into use of GREEK CAPITALS are attributed: and it appears from these specimens, he thought it expedient that the whole text of each Greek poet, the *pars libri nobilior*, as Mattaire expresses it, should be printed *litteris majusculis*, and the scholia or notes only in the smaller character. The fine capitals of Lascaris were, as we know, admitted into use by subsequent printers only so far as to distinguish proper names, and the commencement of poetical lines or verses; and in some early editions of the Greek scholiasts upon Homer and Sophocles, to distinguish the whole words or passages of the poet commented on from those of the annotator.

This preface is addressed by Lascaris to Petrus Medicus. It abounds with honourable testimonies to the family of the Medici; which, he says, has of all others shewn the most conspicuous zeal in collecting the various monuments of antiquity; and the justest discernment of their value. He records the special munificence of Lorenzo de Medici, by means of which two hundred manuscripts, *ducenta antiquorum volumina*, had lately been brought to Florence from Greece and the neighbouring countries: and he alludes to a magnificent "Bibliotheca," or edifice, which Piero was then constructing as a depository for those and similar literary treasures: to the latter he expresses his own personal obligations, and the hopes which all the learned reposed in him as the hereditary patron of letters. The pillage of Florence, however, by Charles VIII. of France, the ruin of the fortunes of the house of Medici, the banishment of Piero and his speedy death, most of which events either anticipated or soon followed the publication of this impression of the *Anthologia Græca*, not only rendered nugatory the preceding expectations, but probably occasioned the otherwise unaccountable suppression of this interesting preface itself; which is actually found in very few of the copies at present known to be extant. Mattaire, in his *Annales*, tom. i., p. 270, seqq. has given a fac-simile of it.

Chevillier observes, on the authority of Aldus himself, in his preface to the edition of *Stephanus de Urbibus, Gr.*, fol. 1502, that he first engaged in Greek impressions when war broke out in Italy; meaning in 1494, in which year Charles VIII. of France passed the Alps, in order to the conquest of Naples. Chevillier considered his impression of the works of Aristotle, the first volume of which appeared in November 1495, as the earliest fruit of his press. But M. Renouard, in his catalogue of the Aldine impressions, first mentioning *Constantini Lascaris Erotemata*, says it is the earliest work printed by Aldus with a date, and probably the first which he gave to the public. But some, he adds, consider his *Musæus* in 4to, without date, as the earliest impression: the reasons for which may be seen in his work.

The most extensive and voluminous efforts of

the early Greek press are doubtless to be found amongst the Aldine editions. Such are the *Aristotle*, Greek, folio, 1495-1498, and the *Galien*, which issued from the same establishment after the decease of Aldus Manutius, viz. anno 1525, in five vols. folio, and a small character. Andreas Cratander of Basil had the courage and patience to reprint the work in the like number of volumes. The *Commentary* of Eustathius on Homer, in 4 vols. Greek, folio, printed at Rome by Antonius Bladus, 1542-1550, was an immense undertaking. It was, however, after a considerable interval, exceeded by the fine edition of the works of St. Chrysostom, executed in England, where Greek typography had before been comparatively little practised. I speak of the well-known magnificent impression, intitled, *S. J. Chrysostomi Opera*, Græce, 8 vols. folio, printed in Eton college, by John Norton, 1613, under the direction and at the charge of sir Henry Saville. These volumes, (says Chevillier,) "sont d'un tres-beau caractère. C'est un chef d'œuvre d'Imprimerie Grecque." This impression acquired for John Norton the same title or distinction in England, which the celebrated Robert Stephens had attained under Francis I. of "in Græcis, &c., Regius Typographus."

1515, Sept. 27. "The King (Henry VIII.) gives to Richard Pynson, Esquire, our Printer, Four Pounds annually, to be paid from the receipts of the Exchequer during life."—The title of esquire, which Pynson had thus formally received, he afterwards used in the colophon to his *Statuta &c. Emprinted at London in Flete-strete at the signe of the George by saynt Dunstone's chyrche by me Richard Pynson squyer and prenter unto the kynge noble grace.*

1516. *Fitzherbert's Grand Abridgement*. Folio. This volume is a large folio law book, and the first that was published; it is divided into three parts, to each of which is a frontispiece, but it is without title, or printer's name. The price of the whole, consisting of three parts, was forty shillings. At this time forty shillings would have bought three fat oxen. From the type in this volume, it appears to have been printed abroad, probably in France, where the law French was better understood, for Wynkyn de Worde.

1516. Ariosto published his great work, the *Orlando Furioso*. Any thing like an analysis of this extraordinary poem must of necessity be out of the question, and it may be enough to state that it is descriptive of the war carried on between Charlemagne and the Saracens. The poem abounds with incongruities, and Ariosto deals largely in enchanters, harpies, and other strange monsters; but then he identifies them with our feelings, and yet he renders them consistent in their character with the world he has formed for them.

Ariosto was necessitated to publish the *Orlando Furioso* on his own account, and, after paying the expense of paper and printing, received rather more than a shilling a copy from a bookseller for the work. He appears likewise to have

been as unfortunate in his choice of a patron as in his efforts at procuring a publisher; for when he presented his work to cardinal Hippolito, to whom it was dedicated, he is said to have asked where he contrived "to pick up such a mass of absurdities."

This distinguished Italian poet was born at the castle of Reggio, in Lombardy, September 8th, 1474. He was the son of Nicolo Ariosto of Ferrara, major-domo to the duke of Este, and when a child was highly distinguished for his poetical and dramatic talents.

Ariosto did not receive the laurel crown, the most distinguished mark of public approbation in his native land, till late in life. Some say that this occurred at Mantua, and others that it took place at Ferrara. At all events, it appears to have been a high source of happiness to the poet; and there is a tradition still current in Italy that, when the crown was placed on his brow, he leaped from the temporary platform that had been erected, and, becoming the herald of his own honours, loudly proclaimed to the multitude that it was Ariosto, the author of the *Orlando Furioso*, for whom they must make way.

Ariosto was invited by the duke of Ferrara to take up his residence permanently in that place, with a promise of pecuniary assistance. One of the first advantages which he derived from the friendship of his ducal patron, was the present of a sum sufficient to build himself a mansion, and a proper site having been selected in the street Mirasole, in Ferrara, it was shortly completed. The simplicity of the man is well depicted in the plainness of the edifice which he erected. He was much blamed by his friends for having built it on so circumscribed a plan, when he had given such splendid descriptions of sumptuous palaces, with their highly decorated porticos and pleasant fountains, to which Ariosto is said to have replied that words were easier laid together than blocks of marble, and that human happiness did not depend on the height of the mansion. Upon the door he caused to be placed the following inscription:—

This house is small, but fit for me,  
And hurtful 'tis to none;  
It is not sluttish, as you see,  
Yet paid for with mine own.

It may be right to add that in this unassuming edifice Ariosto wrote all his later dramatic works, and ultimately died on the 6th of June, 1533, in the fifty-ninth year of his age.

The father of Tasso, author of *Jerusalem Delivered*, before his son had rivalled the romantic Ariosto, describes in a letter the effect of the *Orlando* on the people:—"There is no man of learning, no mechanic, no lad, no girl, no old man, who is satisfied to read the *Orlando Furioso* once. This poem serves as the solace of the traveller, who, fatigued on his journey, deceives his lassitude by chanting some octaves of this poem. You may hear them sing these stanzas in the streets, and in the fields every day."

1516. The first Polyglott work was printed at Genoa, by Peter Paul Porrus, (who appears to

have been invited thither for that purpose,) who undertook to print the Polyglott\* *Psalter*, of Augustin Justinian, bishop of Nebbio, in the island of Corsica. The title of his work was, *Psalterium, Hebraicum, Græcum, Arabicum, et Chaldeum, cum tribus Latinis Interpretationibus et Glossis*. It is in folio. A preface is prefixed, dated Genoa, Cal. Aug. 1516, addressed by Justinian to Leo X. It is divided into eight columns, of which, the 1st contains the Hebrew; the 2nd, Justinian's Latin translation, answering word for word to the Hebrew; the 3rd, the Latin Vulgate; the 4th, the Greek; the 5th, the Arabic; the 6th, the Chaldean Paraphrase in Hebrew characters; the 7th, Justinian's Latin translation of the Chaldean Paraphrase; the 8th, Latin scholio, or notes.

On the 19th Psalm, v. 4, "Their words are gone to the end of the world." Justinian has inserted, by way of commentary, a curious sketch of the life of Columbus, and an account of his discovery of America, with a very singular description of the inhabitants, particularly of the female native Americans; and in which he affirms, that Columbus frequently boasted himself to be the person appointed by God, to fulfil this prophetic exclamation of David. But the account of Columbus, by Justinian, seems to have displeased the family of that great navigator, for in the life of Columbus, written by his son, (see Churchill's *Collection of Voyages*, &c. vol. ii. p. 560,) he is accused of falsehood and contradiction; and it is even added, "that considering the many mistakes and falsehoods found in his History and Psalter, the senate of Genoa has laid a penalty upon any person that shall read or keep it; and has caused it to be carefully sought out in all places it has been sent to, that it may by public decree be destroyed, and utterly extinguished." After all, the mistakes of Justinian most probably arose, not from design, but from incorrect information. The Arabic in this Psalter was the second; that ever was printed; and the Psalter itself, the first part of the Bible that ever appeared in so many languages.

Justinian undertook this work with the expectation of considerable gain, hoping thereby to assist his indigent relatives, but was miserably disappointed. His original intention, he informs us, in the account of himself prefixed to his *Annals of Genoa*, was to give to the public a similar Polyglott edition of the whole Bible. "I had always imagined," says he, "that my work would be eagerly sought after, and that the wealthy prelates and princes would readily have afforded me every assistance necessary for printing the rest of the Bible, in such a diversity of languages. But I was mistaken, every one applauded the work, but suffered it to rest and sleep; for scarcely was a fourth part sold, of the

two thousand copies which I had printed, exclusive of fifty more copies printed upon vellum, which I had presented to all the kings in the world, whether Christian or Pagan." He, nevertheless, completed the manuscript of the *New Testament*, a great part of which he wrote with his own hand; Sixtus Senensis says he had seen the Polyglott manuscripts of the *Four Gospels* thus written, and also decorated by himself. After completing the manuscript of the whole of the *New Testament*, he engaged in a similar compilation of the text and versions of the *Old Testament*; conceiving, as he said, "that his time could not be better employed, than in the study of the holy scriptures."

Augustin Justinian, or according to his Italian name, Agostino Giustiniani, was born at Genoa, 1470. He entered at an early age into the order of St. Dominic, and enjoyed the advantages of good masters, and an excellent library. For many years he devoted himself entirely to study, except what time was occupied in the duties of instruction, from which he obtained permission to retire, in 1514, that he might apply solely to the preparing of the *Pentaglott Bible* for the press, and to the studies necessarily connected with so important a design.

Leo X. promised him greater promotion than the bishopric of Nebbio, to which he had been raised, but never fulfilled the engagement. Happily, about the same time Francis I. king of France, to whom the bishop of Paris had recommended Justinian, as a man of learning and merit, invited him to Paris, and bestowed on him a pension of 300 crowns, with the titles of counsellor, and almoner. He remained five years at the court of Francis, and during that period published various works; and he afterwards visited England and Flanders, returning by way of Lorraine, where he was received, and liberally entertained, by the reigning duke, and his brother the cardinal. This learned scholar perished in a storm at sea, together with the vessel which was conveying him from Genoa to Nebbio, in the year 1536.

1516. It appears by an act of this date, that the bible was called *Bibliotheca*, that is *per emphasim*, the LIBRARY. The word library was limited in its signification than to the biblical writings; no other books, compared with the holy writings, appear to have been worthy to rank with them, or constitute what we call a library. As the bible, in many parts, consists merely of historical translations, and as too many exhibited a detail of offensive ones, it has often occurred to the fathers of families, as well as to the popes, to prohibit its general reading. Archbishop Tillotson formed a design of purifying the historical parts. Those who have given us a *Family Shakespeare*,\* in the same spirit may present us with a *Family Bible*.

\* Polyglott is derived from two Greek words, signifying many languages.

† Qu. *The History of Psalter*?

‡ The first book printed in Arabic character was entitled *Septem Aere canonice*, and executed at Pano, an ancient town of Italy, in the year 1514. Printing was introduced into Pano in 1492.

\* *The Family Shakespeare*, in which nothing is added to the original text; but those words and expressions are omitted which cannot with propriety be read aloud in a family. By Thomas Bowdler, Esq. F. R. S. & S. A. 8 vols. 8vo. third edition. London, Longman & Co.

About this time, Dr. Buckenham, prior of the Blackfriars, preaching at Cambridge, with great pomp and prolixity, showed the dangerous tendency of having the scriptures in English, and the heretical opinions of Latimer, who had just become a staunch supporter of the reformers. "If that heresy," said he, "should prevail, we should soon see an end of every thing useful among us. The ploughman reading that if he put his hand to the plough, and should happen to look back, he was unfit for the kingdom of God, would soon lay aside his labour; the baker, likewise, reading that a little leaven will corrupt the whole lump, would give us very insipid bread; the simple man likewise finding himself commanded to pluck out his eyes, in a few years we should have the nation full of blind beggars."

1516. *Died*, Trithemius, the celebrated abbot of Spanheim. He had amassed about 2000 manuscripts, a literary treasure, which excited such general attention, that princes and eminent men travelled to visit Trithemius and his library. He was fond of improving steganography, or the art of secret writing; having published several curious books on this subject, they were condemned, as works full of diabolical mysteries; and Frederic II., elector palatine, ordered Trithemius's original work, which was in his library, to be publicly burnt.

The following extracts will show to the reader that those who have laboured most zealously to instruct mankind, have been the very individuals who have suffered most from ignorance; and the discoverers of new arts and sciences have hardly ever lived to see them accepted by the world.

Gabriel Naudé, in his apology for those great men who have been accused of magic, has recorded a melancholy number of the most eminent scholars, who have found, that to have been successful in their studies was a success which harassed them with continual persecution, a prison or a grave!

Virgilius, bishop of Saltzburg, having asserted that there existed antipodes, the archbishop of Mentz declared him a heretic, and consigned him to the flames.

Galileo was condemned at Rome publicly to disavow sentiments, the truth of which must have been to him abundantly manifest. "Are these then my judges?" he exclaimed in retiring from the inquisitors, whose ignorance astonished him. In 1597 he wrote to Kepler, stating that he had made many discoveries which he durst not publish, "*owing to the fools who worshipped previous systems.*" The priests preached against him, and to their eternal disgrace, in the year 1632, he was arraigned and tortured, and at the age of seventy made to abjure, publicly on his knees, and to curse his own book and doctrines, and sentenced for the next three years to remain in prison, and to repeat once a week the seven penitential psalms. To all this he submitted, to escape the fate of *Bruno*, who for similar opinions had been burnt at Rome but thirty-two years before. Milton visited him in

prison, and tells us, he was then poor and old. The confessor of his widow, taking advantage of her piety, perused the manuscripts of this great philosopher, and destroyed such as in his judgment were not fit to be known to the world!

Cornelius Agrippa, a learned physician, and friend of Trithemius, Erasmus, Melancthon, and other eminent scholars, and who also held various state offices at Mentz, was compelled to fly his country, and the enjoyment of a large income, merely for having displayed a few philosophical experiments, which now every school-boy can perform; but more particularly having attacked the then prevailing opinion, that St. Anne had three husbands, he was obliged to fly from place to place. The people beheld him as an object of horror; and when he walked, he found the streets empty at his approach. He died in an hospital in the year 1534.

In those times, it was a common opinion to suspect every great man of an intercourse with some familiar spirit. The favourite black dog of Agrippa was supposed to be a demon. When Urban Grandier, another victim to the age, was led to the stake, a large fly settled on his head: a monk, who had heard that Beelzebub signifies in Hebrew the God of Flies, reported that he saw this spirit come to take possession of him. Mr. De Langear, a French minister, who employed many spies, was frequently accused of diabolical communication. Sixtus V., Marechal Faber, Roger Bacon, Cæsar Borgia, his son Alexander VI., and others, like Socrates, had their diabolical attendant.

Jerome Cardan, an eminent astrologer and mathematician, and who died at Rome in the year 1576, was believed to be a magician. An able naturalist, who happened to know something of the arcana of nature, was immediately suspected of magic. Even the learned themselves, who had not applied to natural philosophy, seem to have acted with the same feelings as the most ignorant; for when Albert, usually called the Great, an epithet he owed to his name *De Groot*, constructed an ingenious piece of mechanism, which sent forth distinct vocal sounds, Thomas Aquinas was so much terrified at it, that he struck it with his staff, and, to the mortification of Albert, annihilated the curious labour of thirty years!

Descartes was horribly persecuted in Holland, when he first published his opinions. Voetius, a bigot of great influence at Utrecht, accused him of atheism, and had even projected in his mind to have this philosopher burnt at Utrecht in an extraordinary fire, which, kindled on an eminence, might be observed by the seven provinces. This persecution of science and genius lasted till the close of the seventeenth century.

With a noble perception of his own genius, lord Bacon, in his prophetic will, thus expresses himself:—"For my name and memory, I leave it to men's charitable speeches, and to foreign nations, and the next ages." Before the times of Galileo and Hervey the world believed in the stagnation of the blood, and the diurnal im-

moveability of the earth: and for denying these the one was persecuted and the other ridiculed.

The intelligence and the virtue of Socrates were punished with death. Anaxagoras, when he attempted to propagate a just notion of the Supreme Being, was dragged to prison. Aristotle, after a long series of persecution, swallowed poison. Heraclitus, tormented by his countrymen, broke off all intercourse with men. The great geometricians and chymists, as Gerbert, Roger Bacon, and Cornelius Agrippa, were abhorred as magicians. Pope Gerbert, as bishop Otho gravely relates, obtained the pontificate by having given himself up entirely to the devil; others suspected him too of holding an intercourse with demons; but this was indeed a devilish age! This list of persecuted genius might be much enlarged, but sufficient names and punishments for opinions which are now held as *orthodox*, will show the predominance which ignorance once held over the human mind.

1516. The first edition of the *New Testament*, in Greek, was published by John Froben, at Basil. The design of publishing this edition originated with Froben, who engaged Erasmus as the editor; for Beatus Rhenanus, who was for some time one of the correctors of Froben's press, in a letter addressed to Erasmus, dated April 17th, 1515, makes the proposal, in the following terms: "Petit Frobenius abste *Novum Testamentum* pro quo tantum se daturum pollicetur, quantum alias quisquam:" "Froben requests you to undertake the *New Testament*, for which he promises to give you as much as any other person." During the time he was employed upon it, Erasmus lodged in the house of Froben, as appears from the subscription at the end of the first edition, which is, "Basiliæ, in ædibus Johannis Frobenii Hammelburgensis, Mense Februario, anno MDXVI."

The publication of this work raised a host of enemies against Erasmus, some of whom censured his temerity, whilst others laboured to affix the stigma of inaccuracy and heresy upon him; and one of the colleges at Cambridge forbade it to be brought within its walls. It was printed in folio, in two columns, with the notes at the end; and reprinted in 1519, 1522, 1527, and 1535, accompanied with a *Latin Version*; and various readings, selected from several manuscripts, the works of the fathers, and the vulgate.

1516. The first bookseller who purchased manuscripts from the authors, and had them printed by others, without possessing a press of his own, was John Otto, at Nuremberg.

The first printers executed their different works at their own expense, and sold them themselves, or by their agents, at their risk. It was therefore necessary to employ large capitals; paper and other materials, as well as labour, being exceedingly dear, and the purchasers being but few; partly from the high prices of books, and

partly from the illiteracy which so generally prevailed. These causes reduced many of the early printers to poverty; as was the case of Sweynheym and Pannartz, at Rome; and we also find that Faust made a journey to Paris in order to dispose of his bibles. At length the printers relieved themselves by confining their attention solely to printing, and leaving the bookselling part of the business to others. This we find, created a distinct profession of *booksellers*, who caused the books sold, to be printed at their own expense, and thus became *publishers*. In 1545, two booksellers of this kind, appeared at Leipsic, of the name of Steiger and Boskopf. The books were to Franckfort on the Mayne. Sometimes rich people of all conditions, and particularly eminent merchants, engaged in this branch of the profession, as we have already shewn. Henry Stephens, the second, at Paris, was printer to Ulrich Fugger, at Augsburg, from whom he received a salary. In some editions from the year 1558 to 1567, he subscribes himself *Henricus Stephanus, illustris viri Hulderici Fuggeri typographus*.

1517. It is not exactly ascertained when the art of printing was introduced into the university of CAMBRIDGE; but it is generally supposed that the first work was Erasmus's *de Conscribendis Epistolis*. As Erasmus was then resident at Cambridge, he no doubt took care of his own works. Linacer's Latin version of *Galenus de Temperamentis*, printed by John Siberech in 1521, is given by Dr. Cotton, as the earliest dated volume. A few Greek words and abbreviations are here and there interspersed in Linacer's work, which is the earliest appearance of Greek metal types in England.

Of this edition of Linacer's translation of Galen, the Bodleian library contains an exquisite specimen printed upon vellum, in the original binding, having the royal arms impressed on the sides; being the identical copy which Linacer presented to king Henry VIII. Henry gave it to bishop Tonstall; from whom, passing through various hands, it came at length into the possession of Thomas Clayton, master of Pembroke college, and regius professor of physic in the university of Oxford, who gave it to the Bodleian library in the year 1634.—Cotton.

Dr. Robert Wakefield, chaplain to king Henry VIII. published his *Oratio de Laudibus*, &c.; but he was obliged to omit his whole third part, because the printer, (Wynkyn de Worde) had no *Hebrew* types. There are, however, some few *Hebrew* and *Arabic* characters introduced; but they are extremely rude, and evidently cut in wood; and the first of sort used in England.

1517. Bachmeister, in his *Essay* on the St. Petersburg library, asserts that printing was exercised at Wilna, a populous city of European Russia, so early as this year; and cites an edition of the *Acts of the Apostles* of that date, a copy of which he declares to be in the patriarchal library at Moscow. Henderson also notices printing at Wilna in 1525. In 1583 the Socinians established a press here.—Wilna is the

\* The *New Testament* in Greek, written with his own hand, is with other relics (including his sword and pencil) to be seen at Basil.

capital of Lithuania, and has a bishop's see, a castle, a royal palace, and an university erected so early as 1570.

1517. The first act of open hostility against the Church of Rome, by Martin Luther, was in this year, by affixing to the gate of the church of Wittenberg twenty-four propositions relating to the sale of indulgences. Two years had not elapsed, from the time of Luther's first appearance against indulgences, before his writings found their way into Italy. In a letter, addressed to the reformer, by John Froben, the celebrated printer at Basil, the following information is conveyed:—Blasius Salomonius, a bookseller at Leipsic, presented me, at the last Franckfort fair, with several treatises composed by you, which being approved by all learned men, I immediately put to the press, and sent six hundred copies to France and Spain. They are sold at Paris, and read and approved of even by the Sorbonists, as my friends have assured me. Several learned men there have said, that they for a long time have wished to see such freedom in those who treat divine things. Calvas also, a bookseller of Paris, a learned man, and addicted to the muses, has carried a great part of the impression into Italy. He promises to send epigrams written in praise of you by all the learned in Italy; such favour have you gained to yourself, and the cause of Christ by your constancy, courage, and dexterity." Under the date of September 19, 1520.

Burchard Schenk, a German nobleman, writes to Spalatinus, chaplain to the elector of Saxony: "According to your request, I have read the books of Martin Luther, and I can assure you, that he has been much esteemed in this place for some time past. But the common saying is, *Let him beware of the Pope!* Upwards of two months ago ten copies of his books were brought here and immediately purchased, before I had heard of them; but in the beginning of this month, a mandate from the pope and patriarch of Venice arrived, prohibiting them; and a strict search being instituted among the booksellers, one perfect copy was found and seized. I had endeavoured to purchase that copy, but the bookseller durst not dispose of it."

In the year 1519, Charles V. was elected emperor. In 1520, the disputes had proceeded so far, and the boldness of Luther had so much increased, that Leo X. thought it proper to issue his bull in condemnation of forty-one propositions, which Luther had published subsequently to the former. In the same year he addressed to the Pope his book on *Christian Liberty*; a work which was censured by the universities. He was at length excommunicated by the Pope; in return for which he wrote against "the execrable Bull of Antichrist." "They excommunicate me," said he; "I excommunicate them. Let us break their 'bonds in sunder, and cast their yoke from off our necks.'" His next proceeding was to compose and publish a defence of the condemned articles.

The faculty of divines of the university of

Paris, after many meetings held in the Sorbonne, drew up a *censure* of the heresies of Luther. It was solemnly proclaimed, in a general assembly held on the 15th of April, 1521; and Jodocus Badius one of the sworn printers, in virtue of his oath of obedience, was enjoined to print it with fidelity and exactness; all others of the profession being interdicted from interfering with the impression or sale, under pain of deprivation of their privileges. In the exacerbation produced, more especially by the reformation, the right of censure, became in the hands of bigotry and ignorance, an engine of tyranny and of persecution. The doctors of the Sorbonne were the first to enter into the discussion of the Lutheran proposition; and they commenced with this sentiment in their preamble, "That flames, rather than reasoning, ought to be employed against the arrogance of Luther." By virtue of this condemnation, the parliament caused Luther's books to be burned in the porch of Notre Dame.—During a series of years, the Sorbonne were engaged in repressing Lutheran propositions. The heterodox were never tired of writing, the Sorbonne of censoring, and the parliament of sanctioning informations against distributors of heretical books now forgotten; and which, if left unnoticed, might never have acquired celebrity.

In consequence of the bull of Luther's condemnation, his writings were publicly burnt at Rome. Luther, by way of reprisals, destroyed the decretals, and in particular the bull by which he had been condemned, with all the works of the anti-reformers, in a public fire behind the walls of Wittenberg. This is said to have taken place on the 10th of December, 1521.

1518. The emperor Maximilian granted a privilege to Peter Schoeffer, the grandson of Faust, which is inserted at the end of *Lirey* printed by him, for the sole power of printing that author for ten years; and for six years, to all the other books he should print thereafter, in consideration of Faust having invented the art of printing. This must certainly be considered the first *privilege* granted to a printer. Signed, JAC SPIEGEL.

1519. Bachmeister remarks that one of the first books printed in the Russian or Slavonian language was the *Pentateuch*, in 4to, and printed at Prague, on good paper, in beautiful Cyrillian characters, and with few or no abbreviations. There is a preface to each book; and a summary of contents to each chapter. The chapters are not divided into verses. The whole is adorned with wood-cuts, capitals, and vignettes. It was translated into the Slavonian language by Francis Scorino, a physician.

Dr. Cotton, however, observes, that this had been preceded by some other parts of scripture, in the year 1517 and 1518.

In 1487 a Bohemian version of the *Psalter*, and in the following year the *first edition of the Bohemian bible*, were executed in the city of Prague, and a copy of the latter is preserved in the public library of its university.

1520, July 24. Died HENRY STEPHANUS, or in the English language STEPHENS, and in French ESTIENNE, the first of an illustrious and most distinguished family of printers. Their history has been written by the industrious Mattaire; and his *Historia Stephanorum* presents them to us, not as mere mechanical artists, but as the great patrons of literature, and ranking among the most learned men of the age in which they lived; a period extending from the early part of the sixteenth century to the commencement of the seventeenth, and during which they published, beside almost innumerable classical and grammatical works, of many of which they were the authors as well as printers,—forty-five editions of the *Bible*, in different languages, three editions of *Concordances*, and forty-eight editions of *Commentaries* by various authors.

Henry Stephens would be an interesting subject of our curiosity, if he had no other claims upon it than as the founder of that distinguished family of printers; and more especially as the father of Francis, Robert, and Charles, all conspicuous as scholars, and as artists in the same profession. But the memorials of his personal history are scanty and uncertain. Neither is it easy to ascertain the precise date of his professional commencement. Panzer says that the chronological precedence as an artist is due to Jodocus Badius Ascensius.—Stephens was a printer of the university of Paris, in conjunction with that of Wolfgang Hopyll, in the year 1496.

In the impression of some particular works, the name of Henry Stephens is found occasionally in conjunction with those of Jean Petit, of Denis Roce, and of Jodocus Badius, respectively. But as a separate printer he appears first in an impression of the *Éthica Aristotelis*, translated by Leonardus Arctinus, and in some other treatises of Aristotle, Latin, in 1504: subscribing thus: *per Henricum Stephanum in vico clausi Bramelli e regione scholæ decretorum*: and Panzer has enumerated more than one hundred distinct impressions by him.

The productions of his press are not in general remarkably superior to those of his cotemporaries, either in point of intrinsic interest and merit, or of professional execution. They are for the most part such as might be expected from an age of so rude a character. His types were commonly those which are denominated roman: and such as Mattaire considers not inelegant for that period. But sometimes he employed a species of semi-gothic and abbreviated characters, founded in imitation of manuscripts, and much in use among the early printers of Paris.

From a review of the productions of Stephens's press, as enumerated by Mattaire and Panzer, it will appear, that three several scholars of this period found almost exclusive employment for his professional exertions, by works of which they were either the original authors, or at least the avowed editors. These were Charles Borville, Jaques le Ferre, and Josse Clitieu, a doctor of the Sorbonne.

He used the arms of the university, in common with one or two other Parisian typographers: but all uncertainty was removed by the initials of each, which were respectively added. With those arms he generally connected or intermixed other fanciful ornaments. Of such variety the *Quincuplex Psalterium*, furnishes an amusing specimen; for there, the title being included by a circular ring, and externally by a capacious parallelogram, the space intervening, after exhibiting the *ecu* or shield at the top supported by angels, and a blank shield at the bottom with like supporters, is completely filled up with a complicated festoon of flowers, interwoven by other angelic figures: the initials H. S. appearing within the verge of the ring.

Chevillier speaks very highly of Stephens for the general accuracy of his impressions, and the ingenious concern expressed by him on the discovery of a few errors which had escaped timely observation. He introduces a list of twenty *errata*, subjoined to the *Apologetic* of Erasmus against Latomus, 1519, 4to, by this confession: "*locis aliquot incuria nostra aberratum est.*" On another occasion, having accidentally expressed the word *febris* by an *æ*, he makes this jocular apology: "*foebrem longam sibi Chalcographus delegit, tametsi febris correpta sit minus periculosa.*" On some occasions, typographers who thus felt for the honour of the press, and regretted every blemish as a stain upon their own characters, added to the subscriptions of their editions the names of their correctors. Such was the frequent practice of Stephens; whence we learn that besides other men of eminence, the celebrated Beatus Rhenanus at one time discharged for him that office.

He does not appear to have printed any works in the vernacular or French language; willing probably to discriminate himself from the crowd of his cotemporaries as a learned printer. His impressions seem to consist wholly of Latin works; amongst which, besides those of the several descriptions already mentioned, are a translation of *Dioscorides* by Ruellius, some *Opuscula* of Galen, and other medical writers; and in a word, such other scientific books as were, under that aspect of literature, most popular in the university.

To terminate our account of this venerable founder of the family of Stephens, as Panzer enumerates no works printed by him after the commencement of the year 1520, we may conclude that Peignot is correct in asserting that he died in the month of July in that year. He says, moreover, "the circumstance happened at Lyons;" but mentions no authority. The six latest productions of his *officina*, *ejusdem anni*, bear the *exceudebat* of Simon Colinaeus; who subjoins the usual designation of Henry Stephens; viz. *e regione scholæ Decretorum*.

The widow of Henry Stephens was married to Simon de Colines, an eminent printer at Paris.

It is a little singular, that the use and convenience of the *catchword* did not occur to the Parisian printers till the year 1520.—Chevillier.

1520. About this period died Robert Whittington. He was a most laborious grammarian, and, according to Berkenhout, was born at Litchfield, about the year 1480, and educated under Stanbridge, in the school at the gate of Magdalen college, Oxford. He afterwards became a member of the university; but in which hall or college is not known. In 1501 he began to teach a grammar school, probably in London, as all his books were printed there. In 1513, having supplicated the congregation of regents at Oxford, that he might be laureated, he was accordingly, with a wreath of laurel, decorated in the arts of grammar and rhetoric; and was at the same time, admitted to the reading of any of the logical works of Aristotle; that is to the degree of bachelor of arts; which was, at that time, esteemed equal to the degree of doctor of grammar or rhetoric. From this time he wrote himself *Protovates Anglie*. Where he died is uncertain.—Besides the numerous editions of Grammars which he wrote, and which were printed by Wynkyn de Worde, he was the author also of the following:—two Latin *Epistles to Cardinal Wolsey*, preserved in manuscript in the Bodleian library at Oxford: two Latin *Epistles to William Hormann*, London, 1521, 4to.; and translations with the Latin text, of Cicero's *Offices*, *Tully of Old Age*, and *Erasmus of Good Manners of Children*.

1520. JULIAN NOTARY commenced his labours at Westminster; although Ames, following Bagford, believes him to have printed in France before he came to Britain. It is certain that he had a French associate named John Barbier, whose name appears conjoined with Notary's in the *Salisbury Misal*; whence Ames supposed that the volume was printed on the continent, and that Notary was also a Frenchman. His earliest residence in England was in King-street, Westminster; as he states in the colophons to such of his books as were executed in the end of the fifteenth, and the first two years of the following century: but, about 1503, he removed to the parish of St. Clement, and took up his abode near Temple-bar. The *Golden Legend* was "accomplished and fynnyshed at Tempell barr the xvi daye of Feuerer the yere of our lorde a Thousande. ccccc. iij." but the *Hours of the Blessed Virgin*, which was printed in the same year, speaks of him as living at "London without Tempell barre in Saynt Clement paryshe at the sygne of the thre kyngs."\* The *Sermones Disceptuli*, which appeared in 1510, states that Notary's dwelling place was "in the suburbs, com-

monly called Tembell-barre," and in the same passage he is said to be printer and bookseller. The colophon to the *Cronycle of England*, 1515, shews that he had removed his residence and sign to "powlys chyrche yarde besyde ye west dore by my lordes palyes;" or as the imprint to the *Lyfe of Saynt Barbara*, 1518, more clearly expresses it, "my lorde of Londons palayse at the signe of the thre kynges." The time of Julian Notary's death, is altogether unknown; and the catalogue of his labours which follow, is too imperfect to furnish any very correct data concerning him. His earliest work is dated the 20th of December, 1498, and some of his books bear the date of this year; but whether this period formed the extremes of his typographical life, will probably now never be known.

He printed in the whole twenty-three books; amongst which is an edition of the *Shepherd's Calendar*, containing the following description of the months, and which may be amusing to the poetical reader:—

#### January.

I make me to be called Janyuere  
In my time is great stormes of coldenes  
For vnto me no moneth of the yere  
Mey compare if I aduance me doubtlesse  
For in my time was, as clerks do expresse,  
Circumcysed the Lord omnipotent  
And adoured by kynges of the Orient.

#### February.

I am february the most hardy  
In my season the pure mother virginall  
Offered her sonne in the temple truly  
Makng to God a present speciall  
Of Iesu Christ the kyng of kynges all  
Betwene the armes of the bishop Symon  
To whom pray we to haue his remission.

#### March.

March am I called in noblesse flourishing  
Which amonge monethes am of great noblesse  
For in my tyme all the frutes do huddle & sprnge  
To the seruyce of man in grete largesse  
And leuf is in the tyme of holynesse  
That every man ought to haue repentance  
Of his synnes done by longe continuance.

#### Apryll.

Amonge all monthes, I am lusty Aprill  
Fresche and holisome, vnto eche creature  
And in my tyme the dulcet dropes distill  
Called cristall, as poetes put in scripture  
Causing all stoness the longer to endure  
In my time was the resurrection  
Of God and man by diuine election.

#### Maye.

Of all the monthes in the yere I am kinge  
Flourishing in beauty excellently  
For in my time, in vertue is all thinge  
Fieldes and meades sprede most beautefully  
And byrdes singe with right swete harmony  
Reioysng loouers with hot loue all endued  
With fragrant flowers all about renewed.

#### June.

Whoe of my season taketh right gode hede  
Ought not at all my name to aduall  
For in my time, for all the commons wede  
From shepe is shorne all the fleesh & wull  
And had in merchaundys by grete shippes full  
Ouer the sea, wherfore we ought to pray  
Unto our Lorde and thanke him night & day.

#### July.

If that my time were prayed all a right  
Amonge all monthes I am one of the chiefe  
For I enripe throw great force and might  
Fruites of the earth, to man & beastes reliefe  
Feedyng horses, kynges, muttons, & strong hieffe  
With other properties that I could tell  
But I must pass—I may no longer dwell.

\* These three kings, which Notary, in the colophons to his *Manipulus Curatorum*, and *Postilla* of 1508 and 1509, calls "the three holy kings," formed one of the religious emblems of his time; since they were intended to represent those Eastern Magi who were led by a star to Bethlehem, to adore the infant Saviour. They were called Melchior, who offered to him gold; Balthazar, who offered to him frankincense; and Jaspas, who offered to him myrrh. Their bodies were supposed to have been translated to Cologne, in Germany; whence they were usually denominated the Three Kings of Cologne; and Wynkyn de Worde printed four editions of their history in 1511 and 1530.

## August.

I am named the hote month of August  
For redolent heate of Phebus brightnes  
In my time eche man ought for to haue lust  
To labour in harvest, with great busynes  
To reape & sheffe, eschewing ydlenes  
And ryse early with perfyte diligence  
Thanking our Lorde of his great prouidence.

## September.

Who can my name perfittely remember  
With the commodities of my season  
Ought of right to call me September  
Plenteous of goodes by all maner reson  
As wheate, rye, otes, beanes, fytyches & peason  
Of which fruite every man ought to haue in store  
To lise directly, & thanke our Lorde therefore.

## October.

Among the other October I hight  
Frende unto vintegers naturally  
And in my time Bacchus is ready dight  
All maner wyne to presse and clarify  
Of which is sacred as we see daily  
The blessed body of Christ in fleshe and blode  
Which is our hope refection and fode.

## November.

I Nouember will not abyde behynde  
To shewe my kindly worthynesse and vre  
For in my time the blastes of the wynde  
Abaseth leaues and shedeth their verdure  
Wherefore every prudent creature  
Ought for to lyue right as they would dye  
For all thinge taketh end naturally.

## December.

December every man doth me call  
In whose time the mother inuolute  
Dilivered was in an old oxe stall  
Of Jesu Christ Gods owne sonne incarnate  
Wherefore I thinke me the most fortunate  
Of all the other, to whom pray we then  
That we may come unto his blisse. Amen.

Only two devices were used by Notary, of which there are a very few variations. The following is a representation of one of them :—

Herbert's copy of the *Scala Perfectionis*, printed by Notary, had "stamped on the covers on one side the King's arms, crowned, supported by a dragon and a greyhound; on the other the rose encompassed by two Latin verses, *Hæc rosa virtutis*, &c. In the upper corners are the city arms, with the sun on one side and half-moon on the other. In the centre at the bottom are his mark and initials."

JOHN BARBIER, who is stated by La Caille, in his *Histoire de l'Imprimerie et de la Librairie*, to have been a printer of considerable skill, and, besides being in partnership with Julian Notary, was much employed by the most eminent typographers of his day. How long he remained to

exercise the profession, or when he died, does not appear.

1521. The earliest collection of Christmas Carols supposed to have been published, is only known from the last leaf of a volume printed by Wynkyn de Worde, in this year. *Christmasse carolles newly enprinted at London, in the flete-strete at the sygne of the Sonne by Wynkyn de Worde. The yere of our lorde, m.d.xxi. Quarto.* This precious scrap was picked up by Tom Hearne. Dr. Rawlinson, who purchased it at his decease, in a volume of tracts, bequeathed it to the Bodleian library. There are two carols upon it: one, "a caroll of huntynge," is reprinted in the last edition of Juliana Berners' *Boke of St. Alban's*; the other, "a caroll, bringing in the bore's head," is in Mr. Dibdin's Ames, with a copy of it as it is now sung in Queen's college, Oxford, every Christmas-day, "to the common chaunt of the prose version of the Psalms in cathedrals." Dr. Bliss, of Oxford, also printed on a sheet for private distribution, a few copies of this and Antony Wood's version of it, with notices concerning the custom, from the handwritings of Wood and Dr. Rawlinson, in the Bodleian library. Ritson, in his ill-tempered *Observations on Warton's History of English Poetry*, has a Christmas carol upon bringing up the bore's head, from an ancient manuscript in his possession, wholly different from Dr. Bliss's. The *Bibliographical Miscellanies*, contains seven carols, from a collection in one volume in the possession of Dr. Cotton, of Christ-church college, Oxford, "imprinted at London, in the Powllry, by Richard Kele, dwelling at the longe shop vnder saynt Myldred's Chyrche," probably "between 1546 and 1552." There are carols among the *Godly and Spiritual Songs and Ballades*, in "Scottish Poems of the sixteenth century;" and one by Dunbar, from the Bannatyne manuscript in *Ancient Scottish Poems*. Others are in Mr. Ellis's edition of Brand's *Popular Antiquities*, with several useful notices. Warton's *History of English Poetry* contains much concerning old carols. Mr. Douce, in his *Illustrations of Shakspeare*, gives a specimen of the carol sung by the shepherds on the birth of Christ in one of the Coventry plays.

The custom of singing carols at Christmas prevails in Ireland to the present time.\* In Scotland, where no church feasts have been kept since the days of John Knox, the custom is unknown. In Wales it is still preserved to a greater extent, perhaps, than in England; at a former period, the Welsh had carols adapted to most of the ecclesiastical festivals, and the four seasons of the year, but at this time they are limited to that of Christmas.

\* Mr. Southey, describing the fight upon the Plain of Patay, tells of one who fell, as having

In his lord's castle dwelt, for many a year,  
A well-beloved servant: he could sing  
Carols for Shrove-tide, or for Candlemas,  
Songs for the Wassail, and when the Bore's head  
Crown'd with gay garlands, and with rosemary,  
Smok'd on the Christmas board.—*Joan of Arc.*

The following verse of a carol for Christmas, is literally translated from a Welsh book entitled *Llyfr Carolan*, or the Book of Carols. The poem was written by Hugh Morris, a celebrated song-writer during the commonwealth, and until the early part of the reign of William III.

To a saint let us not pray, to a pope let us not kneel;  
On Jesu let us depend, and let us discreetly watch  
To preserve our souls from Satan with his snares;  
Let us not in a morning invoke any one else.

The following extract is from a carol, called *Dives and Lazarus* :—

As it fell out, upon a day,  
Rich Dives sick'n'd and died,  
There came two serpents out of hell,  
His soul therein to guide.

Rise up, rise up, brother Dives,  
And come along with me,  
For you've a place provided in hell,  
To sit upon a serpent's knee.\*

On the continent the custom of carolling at Christmas is almost universal. During the last days of Advent, Calabrian minstrels enter Rome, and are to be seen in every street saluting the shrines of the Virgin mother with their wild music, under the traditional notion of charming her labour-pains on the approaching Christmas.† Lady Morgan observed them frequently stopping at the shop of a carpenter. In reply to questions concerning this, the workmen who stood at the door said, that it was done out of respect to St. Joseph.

Gilbert Davies, Esq. published eight ancient Christmas carols, with the tunes to which they were formerly sung in the West of England. This is a laudable and successful effort to rescue from oblivion some carol melodies, which in a few years will be no more heard. Mr. Davis says, that on Christmas-day these carols took the place of psalms in all the churches, especially at afternoon service, the whole congregation joining: and at the end it was usual for the parish clerk, to declare in a loud voice, his wishes for a merry Christmas and a happy new year.

To Christians, Christmas-day is truly interesting. On it we celebrate the birth of Christ, the Messiah, sent by God to fulfil the promise that had been announced by the prophets, that man should be redeemed from the penalty of death for his transgressions; and that light and life should be made manifest by the gospel. The strict observance of this day was enjoined by the Catholic church about the year 500; and, with just reason, it continues to be kept holy by all denominations of Christians, however they may

differ in other matters of faith. The name of the day is derived from *Christi Misi* or the *Mass of Christ*; and is of Roman origin. But while we keep this day in solemn remembrance of our great spiritual delivery, we are not bound to fall in with the superstitions that ignorance has attached to its institution. At the birth of Christ there were some singular coincidences: the Temple of Janus was shut, peace being established all over the world;‡ the Oracle of Delphos† ceased to speak, and was consulted no more. At this time Augustus Cæsar was emperor of the Romans, and Judæa was committed to the government of Herod.

The pastimes and recreations indulged in at this festive season are strikingly like those of the ancient Saturnalia. The custom of ornamenting our churches and houses with sprigs of evergreen plants is as old as the Anglo-Saxons, they having a great veneration for such embellishments, particularly the mistletoe, of which a like regard seems to continue at the present day. It has been supposed that when Alfred expelled the barbarous Danes, the churches which they had polluted being recovered and purified, green boughs were stuck up in those temples as symbols of consecration and purity; as well as to show the everlasting continuance of the Christian religion, and its never-fading virtues. The rude gambols and mimicry of old times begin to wear away, and are now principally confined to the lower ranks of society. They are, however, still continued in the northern counties. Some feasting and liberality yet continues among the more opulent, and, in the words of Thomson,

"The smoking sirloin stretched immense  
From side to side, in which with desperate knife  
They deep incision make, and talk the while  
Of England's glory ne'er to be defaced,  
Nor wanting be the brown October drawn  
Mature and perfect from his dark retreat  
Of thirty years."

Henry VII., in the third year of his reign, kept his Christmas at Greenwich: on the twelfth night, after high mass, the king went to the hall and kept his estate at the table; in the middle sat the dean, and those of the king's chapel, who, immediately after the king's first course, sang a caroll. Grainger innocently observes, that they that fill the highest and lowest classes of human life, seem, in many respects, to be more nearly allied than even themselves imagine. A skilful anatomist would find little or no difference in dissecting the body of a king, and that of the meanest of his subjects; and a judicious philosopher may discover a surprising conformity in discussing the nature and qualities of their mind.

\* The idea of sitting on the knee was, perhaps, conveyed to the poet's mind by old wood cut representations of Lazarus seated in Abraham's lap. More anciently, Abraham was frequently drawn holding him up by the sides, to be seen by Dives in hell. In a work entitled *Poesilla Guillermi*, 4to. Basil, 1191, they are so represented, with the addition of a devil blowing the fire under Dives with a pair of bellows.

† In several parts of England a number of musicians, known by the name of *scolds*, go about by night some time before Christmas; and never fail to visit the inhabitants for Christmas-boxes.

‡ The Temple of Janus was shut in times of peace. He is represented with two faces; the one looking backward, the other forward. He is fabled to have taught the Italians to plant vines, &c. He is by some considered to have been Noah.

† The Oracle of Apollo was consulted by the Greeks in all matters of importance. It stood on Mount Parnassus, near the city of Delphos, which they fancied to be the middle of the world.

To give some idea of the merriments of our ancestors, we present the following extract from original autographs in the British museum:—

"Cardinal Wolsey, who was prime minister to Henry VIII. in 1525, established a household for the princess Mary, she being then the princess royal; and he also appointed the various officers and servants of her establishment. The following document is a copy of one presented to Wolsey, for instructions how to proceed at the succeeding Christmas:—

"Please it youre Grace, for the great repaire of straungers, supposed unto the Pryncesse, honourable householde, this solempne fest of Christmas.

"We humbly beseeche the same to let us know youre gracious pleasure concernyng as well a *ship of silver* for the almes disse requysyte for her high estate and spice plats, as also for trumpetts, and a rebek to be sent, and whether we shall appoynt any *Lord of Myrable* for the said honourable householde, provide for interluds, dysgysngs, or pleyes in the sed fest, or for banket or twelf nyght. And in likewise whether the Princess shall sende any newe yeres gifts to the Kinge, the Quene, your Grace, and the Frenshe Quene, & of the value and devise of the same. Besechyng your Grace also to pardon our busy and importunate sute to the same in such behalfe made. Thus our right syngler good Lord, we pray the holy Trynyte have you in his holy preservacion. At Teoxbury the xxvij day of November, Your humble Orators.

To the most reverant father in God the Lord Cardinall, his good Grace.

John Exon, Jeiler Grevile, Peter Burnell, J. Salter, G. Bromley, Thomas Audeley."

Doubtless, his grace the cardinal allowed the recreations prayed for, and this specimen may serve for a mirror of that age, as it respects these revels and pastimes then practised.

1521. To counteract the inclination of his subjects to heretical sentiments, Henry VIII. entered the list against Martin Luther, by writing and publishing a book, *De Septem Sacramentis*, "Of the Seven Sacraments;" for writing this book, pope Leo X., on the 11th of October of this year, bestowed upon the royal controversialist, the title of *Defender of the Faith*.\* But neither the lustre of Henry's crown, nor the acclamations of the admirers of the royal performance, intimidated the intrepid German, who replied to the treatise in terms of unbecoming severity, followed by a letter, acknowledging the virulence of the terms employed. Luther's reply was succeeded by epistolary answers from the king, whose zeal had been inflamed by the honours he had received from the papal head of the church. These epistolary replies, originally written in Latin, were afterwards translated, and printed by Richard Pynson, his Majesty's prin-

ter.—The king's answer begins thus: "Your letters wrytten the fyrst day of Septembre, we have receyved the xx. day of March:" &c. The time of receiving Luther's letter is not mentioned in the Latin editions.

In the king's letter we have this remarkable assertion, "And although ye sayne your self to thyneke my boke nat myne owne, but to my rebuke (as it lyketh you to affyrme) put out by subtell sophisters: yet it is well known for myn, and J for myne auowe it:" &c.

1521. *Here ensueth a goostely Treatise of the Passyon of our Lorde Jesu Chryst, with many devout Contemplacions Examples and Extencions of the same. Enprynted at London in Fletestrete at the sygne of the Sonne by Wynkyn de Worde the vi. Daye of Octobre. The yere of our Lorde m.ccccc.xxi. Quarto.*

Title over a large cut of the crucifixion, and on the reverse is the following poetical prologue:—

#### THE PROLOGUE OF ROBERT COPLANDE.

The godly use of prudent wrytten men  
Cannot abeteyne theyr aunceynt exercyse:  
Records of late how bestly with his pen  
The translator of the sayd treatyse  
Hath him indeured, in most goodly wise  
Bokes to translate, in volumes large and fayre  
From Frenche in prose, of goostly examplayre.

As is the flower of Godden commendement,  
A treatyse also called *Lucydary*,  
With two other of the seven sacramentes,  
One of cristen men the ordinary,  
The seconde the craft to lyve well and to dye,  
With dyvers other to mannes lyfe profitabyl,  
A vertuous use and ryght commendable.

And now this Boke of *Christes Passyon*  
The which before, in Language was to rude  
Seyng the matter to be of grette Compassyon  
Hath beseyd hym that Vyce for to exclude  
In Englysshe clere, with grette Solycitude  
Out of Frenshe at Wynkyn de Wordes Instancce  
Dayly decryng of Vertues the Fortheraunce.

The translator of the above work was Andrew Chertsey, gentleman, the laborious assistant of Wynkyn de Worde and Robert Copland.

1521. On the authority of Maurice Johnson, Esq. Ames mentions a John Butler, or Boteler, who was a judge of the common pleas and a printer; but of whose press the only relic that remains is *Parvulorum institutio ex Stanbrigiana collectione*. Quarto. It consists of two sheets, and at the end is *Imprinted at London in Fletestrete at the sygne of saynt John the euangelyst by me John Butler*. It was most probably that from Butler, Robert Wyer first adopted his sign or device, and he possibly might have been his typographical instructor.

1521. The earliest edition of the *New Testament* printed in Sweden, is of this date, in folio, and executed at Stockholm.\* In 1703, a splendid edition of the Swedish Bible was printed at the same place, by H. Keyser, in the praises of which Alnander is warm and eloquent.—At

\* The seal of the bull of pope Clement VII. who succeeded Leo X. confirming the title of *Defender of the Faith*, to Henry VIII. is of solid gold and preserved in the chapter house, Westminster.

\* In the royal library of Stockholm is preserved, as an interesting relic of the days of the Reformation, a copy of the *Vulgate Bible*, which was used by Martin Luther; it is a folio edition, printed at Lyons in 1521, and its margins and every void space are wholly covered with annotations in the hand-writing of that reformer.

Stockholm, also, was published in 1548, the first edition of the *New Testament* in the *Finnish* tongue, in 4to. In 1551 the *Psalms*, with other books of the *Old Testament* were published; but an entire *Finnish Bible* was not printed until 1642.

We have already noticed that Stockholm was the first place throughout all Sweden into which the art of printing found its way; John Snell having here executed a work, entitled *Dialogus Creaturarum Moralizatus*, so early as 1483, which is considered to be the first book printed within that kingdom. A copy of it may be seen in the university library of Upsal. Of John Snell, who probably was a German, nothing further appears. He was succeeded at Upsal by John Fabri, whose death occurs in the year 1496. Panzer enumerates five books printed in this city during the fifteenth century. In the year 1594, the office of typographer-royal was instituted, with certain privileges and a fixed salary from the government, the printing-materials also being furnished by the king. The first printer who held this post was Anundus Olai. In the year 1700, the Academy of Antiquities, which had been established at Stockholm by Charles XI., appointed a typographer of its own, who, as well as the king's, was honoured with particular privileges and immunities. The liberal policy of queen Christina introduced to this city one of the family of Jansons of Amsterdam as a printer, to whom she allowed an annual pension, and granted several privileges, amongst which was the valuable one, of importing all his paper duty-free. At Stockholm the first Runic types were used, in a *Runic and Swedish Alphabetaurum*, 8vo, 1611; they were cast at the expense of the king, and were afterwards purchased by the university: a new and more correct fount was cast at Lubec in 1702, by desire of the learned Peringskiöld. Russian types were first used in Sweden, at Stockholm, by order of Gustavus Adolphus, in order to the conversion to Christianity and instruction of those of his subjects, who, living on the confines of Muscovy, were addicted to the superstitions of that nation. Peter von Seelen was appointed over this Russian press in the year 1625.—*Dr. Cotton.*

1521, Dec. 1, *Died* pope Leo X. The celebrity of this pontiff, and the intimate connection of his pontificate with the reformation by Luther, may justify us in detailing at some length, the more prominent traits of his life and character.—John, or Giovanni de Medici, was a native of Florence, the second son of Lorenzo, styled the *Magnificent*, and grandson of Cosmo the Great. From his infancy he was destined to the church, and received an education suited to the high rank and ambitious views of his father, which produced a correspondent gravity of deportment at so very early an age, that his biographer says, "he seems never to have been a child."

At seven years of age he was admitted into holy orders, and about a year afterwards, was

appointed abbot of Fonte Dolee, by Louis XI. of France, who also conferred upon him the abbacy of the rich monastery of Passignans. Yet we are assured that at this early period he "was not more distinguished from his youthful associates, by the high promotions which he enjoyed, than he was by his attention to his studies, his strict performance of the duties enjoined him, and his inviolable regard to truth." He, however, bore "his blushing honours thick upon him," for when he was only thirteen years of age, he received the dignity of a cardinal, from pope Innocent VIII.; and pope Julius II. employed him as legate. On the 11th of March, 1513, being then only thirty-seven years old, he was elected supreme head of the church, on the decease of Julius, and assumed the name of Leo X. His election to the pontifical chair proved favourable to the general interests of literature, but increased the licentiousness of the papal court, and spread a baneful influence over the whole of the Romish hierarchy.

The commencement of his pontificate seemed to realize the high expectations which had been formed of it, particularly by a general amnesty published at Florence, his native city, respecting those who had been the occasion of the violent civil commotions which had taken place in it: and by the recall of the banished citizens to their country. With considerable address and perseverance, he surmounted the difficulties which had prevented the enjoyment of peace between Italy and France; and composed the troubles which the ambition of the surrounding sovereigns, or the misconduct of his predecessors, had occasioned. Unhappily, however, the hopes that were entertained respecting him, and the excellency of his pontifical government, were never realized; his ambitious projects being accomplished, by his advancement to the tiara, he became indolent and voluptuous; his assumed gravity gave way to the lowest buffoonery; his munificence degenerated into prodigality; and his attachment to truth was lost in the insincerity of his political engagements: even in his literary pursuits, *profane* was generally preferred to *sacred* literature; and his disposal of ecclesiastical dignities was frequently regulated by the aid afforded to his pleasures. "It seems to have been his intention," says one of his biographers, "to pass his time cheerfully, and to secure himself against trouble and anxiety by all the means in his power. He therefore sought all opportunities of pleasure and hilarity, and indulged his leisure in amusement, jests, and singing."

An elegant writer\* thus characterizes the court of Leo: "While Leo, with equal splendour and profusion, supported the character of a sovereign prince, he was too prone to forget the gravity of the pontiff. He delighted in exposing to public ridicule, those characteristic infirmities of some of his courtiers, which his own penetration easily discovered.—But these were venial aberrations

\* Gresswell's *Memoirs of Angelus Politianus*, &c. Manchester, 1861, 8vo. See also, *Roscoe's Life of Leo X.* and *Life of Lorenzo de Medici.*

from decorum, in comparison with those excesses which Leo's example sanctioned, or at which his indifference connived. The few who, amidst this more than syren fascination, still retained any sense of decency, were constrained to blush on beholding ecclesiastics mingling, without reserve, in every species of pleasurable dissipation. The younger cardinals especially, many of whom were junior branches of royal or illustrious houses, exulted in the free participation of indulgences, to which the most sacred characters were no restraint.

On the first day of August in every year, Leo was accustomed to invite such of the cardinals as were among his more intimate friends, to play at cards with him, when he distributed pieces of gold to the crowd of spectators who were permitted to be present at this entertainment. He was also a thorough proficient in the game of chess, though he is said to have always reproved the playing with dice.

Other gratifications in which Leo indulged were of the lowest and most disgusting nature; such as his entertaining in his palace, a mendicant friar, called Father Martin, whose chief merit consisted in eating forty eggs, or twenty capons, at a meal, and such like feats of voracious gluttony; and the pleasure he derived from deceiving his guests by preparing dishes of crows and apes, and similar animals, and seeing the avidity with which the high seasoned food was devoured. Yet brutish as were these sources of diversion, they have found an apologist in a celebrated writer, who regards them when associated with Leo's literary pleasures, as serving "to mark that diversity and range of intellect which distinguished not only Leo X., but also other individuals of this extraordinary family!" It must, however, be acknowledged, that his own meals were generally of the most frugal nature.

The profuse expenditure of Leo involved him in embarrassments, which led to the adoption of expedients, to supply the deficiency of his income, which for a while effected their purpose, but in the end became the means of limiting the pontifical authority, and of producing an ecclesiastical revolution, infinitely serviceable to the interests of religion and truth. Among the schemes which he adopted, to drain the wealth of the credulous multitude, was the open sale of *dispensations and indulgences* for the most enormous and disgraceful crimes, under pretence of aiding the completion of the magnificent and expensive church of St. Peter, at Rome. In Germany, the right of promulgating these indulgences was granted to Albert, elector of Metz and archbishop of Magdeburg, who employed a Dominican friar named Tetzel, as his chief agent for retailing them in Saxony; who, executing his commission with the most shameless effrontery, roused the indignation of Luther against such flagrant abuses of the papal authority, and created such a feeling against the infamous measure, as terminated in the Reformation.

The most illustrious trait in the character of

Leo, was his munificent patronage of learning and the fine arts. He was himself well versed in the Latin language, and possessed a competent knowledge of the Greek, accompanied with singular proficiency in polite literature, and extensive acquaintance with history in general. In the attention paid by him to the collecting and preserving of ancient manuscripts and other memorials of learning, he emulated the example of his father, and by his perseverance and liberality at length succeeded in restoring to its former splendour the celebrated Laurentian library, which had been commenced by Cosmo de Medici, but had been afterwards dispersed by the troops of Charles VIII. of France, on the expulsion of the haughty Piero de Medici from Florence.

His indifference to religion and religious duties, is farther confirmed by his conduct respecting the discourses delivered in his presence. "In the year 1514, he ordered his master of the palace, on pain of excommunication, to see that the sermon delivered before him did not exceed half an hour; and in the month of November, 1517, being wearied with a long discourse, he desired his master of the ceremonies to remind the master of the palace, that the council of the Lateran had decided, that a sermon should not exceed a quarter of an hour at most. In consequence of which remonstrances there was no sermon on the first day of the year 1518; the master of the palace being fearful that the preacher would exceed the prescribed limits.

It has been suspected that Leo was poisoned; but it is more probable that he died from a fever, brought on by excess of joy, at the unexpected success of the papal armies against France.

1522. The first treatise on arithmetic, published in this country, was printed by Pinson, entitled *De Arte Supputandi*, &c. It was written by Cuthbert Tunstal, bishop of London, one of the best mathematicians, as well as general scholars of his age. It is dedicated by bishop Tunstal to sir Thomas More.

1522. *Hore Beate Marie Virginis ad usum ecclesie Sarum, &c. Impresse Londontii per me vinandum de worde commorantem in vico nuncupato de Fletestrete ad signum solis. m.cccc.xxij. Duodecimo.*

In the productions of early printing may be distinguished the various splendid editions of *Missals*, *Primers*, and *Prayer Books*. Some of them we have attempted to describe; but all description must indeed fall short of these early specimens of the skill displayed by the printer, engraver, illuminator, and binder. They were embellished with cuts, in a most elegant taste; many of them, however, were ludicrous, and often obscene. In one of them an angel is represented crowning the Virgin Mary, and God the Father himself at the ceremony. Sometimes St. Anthony appears attacked by devils. The *Primer of Salisbury*, is full of cuts, and the present is the third edition, by Wynkyn de Worde, which is arranged in the following order:—The calen-

dar, on the last leaf of which is a cut of the genealogy of Christ. Then a series of prayers in Latin, with "These prayers folowyng ought for to be sayd or ye departe out of your chambre at your vprysyng." After them—"Hic incipiunt hore beate marie secundum vsu[m] Sarum. Adimatutinas;" with the engraving of the genealogy already mentioned, and many other small cuts are indented in the different prayers. After them are the Catholic prayers for the Passion of Christ, to the Holy Ghost, the seven Penitential Psalms, the Vigil Mortuorum, the Commendationes Animarum, the Psalms of the Passion, a Prayer for the blessed King Henry (VI.), and an anthem and collect, for the repetition of which forty days of indulgence and thirteen lents are granted. All the foregoing are decorated with the pictures usually attached to them in Catholic missals. At the end of the whole is a table, and the volume contains one hundred and fifty leaves, exclusive of the calendar.

The work is printed in red and black ink with the printer's mark in red; beneath which are the following verses:—

God be in my heed  
And in myn understanding  
God be in myn eyen  
And in my lokyng  
God be in my mouth  
And in my spekyng  
God be in my herte  
And in my thynkyng  
God be at myn ende,  
And my departyng.

*Cocke Lorells Bote. Inprynted at London in the Fletestrete at the Sygne of the sonne by Wynkyn de Worde. Quarto. Without date.*

Of the present exceedingly curious work, there is probably but one copy extant, which is imperfect, and which is preserved in the Garrick collection in the British Museum. It consists of nine leaves of text, and one other, the recto of which is blank, but which contains the large tripartite device of Wynkyn de Worde upon the reverse. It is printed in black letter, and in a full page are thirty lines, with the words "Cocke Lorell," and the signature. There are neither pages nor catch-words, but the signatures extend to c. iij, on the reverse of which the volume concludes. The work is decorated with five rude and not very appropriate wood-cuts, exclusive of the printer's device, but one of these is repeated.

The fragment of the present work commences on sign. a i, with an examination of the candidates for the Boat, and contains the latter part of the scold, who is appointed to the office of "Lauder." Then follow a carrier, cobbler, shoemaker, butcher, masser scourer, cannell raker, two false towlers, a myller, and a pardoner. The latter rehearses the immunities of knaves and fools, after which the crowd occasioned by the number of those of different trades who rush to the boat, concludes the ceremony. The enumeration of these trades is very singular, and they are of the following character: Grote-clyppers, Fletchers, Boke-prynters, Waferers, Owchers,

Players, Forborers, Purse-cutters, Webbers, Lorymers, Brydel-bytters, Golde-washers, Parys-plasterers, Orgyn-makers, Carde-makers, Boke-bynders, Lanterners, Katch-pollys, Mole-sekers, Ratte-takers, Canel-rakers, Muskel-takers, Money-baterers, Ketchen-knaues, Whery-rowers, Smoggy-colyers, &c.

A part of the voyage is thus described—

They sayed Englande thorowe and thorowe  
Vyllage townes cyte and borowe  
They blessyd theyr shypp when they had done  
And dranke about saynt Juliana torne.  
Than every man pulled at his ore  
With that I coude se them no more  
But as they rowed vp the byll  
The botewayne blew his whystell full shrill  
And I wente homewarde.

As the author returns, he meets a company of religious persons who are disappointed of this passage with Cock Lorell, and whom he advises to sail with him the next year. The book concludes, as is usual with many of the same date, with a prayer for the eternal happiness of all who read it. "Here endeth Cocke Lorells bote. Inprynted &c." as above. Of this very valuable and curious fragment, a limited reprint was brought out from the Shakspeare press, by the Rev. Henry Drury of Harrow, for his bibliographical gift to the Roxburghe club, at their annual meeting on June 17th, 1817. Three copies of this edition were on vellum, and facsimiles of the engravings were made by Mr. Ackermann's lithography. Cock Lorell, whose boat is thus described, was a most licentious and notorious knave, who was chief of the London rogues till 1533, in the reign of Henry VIII. He professed to be a tinker, and under that garb committed his depredations. The poem itself states, that in the vessel was a third part of England, and the point of the satire probably consists in the entire amalgamation of all professions and callings in the band of this predatory villain. Mr. Beloe, in his *Anecdotes of Literature and Scarce Books*, gives another extract from this volume and the above account of the subject of it.

1522. The famous *Complutensian Polyglott*, published under the auspices of Cardinal Ximenes,\* archbishop of Toledo, in Spain, who

\* Cardinal Ximenes, the magnificent patron of the *Polyglot of Complutum*, or Alcalá, and founder of a college there, was the most celebrated statesman of his day. He was born at Torrelaguna, an obscure town in Spain, in 1437, and received the first rudiments of his education at Alcalá. He afterwards studied the civil and canon law at Salamanca, and in 1483 became a member of the order of St. Francis, at Toledo. In 1493 queen Isabella chose him for her confessor: in 1506 he was appointed regent of the kingdom of Castile: and in 1507 Pope Julius II. created him a cardinal of Spain, and inquisitor-general. Having exercised the high office of regent for about twenty months, he died, after a short and violent illness, on Sunday, November 8, 1517, in the 81st year of his age.—The manuscripts used in the above *Polyglott* were all deposited in the university library of Alcalá. Professor Moldenhawer, a German, went to Alcalá in 1784, in order to inspect these manuscripts; but he discovered that a very illiterate librarian, about 1749, who wanted room for some new books, sold all the ancient vellum manuscripts to a maker of fire works, as materials for making rockets. Among these manuscripts were seven Hebrew ones.

spared no expense, either in procuring manuscripts, or in recompensing the editors for their trouble. The work was commenced in 1502, and for fifteen years was continued without interruption; it is equally astonishing, that neither the long and tedious application wearied the constancy of the learned editors, nor the oppressive cares which devolved on Ximenes, relaxed either his zeal, or affection for this undertaking. The whole charge of the work, including the pensions of the editors, the wages of the transcribers, the price of books, the expense of journeys, and the cost of the impression, amounted, according to the calculations that were made, to more than fifty thousand crowns of gold. Arnao Guillen de Brocar was the printer of this stupendous work.\* Pope Leo X. favoured Ximenes with manuscripts from the Vatican library, frequently praised his magnificence and generosity, and even consulted him in the most important occurrences of his pontificate. The cardinal died soon after the work was finished; and doubts being started by the church of Rome, whether it was proper to bring it into general circulation, it did not receive the permission of Leo X. for its publication until the 22d of March, 1520; and the copies were not distributed to the world at large before 1522.

1522. Trials for witchcraft arose from the bulls† of three popes; Alexander VI. 1494; Julius II. 1521; Julius III. 1522.‡

\* A small number, (it is thought not more than four,) were printed on vellum. One of these is said to be in the Vatican library; another in the Escorial; and a third was lately purchased at the sale of the Mac-Carthy library, by Mr. G. Hibbert, for £648. The rest of the copies, of which only six hundred were printed, were upon paper. The price offered to the work, by the bishop of Avila, by order of the pope, was two golden ducats and a half; or about forty livres of French money; a considerable sum at that period.

† Pope's bulls are written on parchment, with a seal of gold, silver, wax, or lead, called a bull. On one side are the heads of Peter and Paul, and on the other, the name and year of the pope. In the formula, the pope is called "Servant of the servants of God."

‡ The following facts will show a terrible and disgraceful exhibition of delusion and cruelty; and to what extent ignorance and superstition held the credulous in fear:—Five hundred witches were burnt in Geneva, in 1515.—One thousand, in the diocese of Como, in a year; and one hundred per annum for years. Nine hundred in Lorraine, between 1580 and 1595. An incredible number in France, about 1590. One sorcerer confessed that he had twelve hundred associates!—One hundred and fifty-seven were burnt at Wurtzburg only, between 1657 and 1690, old and young, clerical, learned, and ignorant. At Lindheim, thirty were burnt in four years, out of a population of six hundred. In 1749, Maria Renata was burnt at Wurtzburg; and, in two centuries, fifteen thousand seven hundred were burnt in that city, and, throughout Germany, one hundred thousand altogether.—Three thousand were executed in England, under the Long Parliament. Sir Matthew Hales burnt two in 1664; and, in 1714, Mrs. Hicks, and her daughter, aged 9, were hanged at Huntingdon. Statutes against this supposed crime were passed by Henry VIII., 1541; Elizabeth, 1569; and James I.—In Hale's trial at Bury St. Edmund's, Dr. Browne, the author of the book on *Vulgar Errors*, was a witness in support of the prosecution.—Barrington estimates the judicial murders for witchcraft in England, in 300 years, at thirty thousand.—In Scotland, thousands were burnt in about 100 years; and the last in 1723, at Dornoch; and, among the victims were persons of the highest rank, while all orders in the state concurred. James I. even caused a whole assize to be prosecuted for an acquittal.—Northamptonshire preserved the superstition about witchcraft later than

1522. The edict of Nuremberg was issued at the diet held in that city, by the pope's legate, in this year, by which, among other things, it was decreed, "That printers should print no new things for the future; and that some holy and learned men, appointed for the purpose by the magistrates, within their several jurisdictions, should peruse and examine what came from the press, and that what they disapproved should not be sold." The edict being variously interpreted, Luther wrote to the princes who had sanctioned the diet, acquainting them that he had reverently and with pleasure read it, and also proposed it to the church of Wittemberg; but that since some persons of the highest quality refused to obey it, and put various constructions upon it, he thought it prudent to declare his judgment respecting its meaning, which he hoped would be consonant to their own. After this introduction, he stated the articles of the edict, and proposed his opinions as to the sense of them, and, in particular, respecting the decree before mentioned, observed, "That whereas they had decreed, that no more books should be published, unless they were first approved and licensed by learned men chosen for that purpose, he was not, indeed, against it; but, however, that he understood it so as not at all to be extended to the books of the Holy Scripture; for that the publishing of those could not be prohibited."

Whilst the more learned adversaries of Luther were thus zealously engaged in their literary endeavours to check the progress, and discountenance the perusal, of Luther's translation, the powerful aid of civil authority was called in to assist the design. The Duke George of Saxony persecuted, with unrelenting severity, the clergy of his district who were inclined to Lutheranism; recalled the students from the schools and uni-

any other county. Two pretended witches were executed at Northampton, in 1705, while the *Speculator* was in course of publication in London, and five others seven years afterwards.—Nine women of Husbands Bosworth were executed by the assize magistrates of Leicester, in July, 1616, owing to a boy of the place having dts. In 1643, the rev. Mr. Lawes, of great age, a cooper, and sixteen women, were executed at one time, at Bury St. Edmund's.—The Scotch Solomon, James, called witchcraft high-treason against God, and, therefore, he prohibited the usual rules of evidence.—The last burning in Scotland was in Sutherland, in 1723; the wretch who acted as Judge was captain David Ross, of Little Dean.—Only in 1821 the laws against witches in Ireland were repealed; and, at Glarus, a servant girl was burnt so late as 1793.—In New England, in 1692, above four hundred were accused, and nineteen put to death; one refusing to plead, was pressed to death.—So late as 1756, a Frenchman drew a large audience, among whom was the royal commander at Culoden and Fontenay, to see him get into a quart-bottle. The bottle stood on the stage, but the Frenchman, taking the money, disappeared.—Superstition had its origin in savage tribes and nations, in their ignorance of the causes of natural phenomena. Beasts were ascribed to a good spirit, and evils to a bad one. This primary idea was enlarged and diversified by dreaming during imperfect sleep, (or thinking while the volition was torpid,) and by illusions of the senses, which led to belief in ghosts, signs, omens, &c. These causes were augmented by enthusiasts, and played upon by cunning impostors. Hence, there are superstitions in proportion to ignorance, and the passions are subdued by appeals to them. Most priests profess, too, to be in communion with the good genius, and to be able to subdue the evil one. And then chiefs of tribes use the priests to assist in governing the people by their fears.

versities where the doctrines of Luther were supposed to prevail; and, with a view to destroy Luther's version of the New Testament, purchased as many copies of it as he could collect, and severely punished such of his subjects as refused to deliver them up.

1522. JOHN SIBERCH, the person who introduced the art of printing into CAMBRIDGE, is supposed to have been born at Lyons, in France, where he learned the profession, and came to this country, like many other foreign typographers, to better his fortune. He styled himself the first Greek printer in England; yet, though there are some Greek letters in his books, there is not one that is wholly in that character; and the types he used in his first work very much resembled Caxton's largest. Notwithstanding a favourable licence\* for the encouragement of the press, no books appear to have been printed at Cambridge after this year, to the year 1584, the space of sixty-two years. Siberch used this device on the books he printed at Cambridge.

1523. Printing was introduced into the city of Amsterdam about this period; and the many splendid editions of classical works which we possess from its presses, are evidences of the perfection to which the art has there been carried. William Janson Blean, one of its eminent printers at the early part of the seventeenth century, (a notice of whom will be given at that period,) and who is well known by several beautifully executed volumes of diminutive size, enjoys the additional reputation of having introduced very considerable improvements into the structure of the printing-presses in use in his day. The first edition of Luther's *New Testament*, translated into Dutch, is given by Panzer as the earliest specimen of printing from this place. It is observed by Bachmeister that Russian types were used at Amsterdam in the year 1699.—Santander, in the supplement to his *Dictionnaire Bibliographique*, adduces something like proof that typography was exercised at Amsterdam during the fifteenth century, a circumstance not generally noticed. He had in his possession a small 8vo. volume, called *Tractatus fratris Dionysii de conversione peccatoris*, which

was printed in this city, and appeared to exhibit all the marks of the fifteenth century. He gives the colophon in fac-simile at page 518 of his third volume.

1523. A decree of the university of Cambridge relative to bookbinders, booksellers, and stationers, provides, "that every bookbinder, bookseller, and stationer, should stand severally bound to the university in the sum of £40, and that they should from time to time, provide sufficient store of all manner of books fit and requisite for the furnishing of students; and that all the books should be well bound, and be sold at all times upon reasonable prices."—Hearne.

At this period, the trades of printers, binders, stationers, and booksellers, were exercised, as at the present time, by the same persons.

1525. A printing office was established about this time in the city of CANTERBURY; but no name or date is in the book supposed to have been printed there.

1525. TAVISTOCK. Here was an exempt monastery of Benedictines, whose abbot was a lord of parliament, and whose house was exempted from all jurisdiction except that of the pope. A school for the study and preservation of the Saxon language was established here, which was discontinued about the period of the Reformation. Several of its abbots were learned men; and the encouragement in literature is evident by the introduction of printing at so early a period. The first book which was printed was Thomas Walton's translation of Boethius, by the desire of the lady Elizabeth Berkeley: with the following colophon, "*The Boke of Comfort, called in Latin Boccius de Consolatione Philosophie. Emprinted in the exempt monastery of Tavistock in Denshyre. By me Dan Thomas Rychard, monke of the sade monastery. To the instant desyre of the ryght worshipfull esquier Mayster Robert Langdon, anno domini MDXXV. Deo gracias.*" It is in octave rhyme. Two copies, but neither of them perfect, are in the Bodleian library; and a perfect one is in that of Exeter college.

A book, called the *Long Grammar*, was printed at Tavistock, but no copy of it has been found. Among other productions of the same press, was printed the *Stannary laws*.

1525. The first person who suffered for embracing the tenets of Lutherianism in France, was Jean le Clerc, a wool-carter, at Meux, and who was denominated the restorer of the churches of Metz and Meux. Le Clerc had distinguished himself, by pulling down from the walls the bulls and mandates, and affixing in their place placards describing the pope as antichrist; for which he was whipped and branded. After this, he again offended as an image breaker; and for this latter crime, he was mutilated, crowned with hot iron, and thrown into the flames.

1526. Jacob à Liesveldt, a famous printer at Antwerp, published an edition of the *Belgic Bible*, translated by certain learned men, whose names unfortunately have not been transmitted to us. The numerous editions of this translation, printed by the same person, have gained

\* In July 1534, king Henry VIII. granted to this university for ever, under his great seal, authority to name, and to have three stationers, or printers of books, aliyants and strangers, not born within, or under his obedience, and they to be reputed and taken as denizens.

them the name of *Liersveldt's Bibles*.—He was condemned and beheaded at Antwerp, because in the *Annotations* of one of his *Bibles*, he had said, *that the salvation of mankind proceeds from Christ alone!*

The following extracts from a work printed in Latin and English, prose and verse, will serve as a specimen of the peculiar style of poetry in which Skelton,\* the laureate to King Henry VIII., wrote. The work is entitled—*A Reply-cacion agaynst certayne yong Scolers abjured of late &c* [by John Skelton]. Thus endeth the *Replacacion of Skel. L. &c.* Imprinted by Richard Pynson printer to the Kyng's most noble Grace. Quarto.

"Howe yong scolers nowe a dayes embolden with the fly-blown blast of the moche vayne glorious pipplyng wynde, whan they haue delectably lycked a lytell of the lycorous electuary of lusty lernyng in the moche studeous scole hous of scrupulous philology, counting them selfe clerkes excellently enformed and transcendingly sped in moche high conyng, and whan they have ones superciliously caught."

A lytell rage of Rethorike  
A lesse lumps of Logyke  
A pece or a patche of Philosophy  
Than forthwith by and by  
They tumble so in Theology  
Drowned in dregges of Divinite  
That they luge them selfe able to be  
Doctours of the Chayre in the Vyntrye  
At the thre Cranes  
To magnifyre their names  
But madly it frames.  
For all that they preche and teche  
Is farther than their wytte wyll reche  
Thus by demeryttes of their abusyon  
Finally they fall to carefull confusyon  
To beare a fagot or to be enflamed  
Thus are they undone and utterly shamed.

The work consists of ten leaves, and is considered very rare.

Skelton, speaking of a book, and enraptured with the splendour of its binding, thus breaks out in verse:—

"With that of the boke losende were the claspes,  
The margin was illumined al with golden ralles,  
And bice empicured with grass-opies and waspes,  
With butterflies, and fresh peecocke tales,  
Englored with flowers, and slyme snayles,  
Englored pictures well touched and quickly,  
It would have made a man hole that had be right sickly,  
To behold how it was garnished and bound,  
Encoverde over with gold and tissue fine,  
The claspes and bullions were worth a M pounce,  
With balaisas and carbuncles the border did shine,  
With asurum mosaicum every other line," &c.

1526. James Nicholson commenced the art of printing at SOUTHWARK, but a work with this date with his name is at present unknown. In 1537, he resided in St. Thomas's hospital, and had a patent from Henry VIII. for printing the *New*

*Testament* in Latin and English. He printed in the whole eighteen works, which are fully described in the *Typographical Antiquities*.

1526. The first edition of the *New Testament* in English. As Luther had translated the bible into German, William Tyndale, or Tyndall, an Englishman, or as some say, a native of Wales, determined on translating the scriptures into the English language. He attempted to accomplish this noble work in England; but the opposition and persecution he met with at home, necessitated him to withdraw to the continent; and after a conference with Luther and his associates in Germany, he settled at Antwerp, as the safest place to carry his project into effect, and where, in the course of this year, he finished an edition of the *New Testament*, without the name of translator, or printer, or of the place where printed. Only 1500 copies were printed. Tyndall was assisted by Miles Coverdale, a Franciscan friar, and who was well informed in the Hebrew, Greek, and Latin languages; also by John Frith, and William Roze. Richard Grafton, an Englishman, was the printer, under the direction of Tyndall. A great number of this edition was brought to England, and sold at three shillings and sixpence per copy. The dispersion of them caused prohibitions against them to be issued by cardinal Wolsey, Tonstall, bishop of London,\* archbishop Warham, and sir Thomas More. The people were acquainted "that certain children of iniquity, blinded by malice, had translated the *New Testament* into English, to spread heresy, and ruin men's souls; and that some of these pernicious books had been brought into England. The clergy were directed to search and deliver up to the bishop of the diocese or his commissary any of these dangerous books within thirty days, under pain of excommunication, and of being punished as heretics those who detained them. The only copy known to exist of Tyndall's translation is that which is preserved in the Baptist's library at Bristol. Of this copy Mr. Beloe, in his "*Anecdotes of Literature*

\*Tonstall, bishop of London, happened to pass through Antwerp on a journey, and to testify his abhorrence of Tyndall's principles, and for printing a seditious book for the multitude, he thought of purchasing all the copies, and annihilating them in one common flame. He employed an English merchant residing there, and who happened to be a secret follower and friend of Tyndall. He furnished the merchant with all his unsold copies, which the bishop as eagerly bought, and had them all publicly burned in Cheapside; which the people not only declared was "a burning of the word of God," but it so inflamed the desire of reading that volume, that the second edition was sought after at any price; and when one of the Tyndallists (George Constantine), who was sent to London to sell them, was promised by the lord chancellor, in a private examination, that he should not suffer if he would reveal who encouraged and supported his party at Antwerp, the Tyndallist immediately accepted the offer, and assured the lord chancellor that the greatest encouragement they had was from Tonstall, the bishop of London, who had bought up half the impression, and enabled them to produce a second! —At this time many of the ignorant monks declaimed from their pulpits, that printing was the invention of the devil, and warned their hearers from using such diabolical books as were written with the blood of the victims, who devoted themselves to hell. One of them (the vicar of Croydon in Surrey) exclaimed, "We must root out printing, or printing will root out us!"

\* John Skelton is supposed to have been born in Cumberland. He was educated at Oxford, and obtained the living of Diss in Norfolk; but his conduct was very irregular. Having reflected severely on cardinal Wolsey in his poems, he was obliged to take refuge with Islop abbot of Westminster, where he continued till his death, which took place June 21, 1539. He wrote satires, sonnets, and an invective against Lily the grammarian, who answered him in his own way.

and *Scarce Books*, has furnished the following curious information: "It is in duodecimo, and is lettered on the back, '*New Testament* by Tyndall, first edition, 1526.' It has no title page. There is a portrait pasted to the first leaf. On the opposite leaf is a printed paper which says, that 'On Tuesday evening, (13th of May, 1760,) at Mr. Langford's sale of Mr. Ames's books, a copy of the translation of the *New Testament*, by Tyndall, and supposed to be the only one remaining which escaped the flames, was sold for fourteen guineas and a half. This very book was picked up by one of the late lord Oxford's collectors, (John Murray, written in the margin,) and was esteemed so valuable a purchase by his lordship, that he settled £20 a year for life upon the person who procured it. His lordship's library being afterwards purchased by Mr. Osborne, of Gray's Inn, he marked it at 15 shillings, for which price Mr. Ames bought it. This translation was finished in the reign of Henry VIII. an. 1526, and the whole impression, as supposed, (this copy excepted,) was purchased by Tonstall, bishop of London, and burnt at St. Paul's cross, that year.' On the other side of the leaf, in manuscript, is this, 'N.B. This choice book was purchased at Mr. Langford's sale, 13th of May, 1760, by me, John White, and on the 13th day of May, 1776, I sold it to the Rev. Dr. Gifford, for 20 guineas, the price first paid for it by the late lord Oxford.' Then follows a print of the Earl of Oxford, formerly the owner of the book, who died in 1741. At the end of the book is the following note in manuscript by J. Ames. 'This singular English translation of the *New Testament* appears perfect to a person understanding printing, although it bears no date, which many books about that time wanted also, the subject at that time so dangerous to meddle with. The place where printed is generally supposed to be Antwerp, where persons in those days had the press, and greater liberties than in their own countries. The manner in which this book is done *show* it very early, as the illuminating of the great or initial letters, early used in the finest of our old manuscripts when they had a set of men called illuminators, for such purposes. Besides, the marginal notes being done with the pen, which were afterwards printed, show it prior to others printed with them. The person who did it *show* a fine free hand scarce now to be exceeded. These considerations put together, incline me to subscribe to this being the first printed edition of the English *New Testament*. J. Ames.' Underneath this is written, 'And what puts it out of all doubt that it is prior to all other editions, are his own words, in the second page of his address to the reader. A. Gifford, Sept. 11, 1776.' The address 'to the Reader,' alluded to here, is at the conclusion of the book. It is to this effect, 'Them that are learned christenly, I beseeche for as moche as I am sure, and my conscience beareth me recorde, that of a pure intent, singilly and faythfully, I have interpreted itt, (the Gospel,) as farre forth as God gave

me the gyfte of knowledge and understandyng, so that the rudness of the worke now at the *first tyme* offende them not: but that they consider howe that I had no man to counterfet, neither was holpe with englysshe of any that had interpreted the same, or soche lyke thinge in the Scripture before tyme, &c.' After this follow, 'the errors committed in the prentyng.'"

The Dutch printers pirated Tyndall's *New Testament*; and in the following year they published two editions, of five thousand, in a small form, which were sold by the Dutch booksellers at the rate of 1s. 1d. each, or three hundred for £16 5s. George Joye, an English refugee, who corrected the Dutch editions, received only 4½d. a sheet, or 14s. for the whole of his labour.—In England they were sold singly for about 2s. 6d. Tyndall's own edition was sold at about 3s.

The publication of this *New Testament* occasioned the bishop of London to issue the following prohibition:—"Cuthbert, by the permission of God, bishop of London, unto our well beloved in Christ, the archdeacon of London, or to hys official, health, grace, and benediction. By the duty of our pastoral office, we are bounde diligently with all our power to foresee, provide for, roote out, and put away all those thynges, which seem to tend to the peril, and daunger of our subjects, and especially to the destruction of their soules. Wherefore we haunyng understanding, by the report of divers credible persons, and also by the evident apparaunce of the matter, that many children of iniquitie, maintayners of Luthers sect, blynded through extreme wickedness, wandryng from the way of truth, and the catholicke fayth, craftely have translated the *New Testament* into our English tongue, entermedlyng therewith many heretical articles, and erroneous opinions, pernicious and offensive, seducing the simple people attemptyng by their wicked and perverse interpretations, to prophane the majesty of the scripture, which hitherto hath remained undefiled, and craftely to abuse the most holy word of God, and the true sense of the same, of the which translation there are many bookes imprinted, some with gloses, and some without, contayning in the Englishe tongue that pestiferous and most pernicious poison, dispersed throughout all our diocesse of London in great number; which truly, without it be speedily foreseene, wythout doubt will contaminate, and infect the flock committed to us, with most deadly poyson and heresie, to the grievous peril and danger of the soules committed to our charge, and the offence of God's divine majestie: wherefore we Cuthbert the bishop aforesaid, grevously sorrowyng for the premisses, willing to withstand the crafte and subletie of the ancient enemy, and hys ministers, which seek the destruction of my flock, and with a diligent care to take hede unto the flock, committed to my charge, desiring to provide speedy remedies for the premisses; we charge you jointly and severally, and by vertue of your obedience straightly enjoyn and commaunde you, that by our authority, you warn, or cause to be warned,

all and singular, as wel exempt as not exempt, dwelling within your arch deaconies, that within xxx days space, whereof x dayes shall be for the first, x for the second, and x for the third peremptory terme, under paine of excommunication, and incurring the suspicion of heresie, they do bring in, and really deliver unto our vicare generall, all and singular such bookes conteynynge the translation of the *New Testament* in the Englishe tongue; and that you doe certifie us, or our sayd commissarye, within ii monethes after the day of the date of these presents, duely, personally, or by your letters, together with these presents, under your seals, what you have done in the premisses, under pain of contempt. Given under our seale the xiii of October, in the v yere of our consecration, anno 1526.<sup>12</sup>

1526. At this time appeared a singular book, entitled *Champ Fleury*, 4to., par Maître Geoffroy Tory, of Paris, who was himself the author and printer, and who greatly contributed towards the improvement of the art. His book was in its day of considerable utility. According to Fournier, he derives the letters of the Latin alphabet from the goddess IO, pretending that they are all formed of I and O. He then brings the letters into proportion with the human body and countenance; and, after introducing a variety of extraneous matter, he gives the due and true proportions of letters. For this purpose, he divides a square into ten lines, perpendicular and transverse, which form one hundred squares completely filled with circles formed by the compass; the whole of which serve to give form and figure to the letters.

Tory was a person of considerable erudition and ingenuity. He translated into the French language various Greek works; and La Caille says, that Francis I. honoured him with a special privilege for the impression of the above work and similar devotional books, in consideration of the choice ornaments with which he embellished them.—His insigne, or mark, was "*un Pot casse remply de tonte, sorts d'instrument*," and the words *non plus*. La Caille gives the history of Geoffroy Tory, who died in the year 1550, at considerable length.

*The Myrrour of good Maners &c.*—translate into englyshe &c. by Alexander Berckley preste &c. Imprinted by me Rychard Pynson prynter unto the kynges noble grace &c. Folio. Without date.

Over the presentation wood-cut is the following full title:—"Here begynnyth a ryght frutefull treatyse, intituled the myrrour of good maners, conteynynge the iiiij. vertues, callyd cardynall, compyled in latyn by Domyneke Mancyn: And translate into Englyshe, at the desyre of

Syr Gyles Alyngton knyght by Alexander Berckley preste and monke of Ely.<sup>13</sup>

This volume has neither running-titles, catch-words, nor numerals; but the signatures are a 8, in sixes. Colophon:—"Thus endyth the ryght frutefull matter of the fower vertues cardynall. Impryntyd, &c." as before, "with his gracyous pryuylege the whiche boke I haue pryntyd at the instance and request of the ryght noble Rychard yerle of Kent."

The following extract will at once shew the subject of the book, and the manner in which it is executed. The original is printed in roman letters in the margin.

This playne lytell treatyse, in style compendious  
Moeche brefly conteyneth, four vertues cardynall  
In ryght pleasant processe, playne & commodious  
With light fote of meter, and style herocayll  
Rode people to enforme in language maternall  
To whose understanding, maydens of tender age  
And rude lytell chylderne, shall fynde easy passage

Ye suchs as the mother, doth cherishe on her lap  
With swete blandymnt; of wordes amiable  
Cherryshyng with mylke, and nourishyng with pappe  
Shall fynde this small doctryne: both playne and profitable

Old men, whiche haue vsed in tymes passed to babble  
In barbarike langage, and wordes course & ydle  
May lerne here, theyr maners & tonges newe to fyle.

1527. It will not be improper at this period to turn our attention to the state of literature in Scotland, when the effects of the reformation extended its influence to that kingdom; and when it began to experience the happy result of a more general acquaintance with the sacred writings. Before the Lutheran reformation extended its influence to that kingdom, "gross darkness," the result of popish superstition, "covered the land." "Even bishops were not ashamed to confess that they were unacquainted with the canon of their faith, and had never read any part of the Sacred Scriptures, except what they met with in their missals. Under such pastors the people perished for lack of knowledge. That book which was able to make them wise unto salvation, and intended to be equally accessible to 'Jew and Greek, Barbarian and Scythian, bond and free,' was locked up from them, and the use of it, in their own tongue, prohibited under the heaviest penalties. The religious service was mumbled over in a dead language, which many of the priests did not understand, and some of them could scarcely read; and the greatest care was taken to prevent even catechisms, composed and approved by the clergy, from coming into the hands of the laity."

By many of the Scottish clergy it was affirmed, "That Martin Luther had lately composed a wicked book called the *New Testament*; but that they, for their part, would adhere to the *Old Testament*." Even the libraries of their monasteries were some of them without a complete copy of the Scriptures. In the catalogue of the library at Stirling, at the beginning of this century, we find only two *Psalters*, and one copy of the *Gospels and Epistles*, in manuscript, most probably in Latin; the rest of

<sup>12</sup> Tindall's *Testament* consists of 353 leaves, besides the epistle to the reader and errata; no marginal texts but what are wrote, and the initial letters beautifully gilt and illuminated. In 1836 Mr. Samuel Bagster, of London, reprinted, verbatim, an edition of Tyndall's *New Testament*, with a memoir of his life and writings, by George Offer, together with the proceedings and correspondence of Henry VIII., Sir T. More, and Lord Cromwell.

its contents being purely monkish. There were four *Missals*, four *Antiphonars*, three *Breviaries*, two *Legends*, four *Graduals*, and ten *Processionals*. Nothing, however, can more completely exemplify the indifference to the Scriptures which prevailed among the dignified clergy, than the conversation which took place betwixt dean Thomas Forest, vicar of Dollar, and George Chrichton, bishop of Dunkeld, about A.D. 1538. The vicar, who was also canon of St. Columba, was accused of heresy to the bishop, for preaching every Sunday on the epistle or gospel of the day. The bishop, when the vicar appeared before him, addressed him in this manner: "My joy, Dean Thomas, I am informed that you preach the epistle and gospel every Sunday, to your parishioners, and that you do not take the best cow and the best cloth from them, which is very prejudicial to other churchmen; and, therefore, my joy, Dean Thomas, I would you to take your cow and your cloth, as other churchmen do.\* It is too much to preach every Sunday; for in so doing you make the people think that we should preach likewise: it is enough for you, when you find any good epistle, or good gospel, that setteth forth the liberties of holy church, to preach that, and let the rest alone." To this sage admonition of his bishop, the good vicar answered, "I think, my lord, that none of my parishioners will complain that I do not take the cow and the cloth; but I know they will gladly give me any thing that they have; and they know that I will gladly give them any thing that I have. There is no discord among us. Your lordship sayeth, it is too much to preach every Sunday: I think it is too little; and I wish that your lordship did the like." "Nay, nay, Dean Thomas," said the bishop, "we were not ordained to preach." "Your lordship," said the vicar, "directs me, when I meet with a good epistle, or a good gospel, to preach upon it. I have read both the *Old* and *New Testament*, and have never met with a bad epistle, or a bad gospel; but if your lordship will show me which are the good, and which are the bad, I will preach on the good, and let the bad alone." "I thank my God," said the bishop, "I know nothing of either the *Old* or *New Testament*; therefore, Dean Thomas, I will know nothing but my portass, [breviary,] and my pontifical. Go away, and lay aside all these fantasies, or you will repent it when too late." M'Crie (*Life of Knox*,) has given an interesting account of this excellent clergyman, the vicar of Dollar, from which we learn that his father had been master-stabler to James IV., that after receiving the rudiments of his education in Scotland, he prosecuted his

education at Cologne; and on his return was admitted a canon regular in the monastery of St. Colon's Inch; where being presented by the abbot with a volume of St. Augustin's works, his mind was enlightened, and he began to study the Scriptures. He was afterwards appointed to the vicarage of Dollar, and when the agents of the pope attempted to sell *indulgences* in his parish, he warned his parishioners against them: "I am bound," said he, "to speak the truth to you: this is but to deceive you. There is no pardon for our sins that can come to us, either from pope or any other, but only by the blood of the Christ." He used to commit three chapters of the Bible to memory every day, and made his servant hear him repeat them at night. He suffered martyrdom in 1538.

But notwithstanding the general ignorance which overspread the nation, a gleam of light threw its rays across the minds of certain individuals, probably by the introduction of some of the writings of Luther, since an act of parliament was passed so early as July 17th, 1525, *for eschewing of heresy*, which enacted, that "na manner of persoun, strangeare, that happinis to arrive with thare schip, within any part of this realme, bring with thame any bukis or workis, of the said Luther, his discipulis or servandis, disputis or rehensis, his heresies, &c. under the pane of escheting of thare schipsis and guidis, and putting of thaire personis in presoun." And in 1527, the chancellor and lords of council added this clause, "and all uther the kingis liegis assistaris to sio opunyeons, be punist in semeible wise, and the effect of the said act to straike upon thaim." So that it appears, that in 1525, protestant books and opinions were circulated by strangers only, who came into Scotland for the purpose of trade; but that in 1527, it was found necessary to extend the penalties of the act to natives of the kingdom. This act was renewed in 1535, with some additions.

The jealous caution of the patrons of popery could not prevent the progress of truth; for by means of merchants who traded from England and the continent, to the ports of Leith, Dundee, and Montrose, Tyndall's *Translations of the Scriptures*, with the writings of Luther and other reformers, were imported; and consigned to persons of tried principles and prudence, who circulated them in private with indefatigable industry. "One copy of the *Bible*, or of the *New Testament*, supplied several families. At the dead hour of night, when others were asleep, they assembled in one house; the sacred volume was brought from its concealment, and, while one read, the rest listened with attention. In this way the knowledge of the scriptures was diffused, at a period when it does not appear there were any public teachers of the truth in Scotland."

Poetry also became the vehicle for conveying the sentiments of the reformers to the people. The ignorance and immorality of the clergy were satirized, and the absurdities of popery exposed to ridicule. These poetical effusions were easily

\* This was a perquisite termed the *Corpus-present*, paid to the vicar of the parish, on the death of any of his parishioners. It consisted, in country parishes, of the best cow which belonged to the deceased, and the uppermost cloth or covering of his bed, or the finest of his body clothes. The *Corpus-present* was not confined to Scotland. We find the English House of Commons complaining of it, A.D. 1596. See M'Crie's *Life of Knox*, i. p. 349, note G.

committed to memory, and could be communicated without the intervention of the press, which at that time was under the control of the bishops. Dramatic compositions of a similar tendency were repeatedly acted in the presence of the royal family, the nobility, and vast assemblies of the people. In vain did the bishops repeatedly procure the enactment of laws against the circulation of seditious rhymes, and blasphemous ballads; the people still read with avidity the metrical epistles, moralities, and psalms composed in their native language. Kennedy and Kyllor, the former a young gentleman, the latter a friar, both of whom were cruelly burnt in 1538, distinguished themselves by their satirical dramas. The latter of these composed a scripture tragedy on the *Crucifixion of Christ*, in which he satyrised the clergy.

Another poet of a similar genius was James Wedderburn, son of a merchant of Dundee, and his two brothers John and Robert, who composed a metrical version of a number of the *psalms* which were afterwards commonly sung in the assembly of the protestants, until superceded by the version of Sternhold and Hopkins. They were also the chief authors of *Gude and Godly ballates, changed out of profane songs, for avoyding of sin and heretotrie, &c.* But the poet who had the greatest influence in promoting the reformation was sir David Lyndsay,\* of "the Mount," Lyon king at arms, who enjoyed the favour both of James IV. and his son. His poems were so universally popular, that it is said they were read by every "man, woman, and child;" and there was a proverbial expression for a long time in common use, on hearing any extraordinary word, "there's no sic word in a' Davie Lyndsay." Previously to the appearance of Ramsey and Burns, the poetical effusions of no writer whatever had been so popular, as those of Sir David Lyndsay, or "Davie Lyndsay" as he was called. His principal defence of the translation of the scriptures into the vernacular tongue is contained in the *first book of the Monarchie*, which is his greatest and gravest work, in which a personage termed "Experience," reviews for him in high and lofty verse and tone, the history of all the mighty bygone kingdoms of old. A few stanzas from this poem are here given to show his style:—

Prudent Saint Paul doth make narration,  
Touching the diverse Leeches of every land,  
Saying there have been more edification  
In five words, that folk do understand,  
Then to pronounce of words ten thousand,  
In strange language, and knows not what it means:  
I think such prattling is not worth two pæns.

\* He was the son of a gentleman of noble descent in the county of Fife, but the date of his birth is unknown. He first appeared in public life as a servant of James IV. at whose side he was standing in Lillithgow church, in the summer of 1513, when the supposed apparition came before him, to warn him against the expedition which ended in his defeat and death at Flodden, which took place on the 9th. of September, 1513. Lyndsay is supposed to have died in the year 1557. Both the name and works of Lyndsay have gone entirely out of notice, chiefly in consequence of the quaintness of the language of his poems, and the bygone character of his subjects.

I would that Prelates and Doctors of the Law,  
With Laicke people were not discontent,  
Though we into our vulgar tongue did knaw,  
Of Christ Jesus the Law and Testament.  
And how that we should keep commandement,  
But in our language let us pray and read,  
Our Pater noster, Ave, and our Creed.

I would some Prince of great discretion,  
In vulgar language plainly cande translate  
The needfull Lawes of this Region:  
Then would there not be halfe so great debate  
Among us people of the low estate.  
If every man the verity did knaw,  
We needed not to treat these men of Law.

To do our neighbour wrong, we would beware,  
If we did fear the Lawes punishment:  
There would not be such brawling at the Bar,  
Nor men of Law clime to such Royal rent,  
To keep the Law: If all men were content,  
And each man do, as he would be done to,  
The Judges would get little thinge adoe.

Unlearned people on the holy day,  
Solemnedly they hear the Evangel sing,  
Not knowing what the priest doth sing or say,  
But as a Bell when that they hear it rung,  
Yet would the Priests in their mother tongue,  
Passe to the Pulpit and that doctrine declare,  
To Laicke people, it were more necessarie.

The prophet David King of Israel,  
Compylde the pleasant Psalmes of the Psalter,  
In his own proper tongue, as I here tell:  
And Solomon which was his Son and Heire,  
Did make his Book into his tongue vulgar:  
Why should not their sayings be to us shown  
In our language, I would the cause were known.

Let Doctors write their curious questions,  
And arguments sown full of sophistrie:  
Their Logick, and their high opinions,  
Their dark Judgements of Astronomie,  
Their Medicine, and their Philosophie,  
Let Poets shew their glorious engine,  
As ever they please, in Greek or in Latine.

But let us have the books necessarie,  
To Common-wealth, and our Salvation:  
Justly translated in our tongue vulgare,  
And eke I make you supplication,  
O gentle Reader, have none indignation,  
Thinking to meddle with so high matter,  
Now to my purpose forward will I fare.\*

The endeavours of the Scottish reformers to disseminate the truth, and render the scriptures more generally known and understood, met with the most determined opposition; and persecution exercised its fatal cruelties upon the reformers themselves. Patrick Hamilton, an amiable youth of royal descent, and considerable learning and eloquence, was the first who fell a sacrifice in Scotland. He was burnt at the stake, at Glasgow, with circumstances of peculiar barbarity, A.D. 1527. In 1530, Henry Forrest, another young man of learning, suffered at St. Andrews, for possessing a copy of the *New Testament*, and affirming that Patrick Hamilton was a true martyr. And beside many others, Sir John Borthwick was accused of entertaining and propagating heretical opinions, and dispersing heretical books, among which,

\* *Lyndsay's Monarchie*, B. i. The copy from which this is extracted is a small 8vo., printed in the Gothic letter. It is not folioed; and having lost the title-page, it cannot be ascertained where the work was printed, nor the date; but it appears to have been printed in England, both from the form of the type, and the Anglicised orthography.

the *New Testament* in English was enumerated first. Having escaped to England, he was declared an obstinate heretic, and sentenced to be burnt, as soon as he could be apprehended, all persons were prohibited to entertain him: under the pain of excommunication; and all goods and estates confiscated; and his effigy to be burnt at the market cross. This was in 1540.

Some attempts were likewise made to introduce among the clergy and the higher ranks of the laity, the study of the original languages. In 1534, John Erskine, of Dun, brought a learned man from France, and employed him to teach Greek, in Montrose; and upon his removal, liberally encouraged others to come from France and succeed to his place. From this private seminary, many Greek scholars proceeded, and the knowledge of the language was gradually diffused over the kingdom. At this school, George Wishart probably obtained his acquaintance with that language; and was employed as one of the teachers. But William Chisholm, bishop of Brechin, hearing that Wishart taught the *Greek New Testament*, summoned him to appear before him, on a charge of heresy, upon which he fled the kingdom, in 1538, and remained abroad till 1544; when he returned to Scotland, but very soon fell a prey to the snares of Cardinal Beaton, and suffered death as a martyr, at St. Andrews.

1527. Henry VIII., as he possessed himself some talent for letters, was an encourager of them in others; and the countenance thus given to learning by Henry and his ministers, contributed to render the acquisition of knowledge fashionable in England. Erasmus speaks with great satisfaction of the general regard paid by the nobility and gentry to men of learning. It is needless to be particular in mentioning the writers of this reign or of the preceding. There is scarcely one who has the least pretension to be ranked among our classics. Sir Thomas More,\* though he wrote in Latin, seems to come nearest to the character of a classical author.—As a poet, the gallant and accomplished Surrey† must not be overlooked; nor, as promoting the cause of the reformation, or the study of the Greek and Latin languages, the names and eminent services of Colet, Lily, Grocyn, and Latimer, deserve to be recorded at some length.

John Colet, the great and excellent dean of St. Paul's, and whose history is intimately connected with that of literature, both sacred and profane, was born in London, in the year 1468. He was the eldest son of Sir Henry Colet, knt., who was twice Lord Mayor of London. In 1483 he was sent to Oxford, where he spent seven years in the study of logic and philosophy, and then took his degree in arts. Having re-

solved to enter the church, he was presented, when but nineteen years of age, and only in the order of an acolythe, with the rectory of Denington, in Suffolk; and in 1493 he was instituted to the rectory of Thyrning, in Huntingdonshire, on the presentation of his father, which he resigned before the end of the year 1493. In order to acquire knowledge, and to improve and extend his acquaintance with the languages and sciences which he had already studied, he visited France and Italy. He appears to have returned from his travels in 1497, and withdrew to Oxford, in order to prosecute his studies with greater success. In this situation he was neither inactive nor useless. When Erasmus visited England, Colet soon formed an intimate friendship with him; which he endeavoured to improve to a more accurate and critical knowledge of the scriptures. This friendship was maintained to the close of life, and the correspondence of these two great men served to animate them in the pursuit of biblical learning, in which they met with frequent and violent opposition, especially from the scholastic doctors, who were so enraged at any attempts to promote the study of the *Greek* tongue, that they could not forbear uttering invectives against it from the pulpit; and strove to suppress it by the cry of *heresy*. Hence the proverb, "*Take care of Greek, lest you become an heretic: avoid Hebrew, unless you become like Jews.*" In 1502, Colet was made prebendary of Durnford, in the church of Salisbury, and after some other changes in the church, he was at length, in May 1505, without the least solicitation of his own, raised to the dignity of dean of St. Paul's, on which occasion he resigned the vicarage of Stepney. Dr. Colet soon began to distinguish himself in the important station to which he was now advanced. He called to his assistance other divines of learning and talent. The contempt which the dean expressed for the religious houses or monasteries, and the display which he made of their abuses, together with the divinity lectures, and the method of expounding the scriptures, raised among the people an anxious inquiry after the sacred writings, and doubtless contributed to prepare their minds for the reformation. The ecclesiastics were stung to revenge, and a prosecution was commenced against him for heresy, in which Dr. Fitzjames, bishop of London, was the principal agent. But to the honour of Archbishop Wareham, who knew and valued the integrity and worth of Colet, became his advocate and patron, and dismissed him without giving him the trouble of a formal answer. Disappointed in their accusation of heresy, they attempted to fix upon him a suspicion of sedition or treason. In this they were equally foiled; for the young king (Henry VIII) sent for him, and in private advised him to go on, reproving and reforming a corrupt and dissolute age. Another attack was made upon the dean, of a similar nature, but which was equally unsuccessful; the king dismissing him with marks of affection, and promise of favour. Having succeeded to a very considerable estate

\* Sir Thomas More was beheaded on Tower-hill, July 6, 1535, for denying the supremacy of the king.

† The earl of Surrey was a young man of the most promising hopes; but his qualifications were no security against the violence of Henry's temper. He was arrested on a frivolous charge of infidelity to the king; and notwithstanding his eloquent and spirited defence, was executed on Tower-hill, January 19, 1547.

on the death of his father, who died in 1610, he delivered his church revenues to his steward to be expended in acts of housekeeping and hospitality; and employed the annual produce of his paternal estate in acts of piety, beneficence, and generosity. Having no very near, or poor relatives, he founded the grammar school of St. Paul's, in London, which he endowed with lands and tenements, for the support of a head master, a second master, or usher, and a chaplain, for the instruction of one hundred and fifty-three boys in the Greek and Latin languages; and placed it under the care of the company of mercers; and appointed William Lily to be the head master of the school. His honesty and zeal against the corruptions of the clergy increased the number of his enemies; but, protected by the king, he escaped that degradation and martyrdom, which with a less powerful patron he would probably have suffered. About his fiftieth year, he formed a resolution to withdraw from active life, and spend the rest of his days in retirement; but he was prevented by death: for being seized with the sweating sickness, he retired to his lodgings in the monastery of the Carthusians, at Sheen, near Richmond, where he died on the 16th of September, 1619. He was buried in the cathedral church of St. Paul's, with a humble monument, that he had several years before prepared, with only this inscription:—"JOANNES COLETUS." Such was Colet, a man who, amid the darkness of the age, shone as a light in a benighted land; and who deserves to be ranked among those who were essentially serviceable in the spread of scriptural knowledge; a honour to his country; and a blessing to posterity.

William Lily, or Lilye, was a celebrated grammarian, and a successful teacher of the learned languages. His principal work, or at least that by which he is best known is *Brevissima Institutio, seu ratio grammaticæ cognoscendæ*, London, 1513; commonly called Lily's *Latin grammar*. The English rudiments of it were written by Dean Colet; the preface by Cardinal Wolsey; the syntax chiefly by Erasmus, and the other parts by other hands; so that, although it bears Lily's name, he probably had not the largest share in the work; and therefore during his life, modestly refused the honour of having it ascribed to him. William Lily was born at Oldham, in Hampshire, about 1466, and studied at Oxford. He travelled to Jerusalem, and on his return visited the isle of Rhodes for the purpose of studying Greek under the learned men who had fled thither for protection, after the taking of Constantinople. From thence he went to Rome, where he further improved himself in the Latin and Greek languages. On his return to England, in 1509, he settled in London, and taught grammar, poetry, and rhetoric, with good success, and is said to have been the first who taught Greek in that city. Dean Colet appointed him head master of his school, and for twelve years he continued in that laborious and

useful situation, when he was seized with the plague, of which he died. He left two sons, George and Peter, who were both learned men. The eldest of them published the *first exact map* that was ever drawn of this island. Mr. Lily had also one daughter named Dionysia, who was married to John Ritwyse, usher, and afterwards successor to him in the mastership of St. Paul's school. Lily died, Feb. 25, 1523.

William Grocyn was born at Bristol, in the year 1442; and received his education first at Winchester, and afterwards at New College, Oxford, of which he was made perpetual fellow in 1467; and in about two years afterwards was presented by the warden and fellows of that college to the rectory of Newton-Longville, in Buckinghamshire; and became divinity reader of Magdalen College, of the same university. By the low state of learning in England, he was induced to visit Italy, to perfect himself in the Greek and Latin languages. He returned to England in 1491, and took the degree of bachelor of divinity, and was appointed public teacher of Greek at Oxford, and obtained the friendship of Erasmus, who was then resident in that university; and in several of his epistles speaks of him in a manner that proves he cherished the most sincere regard for him. He died at Maidstone College, in Kent, of which he was master, in the beginning of the year 1522, aged eighty, of a stroke of the palsy; and was buried in the choir of the church at Maidstone. To William Lily, the grammarian, his godson, he bequeathed by his will, a legacy of *five shillings*.

William Latimer was considered by Erasmus, as a man of more than virgin modesty, under which was veiled the greatest worth; and as one of the greatest men of that age; a master of all sacred and profane learning. Leland celebrates also his eloquence, judgment, piety and generosity. Little is known of this eminent scholar; he was fellow of All Souls College, at Oxford, in the year 1489. Afterwards he travelled into Italy, and settled for a time at Padua, where he improved himself, particularly in the Greek tongue. On his return to his native land he settled at Oxford as a teacher, and had for his pupil Reginald Pole, who was afterwards the celebrated cardinal and archbishop, and by whose interest Latimer obtained the rectories of Saintbury and Weston-under-Edge, in Gloucestershire, and a prebendary of Salisbury. He died very aged, and was buried at Saintbury.

The following anecdote will serve as a curious specimen of the despotism and simplicity of an age not literary, in discovering the author of a libel, and which took place about this period. A great jealousy existed between the Londoners and those foreigners who traded to this country. The foreigners probably, observes Mr. Lodge, in his *Illustrations of English History*, worked cheaper, and were more industrious. There was a libel affixed on the door of St. Paul's, which reflected on the king and these foreigners, who were accused of buying up the wool with the

king's money, to the undoing of Englishmen. This tended to inflame the minds of the people; and the method adopted to discover the writer of the libel must excite a smile in the present day, while it shows the state in which learning must have been in.—The plan adopted was this: In every ward, one of the king's council, with an alderman of the same, was commanded to see every man write that could, and further, took every man's book and sealed them and brought them to guildhall to confront them with the original—so that if of this number many wrote alike, the judges must have been much puzzled to fix on the criminal.

1527. LAURENCE ANDREWE is stated by Ames to have been a native of Calais, and a translator and author of various books previous to his exercising the art of printing: which he adds, he might probably have learned from John Doesborowe or Doesbrock, or Peter Treveris. *The wonderful Shape and Nature of Man, Beasts, &c.* of his translating, was printed at Antwerp by the former of the two typographers above-mentioned, as was also Andrew's English version of the *Valuation of Golde and Syluer*, supposed to have been produced in 1499, in black-letter. Like many of the other early printers, Andrew resided near the eastern end of Fleet-street, by the bridge which crossed the Fleet, at the sign of the Golden Crosse.

The following is a list of his works:—

*Boke of Distyllacyon.* London in the fletestrete, in the sygne of the golden Crosse. 18th April, 1527. Folio.

*Myrrour, &c. of the Worlde.* In fletestrete, at the sygne of the golden crosse by fletebridge. Without date. Folio.

*Directory of Conscience.* Without date. Quarto.

The above monogram of Laurence Andrew, consisted of a shield, which was contained in a very rudely-cut parallelogram, surrounded by a thick black line. The escutcheon is supported by a wreath beneath an ornamental arch, and between two curved pillars, designed in the early Italian style. The back-ground is formed of coarse horizontal lines.

1527. *Died*, JOHN FROBEN, or FROBENIUS, an eminent and learned German printer. He was a native of Hammelburg, but settled at Basil, where he acquired the reputation of being uncommonly learned. With a view of promoting useful learning, for which he was very zealous

he applied himself to the art of printing. He was the first of the German printers who brought the art to any perfection. The great reputation and character of this printer was the principal motive which led Erasmus to fix his residence at Basil, in order to have his own works printed by him. He would never suffer libels, or any thing that might hurt the reputation of another, to go through his press for the sake of profit; and being a man of great probity and piety, as well as skill, he was particularly choice in the authors he printed. It is said of him, that he exposed his proof-sheets to public view, and offered a reward to any person that should discover an error. In his preface to *Celii Rodiginus*, he advises the learned against purchasing incorrect editions of books, for the sake of their cheapness, and calls the printers of them, *pests of learning*. He says, "such wretched works cannot but be dearly bought, how cheap soever they are sold; whereas he that buys a correct copy, always buys it cheap, how much soever he gives for it."

Erasmus, Heyland, Oecolampadius, and other persons of the highest rank in literature, were the learned correctors of his press. Oecolampadius says, he could not sufficiently wonder that Erasmus, who alone kept three presses continually going, who read and compared the Greek and Latin manuscripts, and consulted the writings of all the ancients and moderns, could find time enough to correct the proofs of his works; and adds, that his example had not a little encouraged him to engage in the laborious task of corrector.

We have already noticed the frequent falsification, pirating, and forgeries of literary works. The case of Froben, as described by Erasmus, may represent those of many other meritorious printers whose liberality and public spirit were thus made to enrich the ignorant and worthless. "Many are they who lie in wait for the man, and almost have conspired to his ruin. When any new work appears which is likely to be saleable, one or other of them surreptitiously procures a copy from his printing house, prints, and sells it almost for nothing; whilst Froben is at an immense expense, not only in remunerating correctors, but often in purchasing the original manuscripts."\*

This excellent printer expired at Basil, in

\* McCreery, in his poem of the *Press*, alludes to the same subject in the following lines:—

How sweet to yield the tribute of applause,  
When sterling worth with strong attraction draws;  
Or what more pleasing to the feeling mind  
Than living wreaths around his brows to bind!  
But in our days what hordes of blockheads claim  
The proud distinction of the printer's name;  
Around his press, like hungry beasts of prey,  
They swarm, whom every trade hath cast away;  
Without the knowledge that can e'er improve,  
The sordid aim their active passions move.  
Their servile uses and their country's shame,  
How frequent now the public prints proclaim.  
The base pursuits that cunning can devise,  
Strong advocates their hireling page supplies,  
The dread of chains and slavery dispel,  
And as they're brib'd th' obedient conscience sell.

this year, lamented by all, but by none more than Erasmus, who wrote his epitaph in Greek and Latin. He was succeeded in his business by his son Jerome Froben, and his son-in-law Nicolas Episcopius, who carried on the business with the same reputation.

1527. After this time no printer is supposed to have resided at Oxford for the space of sixty years, for which chasm there is no reason assigned.

We have already noticed the introduction of printing into the city of Oxford; and without entering upon any of the disputes in question, it only remains at this time to notice those of whom we have certain dates. Theodoric Rood, a native of Cologne, printed at Oxford in 1480, but his first book is disputed; it is supposed that he continued in business to 1485; and that he had a partner called Thomas Hunte, an Englishman; only four books are known to have been printed by these individuals, and one of these was not known till 1735, unless we admit that Hunte was the printer of the three anonymous books in 1468 and 1479. From these we are obliged to descend to the year 1506, when Pynson or Wynkyn de Worde printed for the university till 1518, when John Scolar\* printed for them, and lived in St. John's, Baptist's-lane, who was succeeded by Charles Kyfirth, a Dutchman, who resided in the city for a short time, in whose name we have only one book in 1519. Anthony Wood, in his *History of the Antiquities of Oxford*, says that Theodoric Rood was succeeded by Scolar, and he by Peter Treveris, who in 1525, removed to Southwark.—See Cotton's *Typographical Gazetteer*, Dibdin, Horne, &c.

1528. Died JOHN AMERBACH, one of the most excellent and learned printers of his time. He was at first a student at Paris, under the famous Lapidanus, who invited the three Germans to that city. Amerbach followed his studies until he attained the degree of master of arts; and went to Basil in 1481, where he set up a printing-press, and became very famous in the science of typography. The exact place of his birth is not determined. Orlandi calls him a Parisian, though perhaps on no other account than that he studied so long in that university. His name is unquestionably German.

Amerbach's first care, when he engaged in the printing-line, was to get a complete fount of round roman. His next was to procure some of the best correctors of that age, of whom, though no person was more capable than himself, he had a greater number than any of his contemporaries. He was so careful and diligent in this province, that he would not let one sheet pass unrevised by himself. Reuchlin says, that

he was a man of excellent genius, highly valuable for the neatness and correctness of his works, and well skilled in several arts and sciences.

As Amerbach was a pious man, and zealous in the cause of religion, which appears from all his prefaces; so he made choice of consecrating his labours to that branch of learning, in preference to any other. This induced him to engage in printing the works of all the ancient fathers, a task hitherto unattempted by any printer. He began with an edition of St. Austin, which he did not finish until 1505, in the old Gothic. What he had most at heart was to publish St. Jerome's works; which as he knew was impossible to be done without a competent skill in the Latin, Greek, and Hebrew tongues (the last of which he was too old and full of business to learn,) he made his three sons, youths of bright parts, divide that province among themselves; who, having studied those languages, were obliged by him, whether he lived or died, to finish that edition; which they faithfully performed. The greatest part of these particulars are communicated by Erasmus in his prefaces to St. Austin and St. Jerome.

Jodocus Badius, an eminent printer, says, he was a man of indefatigable industry, and consummate skill in correcting the errors of corrupt copies. And adds, that if all printers would follow the example of John Amerbach, their productions would be in much higher repute than they are.

Boniface, his eldest son, who died in 1562, was for thirty years law professor at Basil, five times rector of the university, and went through the different offices of the magistracy with the reputation of a man of great integrity. In 1659 was printed at Basil, 4to., the *Bibliotheca Amerbachiana*, a scarce work, which throws considerable light on the *History of Printing*.

1528, Oct. 2. *The obediences of a christian man, and how christen rulers ought to governe; wherein also, yf thou marke diligently, thou shalt fynde eyes to perceave the crafty conveyance of all iugglers.* At Marlborrow in the land of Hesse, the seconde daye of October, MDCXXVIII, by me Hans Luft. In this book Tindall asks, what is the cause why, we may not have the *old testament* translated as well as the *new*, which they had burnt. *Octavo.* Marlborrow, is a fictitious name for Marburg, in Germany, the capital of Upper Hesse, where the art of printing was introduced in 1527; and it is, in all probability, this town which William Tindall designates, in his *English translation of the Pentateuch* of the year 1530, and in many other works printed about this time, as *Marlborrow in the land of Hesse*.

1528, April 6, Died ALBERT DÜRER, the celebrated engraver on wood. This individual may be called the father of the German school of painting; he was also an excellent and indefatigable engraver, a writer on painting, perspective, geometry, and on civil and military architecture. But it is as an engraver that he is chiefly known to us; and we think we may venture to say, that there is no name so cele-

\* John Scolar, printer to the University of Oxford, recited in a book which he had printed, an edict of the chancellor, under his official seal, enjoining that for a period of seven years to come, no person should venture to print that work, or even to sell copies of it elsewhere printed within Oxford and its precincts, under pain of forfeiting the copies, and paying a fine of five pounds sterling and other penalties. During the censorship of the press throughout England, the vice-chancellor was the authorized licencer of all books printed at the University.—Ingram's *Memorials of Oxford*.

brated in the annals of engraving as that of the subject of this memoir.

Albert Durer was born May 20th, 1471, at Nuremberg, in Germany, a city famed at that time, as rich and free, prosperous in trade, and fond of the arts. Having made a slight beginning with his pencil in the shop of his father, who was a goldsmith, Albert rapidly advanced in painting and engraving, and at the age of twenty-six exhibited some of his works to the public. So highly was he thought of, that his prints found their way to Italy, where Mare Antonio Raimondi not only counterfeited on

**A**  
**D**

copper a whole set of beautifully-executed small wood cuts of his, on subjects taken from the *New Testament*, but forged his well-known stamp; a piece of roguery which at once carried Durer into Italy to get redress.

On his reaching Venice, the senate of that place so far did him justice, as to order M. Antonio to efface the mark: they also forbade any one but the right owner to use it in future. To this event in his life was owing his introduction to that wonderful genius Raphael, who sought his acquaintance: and, in the simple fashion of the times, the new friends mutually exchanged portraits. His works quickly became the rage: he received high praises from all quarters; and his style was copied by a first-rate Italian painter, Andrea del Sarto. The substantial rewards of merit kept pace with his fame. Having finished a picture of St. Bartholomew, for the church dedicated to that saint at Venice, the work rose so high in public opinion, that Rodolph II., emperor of Germany, sent orders to Venice, that it should be bought for him at any price, and brought to Prague, not by the common mode of carriage, but (to prevent its taking harm) on men's shoulders, by means of a pole. Durer's honours now flowed thick upon him; his fellow-citizens, proud of his talents, and equally so of his private virtues, chose him into the council of Nuremberg; and the emperor Maximilian sent him a pension, and a patent of nobility.

As Durer did not make so much use of the pencil as of the graver, his pictures are scarce, and seldom to be seen but in palaces or great men's houses. His engravings, on the contrary, are so numerous, as well as closely-laboured, that it would betoken a life of no common toil, directed to this one point, to have performed all those which are extant, and fairly allowed as his. In the British Museum, and in the Fitzwilliam Museum at Cambridge, as well as in many other collections, are various specimens of his skill. His design proves vast invention: his copies of nature are bold and powerful, full of expression, though often extravagant and grotesque: his exactness in the composition of parts is also very striking; and he has given a neatness of finish to small points, where most draughtsmen, probably, would have sacrificed

correctness to the general effect. From his power and simplicity in copying nature, as well as from his attention to particulars, the admirers of Durer have called him, by analogy, the Homer of artists, while others, from the wild and romantic spirit of his works, have compared him to our English poet, Spenser, who, in his *Faerie Queen*, has conveyed so many dark and wondrous legends, and by the magical art of description, has dressed up fiction to look like truth.

With respect to the invention of etching,\* it seems to be not well known to whom it is to be ascribed. One of the most early specimens of Albert Durer, is that print, known by the name of the *Cannon*, dated 1518, and thought by some, with little foundation, to have been worked on a plate of iron. Another etching by the same artist, is *Moses receiving the Tables of the Law*, dated 1524.

One of Durer's best pieces, on wood, is that of *St. Hubert at the Chase*. The saint is seen kneeling before a stag, which has a crucifix between its horns, while around him are hounds in various attitudes, surprisingly true to nature. Another is an armed knight on horseback, attended by death (also on horseback), and followed by a frightful fiend, the group having almost as much of the ludicrous as the terrible; this is called by some *Death's Horse*, and by others *The Worldly Man*. But, perhaps, the most remarkable of all his prints is that of *Melancholy*, which conveys the idea of her being the parent of *Invention*; it is a female form, sitting on the ground, her features marked with the deepest and most solemn shades of thought, and her head resting pensively upon her hand; above, before, and around her, are a multitude of emblems of science, and instruments of study. This composition, it has been observed, is interesting on another account; namely, as a true picture of the times when it was engraved; for precisely thus was attention perplexed and distracted on most philosophical subjects, in the age of Albert Durer; and as he himself was author of seven treatises, most of which are on the metaphysics of art, he had probably experienced much of that sort of melancholy, which proceeds from mental weariness and disgust—the usual end of such studies. In this view, the proverb might be true of him, “the painter paints himself!” But poor Durer had other sources of melancholy, which may help us in coming to

\* Some have ascribed the invention of etching to Francesco Mazzuoli, of Parma, or to Lucas a Deutecum, of Zutphen, about the year 1536. But we are certain that it was commonly practised in Germany, both at Nuremberg and Frankfurt, about 1515; and since the use of aquafortis was known to Durer, some scruple not to give the invention of etching to his master Wolgemuth.—*See* *Handbook*.—Parmegiano, who died in 1540, practised the art in Italy, and in whose etchings we discover the hand of the artist working out a system, as it were, from his own imagination, and striving to produce the forms he wanted to express.—The artists were probably not long after this before they found out the way of uniting etching with engraving, in the manner that prints are now generally executed. The precise period cannot be ascertained.—*Microm.*

this conclusion. Although amiable in conduct and manners; a lover of modest mirth, esteemed, and even beloved, by his brethren in art, respected by his fellow-citizens, and distinguished by his monarch, he had a private woe which imbibed all his cup of honour: he had a shrew for his wife.\* Yet, as another proof that beauty and a sweet temper are not necessarily united, we are informed that, in painting the Virgin Mary, he took her face for a model. His domestic trials he bore with calmness for a time, but at last he escaped, for rest from her unkindness, to Flanders, finding an asylum in the house of a brother in profession and fame; but she discovered him in his quiet retreat, and prevailed upon him, by earnest promises of amendment, to return to his home. Unfortunately, however, for him and for the world, her ill disposition returned too, triumphed over the strength of his constitution, and hurried him to the grave before his time. He died at the age of fifty-seven. A Latin inscription to the following effect, was engraved on his sepulchre in the cemetery of St. John:—

TO THE MEMORY OF ALBERT DURER.  
ALL THAT WAS MORTAL OF ALBERT DURER IS  
PLACED IN THIS TOMB. MDXXVIII.

We have by this celebrated master one hundred and four engravings on copper, six on tin, a great number on wood,† and six etchings. His wife, whose maiden name was Agnes Frey, is supposed by some to have executed several small pieces, representing the miracles of Christ; but this is merely conjecture. His son, Albert, was a sculptor, and probably an engraver.

1529. Died RICHARD PYNSON, printer, of whom we have already given some notice (see page 196 ante), and also made such extracts as may shew the nature of the works in which he was engaged. Pynson, like many of the early typographers, was a foreigner. In the chapel of the rolls is contained a patent of naturalization

granted to him by king Henry VII., about 1493, which calls him "Richard Pynson, descended from the countries of Normandy." The name does not then appear to have been first introduced into England, for in the churchwarden's books belonging to the parish of St. Margaret, Westminster, in the year 1504, are the words, "Item, receyved of Robert Pynson for four tapers iiiid." Anthony A. Wood also, in his *Athene Oxonienses*, edit. by Bliss, London, 1815, vol. ii. p. 692, mentions, that one "Philip Pynson, an English man, studied among the Minorites or Grey Friars, for a time at their house in Oxon, of which order he was a learned brother." He was subsequently suffragan-bishop to Hadrian de Castello, bishop of Hereford, and afterwards bishop of Bath and Wells; through whose endeavours, united with the interest of king Henry VII., he was advanced by the court of Rome to the archbishopric of Tuam, in Ireland, December 2nd, 1503, and three days after he died of the plague. It has been supposed, from an equivocal note inserted in Palmer's *General History of Printing*, that Richard Pynson, or Wynkyn de Worde, was the son-in-law of William Caxton; but the preference has rather been assigned to the latter, since in all his devices Caxton's monogram appears most prominently conjoined with De Worde's, while those of Pynson are composed of his own initials only. That Pynson might have been either an apprentice or workman of Caxton's is scarcely to be doubted; since in *The Prohemye*, to his edition of Chancer's *Canterbury Tales*, printed without date, he says, "whiche boke diligently ouirsien & dnelly examined by the politticke reason and ouersight of my worshipful master william Caxton accordinge to the intente and effect of the seid Geoffrey Chancer, and by a copy of the seid master Caxton purpos to imprint by the grace ayde and support of almyghty god. Whom J humbly beseeche. that he of his grete and habundant grace will so dispose that J may it fynyshe to his plesure laude and glorie." It has also been considered, that Richard Pynson was probably a more ancient printer than Wynkyn de Worde, on account of the rudeness of type which is shewn in his edition of *Diues and Pauper*, 5th July 1493; and in the book of *Canterbury Tales*, without date, when contrasted with the typographical excellence of Wynkyn de Worde. The residence of Pynson was in Fleet-street, close to that of De Worde, whom it has been supposed he invited from Westminster, to dwell near him. Psalmazar has also intimated, that the two typographers lived in the closest familiarity and friendship with each other, but by their publishing different editions of the same book, almost at the same period, it would appear more as if they had been the supporters of two rival presses. The first book of Pynson's which is known with a date, states in the colophon, that it was printed "the v day Juyll. the yere of oure lord god. m.cccc.lxxxiii.—by me Richarde Pynson at the Temple-barre of london." The

\* Matrimony has been considered, by some writers, as a condition not so well suited to the circumstances of philosophers and men of learning. There is a little tract which professes to investigate the subject; it has for its title *De Matrimonio Literati, an Calibem esse an vero nubere conueniat?* That is, Marriage of a Man of Letters; with an enquiry whether it is most proper for him to continue a bachelor or marry?—The author alleges the great merit of some women; particularly that of Courage, the consort of Montefreito duke of Urbino; a lady of such distinguished accomplishments, that Peter Bembo said, none but a stupid man would not prefer one of her conversations to all the formal meetings and disputations of the philosophers.—The wife of Berghem would never allow that excellent artist to quit his occupations, and she contrived an odd expedient to detect his indolence. The artist worked in a room above her; ever and anon she roused him by thumping a long stick against the ceiling, while the obedient Berghem answered by stamping his foot, to satisfy Mrs. Berghem that he was not sleeping.—Elianus had an aversion to the marriage state.—Sigeonua, a learned and well known scholar, would never marry, and alleged no inelegant reason, that "Minerva and Venus could not live together."

† Mr. Ottley has been enabled to give a rich treat to those who can feel an interest in this study, by presenting in his book, specimens of the works of this great artist, printed from the original blocks themselves! There are four, viz., *The Last Supper; Christ before Pilate; Christ taken down from the Cross; and The Ascension.*

*Falle of Princis*, of the following year, has "dwellynge withoute the Temple barre of London," which place of his residence is continued, till 1502-3. In the *Imytacyon & Follownynge* ..... of *Criste*, finished on the 27th of June in the latter year, his house is stated to be "in Flete-strete at the sygne of the George;" and the book to have been printed "at the commaundement and instaunce of the ryght noble and excellent Prynces Margaret moder of our souverain lorde Kynge Henry the VII. and Countesse of Rychmount and Derby." But a still higher protection is to be found attached to a *Salisbury Missal*, printed in 1504, which has the words, "per Richardum Pynson huius artis ingeniosissimum mandato et impensa serinissimi xristianissimiq. et omnia virtutum genere pre-diti regis Henrici septimi." The *Pylgrymage of Perfection*, 1525, was "Imprinted at London in Fletestrete, besyde saynt Dunstan's Church by — printer to the Kynge's noble grace;" and in an edition of the *Salisbury Missal*, without date, are the expressions "In parochia Sancti Dunstani (in fletestrete), iuxta ecclesiam commoran-tem." From these extracts, it is ascertained that Pynson lived in two, if not in three different residences; since, as the parish of St. Clement reaches to the western side of Temple-Bar, he could not be dwelling near St. Dunstan's church at the time when he was situated without the boundary. It is supposed that in 1508, when William Faques either died or resigned his office of king's printer, Pynson first properly assumed this title in his colophons; and that the royal patronage which he had previously received, must have been confined to certain books only. In December 1508, in the colophon to the *Peregrinatio Humani Generis*, he styles himself, "Prynster vnto the Kyngis noble grace," and in Alexander Barclay's translation of *Salust's Chronicle*, no date, there is added to the above, "with pryuelege vnto hym graunted by our sayd sourayne lorde the kynge."

About 1525, Robert Redman assumed and altered one of the best devices of Richard Pynson, and also interfered in one department of printing, (the law,) which the latter considered, from the royal protection already mentioned, as being peculiarly his own. At the end of an edition of *Lyttleton Tenures newly and moost truly correctyed and amended*, October 12th, 1525, Pynson placed the affair before the public in a Latin letter, of which the following is a translation:—"Richard Pynson, the Royal Printer, Salutation to the Reader. Behold I now give to thee, Candid Reader, a Lyttleton corrected (not deceitfully,) of the errors which occurred in him; I have been careful that not my printing only should be amended, but also that with a more elegant type it should go forth to the day: that which hath escaped from the hands of Robert Redman, but truly Rudeman, because he is the rudest out of a thousand men, is not easily understood. Truly I wonder now at last that he hath confessed it his own typography, unless it chanced, that even as the Devil

made a Cobbler a Mariner, he made him a Printer. Formerly this Scoundrel did profess himself a Bookseller, as well skilled as if he had started forth from Utopia; he knows well that he is free who pretendeth to books, although it be nothing more; notwithstanding he is a Buffoon who hath dared to engage in it, his reverend care for the Laws of England should knowingly and truly have imprinted them all. Whether the words which I give be profitable, or whether they be faithful he can tell, and do thou in reading Lyttleton excuse his care and diligence in that place where thou dost see it. Farewell;" Redman took but little notice of all this, but in April 1527, he removed into St. Clement's parish, to the sign of the George, the very house which Pynson had quitted; and in the same year, in an edition of *Magna Charta*, Pynson again attacked him in a similar manner. In 1532, Redman seemed to have occupied his antagonist's residence next to St. Dunstan's church, as his direction expresses; and Herbert supposes that Pynson thus effected a reconciliation with Redman, by retiring from business, and making over his whole stock to him. The last books printed by Pynson, are supposed to have been bishop Longland's *Convoocation Sermon*, and the *Missal of the Holy Ghost*, both in octavo, 1531; but in the date of the former, Herbert supposes that there is an error, and that M D X X X I has been placed for M D X X I X. The colophons of some of Pynson's books shew that he was employed by some of considerable importance as well as the royal family, for in that to the *Promptuarium Puerorum*, 1499, he says, "Imprinted by the excellent Richard Pynson, at the charges of those virtuous men Frederick and Peter Egmont, after Easter," &c. In an edition of the *Old Tenures*, he mentions, that it was printed at "the instance of my maistres of the company of Stronde Inne with oute tempyll barre off London;" and in *The Myrrour of Good Manners*, no date, he says "whiche boke I haue pryntyd at the instance and request of the ryght noble Rychard Yerle of Kent." As in 1529, Thomas Berthelet had a patent for the office of king's printer, and in a book of that year he assumed the title, it has thence been concluded that Pynson died about the same time; but, if the above-mentioned books be received as evidence, this supposition is certainly erroneous. Lord Coleraine, in his manuscripts concerning Tottenham, preserved in the Bodleian library at Oxford, states that in the 11th of Henry VIII., 1519, the manor-house of Tottenham with the adjoining fields, (then the property of sir William Compton), were leased for forty-one years to one Richard Pynson, gent., but whether this were the typographer is certainly doubtful. Mr. Rowe Mores, in his very curious work on *English Founders and Foundries*, speaks well both of Pynson and his types. He states that in 1496, this printer was possessed of a double pica, and great and long primers, all clear and good, with a rude Eng. english, and english, and a long primer roman. In 1499, he

had an english, and a pica roman, of a thick appearance, but a letter which stood well in line. He had also a better fount of great primer English, with which he printed in 1498; Pynson was the first typographer who introduced the roman letter into this country.

As the authenticity of the portrait of William Caxton has already been noticed, so it should be observed, that there is no better proof than that of time and popular acceptance for the head engraved for Richard Pynson. In reality, it represents John Gorraus, junior, who lived at the court of Louis XIII. to whom he was physician in ordinary; and it occurs on the back of a Latin address to marshal Montmorenci, composed by him. The original is a fine spirited wood engraving, about six inches in height; and was discovered by Francis Douce, Esq.

The above is the principal device of Richard Pynson, though in general, they were six in number. He had also several loose engraved border pieces, for the formation of compartments and title-pages; or for the enlarging of some other device, on some of which his cypher appears in miniature. Of these compartments, one consisted of naked boys in procession to the left, carrying one upon the shoulders of four others; another had a procession to the right, in which two of the boys were riding in panniers on an elephant, the nearest of which was crowned. A third had two boys holding a festoon; and all of these were bottom pieces. A fourth compartment contained the history of Mutius and Portenna. He probably had likewise a kind of stamp for the covers of books; since in Herbert's description of the *Imitacion, &c. of Christ*, 1503, and Dibdin's *Typographical Antiquities*, vol. ii. page 423, he says, "a copy of this book was curiously bound, with the king at length, the printer's mark, and other figures stamp on the cover." Again, in Herbert's notice of the *Abbreviamentum Statutorum*, 1499, he states that "the king at length, and Pynson's mark, R. P. were stamped on the cover of the book." Pynson, like Wynkyn de Worde, affixed to several of his books, especially to his statutes and law publications, various engravings of the royal arms, supporters, badges, &c. as well to indicate his being the king's printer, as to denote those volumes which more immediately related to the history and constitution of England.

1529. The first patent of king's printer which has been found, is that granted to Thomas Berthelet, by Henry VIII., in this year. But before this time, Richard Pynson, in 1503, had styled himself "printer unto the king's noble grace;" and in 1508, we find William Faques, in like manner, taking the Latin title of *regis impressor* (the king's printer). It may be regarded as almost certain, that at this time the appointment of king's printer did not convey any exclusive privileges, but was merely an honorary distinction, implying that the individual possessing it was peculiarly patronized by his majesty, and perhaps was regularly employed to do the printing work of the crown. It was, in fact, an appointment very nearly of the same nature with those held at present by any of the royal tradesmen. Wynkyn de Worde, before Pynson, called himself printer to the lady Margaret (Henry VII.'s mother), but it will scarcely be pretended that that princess, by such an appointment, could confer upon him any exclusive privileges. At the very time that Pynson called himself printer to the king, the acts of parliament were printed not only at his press, but also at those of Wynkyn de Worde, and of Julian Notary. And this view is fully confirmed by the terms of the patent granted to Berthelet, in which there is not a word about the exclusive right of printing anything whatever. The king assumed the right of controlling the exercise of the art of printing, not merely in regard to certain classes, but in regard to all classes of books. He licensed at his pleasure one man to print, and refused that liberty to another; he permitted the printing of one book, and prohibited that of another. The royal prerogative, in fact, as to this matter, was held to be unlimited and omnipotent. Every thing testifies the supremacy actually exercised by the royal prerogative. No book, in the first place, could be printed at all until it was licensed; and secondly, the king assumed the power of granting a right of exclusive printing and exclusive selling to whom he pleased in regard to all books whatsoever.—We shall enumerate the patents and privileges as they were granted to certain persons for printing or vending any kind of books.

Thomas Berthelet lived at the sign of *Lucretia Romana*, in Fleet-street; and it is singular to remark that the king's printer, (from Pynson in 1500) to the present time, have all resided in the parish of St. Bride, which seems to have been the *Alma Mater* of our profession, upon its first introduction into the metropolis. The total number of those carrying on printing in this parish almost defies enumeration; certainly eclipses, in comparison, that of any other parish or circle of similar extent in England, or perhaps the world.

1529. Louis de Berquin, a gentleman of Artois, who was probably attached to the reformed opinions, presumed to avow himself by his conversation and writings the defender of Erasmus, and brave in his behalf the fury of the Sorbonne. Such was the fury of the Parisian divines, (who had published a *Censura*, about 1526, upon va-

rious passages of Erasmus's *New Testament*), that not even the royal protection of Francis I., though powerfully exerted in the favour of Berquin, was sufficient to shield him from their vengeance; and this unfortunate man was, after a tedious process, condemned to expiate his offence in the flames; and was actually burned at Paris in this year.—Noel Bedier, who affected the name of Beda after the venerable Bede, was syndic of the Sorbonne at this period. He was a fierce fanatical pedant, and an incessant disputant; always on the look out for heresy, and for some new victim to persecute; and such was his hatred to heterodoxy that he would have burned every individual whom the Sorbonne condemned.

1530.—The first abridgement of the *English Statutes*, printed in English, was done by John Rastell. The preface to this work details the arguments which caused the old Norman French to give place to the English language, in enacting the laws of this country. It is on this account an interesting relic; and we therefore give the following extracts from Luckombe:—

“Because that the lawys of this realme of England, as well the statutes as other jugementys and decreys, be made and wrytyn most communly in the Frenche tongue, dyverse men thereof muse, and have oftimis communicacion and argument consydering, that in reason every law wherto any people shuld be boundyn, ought and shulde be wrytyn in such manere and so openly publishyd and declaryd, that the people myght sone, without gret dyfficulte, have the knowlege of the seyd laws. But the verey cause why the seyd laws of Englonde were writin in the French tonge, shuld seme to be this: furst, yt ys not unknowyn, that when Wyllyam, duke of Normandy, came in to this land, and slew kyng Herold, and couquered the hole realme, there was a grete number of people, as well gentylmen as other, that cam wyth hym, which understode not the vulgar tong, that was at that tyme vsyd in this realme, but onely the French tong; and also, because the seyd kyng, and other grete wyse men of hys counsell, perseuyd and suposyd that the vulgar tong, which was then usyd in this realme was, in a manere, but homely and rude, nor had not so grete copy and haboundaunce of wordys as the Frenche tong than had, nor that vulgare tong was not of yt self suffeycent to expown and to declare the matter of such lawys and ordenauncis, as they had determynid to be made for the good governaunce of the people so effectually, and so substancially, as they coud indyte them in the French tong, therefore they orderid, wrot, and indydyd the seyd lawys, that they made, in the French tong. And furthermore, long after the commyng off kyng Wyllyam conquerour, because that the vse of the French tong in this realme began to mynyshe, and be cause that dyvers people that inhabitid wythin this realme, wiche could nother speke the vulgare tonge of this realme, nother the French tong; therefore the wys men of this realme causyd to be ordyryd,

that the matters of the law, and accions between partes shuld be pledyd, shewyd and defendyd, answerd, debatyd and juggyd in the English vulgar tong; and more over, that wrytyn and enteryd of record in the rollys in the latyn tong, because that every man generally, and indifferently, myght haue the knowlege thereof, as apperyth by a statute made in the xxxvi yere of E. iii. c. vltimo; wherfore, as I suppose, for these causis before rehersyd, which was intendyd for a ryght good purpose.”

“Though the statuty, made as well in the tyme of the seyd kyng Henry the VII., as in the tyme of our souerein lorde, that now ys, be sufficiently indydyd and wrytyn in our Englysh tong, yet to them that be desirous shortly to knowe the effect of them, they be now more tedyyouse to rede, than though the mater and effect of them were compendiously abbreviat: wherfore now, as farr as my symple wyt and small lernynge wyll extende, I haue here takyn upon me to abbrege the effect of them more shortly in this lyttill book, besechyng all them, to whome the syght here of shall come, to accept hyt in gree; and though they shall fortune to fynde any thyng mysreportyd, or omytted by my neglygens, elis by neglygens of the prynters, that yt wolde lyke them to pardon me, and to consyder my good wyl, which haue intendid ty for a comyn welth, for the causis and consideracyous before rehersyde; and also, that yt fortune them to be in dout in any poynt thereof, yet, yf it please them, they may resorte to the hole statute, whereof this book is but a bregement, and in manere but a kalender. And furthermore I wyll aduertise every mon, that shall fortune to haue any matter in ure, to resorte to some man, that ys lernyd in the laws of this realme, to haue his counsell in such poyntis, which he thinkith doubtfull concernyng these seid statutis, by the knowlege wherof, and by the dylygent obseryng of the same, he may the better do hys dewte to hys prynce and soueraine, and also lyf in tranquillite and pease wyth his neyghbour, accordyng to the pleasure and commandment of all mighti God, to whom be eternal laud and glori. Amen.”

1530, Nov. 30. *Died* CARDINAL WOLSEY, the celebrated minister of Henry VIII. Thomas Wolsey was the son of a butcher at Ipswich, born in 1471, and educated at Magdalen College, Oxford. He was a youth of great parts; and, making considerable proficiency in learning, he became tutor to the sons of Grey, marquis of Dorset, who gave him the rectory of Lymington, in Hampshire, and opened the way for him at court. Prompted by ambition, he sought and obtained promotion and favour under Henry VII., who sent him on an embassy to the emperor, and, on his return, made him dean of Lincoln. Henry VIII. gave him the living of Torrington, in Devonshire; and afterwards appointed him register of the garter and canon of Windsor. He next obtained the deanery of York; and, attending the king to Tournay in France, in 1513, was made bishop of that city.

honours fell upon him in a degree equal to his ambition. "He was rapacious," says Sir James Mackintosh; "but it was in order to be prodigal in his household, in his dress, in his retinue, in his palaces, and, it must be added, in justice to him, in the magnificence of his literary and religious foundations. The circumstances of his time were propitious to his passion of acquiring money. The pope, the emperor, the kings of France and Spain, desirous of his sovereign's alliance, outbade each other at the sales of a minister's influence; which change of circumstances, and inconsistency of connection, rendered, during that period, more frequent than in most other times. His preferment was too enormous and too rapid to be forgiven by an envious world."

In 1514 he was advanced to the bishopric of Lincoln; and the same year he was made archbishop of York. In 1515 he succeeded archbishop Warham in the office of lord chancellor: the king obtained for him the same year a cardinalship; and, in 1519, he was made the pope's legate in England, with the extraordinary power of suspending the laws and canons of the church. He made every possible effort to obtain the triple crown of his holiness the pope; and was near succeeding, but for the preponderating influence of the emperor, Charles V.

Wolsey's "passion for shows and festivities—not an uncommon infirmity in men intoxicated by sudden wealth—perhaps served him with a master, whose ruling folly long seemed to be of the same harmless and ridiculous nature. He encouraged and cultivated the learning of his age; and his conversations with Henry, on the doctrines of their great master Aquinas, are represented as one of his means of pleasing a monarch so various in his capricious tastes. He was considered as learned; his manners had acquired the polish of the society to which he was raised; his elocution was fluent and agreeable; his air and gesture were not without dignity. He was careful, as well as magnificent, in apparel. As he was chiefly occupied in enriching and aggrandizing himself, or in displaying his wealth—objects which are to be promoted either by foreign connections or by favour at court—it is impossible to whatshare of the merit or demerit of internal legislation ought to be allotted to him." As his revenues were immense, his pride and ostentation were carried to the greatest height: for he had five hundred servants: among whom were nine or ten lords, fifteen knights, and forty esquires.

Wolsey's administration continued, seemingly with unabated sway, till 1527, when those who were opposed to him in the council, together with his opposition to Henry's divorce from queen Catherine, soon worked his downfall. Crimes are easily found out against a favourite in disgrace, and his enemies did not fail to blacken his good deeds, or to increase the catalogue of his errors. On the 17th of October, 1529, he was deprived of the great seal, which was given to Sir Thomas More. He was soon afterwards de-

prived of his ecclesiastical and temporal wealth, and only suffered to remain at Esher, in Surry, a country house of his bishopric of Winchester. Such was the state of this discarded minister, that the king left him without provisions for his table, or furniture for his apartments. In Feb. 1530, Wolsey was pardoned, and restored to his see of Winchester, and to the abbey of St. Albans, with a grant of £6,000, and of all other rents not parcel of the archbishopric of York. Even that great diocese was afterwards restored. He arrived at Cawood castle in September, 1530, where he employed himself in magnificent preparations for his installation on the archiepiscopal throne; but at that moment his final ruin seems to have been resolved upon, and the earl of Northumberland was chosen to apprehend him for high treason. Wolsey at first refused to comply with the requisition, as being a cardinal; but finding the earl bent on performing his commission, he complied, and set out by easy journeys to London, to appear as a criminal, where he had acted as a king. He was carried first to lord Shrewsbury's castle at Sheffield, where he was compelled by sickness to rest, and afterwards to the abbey of Leicester, where he died at the age of fifty-nine. His dying words were most memorable, and highly instructive to all classes of hypocritical professors of religion—"If I had served God as diligently as I have done the king, he would not have given me over in my grey hairs. This is the just reward that I must receive for the pains I have taken to do him service, not regarding my service to God!"

Shakspeare so correctly draws the character of this great churchman; and paints his virtues and his vices so impressively, in the following lines, that we cannot refrain from quoting them:—

He was a man  
Of an unbounded stomach, ever ranking  
Himself with princes; one, that by suggestion  
Ty'd all the kingdom: simony was fair play;  
His own opinion was his law. 'T' the presence  
He would say anathema, and be over double  
Both in his words and meaning. He was never,  
But where he meant to ruin, pitiful.  
His promises were, as he then was, mighty;  
But his performance, as he now is, nothing.  
Of his own body he was ill, and gave  
The clergy ill example.

This cardinal,  
Though from an humble stock, undoubtedly  
Was fashion'd to much honour, from his cradle;  
He was a scholar, and a ripe and good one;  
Exceeding wise; fair spoken, and persuading;  
Lofly, and sour to them that lov'd him not:  
But to those men that sought him, sweet as summer.  
And though he was unsatisfy'd in getting,  
(Which was a sin) yet in bestowing, madam,  
He was most princely. Ever witness for him  
Those twins of learning that he rais'd in you,  
Ipawich and Oxford: one of which fell with him,  
Unwilling to outlive the good he did it.  
The other, though unfinish'd yet so famous,  
So excellent in art, and still so rising,  
That Christendom shall ever speak his virtues.

Wolsey founded Christchurch college in Oxford, and intended to call it Cardinal college; and also to enrich its library with copies of all manuscripts that were in the Vatican at Rome. Upon his fall, which happened before he had finished his scheme, the king seized all the re-  
2 K

nues; but sometime afterwards restored them, and changed the name of the college. About the year 1524, Wolsey erected a school at his native town, and employed Arnold Birkman, a printer at Antwerp, to print *Grammars* for its use. We find from an epistle of his, dated at Westminster 1st September, 1528, prefixed to a grammar, with this title page. *Rudimenta grammatices, et docendi methodus, non tam scholae Gypswichianae, per reverend. D. Thomam cardinalem Ebor. foeliciter institutae, quam omnibus aliis totius Angliae scholis praescripta. Joan. Grapheus exudebat impensis Arnoldi Birkmanni, Antwerp 1534.* The cardinal also vouchsafed to direct the use of it in a short epistle to the masters of his school. The same grammar was printed the next year in twelves, at Antwerp, by Martin Ceaser.\*

1530. In consequence of the opposition of the Romish clergy to the translation of the scriptures, and more particularly of their being printed in this country, many private individuals made translations, and had them printed at foreign presses. In this year, an English translation of the *Psalms* was printed at Strasburg, by Francis Foye, in 12mo. with a preface by John Aleph; and said to be "purely and faithfully translated after the text of *Felina*."† In 1531, George Joye, an Englishman, translated the *Prophet Isaye and Jeremy*, and was printed at Strasburg by Balthasar Beckneth, in 8vo. Robert Shirwood, another Englishman, who succeeded Robert Wakefield as oriental professor at Louvain, published, in 1523, a Latin translation from the

Hebrew, of the book of *Ecclasiastes*, accompanied with short notes, chiefly from rabbinical writers. It was printed at Antwerp, by William Vorstman, in 4to.

1530. JOHN HAUKINS. The only particulars which exist concerning this printer are suppositious. Herbert imagined him to have been an inhabitant of Exeter; to have exercised his profession in that city; and to have been the father of "*Edyth the lying widow*," the "*twelve merry gestys*," of whom, were printed by John Rastell, in Folio, 1525; in the preface to which, one bearing nearly the above name is thus mentioned.

This lying wydow, full fals and crafty,  
Late in Engloind hath dyscryened many,  
Both men and wemen of every degree,  
As well of the spiritull as temporalle;  
Lords, knyghts, and gentiemen, also  
Yemen, gromys, and that not long ago:  
For in the tyme of kynge Henry the eight  
She hath used many a suttel sleight,  
What with lying, wepyng and laughyng,  
As by this booke after here doth appere.  
Whoso list matter now for to here,  
No faynyd storie, but matters in dede,  
Of xii. of her gestis here may ye red.

#### THE PREFACE.

In the cyte of Excester, by west away,  
The tyme not passed hence many a day,  
Ther dwellid a yoman discreet and wys,  
At the sygne of the fleur de lyse,  
Whych had to name John Haukyn, &c.

And concludes thus with the xii. geste.

To London they toke in all the hast,  
They woud not onis tarry to brek there fast.  
And of these poses I mak an ende.  
God saue the wyddow where soever she wende.

Quod Waterius Smyth.

Emprinted at London, at the sygne of the meremayde, at Pollis gate next to chepesyde, by J. Rastell, 23 March. In sheets d iii. Folio.

It is, however, not very probable that no degree of consanguinity existed between this printer and the before-mentioned female sharper, but also that the typographical art was unestablished in Exeter in his time. Respecting the only book which is extant with the name of Haukyns, there is scarcely less doubt than there is concerning its printer. This is entitled *Les clarcissement de la Langue Francoyse*; the colophon to which states, that the imprinting was "fynysshed by Johan Haukyns the xviii. daye of July. The yere of our lorde god M.CCCCC. and XXX;" whence Ames supposed that two of the three parts into which it is divided were printed by Pynson, and only the latter one by Haukyns, with his letter. It remains to be added that the volume is well executed, and is full of curious and useful information.

Haukyns seems to have made use of Pynson's letter and compartments after his decease, by the following book:—*Les clarcissement de la langue Francoyse, compose par maitre Jehan Palagrave, Angloys, natyf de Londres, et gradue de Paris. Neque, luna, per noctem.* 1530. After this title are two verses of Leonard Cox in Latin, then the author's epistle to king Henry viii. which is followed by a copy of the privilege.

\* Lord Herbert in his life of Henry VIII., supposed that cardinal Wolsey stated the effects of printing to the pope (Leo X.) thus:—"That his holiness could not be ignorant what diverse effects this new invention of printing had produced, for it had brought in and restored, books and learning; and that which was most particularly to be lamented, that lay and ordinary men might read the scriptures, and to pray in their vulgar tongue; and if this was suffered, the common people might at last come to believe, that there was not so much use for the clergy.—For if men were persuaded once they could make their own way to God, and that prayers in their native and ordinary language might pierce heaven as well as Latin; how much would the authority of the mass fall! For this purpose, since printing could not be put down, it were best to set up learning against learning; and by introducing able persons to dispute, to suspend the laity between fear and controversy. This at worst would yet make them attentive to their superiors and teachers."

† It is a singular circumstance that the skull of cardinal Wolsey was burnt in the printing office of Richard Phillips, of the *Leicester Herald*, consumed by an accidental fire in 1795. In 1789 the bones of cardinal Wolsey was discovered in the ruins of Leicester abbey, and lay exposed for some weeks for the inspection of the curious on a bench in the garden, but at length Mr. Phillips bought the skull of that famous man of the gardener for a shilling, and kept it till the accident.

† By the text of *Felina* was meant the Latin version of Martin Bocer, published by him under the feigned name of *Arctius Felinus*, Strasburg, 1526, folio.—*Strype*.

† George Joye was a Bedfordshire man, and educated at Cambridge, and admitted fellow of Peter House in 1517. But being accused of heresy by the prior of Newnham, he fled to Strasburg; and was afterwards employed by the Dutch printers, in correcting the pirated editions of Tindal's New Testament. Though a learned man, he does not appear to have possessed that conscientious integrity, which would have given Christian dignity to his character; and it is to be regretted that whilst he defended the "Truth," the "Truth" does not seem "to have made him free" from guile and deception.—*Lewis*.

*Merlin's prophecy.* The original is said to be of the famous Merlin, who lived about a thousand years ago; and the following translation is two hundred years old, for it seems to be written near the end of Henry the seventh's reign. I found it in an old edition of Merlin's prophecies, imprinted at London by John Haukyns in the year 1533.—*Ames.*

Seven and ten addyd to nine,  
Of Fraunce her woe thys is the sygne,  
Tamy's rivere twys y frozen,  
Walke sans wetyng shoes ne ho zen.  
Then comyth forth, Ich understande,  
From town of Stoffe to fatty's Londe,  
An herde chyftan, woe the morne  
To Fraunce, that ever he was borne.  
Then shall the fyshe beweyle his bouse;  
Nor shall grin berrys make up the losse,  
Yonge Symeale shall again miscarrye;  
And Norways pryd again shall marrey.  
And from the tree blowms feele,  
Ripe fruit shall come, and all is wele.  
Reaums shall daunce honde in honde,  
And it shall be merrye in old Inglonde.  
Then old Inglonde shall be no more,  
And no man shall be sorrie therefore.  
Geryon shall have three hodes agayne,  
Till Hapsburgh makyth them bat twayne.

1530. At this period the *benefit of clergy*\* was abolished for the crimes of petty treason, to all under the degree of a subdeacon. But the former superstition not only protected crimes in the clergy; it exempted also the laity from punishment, by affording them shelter in the churches and sanctuaries. These privileges were abridged by the parliament. It was first declared that no sanctuaries were allowed in cases of high treason; next, in those of murder, felony, rapes, burglary, and petty treason; and it limited them in other particulars. It appears by our law books, that laymen that could read had the privilege of the clergy ever since the 25th Edward III., stat. 3, c. 4, which provides that clerks, convicts for treason or felonies, touching other persons than the king himself or his royal majesty, shall have the privilege of holy church. But yet it was not allowed in all cases whatsoever, for in some it was denied even in common law, viz., *insidiatio viarum*, or lying in wait for one on the highway, *depopolatio agrorum*, or destroying and ravaging a country; and *combustio demorum*, or arson, that is burning of houses;

\* *Privilegium Clericale*, or benefit of clergy, denotes an ancient privilege of the church, consisting in this, that places consecrated to religious duties were exempted from criminal process before the secular judges in particular cases. This, at first, was an indulgence granted by the civil government, but it was afterwards claimed as an inherent, indefeasible, and *jure divino* right: and the clergy endeavoured to extend the exemption not only to almost all kinds of crimes, but to a variety of persons, besides those who were properly of their own order.

We are told of a rector of a parish who, on going to law with his parishioners about paying the church, quoted this authority, as from St. Peter—*Pascant illi, non peccam ego*: which he thus construed, *They are to save the church, not I*: and this was allowed to be good law by a judge, who was an ecclesiastic.

There is extant an old act of parliament, which provides, that a nobleman shall be entitled to the *benefit of his clergy*, even though he cannot read. And another law, cited by Judge Rolles in his *Abridgment*, sets forth, that the command of the sheriff to his officer, by word of mouth, and without writing, is good; for it may be, that neither the sheriff nor his officer can write or read.

all which are a kind of hostile acts, and in some degree border upon treason.—And further, all these identical crimes, together with petit treason, and very many other acts of felony, are ousted of clergy by particular acts of parliament.

The privileges of the English clergy, by the ancient statutes, are very considerable; their goods are to pay no tolls either in fairs or markets; they are exempt from all offices but their own, from the king's carriages, posts, &c., from appearing at sheriffs' tourns, or frankpledges; and are not to be fined or amerced according to their spiritual, but their temporal means. A clergyman acknowledging a statute, his body is not to be imprisoned. If he is convicted of a crime for which the benefit of clergy is allowed, he shall not be burnt in the hand: and he shall have the benefit of clergy in infinitum, which no layman can have more than once. The clergy, by common law, are not to be burdened in the general charges of the laity, nor to be troubled nor encumbered, unless expressly named and charged by the statute; for general words do not affect them. Thus, if a hundred is sued for a robbery, the minister shall not contribute; neither shall they be assessed to the highway, to the watch, &c.

In England, though this privilege was allowed in some capital cases, it was not universally admitted. The method of granting it was settled in the reign of Henry VI. which required, that the prisoner should first be arraigned, and then claim his benefit of clergy, by way of declinatory plea, or, after conviction, by way of arrest of judgment, which latter mode is most usually practised. This privilege was originally confined to those who had the *habitus et tonsuram clericalem*: but in process of time every one was accounted a clerk, and admitted to this benefit, who could read; so that, after the invention of printing, and the dissemination of learning, this became a very comprehensive test, including laymen as well as divines.

This privilege was formerly admitted, even in cases of murder; but the ancient course of the law is much altered upon this head. By the statute of 18 Eliz. cap. vii. clerks are no more committed to their ordinary to be purged; but every man to whom the benefit of clergy is granted, though not in orders, is put to read at the bar, after he is found guilty and convicted of such felony, and so burnt in the hand, and set free for the first time, if the ordinary or deputy standing by, do say, *Legit ut clericus*: otherwise he shall suffer death.

Such was the power of the clergy in those days, that they committed the most scandalous crimes with impunity, and if ever brought to trial, which was only a matter of form, before twelve of their own body, they were invariably acquitted. At length, however, it was considered that learning was no extenuation of guilt; and experience having shewn that so universal a lenity was an encouragement of crime, that it gradually was abolished.

"The art of reading," says lord Kaimes, "made a very slow progress : to encourage that art in England the capital punishment for murder was remitted if the criminal could but read ; which in law language is termed *benefit of clergy*. One would imagine that the art must have made a very rapid progress when so greatly favoured ; but there is a signal proof of the contrary ; for so small an edition of the Bible as six hundred copies, translated into English in the reign of Henry VIII. was not wholly sold off in three years."—*Sketches*, vol. i. page 105.

1530. Tindall having translated the *Pentateuch*, or *Five Books of Moses*, and going to Hamburg to print it, the vessel in which he sailed was shipwrecked, and his papers lost, so that he was compelled to recommence his labour ; in which he was assisted by Miles Coverdale, and at length, it was published in a small octavo. It seems, by the difference of the type, to have been printed at several presses. To each of the books, a prologue is prefixed. In the margin are some notes ; and the whole is ornamented with ten wood-cuts. In some copies there is added at the end, "*Emprinted at Marlborrow in the land of Hesse by me Hans Luft the yere of our Lord mccccxxx. the xxvi daye of January.*" In 1531, Tindall translated and published the prophecy of *Jonas*, to which he prefixed a prologue, full of invective against the church of Rome.

1530. RICHARD FAWKES. Bagford imagined that this person, whose name is also spelled Faukes, Fakes, and Faques, was a foreigner who printed in Syon monastery, at the same time that one Myghel Fawkes worked in conjunction with Robert Copland in 1535 ; but perhaps it is more than probable that he was a relative of William Faques treated of at page 214, *ante*. He was it has been ascertained, the second son of John Fawkes, of Farnley Hall, in Yorkshire, Esq. ; and it is said by Herbert, although without any apparent support, that Wyer was his servant. But few of his volumes are now remaining, and they are of very considerable rarity. The residences of Faques were in Duresme, or Durham Rents, which he calls, "in the suburbes of the famous cyte of London without Temple barre," and at the sign of the A. B. C. in St. Paul's Church Yard. He published in all eight books, in the last of which is "and be for to sell in St. Martyn's parish at ye signe of ye St. John Euangelyst by R. Fawkes."

The device of Fawkes is a parallelogram, surrounded by double lines, of which the outer one is the thickest, and within them are some figures. On each side of the shield is an unicorn regardant, and beyond them the trunks of two trees running up the margin of the cut, from which issue the richest flowers and foliage spreading over their heads : the back ground is thickly stellated. There is also a variation of this device, in which the R. F. are connected by a bow knot entwining round each letter.

1530. *The Assembly of Foules*. Imprinted in london in flete strete at the sygne of the Sonne

*agaynst the condyte, by me Wynkyn de Worde. The 24 day of January in the yere of our lord 1530. Folio.* Title on a ribbon, under which is a wood cut of a man sitting thoughtfully in his library, and above it the words—"Here foloweth the Assemble of foules veray pleasaunt and compendyous to rede or here compyled by the preclared and famous Clerke Geffray Chaucer."

On the reverse is the following address—

"ROBERT COPLANDE BOKE PRINTER TO NEW PANGLERS.

Newes, newes, newes, haue ye ony newes  
Myne cres ake, to here you call and crye  
Ben bokes made with whystelnyng and whewes  
Ben there not yet ynow to your fantasie  
To fayth say I trow and yet haue ye dayly  
Of maters saddle, and eke of spee and oyle  
Bet yet for your pleasure, thus moche do wyl I  
As to lette you here the parliament of foules  
Chaucer is deed the which this pamphlete wrote  
So ben his heyres in all suche baynesse  
And gone is also the famous clerke Lydgate  
And so is yonge Hawes, god theyr soules adrese  
Many were the volumes that they made more and lesse  
Theyr bokes ye lay up, tyll that the lether moules  
But yet for your myndes this boke I wyl impresse  
That is in tittle the parliament of foules  
So many lerned at lest they saye they be  
Was neuer sene, doynge so fewe good werkes  
Where is the time that they do spende trow ye  
In prayers :—ye, where ?—in felde and parkes  
Ye but where by becommen all the clerkes ?  
In slouth and ydelnesse theyr tyme defoules  
For lacke of wrytynges couteynynge moral sperkes  
I must imprint the parliament of foules  
Byttes, and letters them can I make myseife  
Of suche ynowe ben dayly to me brought  
Olde moral bokes stond styll upon the shelve  
I am in fere they wyl neuer be bought  
Trytes and toyes they ben the thynges so sought  
Theyr wrytes trynde lyke thes demyshe boules  
Yet gentyl clerkes followe hym ye ought  
Tat dyd endyte the parliament of foules."

The poem then commences in seven-line stanzas, and at the end—"Thus endeth the congregacyon of Foules on saynt Valentynes day." After this follows the "Lenvoy of Robert Coplande boke prynter."

Laye upon shelve, in leues all to torne  
With Letters, dymme, almost defaced clem  
Thy hyllynge rote, with wormes all to worne  
Thou lay, that pyte it was to sene  
Bounde with olde quayres, for age all hoorse and grene  
Thy mater endorned, for lacke of thy presence  
But nowe arte losed, go shewe forth thy sentence.

And where thou become so ordre thy language  
That in excuse thy prynter lste thou haue  
Whiche hathe the kepte from ruynous damage  
In snoweswyte paper, thy mater for to saue  
With thylke same langage that Chaucer to the gave  
In termes olde, of sentence clered newe  
Than methe muche wenter, who can his mynde anowe.

And yf a louseuer happen on the rede  
Let be the goos with his lewde sentence  
Unto the turtle and oot to her to take hede  
For who so cheungeth, true loos doth offence  
Loue as I rede is flour of excellence  
And loue also is rote of wretchednesse  
Thus be two loves, scripture bereth wytnesse.

Finis.

"Imprinted, &c." as before.

1531. The English bishops exerted all their influence to prevent the importation and circulation of Tindall's translation. In this year, a royal proclamation was issued, at the requisition of the clergy, for totally suppressing this

translation, which was pretended to be full of heresies and errors; and holding out the expectation that another and more faithful translation should be prepared and published. The rigour with which the king pursued Tindall and his followers, serves to mark the inconsistency of his character, who, through the whole of his reign, distinguished himself, sometimes by the zeal with which he promoted literature, and at other times by the cruel policy which he exercised against those who read and studied the scriptures in English. Dr. Stokesley, bishop of London, who in the month of May, in this year, caused all the *New Testaments* of Tindall, and many other books which he had bought up, to be brought to St. Paul's churchyard, and there burnt, was one of the most cruel persecutors among the prelates of his time. The following particulars of the charges laid against several individuals, who were either imprisoned, and compelled to abjure, or put to death.

John Raimund, a Dutchman, 1528, "for causing fifteen hundred of Tindall's *New Testaments* to be printed at Antwerp, and for bringing five hundred into England."

Thomas Curson, monk of Bastacre, in Norfolk, 1530, "for going out of the monastery, and changing his weed, and letting his crown to grow, working abroad for his living, making copes and vestments. Also, for having the *New Testament* of Tindall's translation, and another book containing certain books of the *Old Testament*, translated into English, by certain persons whom the papists call Lutherans."

John Row, bookbinder, a Frenchman, "for binding, buying, and dispersing of books inhibited, was enjoined, beside other penance, to go to Smithfield with his books tied about him, and to cast them in the fire, and there to abide till they were all burnt to ashes."

Christopher, a native of Antwerp, "for selling certain *New Testaments*, in English, to John Row, aforesaid; was put in prison at Westminster, and there died."

Edward Hewet, a servingman, his crime was, "that after the king's proclamation, he read the *New Testament* in English; also the book of John Frith, against purgatory, &c."

Walter Kiry, servant, his crime was, "that he, after the king's proclamation, had and used these books, the *New Testament*, the *Summe of Scripture*, a *Primer*, and *Psalter*, in English, hidden in his bed-straw at Worcester."

In 1519, a shoemaker, residing at Newberry, in Berkshire, was burnt alive, for having in his possession some books in English, and denying the articles of the Christian faith. A copy of Tindall's *New Testament* being found in the possession of any person was sufficient to convict him of heresy, and subject him to the flames.

John Mel, of Bockstead, 1532, "for having and reading the *New Testament* the *Psalter*, and the book called A. B. C. all in English."

William Nelson, priest at Lith, 1531, for having, and buying of Periman, certain books of Luther, Tindall, Thorpe, and others, and for

reading and perusing the same contrary to the king's proclamation, for which he was abjured."

About the latter end of the year 1533, Thomas Bennet, a schoolmaster at Exeter, was burnt at the stake, near that city, for writing upon the doors of the cathedral church, that the pope was *antichrist*.

Humphrey Monmouth, who supported Tindall abroad, was imprisoned in the tower; and though a man of wealth, was almost reduced to ruin. Penance was enjoined to Thomas Patmore, and to John Tindall, (brother to the translator) on suspicion of importing and concealing Tindall's *Testaments*; and Sir Thomas More, adjudged, "that they should ride with their faces to the tails of their horses, having papers on their heads, and the *New Testaments*, and other books which they had dispersed, hung about their cloaks; and at the standard at Cheapside, should themselves throw them into a fire prepared for the purpose; and that they should afterwards be fined at the king's pleasure." The fine set upon them was £18,840 Or. 10d.

The following are a few of the names of persons accused before John Longland, bishop of Lincoln, in 1521, with the charges brought against them, extracted from the bishop's register. An enumeration of a few of the charges, will exhibit their nature.

Agnes Well, detected by her brother, "for learning the epistle of *St. James* in English, of Thurstan Littlepage."

The wife of Bennet Ward and her daughter, "for saying that Thomas Pope was the devoutest man that ever came in their house, for he would sit reading in his book, to midnight, many times"

John Butler, impeached by his own brother, "for reading to him (his brother) in a certain book of the scriptures, and persuading him to hearken to the same."

Robert Collins, and his wife; and John Collins, and his wife, "for buying a *Bible* of Stacey, for twenty shillings."

John Heron, "for having a book of the *Exposition of the Gospels*, fair written in English."\*

These are but a few of the many instances adduced by Fox, from the register of Longland, bishop of Lincoln, of persons accused and suffering, either in one way or other, for possessing, or reading, or hearing the scriptures, or other books, that the clergy deemed inimical to them, or their religious tenets; and for whose accusation husbands had been suborned against their wives, wives against their husbands; children against their parents, and parents against their

\* On the 14th of October, 1529, a placard appeared at Brussels, whereby "all such as had in their custody any prohibited books, which they had not brought forth to be burnt, as required by former placards against heresy; or had otherwise contravened them, were condemned to death, without pardon, or reprieve."

On the last of July, 1546, the Emperor Charles V. published another placard against heretical books. By this it was ordered, "that none should presume to print any books, unless they first obtained from the emperor, a license for exercising the trade of a printer, &c. on pain of death."

children; brothers against sisters, and sisters against brothers. Persecution was not confined to one part of the kingdom; its baleful influence spread far and wide; and from one end of the land to the other, there was a continual struggle between truth and superstition. Hundreds were burned at the stake; a great number confined to monasteries, and condemned to live upon bread and water; others were sentenced to bear a fagot at the market-cross, to be burned on the cheek, to repeat certain prayers upon Sunday and Friday; they were to fast upon bread and water the remainder of their lives, except on Fridays, when a little ale was allowed them. "The clergy," says Dr. Henry, "were very sensible of their danger from the translation of the scriptures, and the progress of printing, that they exerted all their power to prevent the circulation of the *New Testament in English*, which they represented as perfect poison to the souls of christians; but all their efforts were ineffectual." "Cardinal Wolsey declaimed," says Mr. Baxter, in his *Cure of Church Divisions*, "against the art of printing, as that which would take down the honour and profit of the priesthood, by making the people as wise as they."

In the *Apology* of Sir Thomas More, printed in 1533, mention is there made of one Segar, a bookseller, of Cambridge, who was prisoner in his house for heresy four or five days; and though it was reported, that Sir Thomas had used him ill, he vindicates his conduct. Of Segar, says Herbert, I have seen no books, either printed by or for him.

1531. Dr. Van Troil, in his *Letters on Iceland*, mentions that a printing press was established at Hoolum, a town on the northern coast of Iceland, by John Areson, bishop of that place, from which issued a work entitled *Breviarium Nidarosiense*,\* of this date. The following notice of the general state of typography in Iceland, is extracted from Sir George Mackenzie's *Travels* in that island, during the year 1810. "The first printing press was erected at Hoolum, about the year 1530, under the auspices of John Areson, who was at that time bishop of this see.† Though an illiterate and uncultivated man, he was extremely ambitious; and wished to avail himself of all the means which literature might afford for the promotion of his influence in the country. With

this view he procured as his secretary, a Swede of the name of Mathiesson, who, coming over to Iceland, brought with him a printing press, and made a small establishment for its use. The types were originally of wood, and very rudely formed; and the only works issuing from the press during the first forty years after its institution, were a few *Breviaries*, *Church Rituals*, and *Calendars*. In 1574, however, Gudbrand Thorlakson, bishop of Hoolum, made very great improvements in the printing establishment at that place, providing new presses and types, some of which were constructed by his own hand, and bestowing the utmost care upon the correction of every work which was printed during his lifetime. Before the century had elapsed, a number of valuable publications made their appearance, greatly improved in their style of composition, and displaying a neatness and even elegance of execution, very remarkable at this early period of the use of printing in the country." p. 57.

"The printing-establishment at Hoolum, which had fallen into decline, and another, which in the year 1773, was instituted at Hrapsey, an island in the Breidè Fiord, were purchased by the Icelandic society [about 1794]; and a printing-office, under their management, established at Leira, in the Borgar-Fiord Syssel (on the south-western coast). From this press have issued, for the use of the society, fifty or sixty different works; some of them translated, but the greater number original, and comprising a very great variety of subjects; history, poetry, divinity, law, medicine, natural history, and rural economy." p. 309.

"We visited in our way the only printing-office now in Iceland, (1810,) which is close to Leira, in a small and miserable wooden building, situate in the midst of a bog. This establishment is at present kept up by the literary society, of which Mr. Stephenson is at the head. He has the sole management of the press; and few other people now give it employment,\* none liking to submit their works to a censor who is reckoned too severe, but perhaps without much reason. This state of the press is, however, extremely injurious to the literature of Iceland. Two men are engaged in the printing-office: they have a press of the common construction, and make their own ink of oil and lamp-black. There are eight founts of types; six Gothic, and two Roman; with a few Greek characters. We found a small collection of books, which had been printed here within the last few years, and remained here for sale. We purchased several of these, among which was Pope's *Essay on Man*, translated into Icelandic verse. During the last winter the printing-office, with all its contents, was very nearly swept away by a flood; and at the present time the building is in a state of wretched repair." p. 151.

\* The only copy of this volume which was known to be remaining was in the library of Arnes Magnæus, and was consumed in the fire of Copenhagen in 1728.

† Some time after the death of bishop Areson, this press appears to have been removed from Hoolum. In the year 1562 we find it at work at Breidabólstað; from whence having been purchased by bishop Gudbrand Thorlakson, together with all the materials, it was at first erected by him at Nupufell, in the valley of Eynford; but soon afterwards, for greater convenience towards his meditated work, the *Icelandic Bible*, the bishop restored it to Hoolum. After resting for more than a century, the press travelled to Skálholt: was brought back to Hoolum in 1794; and in 1799, being put into the hands of the Icelandic literary society, was by them erected at Leira, where it now remains. In the year 1804 the first edition of the *Icelandic Bible* was printed here, (1000 copies;) a second, in 1644, (also 1000 copies;) and another, in two volumes folio, in 1738, bearing the imprint, *Hoolum i Hialla-dal, af Mortine Arnódayne*.—Cotton.

\* A good and sufficient reason for which is given by Mr. Henderson, at p. 7. of the second volume of his "Journal."

1531. JOHN TOYE. Nothing is known of this person, more than the appearance of his name to a small work of eight leaves, intitled *Gradus comparationum cum verbis*, &c. Quarto. At the end, "Imprynted at London, in Poules chyrche yard, at the sygne of saynte Nycolas, by me John Toye." John Scot's device is at the conclusion.

1532. Died Alexander Barclay, a priest of St. Mary Ottery, in Devonshire. We have already quoted largely from his poem of the *Ship of Fools*; but he is more memorable for having been the earliest writer of *Eclogues* in the English language. Barclay's age is not known, but he must have been very old.

1532. The first exclusive patent for printing a book in England, was granted to Thomas Godfray, for the *History of King Boccus*, at the coste and charge of Dan Robert Saltwode, monk of saynt Austens of Canterbury, 1510. He printed other works *cum gratia et privilegio*. An *Epistle of Erasmus to Christopher Bishop of Bayle*, concerning the eating of flesh. London. 1522. Sextodecimo. The works of Geoffray Chaucer. London. 1532. Quarto. And many others. Godfray resided at Temple-bar, and continued in business until the above year. Ames assigns to Godfray the following monogram.

1532. In the privy purse expenses of Henry VIII. (edited by Nicolas, 8vo.) are the following entries. "Paied to Westby clerk of king's closet for vj *masse bookes*. And for vellute for to covr them iiijl. xjs. To Rasmus one of the armerars garnissing of bookes and div's necessaryes for the same by the king's comandment, xjl. vs. vijd. To Peter Scryvener for bying vellum and other stuf for the king's bookes, iiijl. To the bokebynder, for bryngyng of bookes fro hamptonco'te to yorke place, iiijjs. viijd. To Rasmus the armerar, for the garnissing of iiij-xx. vj. bookes as apperith by his bille, xxxiiijl. xs. And paied for sending of certeyne bookes to the king's bokebynder, ijs."

A tolerable correct idea may be formed of the superb manner in which books were bound, that were designed for the use of the cathedral or other principal churches, from the following extract of an inventory of copies of the gospels, belonging to the cathedral church of Lincoln, about this period:—*Imprimis*, A text after *Matthew*, covered with a plate silver and gilt, having an image of his majesty, (the Saviour) with the four evangelists and four angels about

the said image; and having at one corner an image of a man, with divers stones, great and small; beginning in the second less: and a transmigration, wanting divers stones and little pieces of the plate. *Item*, One other text after *John*, covered with a plate, silver gilt, with an image of the crucifix, Mary, and John, having twenty-two stones of divers colours, wanting four, written in the second less: *Est qui prior me erat*. —Dugdale's *Monast. Anglie*.

These accounts prove that a degree of splendour was lavished on the exterior coatings of books almost unknown to our day.

1532. GERARD MORRHUIS flourished at this time as one of the most celebrated Parisian Greek printers. The ardour and diligence of this eminent typographer in the multiplication of Greek books appear in eleven distinct impressions in one year. His learning, no less than his liberality, may be reasonably inferred from the elegant Latin preface to the *Lexicon Græco-Latinum*, &c. in which he declares that the augmentations found in it had been carefully prepared by persons of competent erudition, whom he had engaged at great expense. And to the *Interpretatio Didymi in Odyseam*, a perspicuous Greek epistle is prefixed; in which he avows, that his own love of philology inclines him to risk his whole fortune for the public benefit. This, he says, his late costly impression of the *Lexicon Græcum* has sufficiently indicated: that he is far from emulating the example of sordid typographers, who, intent only upon their private gain, execute their impressions in a slovenly and inaccurate manner; thus bringing the art itself into contempt; that therefore he has engaged correctors of approved ability, by whose means his establishment will acquire a reputation of faithfulness and correctness beyond those which preceded it; of which, he trusts, this accurate edition of the Scholiast will convince the public. At the end of this volume he subscribes himself Gerardus Morrhuis, Germanus. His impressions are usually dated from the Sorbonne.

As the singular device of Morrhuis presents an enigma, which neither La Caille nor Mattaire has explained, I may venture, says Mr. Greswell,\* to suggest, that the figure exhibited in his titles is that of Vice; female form above, but changing beneath "in monstrum horrendum & informe." The Greek motto above, may imply: "I neither possess sweetness, nor the means of procuring it." That beneath, is the well known adage: *Noctem emptam dolore voluptas*. In some of the smaller specimens of this device the figure holds a mirror, as if to contemplate her own deformity.

This interesting printer was a warm friend of Erasmus, to whom a letter of his is cited by Mattaire, in which he evinces his prudence and moderation, by disapproving of the violent measures of the Sorbonne against that scholar.

Mattaire finds no mention of Morrhuis after the year 1532.

\* View of the early Parisian Greek Press, vol. 1. p. 120.

1533. About this time, a cunning friar who resided at Coventry, asserted that any person who said over the *Blessed Virgin's Psalter* every day, could not possibly be damned. This bold and irreligious assertion was eagerly swallowed by the ignorant multitude, and all opposition to it was treated with virulence and violence.—Sir Thomas More, though somewhat bigotted and superstitious, could not entirely assent to this proposition, published a letter on the subject, in which he reasoned and ridiculed such an absurd idea; the effect was, that the friar gained the applause; while Sir Thomas was derided as a fool. Such was the conquest of superstition and credulity over learning and common sense.

1533. A statute was passed at this time to fix the price of beef, pork, mutton, and veal. Beef and pork were ordered to be sold at a halfpenny a pound; mutton and veal at a halfpenny half a farthing, money of the time. The preamble of the statute says, that these four species of butcher's meat were the food of the poorer sort. Fat oxen were sold for 26s. 8d. each; a fat lamb for one shilling.

1533. *Died* Lucas Van Leyden, the friend and rival of Albert Durer. Inferior to Durer in design, his engravings have more harmony, and his heads more expression—he finished very highly. The great number of his works, which consist of one hundred and sixty-six engravings on copper, twenty-eight on wood, and six etchings, and the shortness of his life, is, of itself, little short of miraculous. Several of the finest and the most highly finished works of Leyden were executed before he had completed his fifteenth year. He was born at the end of May, or the beginning of June, 1494; and he said to have astonished the artists of his time by a picture of *St. Hubert*, painted when he was only twelve years of age. His print of *Sergius, killed by Mahomet*, as it is called, is dated 1508; and his *Conversion of St. Paul*, one of his largest and most esteemed prints, is dated 1509.

V. Gemberlein, or Gamperlein, of Strasburg, executed many excellent wood-cuts, from 1507, to about this time.

Hans Schaeufelin, a German, executed wood-cuts in the manner of Albert Durer; his principal work is *Christ's Passion*, in twenty-four pieces. He flourished from 1507, to 1520. Albert Glockenthon executed *Christ's Passion* in twelve plates—1510.

Hans Burgmair, of Nuremberg, was one of Durer's best scholars. He engraved a set of *Histories* in thirty-six pieces, and sometimes used his master's mark, sometimes H. B. I. B. &c. From 1510, to 1520.

Albert Altorffer, of Switzerland, 1511. His works both on wood and copper, are excellent for the time.

\* It was not till the end of this reign that any sallads—carrots, turnips, or other edible roots were produced in England. These were generally imported from Holland and Flanders. Queen Catherine, when she wanted a sallad, was obliged to dispatch a messenger thither on purpose. The use of hops, and the planting of them, was introduced from Flanders about the beginning of this reign.

1533. In the 25th of Henry VIII, was passed the following act, touching the importation and binding of books, and for providing against enhancing their prices.

Whereas by the provision of a statute made in the first year of the reign of king Richard III, it was provided in the same act, that all strangers repairing unto this realm might lawfully bring into the said realm, printed and written books, to sell at their liberty and pleasure. 2. By force of which provision there hath come into this realm, sithen the making of the same, a marvelous number of printed books, and daily doth; and the cause of making of the same provision seemeth to be, for that there were but few books, and few printers, within this realm at that time, which could well exercise and occupy the said science and craft of printing: nevertheless, sithen the making of the said provision, many of this realm, being the king's natural subjects, have given themselves so diligently to learn and exercise the said craft of printing, that at this day there be within this realm a great number of cunning and expert in the said science or craft of printing: as able to exercise the said craft in all points, as any stranger in any other realm or country. 3. And furthermore, where there be a great number of the king's subjects within this realm, which live by the craft and mystery of binding of books, and that there be a great multitude well expert in the same, yet all this notwithstanding there are diverse persons, that bring from beyond the sea great plenty of printed books, not only in the Latin tongue, but also in our maternal English tongue, some bound in boards, some in leather, and some in parchment, and them sell by retail, whereby many of the king's subjects, being binders of books, and having no other faculty wherewith to get their living, be destitute of work, and like to be undone, except some reformation be herein had. Be it therefore enacted by the king our sovereign lord, the lords spiritual and temporal, and the commons in this present parliament assembled, and by authority of the same, that the said proviso, made the first year of the said king Richard the third, that from the feast of the nativity of our Lord God next coming, shall be void and of none effect.

II. And further, be it enacted by the authority aforesaid, that no persons, resident, or inhabitant, within this realm, after the said feast of Christmas next coming, shall buy to sell again, any printed books, brought from any parts out of the king's obedience, ready bound in boards, leather, or parchment, upon pain to lose and forfeit for every book bound out of the said king's obedience, and brought into this realm, and brought by any person or persons within the same to sell again contrary to this act, six shillings and eightpence.

III.\* And be it further enacted, by the authority aforesaid, that no person or persons, inhabitant, or resident, within this realm, after the said feast of Christmas, shall buy within this realm, of any stranger born out of the king's obedience,

other than of denizens, any manner of printed books, brought from any of the parts beyond the sea, except only by engross, and not by retail, upon pain of forfeiture of six shillings and eight pence, for every book so bought by retail, contrary to the form and effect of this statute.—

2. The said forfeitures to be always levied of the buyers of any such books contrary to this act, the one half of the said forfeitures to be to the use of our sovereign lord the king, and the other moiety to be to the party that will seize, or sue for the same in any of the king's courts, to be by bill, plaint, or information, wherein the defendant shall not be admitted to wage his law, nor no protection, no essoin shall be to him allowed.

IV. Provided always, and be it enacted by the authority before said, that if any of the said printers, or sellers of printed books, inhabited within this realm, at any time hereafter, happen in such wise to enhance, or encrease the prices of any such printed books in sale or binding, at too high and unreasonable prices, in such wise as complaint be made thereof unto the king's highness, or unto the lord chancellor, lord treasurer, or any of the chief justices of the one bench or the other, that then the same lord chancellor, lord treasurer, and two chief justices, or two of any of them, have power and authority to enquire thereof, as well by the oaths of twelve honest and discreet persons, as otherwise by due examination by their discretion. 2. And after the same enhancing and encreasing of the said prices of the said books and binding, shall be so found by the said twelve men, or otherwise, by examination of the said lord chancellor, lord treasurer, and justices, or two of them at the least, that then the same lord chancellor, lord treasurer, and the justices, or two of them at the least, from time to time, shall have power and authority to reform and redress such enhancing of the prices of printed books from time to time by their discretions, and to limit the prices all well of the books, as for the binding of them. 3. And over that, the offender or offenders thereof being convict by examination of the same lord chancellor, lord treasurer, or two justices, or two of them, or otherwise, shall lose and forfeit for every book by them sold, whereof the price shall be enhanced for the book, or binding thereof, three shillings and fourpence, the one half thereof shall be to the king's highness, and the other to the parties grieved, that will complain upon the same, in manner and form before rehearsed.

1533. The convocation of the clergy met, and among other things, decreed, that the scripture should be translated into the vulgar tongue; but at that time it was not carried into execution. In this year, popery was abolished in England, and Henry VIII. declared head of the church. But though the king thus separated from the church of Rome, he by no means adhered to the doctrines of Luther which had been lately published. The title of *Defender of the Faith*, which Henry had obtained, he seemed to be determined to maintain, and, therefore, persecuted the reformers most violently. Many were burnt for

denying the papal doctrines, and some also were executed for maintaining the supremacy of the pope. All the authority and credit which the popes had maintained over England for ages was overthrown at once; and all tributes formerly paid to the holy see were declared illegal.

1533. Warton observes, that the public pageantries of this reign are proofs of the growing familiarity and national diffusion of classical learning: and selects as instances, among others, from the shews exhibited with great magnificence, at the coronation of queen Anne Boleyn. Among the other polite amusements of this reign, the *Masque* seems to have held the first place. It chiefly consisted of music, dancing, gaming, a banquet, and a display of grotesque personages and fantastic dresses. The performers were often the king, and the chief of the nobility of both sexes, who under proper disguises executed some preconcerted stratagem, which ended in mirth and good humour. With one of these shews, in 1530, the king formed a scheme to surprize Wolsey, while he was celebrating a splendid banquet at his palace of Whitehall.

I do not find that it was a part of this diversion in these entertainments to display humour and character. Their chief aim seems to have been to surprize, by the ridiculous and exaggerated oddity of the visors, and by the singularity and splendor of the dresses. Every thing was out of nature and propriety. Frequently the masque was attended with an exhibition of some gorgeous machinery, resembling the wonders of a modern pantomime.

1534. The *Bible* first printed in a complete form by John Lufft, of Wittenberg. The psalms of this edition were those of the translation of 1531. The eagerness with which copies of this translation were sought after, called for numerous editions, so that besides several printed at Nuremberg, Strasburg, Augsburg, and other places in Germany, editions were printed under the inspection of Luther and his learned coadjutors, and were supplied so rapidly that betwixt 1534 and 1574, a hundred thousand copies were issued from the office of one printer only.

1534. Tindall revised and prepared a second edition of his *New Testament*\* for the press, which was afterwards printed at Antwerp, by Martin Emperour, 8vo.; but before the printing

\* A singularly beautiful copy upon vellum, of the revised edition of Tyndall's *New Testament*, is in the Cracherode collection, now in the British Museum. It belonged to the unfortunate "Anne Boleyn, when she was queen of England, as we learn from her name in large red letters, equally divided on the fore-edges of the top, side, and bottom margins; thus at the top Anna; on the right margin fore-edge Regina; at the bottom Anglie. The illumination of the frontispiece is also in very fair condition." It is bound in one thick volume in blue morocco. In its history every lover of the bible must feel interested, and to such the following brief sketch may afford some gratification.

Anne Boleyn, the ill-fated wife of Henry VIII., was beheaded on Tower-hill, May 19, 1536, in the 39th year of her age. She was the daughter of sir Thomas Boleyn, and mother of queen Elizabeth. She was doubtless gay and thoughtless, but the charge of incontinence was never substantiated. The tyrant Henry, as he had cast off one wife, to gratify his lust, conceived a new passion for Jane Seymour, whom he married May 23, 1536.

was quite finished Tindall was betrayed, and in the end suffered martyrdom.

1534. *Died* THEODORE MARTENS an eminent printer, who introduced the art into Alost about 1472. Martens continued the printing business for nearly sixty years at Alost, Louvain, and Antwerp. He was an author as well as a printer, but he is more renowned for the many beautiful editions of other men's works which issued from his press. He was highly esteemed by the learned men of the period in which he lived; Santander is loud and long in his praise, and he enjoyed the friendship of Erasmus, who lodged in his house. His device was the double anchor. Martens was born at Alost, in the year 1454.

1534. *Died*, WYNKYN DE WORDE, the first assistant and successor of Caxton, (see page 195 ante.) Throughout the whole range of our ancient typographers, there is scarcely one whose memory beams with greater effulgence than that of Wynkyn de Worde: he gained this high distinction not only from the number of his publications, but also from the typographical excellence which they exhibit. By an examination of the patent in the chapel of the rolls, it will appear that W. de Worde was born in the dukedom of Lorraine: he became a denizen of England in the year 1496. It has been conjectured, that he was an assistant, or workman, with William Caxton, during his residence at Bruges, or Cologne: be this as it may, there is no doubt of his having been a servant to our first typographer, and remaining in that capacity till his death. From this period he most successfully practised the art of printing on his own account; and continued to print in his master's house. Mr. Dibdin imagines, that the interval between the death of his master, and the appearance of his first publication, was principally occupied in rearrangements, and in procuring new types. In the colophon to Hilton's *Ladder of Perfection*, printed in 1494, Wynkyn de Worde notices the death of his master, Caxton; and in the second verse he mentions the patronage which he himself had obtained from Margaret Beaufort, countess of Richmond, only daughter of John Beaufort, duke of Somerset, and mother of king Henry VII.

"This heuently boke, more precyous than goulde,  
Was late dyrect, wyth great humylyte,  
For godly plesur thereon to beholde,  
Unto the right noble Margret as ye see,  
The Kynges moder, of excellent bounte,  
Herry the Seuenth, that Jhu hym preserue,  
This myghty pryncesse hath commaunded me  
Temprunt this boke, her grace for to deserue."

In the following year, Wynkyn de Worde produced from his press the *Vitas Patrum*, the *Polychronicon*, and, most probable, *Bartholomæus de Proprietatibus Rerum*; as they are all printed with the same types, and under the same patron, namely, Robert Thorne, mercer. The colophon of the *Constitutiones Prouinciales Ecclesie Anglicane*, 1496, shews that Wynkyn de Worde was at that period still living at Westminster, in Caxton's house; as was also the case when he printed *Withal's Short Dictionary*, the

*Accidence*, the *Chorle and the Byrde*, and the *Doctrynnale of Dethe*; all of which have a similar notice in their colophons. In this office he appears to have continued until the year 1499, and soon after he removed to the "sign of the Golden Sun, in the parish of St. Bride, in the Fleetstreet, London;" the neighbourhood of which he appears never to have left, as in his will he directs his body to be buried in the parochial church of St. Bride, Fleet-street, before the high altar of St. Katharine. He was also a considerable benefactor to that parish, as he bequeathed to the church, £36 in money, to be laid out in lands, and with the rents thereof, an obit, or funeral service, was to be said for his soul, on the day of his death, for ever. It is supposed that Wynkyn de Worde died in the year 1534; although the colophon to his edition of *Esop* is dated 1535, yet the circumstance adduced by Mr. Dibdin, of his will having been proved in January 19th in that year, is almost a sufficient evidence that it must be a typographical error.

Whether he was married or not, or had relations that came over with him, does not appear by his will; yet we find in the churchwarden's accounts for St. Margaret's Westminster, an entry made in the year 1498. "Item, for the knell of Elizabeth de Worde vi pence. Item, for iii torches, with the grate belle for, v. iiiii." Again, in the year 1500, "Item, for the knelle of Iuliane de Worde, with the grete belle, vi pence."

According to the custom of his time, this eminent typographer was a stationer, since, he calls himself in his will, "citizen and stationer of London;" yet Stow is certainly in an error when he states that Wynkyn de Worde was one of the corporation, since the stationer's charter was not granted until 1555-6, and he had then been deceased about twenty years. Herbert endeavours to obviate this anachronism, by adducing a receipt given by the stationer's collectors in 1554, and by this he supposes they might have been qualified to act as an associated body, previous to their receiving an act of incorporation. The name of Wynkyn de Worde also appears on the books of the leatherseller's company, in the reign of Henry VIII. and he was one of the brotherhood of our lady's assumption, which, probably, was a fraternity belonging to St. Bridget's church, as Stow relates that such associations "were numberless" in "most churches and chapels." The same laborious antiquary supposes that de Worde was a native of Holland.

Herbert remarks of him, that "although he was the immediate successor of Caxton, yet he improved the art to a very great degree of perfection; cutting a new set of punches, which he sunk into matrices, and cast the several sorts of printing letter which he made use of himself; and some of them have been in use to this day, being so true, and standing so well in line, as not to be excelled by any; and of these he had also a larger variety of sorts and sizes than his predecessors." It has been supposed by some authors, that Wynkyn de Worde was the

first printer who introduced the Roman letter into England; but that honour has usually been claimed and assigned to Richard Pynson, his cotemporary. Mr. Rowe Mores, in his treatise of *English Founders and Foundries*, seems inclined to believe that Wynkyn de Worde was his own letter founder; and the Rev. T. F. Dibdin remarks, that "the type with which he printed most of his early folio volumes, is not, to the best of his recollection, to be found in any of the books printed abroad at the same period;" this latter evidence gives force to the assertion of Mr. Mores, when he states that Wynkyn de Worde's gothic type has been "the pattern for his successors in the art."

In many classes of literature, this eminent typographer produced several volumes from his press, but his principal fame rests on the grammars which he printed; although his curious romances and poetical books have also greatly contributed to procure respect for his memory.

The typographical devices of Wynkyn de Worde were nine in number, of which the following is one of them.

As in the instance of the portrait of W. Caxton, so the head which hitherto has been received as a likeness of Wynkyn de Worde has been produced by a similar error. From the same book in the Harleian collection, as that which contained the fictitious head of Caxton, another purporting to be Wynkyn de Worde, was engraved on wood by Ames; and this, after having been for so many years received as genuine, proves to be the portrait of Joachim Ringelberg, a profound scholar, critic, and commentator of Antwerp; the original of which was affixed to his *Elegantie*, Antwerp, 1529, octavo. A facsimile of it will be found in the Rev. T. F. Dibdin's *Bibliographical Decameron*, vol. II. page 289.

He made his will, as may be seen in the prerogative-office, dated the 5th of June, 1534, and died not long after. He writes himself "citizen and stationer of London." He recommends his soul to God and the blessed St. Mary, and his body to be buried in the parochial church of St. Bride's in Fleet-street, before the high altar of St. Katherine. "Item, For tythes forgotten six shillings and eight pence. Item, To the fraternity of our lady, of which I am a brother, ten shillings, to pray for my soul. Item, To my maid, three pounds in books. To Agnes Tidder, widow, forty shillings in books. Item, to Robert

Darby, three pounds in printed books. To John Barbanson, sixty shillings in books, and ten marks. To Hector, my servant, five marks sterling in books. To Wislin, twenty shillings in printed books. To Nowel, the book-binder, in Shoe-lane, twenty shillings in books. To Simon, my servant, twenty shillings in printed books. To every of my apprentices, three pounds in printed books. To John Butler, late my servant, six pounds in printed books. To my servant, James Ganer, in books twenty marks. And forgive John Bedel, stationer, all the money he owes me, &c., for executing this my will, with James Ganer; and that they, with the consent of the wardens of the parish of St. Bride's, purchase at least twenty shillings a year in or near the city, to pray for my soule, and say mass. To Henry Pepwell, stationer, four pounds in printed books. To John Gouge forgive what he owes me, and four pounds. To Robert Copland, ten marks. And to Alard, book-binder, my servant, six pounds fifteen shillings and four pence."

1534. The first Concordance to the English New Testament, was compiled by Thomas Gibson, an eminent printer in London. The title of it was, *The concordance of the new testament, most necessary to be had in the handes of all soche, as desire the communicacion of any place contayned in the new testament.* Imprinted by me Thomas Gybson, Cum privilegio regali; with the mark T. G. on the sides of a cut, afterwards used by John Day, with this motto, *Sum horum charitas*. Besides being a printer, Gibson was a studious man, and continued in business till 1539.

1535. The well-known edition of the first French Protestant Bible was printed by P. de Wingle, at Neuchâtel, in Switzerland, and published, under the superintendence of Calvin, by Robert Pierre Olivetan. This edition was printed at the expense of the Vaudoise, or Waldenses, and is called the *Bible of the Sword*, on account of that emblem being adopted by the printer.

Robert Pierre Olivetan, the coadjutor of John Calvin, in the translation of this version, was also related to that intrepid reformer. His true name was Olivetau, but having assumed the name of Olivetanus in Latin, he was usually called Olivetan. He died at Rome, in 1538, not without strong suspicion of being poisoned.

For more ample accounts, concerning the Olivetan edition of the French bible, and the French New Testament of Faber, printed by de Wingle, in 1534, the reader may consult Le Long, Clement, and other bibliographers.

1535. WILLIAM MARSHALL seems to have been a gentleman, or merchant, who had great interest at court, and the desire of queen Anne Boleyn to promote the reformation, are the causes

\* In 1537, John, elector of Saxony, appointed Melancthon to draw up the *Augsburg Confession of faith*, and which received its name from being presented in 1530 to the emperor Charles V., at the diet held in that city, as the confession of faith of those who from having protested against the decree of the diet of Spire, in 1520, had received the honourable denomination of PROTESTANTS.

mentioned by Ames and Herbert for his receiving a royal licence to print. In this year John Byddell printed for him, the *fine Reformed or Protestant Primer* from the *Cantabrians or Oxonians* casting off the pope's supremacy the year before. A patent was granted to Marshall, as the publisher, prohibiting all printers, booksellers, merchants, and others, without license of him, from selling the same, during the space of six years. Most of his books were executed for him, as the *Defence of Peace*, 1545, of which he has been supposed to have been the author, printed by Robert Wyer; *An Abridgment of Sebastian Munsters Chronicle*, 1542; and *Erasmus on Confession*, by John Byddell. Marshall had likewise printed for him, *Pictures and Images*, without date, 12mo; and *Chrysten Bysshop and Counterfayte Bysshop*, without date, 8vo.

1535. ROGER LATHERM, according to Ames, resided in the Old Bailey, and printed a work entitled *A Grammar of the Latin Tongue*, 1535. Quarto. For this work, Ames cites a book in the collection of the late earl of Oxford; but Herbert states, that such work was not to be found in the *Bibl. Harleiana*.

1535, July 5. SIR THOMAS MORE, beheaded on Tower hill, for denying or speaking ambiguously about the supremacy of the king. He was the son of sir John More, a judge, and born in London in 1480. As soon as he came of age he obtained a seat in parliament, where he opposed a subsidy demanded by Henry VII. with such force that it was refused by the house. At the accession of Henry VIII. he was called to the bar, and in 1508 appointed judge of the sheriff's court, in London, which was then a considerable post. By the interest of Wolsey he obtained the honour of knighthood, and a place in the privy-council. In 1520 he was made treasurer of the exchequer, and in 1523 chosen speaker of the house of commons,\* where he resisted a motion for an oppressive subsidy, which gave great offence to cardinal Wolsey. Sir Thomas was made lord chancellor in 1530, and by his indefatigable application in that office there was in a short time not a cause left undetermined.

The following lines are attributed to Sir Thomas More; if they do not establish his reputation as a poet, says Mr. Beloe, they at least confirm the account of the more than philosophic indifference with which he went to his execution:—

If evils come not, then our fears are vain;  
And if they do, fear but augments the pain.

\* In the 14th year of Henry VIII. sir Thomas More was speaker to the house of commons, and chancellor of the duchy of Lancaster, and was treated by the king with singular familiarity. The king having once dined with sir Thomas at his house at Chelsea, walked with him near an hour in the garden, with his arm round his neck. After the king was gone, Mr. Roper, sir Thomas's son-in-law, observed he was to be envied to be so familiarly treated by the king; to which sir Thomas replied, "I thank you lord, son Roper, I find his grace my very good lord indeed, and believe he doth as singularly favour me as any subject within this realm; howbeit, I must tell thee, I have no cause to be proud thereof; for if my head would win him a castle in France, it would not fall to go off." From this anecdote, it appears, that sir Thomas knew the king to be a villain.

Sir Thomas wrote several pieces against the reformation, and epistles to Erasmus and other learned men. The best of his works is a kind of political romance, entitled *Utopia*,\* which was translated into English by bishop Burnet.

The king also had John Fisher,† bishop of Rochester, executed for a similar offence, who was created a cardinal while in prison. When this was reported in Italy, numerous libels were published all over the kingdom, comparing the king of England to Nero, Domitian, Caligula, and the tyrants of antiquity.

The following Epigram upon bishop Fisher, is from a work called *Two Centuries of Epigrams*, written by John Heath, B. A. Oxford. London, printed by John Windet, 1610.

Fisher, by being the pope's humble thrall,  
Missed not much of being cardinal;  
A cap there was prepared, a legate sent,  
To invest his brow with that pure ornament;  
But see how things fell out, see how he sped,  
Before his cap came he had lost his head.

1535, Oct. 4. The first edition of the *whole Bible* in the English language, being the translation by Miles Coverdale, and generally called *Coverdale's Bible*, with the following title.

*Bibla. The Bible, that is, the holy scripture of the Olde and New Testament, faithfully and truly translated out of the Douche and Latyn into Englyshe. m. d. xxxv.* The last page has these words:—*Printed in the year of our Lorde m. d. xxxv. and fynished the fourth daye of October.* It is in folio, and from the appearance of the types, it is now generally considered to have been printed at Zurich, in the printing-office of Christopher Froshover, an eminent printer of that place.

This noble work had been conducted under the patronage of lord Cromwell. Six copies were presented to archbishop Cramer and Cromwell. It was dedicated to the King in the following manner:—

Unto the moost victorious prynce and our moost gracious soveraygne lord kynge Henry the eyghth, kynge of Englande and of France, lorde of Irelande, &c. defendour of the fayth, and under God the chefe supreme heade of the church of Englande.

The ryght and just administracyon of the lawes of God gave unto Moses and unto Josua: the testimonye of faythfulness that God gave of David: the pleteuous abundance of wysedome that God gave unto Salomon: the lucky and prosperous age with the multiplicacyon of sede

\* The *Utopia* is a political romance which represents a perfect, but visionary republic, in an island supposed to have been newly discovered in America. "As this was the age of discovery," says Granger, "the learned Budeaus, and others, took it for a genuine history, and considered it highly expedient, that missionaries should be sent thither, in order to convert so wise a nation to christianity."

† John Fisher was born at Beverley, in Yorkshire, in 1449, and educated at Cambridge. He became confessor to Margaret countess of Richmond, mother to Henry VII. who by his advice founded St. John's and Christ's colleges, Cambridge. He was a man of considerable learning, strict integrity, and fervent piety. He was beheaded on Tower hill, June 23, 1535, in the 86th year of his age.

which God gave unto Abraham and Sara his wyfe, be given unto you, moost gracious pryncce, with your dearest just wyfe and moost vertuous pryncesse quene Jane. Amen.—This dedication is thus subscribed,

Your grace's humble subjecte and dayly oratour, Myles Coverdale."

In this dedication he tells his majesty that "The blynd bishop of Rome no more knew what he did when he gave him this title, defender of the faith, than the Jewish bishop, Capphas, when he prophesied that it was better to put Christ to death, than that all the people should perish: that the pope gave him this title because his highness suffered his bishops to burne God's word, the root of faith, and to persecute the lovers and ministers of it, where in every deed he prophesied, that by the righteous administration of his grace the faith should be so defended, that God's word, the mother of faith, should have its free course thorow all christendome, but especially in his grace's realme: that his grace in very deed should defende the faith, yea even the true faith of Christ, no dreames, no fables, no heresye, no papistical inventions, but the uncorrupt faith of God's most holy word; which, to set forth, his highness with his most honourable council applied all studie and endeavour."

He also takes notice of the intolerable injuries done unto God, to all princes, and the commonalities of all christian realms, since "they who should be only the ministers of God's word became Lords of the world, and thrust the true and just princes out of their rooms." This he imputes to "the ignorance of the scripture of God, and to the light of God's word being extinct, and God's law being clean shut up, depressed, cast aside, and put out of remembrance." But he adds, that "By the king's most righteous administration it was now found again; and that his majesty, like another Josia, commanded straitly, that the law of God should be read and taught unto all the people."

The following extract is from a little manuscript *Manuel of Devotions*, which, according to the tradition of the family in which it is preserved, was the present of queen Anne Boleyn to her maids of honour:—"Grante us, most merciful father, this one of the greatest gyftes that ever thou gavest to mankynde, the knowledge of thie holy wille and gladde tidings of oure salvation, this greate while oppressed with the tyrannye of thy adversary of Rome and his fantors, and kepte close unde his Latyne Lettres, and now at length promulgate, publyshed, and sette at lybertye by the grace poured into the

harte of thy supreme power our prince, as all kinges hartes be in thie hande, as in the olde lawe dydest use lyke mercye to thie people of Israell by thie hie instrument, the good king Josia, which restored the temple decayed to his former beawtie, abolyshed all worshippynge of images and ydolatrie, and sette abroad the lawe by the space of many hundred yeres befor clean oute of remembrance."

1535. *Died*, JODOCUS BADIUS, surnamed ASCENSUS, one of the most eminent printers of this century, or that France ever produced. He was a Fleming, a native of Asc, (in argo Bruxellensi), whence he was denominated Ascensius. He is supposed to have been born anno 1462, to have received the rudiments of his education in a religious house at Ghent: and after continuing his studies at Brussels to have visited Ferrara, where he became a scholar of Baptista Guarino. He afterwards became a professor of humanity, as some accounts say, at Paris, but according to others, at Lyons; where he read public lectures upon the Latin poets. At the last mentioned city Badius commenced his typographical career as a corrector of the press in the establishment of Jean Treschel, a German, *cujus stipendii utebatur*, as Guaguin said: but probably this employment was not incompatible with the duties of his literary professorship. After the death of Treschel, he married his daughter Thelif, and removed to Paris.

He became so great a proficient in the art of printing, that the learned Robert Gaguin, general of the Trinitarian order, who was perfectly well acquainted with his merit, wrote a letter to him, desiring he would undertake the printing of his works. This, with some other invitations of the learned, brought Badius to Paris about 1499, where he designed to teach the Greek tongue, and where his last endeavour, after he had furnished himself with fine Roman characters, was to explode the old gothic; both in his works and by his example. Accordingly, he printed the *Philobiblion* of that great encourager of learning, Richard Bury, lord high chancellor of England, bishop of Durham, and founder of the Oxford library, towards the middle of the 14th century; which book was sent to him by Dr. Bureau, bishop of Cisteron, and confessor to the French king, in order to be printed by him, which was in 1500. The name of Ascensius first occurs as a printer in a book of the year 1497.

Badius was no less skilful in restoring corrupt manuscripts, than careful in printing them with the greatest accuracy; so that some of his *erratas* have contained but five words. In printing the work of any living author, he always followed the copy exactly; and he informs us in his preface to his edition of *Angelus Politianus*, that he endeavoured to imitate the laudable diligence of Aldus Manutius, and to print from his copies with the utmost exactness. This made not only the learned very ambitious to have their works printed by him, but the most eminent booksellers of Paris courted his acquaintance, and endea-

\* Copies of bishop Coverdale's version of the Bible are preserved in the following libraries, viz., of the British museum and Slon college, in London; of his grace the archbishop of Canterbury, at Lambeth; in the public library, at Cambridge; in the library at all soul's college, and in the Bodleian library, at Cambridge; and in the library of the baptist academy at Bristol.

\* A fragment of this Bible (an entirely perfect copy is not known to exist) was offered in a trade catalogue, 1837, for £18 18s.

voured to cultivate it, in order to secure their business from his press. John Petit, sworn bookseller to that university, and one of the most famous of that age, caused several noble editions to be printed by him; as the *Calepini Dictionarium Octo Linguar.* 1516.

Amongst the works which issued from this prolific press, we find almost every important Latin classic author, generally exhibited in a large size, and having the pages filled with notes, or *explanations*, by Badius himself and other commentators.

Badius was a *Libraire Jure* of the university of Paris, under which character he was specially employed by the doctors of the Sorboune in printing their *censures*, &c. His claims to the character of erudition were so far from contemptible, that Trithemius praises him extravagantly; and Erasmus has spoken well of his Latinity; and the famous Henry Stephans compliments him highly on his abilities as a printer. So attached was Badius to the typographical profession, that he married his three daughters to three of the most eminent printers in Paris. Petronilla became the wife of Robert Stephans, and mother of Henry Stephans the second, and of two other sons, Robert and Francis. Badius gave the second, Johanna, to John Roigny, and the youngest Catherina to Michael Vascosanus.

Jodocus Badius had a brother named John, and a son named Conrad, who both exercised the same profession. The latter is found subsequently as a refugee for the sake of religion at Geneva, and labouring in his profession there conjointly with Robert Stephans. Badius was succeeded in his business by his son-in-law John de Roigny.

The insigne or mark of Badius is the representation of an ancient printing press, beneath which is sometimes found the words *Prelum Ascensianum*. He occasionally subjoined this sentence, *Æra merent*.

1536. *Died*, JOHN RASTELL, a celebrated printer of London, where, according to several authorities he was born; that he was educated in grammar and philosophy; afterwards studied at Oxford, and probably brought up to the law. In 1517, he commenced the art of printing, which, at that time, was esteemed a profession fit for a scholar or ingenious man. Being distinguished for his piety and learning, he became intimate with Sir Thomas More, whose sister Elizabeth he married; he was a zealous defender of the catholic cause, and a great opposer of the proceedings of Henry VIII. There is not any information to be gained of Rastell's instructor, and it is known only, that he resided at the sign of the "Mermaid at Powls gate, next Cheapside." Rastell's works are, *Natura Naturata*; *Canones Astrologici*; three dialogues, one of which is on purgatory, and which was answered by John Frith; this produced from Rastell an *Apology against John Frith*; who also followed it by a second reply, which is said to have ended in his opponent's conversion to Protestantism. Rastell likewise wrote the *Rules of a good Life*; and the

celebrated *Anglorum Regum Chronicon*; or, *Pastimes of the People*; beside which seven Latin tracts are attributed to him, on the following subjects: *Concerning good Works*; *Of Speaking*; *Upon Indulgences*; *On the Brotherhood of the Rosary*; the *Abasement of Popery*; *Words of the English Law*; or, *les Termes de la Ley*; and the *Indexes of Anthony Fitzherbert*. The books printed by John Rastell are thirty in number. He left two sons, William and John; the former of them succeeded his father as a printer, and the latter was in the commission of the peace, who had a daughter named Elizabeth, the wife of Dr. Robert Laugher, chancellor of the diocese of Exeter.

Like the devices of some of the other early printers, Rastell's principal mark was formed from the sign of his dwelling-house, the mermaid, of which a representation is here given.

There were, it is probable, two families of the Rastell's about this time, which makes it difficult, in many places, to distinguish one from the other. It is plain, that William Rastell, of St. Bride's parish in London, in the year 1530, and in the lifetime of John, was a very noted printer of law books. This family existed some time before the Rastells mentioned by Wood.

1536. John Hertford endeavoured to revive the art of printing at St. Albans, half a dozen books, executed within the space of four years, are all which are known to have proceeded from its reestablishment. In 1538, Hertford finding it not to answer his expectation, removed to Aldersgate-street, London. This second interruption, says Dr. Cotton, is easily accounted for, in the total dispersion of the inmates of religious houses by command of king Henry VIII.

1536, *July 12. Died*, ERASMUS, who occasionally assumed the pænomen of *Desiderius*. This learned Dutchman was born at Rotterdam in 1467. He was a singing boy in the cathedral of Utrecht till his ninth year, then entered the school at Deventer, where he displayed such brilliant powers that it was predicted that he would be the most learned man of his time. Alexander Hegins was his master, and Adrianus Florentius, afterwards pope Adrian IV. was his school fellow.

After the death of his parents, whom he lost

in his fourteenth year, his guardians compelled him to enter a monastery; and at the age of seventeen he assumed the monastic habit. The bishop of Cambray delivered him from this constraint. In 1492 he travelled to Paris, to perfect himself in theology and polite literature. He there became the instructor of several rich Englishmen, from one of whom he received a pension for life. He accompanied them to this country in 1497, where he was graciously received by the king. He returned soon after to Paris, and then travelled into Italy to increase his stock of knowledge. In Bologna, where he received the degree of doctor of theology, he was one day mistaken, on account of his white scapulary, for one of the physicians who attended those sick of the plague; and not keeping out of the way of the people, as such persons were required to do, he was stoned, and narrowly escaped with his life. This accident was the occasion of his asking a dispensation from the vows of his order, which the pope granted him.

He visited Venice, Padua, and Rome; but, brilliant as were the offers here made him, he preferred the invitation of his friends in England, where the favour in which he stood with Henry VIII. promised him still greater advantages. When he visited the lord chancellor, sir Thomas More, without making himself known to him, the chancellor was so delighted with his conversation that he exclaimed, "You are either Erasmus or the devil." He was offered a benefice, but was unwilling to fetter himself by an office of this kind. He was for a short time professor of Greek at Oxford. He afterwards travelled through Germany and the Netherlands, and went to Basil, where he had his works printed by Froben, and in whose house he for a long time resided.

The bold and satirical manner in which Erasmus attacked the corruptions of the Romish church and clergy, not only in his biblical works, but in his numerous other writings, exposed him to the hatred, and malicious machinations of a host of enemies, who regarded him as one of the most dangerous and powerful opponents of the Roman catholic hierarchy and doctrines, that the monks, used to say that "Erasmus laid the egg that Martin Luther hatched." His works were exclaimed against as disseminating heretical opinions, and placed in the *Indices Expurgatorii*,\* as dangerous to be read; and narrowly escaped becoming a martyr through the fiery zeal of his adversaries. About the year 1526, the Parisian divines published their censures upon various passages of the paraphrases of his

*New Testament* and other parts of his works. He states, that amongst other dreadful charges of heterodoxy, they had accused him of maintaining the Arian heresy, on account of a typographical error which had crept into a second edition of his paraphrase before mentioned. The liberality of Francis I. was indeed happily, for some time a counterpoise to the precipitate and anathemising zeal of these bigotted divines; for a considerable period elapsed before the university dared to publish their censure of his works.

Whatever imperfections may be discovered in some particular parts in the character of Erasmus, he must be considered as one of the greatest men that ever adorned the commonwealth of learning, and his memory must be revered by every friend of genius, learning, and moderation. Liveliness of imagination, depth and variety of erudition, together with great sagacity of judgment, were in him eminently united.

Erasmus and Luther asserted, that to burn heretics was contrary to the spirit of the gospel; the condemnation of which proposition was constantly repeated in all the doctrinal decisions of the Sorbonne. P. Courayer considers this censure of theirs more scandalous, than all the propositions of Luther. Such cruel measures were revolting to the natural feelings of Francis. His first movement was aversion; and he began by rescuing some of the victims of intolerance.

1536, Sept. 22. William Tyndale or Tindall, otherwise named HITCHINS, one of the first publishers of the *Holy Scriptures* in English: burnt at the stake. He was born at Hunt's court, about the year 1477. Studied at Oxford. His ancestors were the barons de Tyndale, who for several centuries were settled on the banks of the Tyne, and whose seat was Langley Castle, a small but strong fortress. His behaviour at college was such as gained him a high reputation both for morals and learning, so that he was admitted a canon of cardinal Wolsey's new college, now Christ church. But making his opinions too public he was ejected, and retired to Cambridge, where he pursued his studies and took a degree. Embracing every opportunity to propagate the new opinions, he was placed in imminent danger both in Gloucestershire, at Bristol, and at London. His thoughts were bent, about 1524-5, upon translating the *New Testament* into English; but being sensible he could not do it with safety in England, he went abroad, receiving very liberal pecuniary assistance from his friends, who were favourers of Luther's opinions. He first went to Saxony, where he held conferences with Luther, and his learned friends, then came back into the Netherlands, and settled at Antwerp, where there was a very considerable factory of English merchants, many of whom were zealous adherents to Luther's doctrine. Here he immediately began his translation of the *New Testament*, in which he had the assistance of John Fryth, and William Roye, the former of whom was burnt at Smithfield for heresy, July, 1533, and the

\* When the insertions in the index were found of no other use than to bring the peccant volumes under the eyes of the curious, they employed the secular arm in burning them in public places. The history of these literary conflagrations has often been traced by writers of opposite parties, for the truth is, that both used them; zealots seem all formed of one material, whatever be their party. They had yet to learn, that burning was not confuting, and that these public fires were an advertisement by proclamation. The publisher of Erasmus's *Colloquies* intrigued to procure the burning of his book, which raised the sale to twenty-four thousand copies.

latter suffered that dreadful death in Portugal on the same accusation. The *New Testament* was printed in 1526, in 8vo., without the translator's name. As there were only 1500 printed, and all the copies which could possibly be got into England, were committed to the flames, this first edition is extremely rare.

When this translation was imported into England, the supporters of the church of Rome became very much alarmed; William Warham,\* archbishop of Canterbury, and Cuthbert Tonsall,† bishop of London, issued their orders and monitions to bring in all the *New Testaments* translated into the vulgar tongue, that they might be burnt. But this illjudged policy only took off many copies which lay dead upon Tindall's hands, and supplied him with money for another and more correct edition, printed in 1534, while the first edition was in the mean while printed twice, but not by the translator. Of Tonsall's singular purchase, we have given an anecdote at page 235 *ante*. the following fact is also related: "sir Thomas More being lord chancellor, and having several persons accused of heresy, and ready for execution, offered to compound with one of them, named George Constantine, for his life, upon the easy terms of discovering to him who they were in London that maintained Tindall beyond sea. After the poor man had got as good security for his life as the honour and truth of the chancellor could give him, he told him it was the bishop of London who maintained Tindall, by sending him a sum of money to buy up the impressions of his *Testaments*. The chancellor smiled, saying that he believed he said true. Thus was the poor confessors life saved." John Tindall, our authors brother, was prosecuted, and condemned to do penance. Humphrey Monmouth, his great patron and benefactor, was imprisoned in the tower, and almost ruined. In 1529, sir Thomas More published *A Dialogue*, in which he endeavoured to prove that the books burnt were not *New Testaments*, but Tindall's or Luther's *Testaments*; and so corrupted, as to be quite another thing. In 1530, Tindall published an answer to this dialogue, and proceeded in translating the five books of Moses, from the Hebrew into English; but happening to go by sea to Hamburg, to have it printed there, the vessel

was wrecked, and he lost all his money, books, writings and copies, and was obliged to begin a-new. At Hamburg he met with Miles Coverdale, who assisted him in translating the *Pentateuch*, which was printed in 1530, in a small octavo volume, and apparently at different presses. He afterwards made an English version of the *Prophecy of Jonas*, with a large prologue, which was printed in 1531; and it is asserted that he translated no more books of scripture.

From Hamburg he returned to Antwerp, and was there betrayed into the hands of his enemies. Henry VIII., and his council employed one Henry Phillips on this disgraceful commission. He got the procurator general of the emperor's court at Brussels, and other officers, to seize him, and convey him to the castle of Villefort, where he remained a prisoner a year and a half. Tindall was at length brought to trial, where he pleaded his own cause. None of his arguments, however, being admitted, he was condemned, and being brought to execution in 1536, he was first strangled and then burnt. His last words were "Lord, open the king of England's eyes." Thus perished one of the best men and ablest writers of his time.

Speaking of Tindall—it is a common thing with grateful people to erect statutes, and embellish monuments with florid inscriptions in honour of those who have done service to their country; but, surely he who devoted his time to the translating of the scriptures, and became a martyr in the cause of religious liberty, deserves a more lasting remembrance than pyramids of stone or marble.

Tindall's principal theological and controversial tracts were collected together, and printed with the works of John Fryth, and Barnes, in one volume, fol. by John Day, 1572.

1536. In this year, three hundred and seventy-six monasteries were abolished, and their revenues, amounting to £32,000 per annum, confiscated to the king's use, in addition to a vast quantity of plate and other valuable property, computed at more than £100,000. As the monks had all along shown the king the greatest resistance, he resolved to deprive them of future power to injure him. He accordingly empowered Thomas Cromwell, who was now made principal secretary of state, to send commissioners into the several counties of England to inspect the monasteries, and to report with rigorous exactness the conduct and deportment of those who were resident there.\* This employment was readily undertaken by some creatures of the court, who are said to have discovered monstrous disorders in many of the religious houses. The accusations, whether true or false, were urged with

\* William Warham, archbishop of Canterbury, was born at Okeley, in Hampshire, about the year 1468. He was high in favour both with Henry VII. and Henry VIII.; and was successively master of the rolls, lord keeper, lord chancellor, chancellor of the university of Oxford, and archbishop of Canterbury. He died August 23, 1535, and was buried in his cathedral. He was succeeded in the archbishopric of Canterbury by Cranmer.

† Cuthbert Tonsall, bishop of Durham, was successively master of the rolls, prebendary of York, dean of Sarum, bishop of London, and lord privy seal. He was an able negotiator, and a good critic. He was deprived by Edward VI. but was restored by Mary, and appointed one of her ecclesiastical commissioners. In that odious office he distinguished himself by his mildness and humanity. He was again deprived by Elizabeth, but so highly esteemed was he, even by protestants, that he found an asylum in the family of archbishop Parker, with whom he resided till his death, which took place November 18, 1569, and was buried in Lambeth church.

\* A book was kept by the English monasteries, in which a detail of the scandalous enormities practised in religious houses were entered, for the inspection of visitors under Henry VIII., in order to blacken them, and hasten their dissolution. It was termed the *Black Book*, hence the vulgar phrase, "I'll set you down in my black book."

great clamour against these communities, and a general horror was excited in the nation against them. But as great discontent and murmurs were evinced by many persons of rank and learning, who still adhered to the old religion, Henry took care that all those who could be useful to him, or even dangerous in case of opposition, should be sharers in the spoil. He either made a gift of the revenues of the convents to his principal courtiers, or sold them at low prices, or exchanged them for lands on very disadvantageous terms. In the midst of these commotions the fires of Smithfield were seen to blaze with unusual fierceness.\* Those who adhered to the pope or those who followed the doctrines of Luther, were equally the objects of royal vengeance and ecclesiastical persecution. Henry delivered his opinions in a law, which, from its horrid consequences, was afterwards termed the *Bloody Statute*.† From the multiplied alterations which were made in the national systems of belief, mostly drawn up by the king himself, few knew not what to think or what to profess.—Cromwell earl of Essex, who was lord privy seal, vicegerent to the king's highness, and Cranmer, archbishop of Canterbury, were both seen to favour the reformation with all their endeavours. On the other hand, Gardiner, bishop of Winchester, together with the duke of Norfolk, were for leading the king back to his original superstition. But, in fact, Henry submitted to neither; his pride had long been so inflamed by flattery, that he thought himself entitled to regulate by his own single opinion, the religious faith of the whole nation.

Dr. Priestley, in his *Lectures on History*, truly observes, how can we help acknowledging the hand of God when we see great and important events brought about by seemingly trifling and inconsiderable means; or by means which seem to have little or no relation to the end; who would have imagined that the desire which Henry VIII. had to be divorced from his wife, would have brought about the reformation in England? Again, he observes, how incapable riches and power are to satisfy the minds of man; is an

observation which few persons, in the course of their own experience, have not seen occasion to make. But the sentiment makes a deeper impression upon us when we see it exemplified in the history of statesmen and kings. How often do we see the vanity of the living in their boundless provision for futurity, in the dissipation of the large fortunes of covetous persons, by the extravagance of their heirs. But it does not affect us so much as when we read in history, that the riches which pope Sixtus V. amassed in his pontificate, and those which Henry IV. king of France, had with great difficulty saved, were squandered away within less than a year after their deaths; and also, that the treasure which Henry VII. of England, had raised, by every art of extortion, went almost as fast by Henry VIII. his son and successor.

1536. Shortly after the appearance of *Coverdale's Bible*, a royal proclamation was issued to the clergy to provide a book "of the whole Bible, both in *Latin*, and also in *English*, and lay the same in the quire for every man that will to loke and reade thereon."

The convocation of the province of Canterbury assembling June 9, the year 1536, Dr. Heylin tells us that the clergy then agreed upon a form of a petition to be presented to the king, that he would graciously indulge unto his subjects of the laity the reading of the Bible in the English tongue, and that a new translation of it might be forthwith made for that end and purpose. By this it appears that the clergy did not approve of the translation already made by Tindall and Coverdale, and that their attempt, which they made two years ago to have the royal permission to make a new one did not succeed.

Soon after the finishing this Bible, were published by Lord Cromwell, keeper of the privy seal, and vicegerent to the king for and concerning all his jurisdiction ecclesiastical within his realme, "Injunctions to the clergy, by the authorite of the king's highnesse,"\* the seventh of which was as follows:—

"That every person or proprietary of any parish church within this realme shall on this side the feast of St. Peter ad vincula (August 1) nexte comming provide a booke of the whole Bible, both in Latin and also in English, and lay the same in the quire for every man that will to loke and read thereon; and shall discourage no man from the reading any parte of the Bible,

\* Formerly kings were apostrophised by the title of *your grace*. Henry VIII. was the first, says Housaie, who first assumed the title of *highnesse*; and at length majesty. It was Francis I. who saluted him with the last title, in their interview, in this year, though he called himself only the first gentleman in his kingdom. The *titles of Honour of Seldon* is a very curious volume, and, as the learned Usher told Evelyn, the most valuable work of this great scholar. He vindicates the right of a king of England to the title of *Emperor*.

And never yet was *title* did not move;  
And never eke a mind, *that title* did not love.

An honest curate of Montserrat refused to bestow the title of *highnesse* on the duke of Mantua, because he found in his breviary these words: *Tu solus Dominus, tu solus Altissimus*; from all which he concluded, that none but the Lord, was to be honoured with the title of *highnesse*.

\* Elizabeth Barton, a country girl of Aldington, in Kent, (therefore called the "holy maid of Kent,") with some of her accomplices, were adjudged guilty of high treason, for a conspiracy against the king, and executed, April 30th, 1534.

† No less than five hundred persons were imprisoned for contradicting the opinions delivered in the *Bloody Statute*: and received protection only from the lenity of Cromwell. Lambert, a schoolmaster, and doctor Barnes, who had been instrumental in Lambert's execution, felt the severity of the persecuting spirit, and by a bill in parliament, without any trial, were condemned to the flames, discussing *theological* questions at the very stake. With Barnes were executed one Gerrard, and Jerome, for the same opinions. Three catholics also, whose names were Abel, Featherstone, and Powell, were dragged upon the same hurdles to execution; and who declared that the most grievous part of their punishment was the being coupled with such heretical *miscreants* as were united in the same calamity.

‡ The indiscretion of a Portuguese priest, who would not give place to one of the king's officers in Japan, and the obstinacy of the Jesuits, in refusing to give up the house which a nobleman had given them, when his son claimed it back again, occasioned the extirpation of the Roman catholic religion in that country.

either in Latin or English, but rather comfort, exhort, and admonish every man to read the same as the very word of God and the spiritual food of manne's soul, whereby they may the better knowe their duties to God, to their soueraine lord the king, and their neighbour; ever gently and charitably exhorting them, that, using a sober and modest behavioure in the reading and inquisition of the true sense of the same, they doo in no wise stifly or eagerly contend to stryve one with another about the same, but referre the declaration of those places that be in controversie to the judgement of them that be better learned. This seems a confirmation of Coverdale's Bible being licensed by the king, since by this injunction it is ordered to be had in churches, and there read by any that would, there being no other Bible in English at this time than Coverdale's.

Whether the archbishop had a mind to have Tindall's prologues and notes reprinted, or the printers thought such an edition would sell well we find the next year (1537) published another noted edition of the English Bible in folio, and is usually called MATTHEWE'S BIBLE,\* from the name affixed to it, as the editor. It was printed abroad, at the expense of Grafton and Whitchurch; and was "set forth with the king's most gracious licence."† It bears the following title:—*The Byble, which is all the Holy Scripture, in which are containyd the Olde and Newe Testament, truly and purely translated into English.* By Thomas Matthewe.‡

At the beginning of the prophets are printed on the top of the page the initial letters R. G. i. e. Richard Grafton, and at the bottom E. W. i. e. Edward Whitchurch, who were both the printers and publishers, and at whose expense this impression was made; and was "set forth with the king's most gracious licence."

Richard Grafton, sent six copies of this edition to Cromwell, at his lordship's request, accompanying them with a letter, in which he complained, that after having printed 1500 copies at an expense of not less than £500 he was apprehensive of being undersold by the Dutch booksellers,

who, observing how acceptable the English bible was to the common people, were designing to print it in a smaller volume; and though he believed the editions which they would print would be very inferior in paper, type, and correctness, yet without his lordship's interposition, they would probably ruin him and his friends. He therefore entreated his lordship to obtain for him, from the king, "that none should print the bible for three years but himself;" and urged the advantage that would result from enjoining every clergyman to have one, and placing six copies in every abbey. By this it would seem, that Grafton intended another impression, since the number already printed, namely, 1500, was no wise sufficient to answer so large a demand.

A resolution was soon after taken to revise this edition of Matthew's, and to print it again without the prologues or annotations, at which great offence was pretended to be taken, as containing matters heretical, and very scandalous and defamatory. From the following circumstance, it is supposed that Richard Grafton and Edward Whitchurch, executed this edition at Paris, because at that time there were in France better printers and paper than could be had here in England. Cromwell, earl of Essex, procured a letter to be written from Henry VIII. to the king of France, that some of his subjects might be licensed to print an English bible at the university of Paris; and at the same time another letter was sent to Bonner, Henry's ambassador at the French court, to afford this request all the assistance in his power. Francis complied, and Bonner appeared so zealous in the cause, that Cromwell first procured him the bishopric of Hereford, and immediately afterwards that of London. The work advanced and was even on the verge of its conclusion, when the printer was summoned before the inquisitors\* of the faith, who charged him with certain articles of heresy, whilst Grafton and Whitchurch, the proprietor, of the book, and Coverdale the corrector of the press, escaped only by suddenly leaving the country. Four dry vats filled with the copies of the bibles which they left behind, were sold by the lieutenant criminal, to whom they were delivered to be burned in Maulbert place, to a haberdasher to wrap his wares in, and these upon a second visit which Grafton and Whitchurch made to Paris, were bought up by them, together with the presses and types which they had formerly used, and the servants of their first printer engaged to go with them to England, where they resumed the work, and finished it the middle of April, in the following year. It is in large folio, and has obtained the name of the bible of the largest volume, or the great bible;† a

\* The Bible, with marginal notes, black letter, with cuts. 1530. This is the Bible, in which, by an artful counterfeit, described by Mr. Wanley, St. Paul is called the *knowe*, &c. the rasure of the true word *sewene*, and the insertion of the false reading, though discoverable by an exact observer, are so well executed, that the Bible was sold to the duke of Lauderdale, for seventeen guineas, by one Thornton, who, indeed, first effaced Matthew's preface, all the dates except one, of which he erased XVII., and added a note that this Bible, which was the edition of 1537, was printed in 1520, a date earlier than that of any English Bible. It does not appear that this reading was ever really printed. There is no other copy in the world that has this alteration.

† The name of Thomas Matthewe is affixed to this bible as the editor; but this, it is said, was fictitious; and that the real editor was John Rogers; a native of Lancashire, who was educated at Cambridge, and became acquainted with Tindall at Antwerp; but in queen Mary's reign, (being then in England) he became the first martyr of her reign, being burnt at Smithfield, February 4, 1555, on account of printing this bible. Nicholls, in his *Commentary on the Book of Common Prayer*, however, states that Thomas Matthewe was prebendary of St. Paul's.

\* Copies of the royal license by Francis I., and of the instrument of the inquisition for inhibiting the bible, may be seen in Strype's *Memorials of Archbishop Cranmer*, v. 1., c. xxi., b. 1., p. 119; and vol. II., appendix, No. xxx. Fox.

† Vellum copies of this edition are in the British museum, and in the library of St. John's college, Cambridge.

term which seems to have been occasionally given to other early folio editions.

Fulke, in his *Defence of the English Translation of the Bible*, relates, that "when Coverdale's translation was finished, and presented to Henry, he gave it bishop Gardiner and some others to examine. They kept it so long, that at last Henry had to call for it himself. When they delivered the book, he demanded their opinion of the translation. They answered, that there were many faults in it." "Well," said the king, "but are there any heresies mentioned in it?" They replied, "There were no heresies they could find." "If there be no heresies," said Henry, "then, in God's name, let it go abroad among our people."—*Leavis*.

1536. Engraving in dots or commonly called *stippling*, is the only mode of engraving which is supposed to have been the invention of the Italians. Agostino de Musis, better known by the name of *Augustine of Venice*, a pupil of Mark Antonio, used it in several of his earliest works, but confined it to the flesh, as in the undated print of an old man seated upon a bank, with a cottage in the back ground. He flourished from 1509 to 1536. We also find it in a print of a single figure standing, holding a cup and looking upwards, by Giulio Campagnola, who engraved about the year 1516. The back ground is executed with round dots, made apparently with a dry point. The figure is outlined with a stroke deeply engraved, and finished with dots, in a manner greatly resembling those prints which Demarteau engraved at Paris in imitation of red chalk. The hair and beard are expressed by strokes. Stephen de Laulne, a native of Germany, followed the steps of Campagnola; and many of his slight works are executed in dots only. John Boulanger, a French artist, who flourished in the middle of the sixteenth century, and his cotemporary, Nicholas Van Plattenberg, improved greatly on this method, and practised it with much success. John Lutma executed this kind of work with a hammer and a small punch or chissel.

In this style of engraving, Francis Bartolozzi, stands preeminent in modern times; he contrived to execute it so beautifully as to assist in seducing the public taste from the superior and legitimate style of line engraving. He was born at Floreuce, in 1728, and died at Lisbon, 1815. He resided for some time in England, and executed many prints for Boydell's *Shakespeare*, which exhibit exquisite specimens of taste and execution.

1537. In this year was printed at Lyons, a book entitled, *Les Controverses des Sexes masculin et feminin*, 16mo. The author, Gratian du Pont; asserts that every man will, at the resurrection, be an entire body, without the least deformity. He maintains that were every part of the body separated into fifteen hundred different places, they would all unite, and become complete. He adds that Adam will regain the part from which Eve was formed, and that Eve must again become Adam's side; and thus, he says, it will be with all other persons; every man will be

like Adam, and every woman like Eve; and he concludes with a positive assertion, that woman will cease to exist.

1538. Printing introduced at Tortosa, a city of Spain. In the library of Trinity college, Dublin, there is a curious book of this year, namely the *Mariale* of Bernardinus de Sorio, who was rector of the college of Tortosa. The printer, Arnaldum Guillermi, is protected for ten years, under a penalty of 1000 florins and forfeiture of the copies.—The *Mariale* is a quarto, consisting of 277 leaves printed irregularly in black letter, with a few flowered initials of coarse workmanship. The title-page is ornamented with wood cuts on both sides. The paper is strong though yellow; neither the type nor press-work are very good.

1538. In this year the *English Bible* was permitted to be exposed to sale, and publicly read; and an injunction was published by the vicar general of the kingdom, "ordering the clergy to provide, before a certain festival, one book of the whole bible, of the largest volume in English, and to set it up in some convenient place within their churches, where their parishioners might most commodiously resort to read it;" the expense of which was to be borne equally by the clergyman and the parishioners. A royal declaration was also issued, which the curates were to read in their respective churches, informing the people of the injunction to place it in the churches, and of the permission given to all to read it; with directions how to read and hear it, and advising them to avoid all disputes about the scriptures in "taverns or alehouses," and rather to consult those who were authorized to preach and explain them. "It was wonderful," says Strype, "to see with what joy this book of God was received, not only among the learned sort, and those that were noted for lovers of the Reformation, but generally all England over, among all the vulgar and common people; and with what greediness God's word was read, and what resort to places where the reading of it was." Again, he observes, "that the parsons, vicars, and curates did read confusedly the word of God, and the king's injunctions, lately set forth, and commanded by them to be read: humming and hawking therat, that almost no man could understand the meaning of the injunction. And they secretly suborned certain spreaders of rumours and false tales in corners, who interpreted the injunctions to a false sense. And bad their parishioners, notwithstanding what they read, being compelled so to do, that they should do as they did in times past, to live as their fathers; and that the old fashion is the best. They even insinuated that the king meant to take away the liberties of the realm, with other seditious intimations."

Mr. Thoresby mentions the *New Testament* printed at Paris, by Reignault, in 1538, at the expense of bishop Bonner. It was printed in 8vo. in two columns, *English and Latin*; and has 1 Peter ii. 13, thus translated, "*Unto the Kyng as the chefe heade*," doubtless out of compliment to Henry VIII.

1538. King Henry VIII. granted a license to James Nicholson, a printer, who resided in St. Thomas's hospital, in Southwark, to print the *New Testament* in *Latin* and *English*, in quarto. The English was Coverdale's version, and the Latin, that of the Vulgate. Coverdale wrote a dedication to the king, in which he assured his majesty "that his principal design was to induce such as knew the English only, and were not learned in Latin, that in comparing these two texts together, they might the better understand the one by the other; and he did not doubt, but such ignorant bodies, as having care and charge of souls, were very unlearned in the Latin tongue, should through this small labour be occasioned to attain unto knowledge, and at least be constrained to say well of the thing which heretofore they had blasphemed."

1538. Nov. 16. The proclamation of Henry VIII. following the formal trial and condemnation of the *shrine* and goods of Thomas à Becket,\* declaring that he was no saint, but a rebel and a traitor to his prince, and caused his bones to be burnt by the hangman. The account of the miracles wrought at his tomb filled two folio volumes. His jubilee of fifteen days was attended by 100,000 pilgrims, and the offering, in two years, to God, were £3 2s. 6d.; to the virgin, £67 7s. 2d.; but to *Saint Thomas*, £1786 18s. 6d. The shrine was estimated at above a million of money.

When relics of saints were first introduced, the relique-mania was universal; they were bought and sold like other articles of commerce; and the collectors made no scruple to *steal* them. It is entertaining, says Mr. D'Israeli, to observe the singular ardour and grasping avidity of some, to enrich themselves with these religious

morsels; their little discernment, the curious impositions of the vender, and the good faith and sincerity of the purchaser. The prelate of the place sometimes purchased for the holy benefit of the village or town.

The following legend concerning Thomas Becket, is taken from the *Golden Legend*, printed by Wynkyn de Worde, 1498, folio:—"And anon after, Saint Thomas came to Rome on Saint Marcus day at afternoon, and when his catour should have brought fish for his dinner, by cause it was fasting day, he could get none for no money, and came and told his lord St. Thomas so. And he bade him buy such as he get; and then bought flesh, and made it ready for their dinner; an St. Thomas was served with a capon roasted, and his meyne with boiled meat; and so it was that the pope heard that he was come, and sent a cardinal to welcome him; and he found him at his dinner eating flesh; which anon returned, and told the pope how he was not so perfect a man as he had supposed; for, contrary to the rule of the church, he eated this day flesh. The pope would not believe him, but sent another cardinal, who, for more evidence, took the leg of the capon in his keuercheyf, and affirmed the same. And opened his keuercheyf to fore the pope, and he found the leg turned into a fish called a carp. And when the pope saw it, he said they were not true men to say such things of this good bishop. They said faithfully it was flesh that he did eat. And after this, St. Thomas came to the pope, and did his reverence and obedience, whom the pope welcomed; and after certayn communication, he demanded what meat he had eaten? and he said flesh, as ye have heard to fore; because he could find no fish, and very need compelled him thereto. Then the pope (understood of the miracle that the capon's leg was turned into a carp) of his goodness, granted to him and to all them of the diocese of Canterbury, license to eat flesh for ever on Saint Marcus day, and pardon withal; which is kept and accustomed unto this day."

The Roman church not being able to deny, says Bayle, that there have been false relics, which have operated miracles, they reply that the good intentions of those believers who have recourse to them obtained from God this reward for their good faith! In the same spirit, when it was shown that two or three bodies of the same saint are said to exist in different places, and that therefore they all could not be authentic, it was answered that they were all genuine; for God had multiplied and miraculously reproduced them for the comfort of the faithful.

Canute II. who reigned in 1041, commissioned his agent at Rome to purchase *St. Augustine's arm* for one hundred talents of silver and one of gold; a much greater sum observes Granger, than the finest statue of antiquity would have sold for. Henry III. of England, who reigned from 1216 to 1272, was so deeply tainted with the superstition of the age, summoned all the great in the kingdom to meet in London. This summons excited the most general curiosity, and

\* Thomas à Becket, was born in London, in 1119, and educated at Oxford and Paris. Henry II. appointed him, in 1155, chancellor and preceptor to the prince. In 1162 he was elected archbishop of Canterbury, on which he resigned the chancellorship, and assuming the arrogance of a sovereign pontiff, came to hostilities with the king, who endeavoured to effect a reform among the clergy. In a convention held at Clarendon, laws were passed respecting the privileges of the church, to which Becket assented at first, but afterwards retracted, and endeavoured to leave the kingdom, to communicate his grievances to the pope. This occasioned a parliament to be called at Northampton, in 1165, when the archbishop was sentenced to forfeit all his goods to the king. On this he left the kingdom, and Henry seized upon the revenues of his see. Becket resigned at Sens his archbishopric into the hands of the pope, who returned it to him with assurances of support. The prelate now fulminated his anathemas against several bishops and noblemen, which so irritated the king that he banished all his relations. An accommodation was at last concluded between Becket and the king, but Becket refusing to withdraw his excommunication of the bishops, they laid their complaints before Henry, who was in Normandy. In a fit of passion the king exclaimed how unhappy he was, that among so many attendants none had gratitude enough to rid him of one who caused him so much disturbance. On this, four knights set out for Canterbury, and assassinated the archbishop at the altar of his cathedral, December 29, 1171. For this the king was obliged by the pope to do penance at Becket's tomb, where he was scourged by the monks, and passed the whole day and night fasting upon the bare stones. The murderers were sent on penance to the Holy Land, where they died. Becket was canonized two years after; and his pretended miracles were so numerous, that his shrine became the richest in Europe.

multitudes appeared. The king then acquainted them that the great master of the knight templars had sent a phial containing a small portion of the precious blood of Christ which he had shed upon the cross; and attested to be genuine by the seals of the patriarch of Jerusalem and others! He commanded a procession the following day; and the historian adds, that though the road between St. Paul's and Westminster abbey was very deep and miry, the king kept his eyes constantly fixed on the phial. Two monks received, and deposited the phial in the abbey "which made all England shine with glory, dedicating it to God and St. Edward."—This is one of the many absurdities of this king.

Lord Herbert, in his life of Henry VIII., notices the great fall of the price of relics at the dissolution of the monasteries. "The respect given to relics, and some pretended miracles, fell; insomuch, as I find by our records, that a piece of St. Andrew's finger (covered only with an ounce of silver), being laid to pledge by a monastery for forty pounds, was left unredeemed at the dissolution of the house; the king's commissioners, who upon surrender of any foundation undertook to pay the debts, refusing to return the price again." That is, they did not choose to repay the forty pounds, to receive a piece of the finger of St. Andrew.

Lord Cromwell's commissioners found, in St. Augustine's abbey, at Bristol, the following relics:—two flowers which bore blossoms only on Christmas day, Jesus's coat, our Ladie's smocke, part of the last supper, part of a stone on which Jesus sat in Bethlehem, &c. The prior of Maiden Bradley, they found had five sons, and a daughter married.

About this time the property of relics suddenly sunk to the South-sea bubble; for shortly after the artifice of the Rood of Grace, at Boxley in Kent, was fully opened to the eye of the populace; and a far-famed relic at Hales in Gloucestershire, of the blood of Christ, was at the same time exhibited. It was shown in a phial, and it was believed that none could see it who were in mortal sin; and after many trials usually repeated to the same person, the deluded pilgrims at length went away fully satisfied. This relic was the blood of a duck, renewed every week, and put in a phial; one side was opaque, and the other transparent; the monk turned either side to the pilgrim, as he thought proper. The success of the pilgrim depended on the oblations he made; those who were scanty in their offerings were the longest to get a sight of the blood: when a man was in despair, he usually became generous!

1538. The introduction of *Parochial Registers* in England was in consequence of the injunctions of Thomas Lord Cromwell, which were set forth in this year, the thirtieth year of Henry VIII.; but they were not much attended till the reign of queen Elizabeth, who issued injunctions concerning them in the 1st, 7th, and 39th years of her reign. It appears that in Spain they had been in use several years before,

and are said to have been instituted by cardinal Ximenes, in the year 1497, in order to remedy the disorders arising from the frequency of divorces in that country. Till late years, they were kept very negligently in many parts of England; and being in the custody of churchwardens who changed from year to year, old registers were frequently lost or destroyed. In Northamptonshire, a piece of an old parish register, on parchment, was found on the pillow of a lace-maker, with the pattern of her work pricked upon it.

In a letter written by Mr. Brokesby to Mr. Hearne, (both learned antiquaries, dated Dec. 12, 1708, the writer, speaking of long-lived persons, tells us that there was a woman whom he had conversed with in Yorkshire, who gave out that she was six score, and afterwards seven score, and hence had many visitants, from whom she got money. He then adds, "She was born before registers were kept in country parishes. Hence I could have no light for the time of her baptism."

1538. The first play printed in England was entitled *A Tragedye or Enterlude, manifestyng the chefe Promyses of God unto Man, by all ages in the Olde Lawe, from the fall of Adam to the incarnation of the Lorde Jesus Christ*. Compyled by Johan Bale, anno domini m.n. xxxiiii. This is one of the rarest and valuable articles belonging to the British drama. It is in the Garrick collection.\*

1538. *The New Testament, faithfully translated and lately corrected by Miles Coverdale*, 8vo.

This testament seems to have been printed abroad, but is very accurate. In the title is a kind of label, inclosing the words, *Search the Scriptures*. At the end, is a collection of the *Epistles* from the bible, after the use of *Salisbury*. It has cuts only in the *apocalypse*, which, whatever was the reason, are very frequent in the testaments of that time.

In Smith's *Facsimiles*, plate 17, there is a letter by Miles Coverdale to Thomas lord Cromwell, relative to his translation of the *Bible*, which says, A.D. 1538, "As concernyng y<sup>r</sup> New Testament in English, y<sup>r</sup> copy whereof yo<sup>r</sup> good lordshippe receaved lately a booke by

\* John Bale, a tolerable Latin classic, and an eminent biographer, embraced the reformation, and was advanced to the bishopric of Osory, by king Edward VI. Prior to his conversion from popery, he composed many scriptural interludes, chiefly from incidents of the *New Testament*; amongst them are the *Life of Saint John the Baptist*, written in 1538, *Christ in his Twelfth year, Baptism and Temptation, The Resurrection of Lazarus, The Council of the High Priests, Simon the Leper, Our Lord's Supper, and the Washing of the Feet of his Disciples, Christ's Burial and Resurrection, the Passion of Christ, the Comedy of the three Lawes of Nature, Moses and Christ corrupted by the Sodomites, Pharisees and Papist*, printed by Nicholas, Hamburg, in 1538, and so popular that it was reprinted by Colwell, in 1662; *God's Promises to Man*, which he calls *A Tragedie, or Enterlude, manifestyng the chefe promyses of God unto man, in all ages, from the begynnyng of the worlde to the Deathe of Jesus Christe, a Myserie*, 1538; our author in his *Vocacyon*, to the Bishopric of Osory informs us, that his comedy of *John the Baptist*, and his tragedy of *God's Promises*, were acted by the youths upon Sunday at the Market-cross of Kilkenny.—John Bale died 1563.

y<sup>r</sup> servant Sebastian y coke, I besech y<sup>r</sup> L. to consydre y<sup>r</sup> grenesse thereof, which (for lack of tyme,) can not as yet be so apte to be bounde as it should be."

1539. *Died* HENRY PEPWELL. Ames considered this person more in the light of an extensive publisher and bookseller, than in that of a printer; and he supposes that he probably might have been that agent or factor who lived at the sign of the Holy Trinity, in St. Paul's Church-yard, and who sold the numerous works which were printed abroad at the expense of merchants or literary men. About the close of the reign of Henry VII., independent of the books produced by the English presses, many religious volumes were printed on the Continent; and William Bretton, a London merchant, who perhaps was the same with William Bretton, M.A. of Cambridge in 1494, was a particular encourager of foreign printing for the use of Britain and his own profit. Maittaire would infer that he resided at the sign of the Trinity, in St. Paul's Church-yard; but it is perhaps more probable that it was the dwelling of his publishing correspondent, although it is very doubtful whether Henry Pepwell were that person. His name does not appear until 1520, but all the works which are stated to have been sold at the house already mentioned, are attributed to him, as no other occupant of it is now known. The will of Henry Pepwell, citizen and stationer, is dated September 11th, 1539; and it states, that he was a married man, as he left his wife, Ursula, and his children his executors. He desires to be buried in the church of St. Faith, beneath St. Paul's, near the high altar; and he bequeaths to the parish of Bermondsey in which, he was born, a *printed mass book of five shillings value*, for prayers to be made for his soul. He seems to have been attached rigidly to the Roman catholic religion all his days, and a useful man for John Stokesley, bishop of London.

The list of his works now extant, which were to be sold at the Holy Trinity, in St. Paul's church-yard: those to which Pepwell's name appears as printer, have it there indicated, together with the names of such foreigners as printed the books which were executed on the continent for him, amounting to seventeen.

The device of this printer consisted of his name on a ribbon. There are however some wood-cut representations of the Trinity, perhaps copies of the sign of his house in St. Paul's church-yard, which are considered by Ames as being equally entitled to the name of devices.

1539. In the course of this year, another *Bible* was printed by John Byddell. The principal editor of it was Richard Taverner, who received his education at Christ church, in Oxford, under the patronage of lord Cromwell, when secretary of state. It is probable that his patron encouraged him to undertake this work, on account of his skill in the Greek tongue. It is neither a bare revisal, nor a new version, but a correction of what is called *Mattheus's Bible*; many of whose marginal notes are adopted, and

many omitted, and others inserted. After his patron's death, Taverner was imprisoned, Wood believes through the influence of those bishops who were addicted to the Romish religion. He had, however, the address to reinstate himself in the king's favour; and regained his situation at court. His death is said to have happened in 1573. In November of the same year, the king, at Cranmer's intercession, appointed his vicar-general, lord Cromwell, to take special care and charge that no person within the realm attempt to print any English *Bible* during the space of five years, but such as shall be admitted by the said lord Cromwell. The reason given was, "that the Bible should be perused and considered in one translation; the frailty of men being such, that the diversity thereof may breed and bring forth manyfold inconveniences, as when wilful and heady folk shall confer upon the diversity of the said translations." Accordingly it appears by the bibles printed this very year, that Cromwell assigned other printers besides Grafton and Whitchurch, as John Byddell, Thomas Berthelet, &c. to print bibles in the English tongue.

1539. *An epitome of the psalmes, or briefe meditations upon the same, with diverse other most christian prayers.* Translated by Richard Taverner. *Cum privilegio*. No printer's name. Printed at the White Hart, in Fleet-street, in twelves.

1539. Fox, in his *Acts and Monuments*, cites *Certaine other injunctions*, set forth by the authoritie of the king, against *English bookes, sectes, &c.*

FIRST. That none without special license of the king, transport, or bring from outward parties into England, any manner of English books, neyther yet sell, give, utter, or publish any such, upon pain to forfeit all their goods and chatties, and their bodies to be imprisoned, so long as it shall please the king's majesty.

Item. That none shall print, or bring over any English books with annotations, or prologues, unless such books before be examined by the king's privy council, or others appointed by his highness, and yet not to put thereto these words, *Cum privilegio regali*, without adding, *ad imprimendum solum*. Neither yet to print it, without the king's privilege be printed therewith in the English tongue, that all men may read it. Neither shall they print any translated book, without the plain name of the translator be in it, or else the printer to be made the translator, and to suffer the fine and punishment thereof at the king's pleasure.

Item. That none of the occupation of printing shall within the realm, print, utter, sell, or cause to be published any English books of scripture, unless the same be first viewed, examined, and admitted by the king's highness, or one of his privy council, or one bishop within the realm, whose name shall therein be expressed, upon pain of the king's high displeasure, the loss of their goods and chatties, and imprisonment, so long as it shall please the king, &c.

1539. Every one knows how often we are obliged to refer to ancient times to explain common terms of art and words which are in every one's mouth. We have a curious instance of this in the names which are given to the different sorts and sizes of paper. We all talk of *foolscap paper*, *post paper*, and *note paper*, and paper makers and stationers have other terms of the same kind, as *hand-paper*, *pot-paper*, &c. Now, the term *note paper* is clear enough, as it evidently means paper of the size fit for notes; while *post paper*, we may suppose, means the larger size which is used for letters sent by the post. But when we come to *foolscap paper* we are altogether at a loss for an explanation; and here we find we must look to something else than the size of the paper as the origin of the name.

Now, if we go back to the early history of paper-making, we find that terms which now puzzle us so much, may easily be explained by the various paper-marks which have been in use at different times. In ancient times, we have shewn, when very few people could read, pictures of every kind were very much in use, where writing would now be employed: every shop had a sign, as well as every public-house; and these signs were not then, as they very often are now, only printed upon a board: they were always either painted pictures, as many inn-signs still are, or else models of the thing which the sign expressed, as we still sometimes see a beehive, a tea-canister, or a doll. For the same reason, printers always had some device which they put upon the title-pages and at the end of their books; and paper-makers used marks to distinguish the paper of their manufacture from that of others. Some of these marks becoming common, naturally gave their name to different sorts of paper; and as names, we all know, remain very often long after the origin of them is forgotten and the circumstances changed, we shall not be surprised to find the old names still in use; though, in some cases, they are not applied to the same things they originally denoted.

It will be the best way, perhaps, to mention briefly the chief paper-marks which have been used, as they occur in the order of time.

The first paper-maker in England was John Tate, who had a mill near Hertford: his device was a star of five points, within a double circle. The first book printed on paper manufactured in England was a Latin one entitled *Bartholomeus de Proprietatibus Rerum*: it was printed in 1495 or 1496: the paper seems to have been made by John Tate the younger, and had the mark of a wheel. The paper used by Caxton, and other early printers, had a great variety of marks, of which the chief are the ox-head and star, the letter *B*, the shears, the hand and star, a collared dog's head, with a trefoil over it, a crown, a shield with something like a bend upon it, &c. &c. The ox-head, sometimes with a star or a flower over it, is the mark of the paper on which Faust printed some of his early books: but the open hand, which was likewise a very ancient mark, remained longer in fashion, and

probably gave the name to what is still called *hand paper*. We have given a representation of one which is copied (as were the rest which we shall give) from loose pages of old written or printed books.

The above figure was taken from a loose page at the beginning of a *Bible* printed in 1539.

Another very favourite paper-mark, at a somewhat later period, was the jug, or pot, which seems to have been the origin of the term *pot paper*. It is sometimes found plain, but oftener bears the initials or first letters of the maker's name: hence there is a very great variety of figures, every paper-maker having a somewhat different mark. We have given figures of both kinds: the jugs or flagons are often of a very elegant shape, and curious as showing the workmanship of the times in which they were made.

The specimens here given are taken from books printed in 1539.

The *fool's cap* was a later device, and does not seem to have been nearly of such long continuance as the former. It has given place to the figure Britannia, or that of a lion rampant, supporting the cap of liberty on a pole: the name, however, has continued, and we still denominate paper of a particular size by the title of *foolscap paper*. The subjoined figure has the cap and bells which we so often read of in old plays and histories as the particular dress of the fool, who formerly formed part of every great man's establishment.

Post paper seems to have derived its name from the post-horn which at one time was its distinguishing mark. This is of later date, and does not seem to have been used before the establishment of the general post-office, when it became the custom to blow a horn.

The paper from which the above is copied was dated 1670.

The mark is still sometimes used; but the same change which has so much diminished the number of painted signs in the streets of our towns and cities, has nearly made paper-marks a matter of antiquarian curiosity; the maker's

name being now generally used, and the mark in the few instances where it still remains, serving the purpose of mere ornament rather than of distinction.

1539. *The Byble in Englyshe: That is to saye, the content of all the Holy Scripture, bothe of the Olde and Newe Testament; truly translated after the veryte of the Hebrue and Greke textes, by the dylygent studye of dyvers excellen learned men, expert in the forsayde tonges* Prynted by Rychard Grafton and Edward Whitechurch, cum priv.

This is called *Cranmer's Bible*; and this edition of it has a beautiful frontispiece, cut in wood, said to have been designed by Hans Holbien; representing in the upper part, king Henry VIII. on his throne, under God, delivering these books to his lords spiritual, on one hand, and temporal on the other; in the middle part is archbishop Cranmer, on one side, delivering the said book to the clergy; and Cromwell, earl of Essex, the king's vicar-general, on the other side, to the laity; all expressing themselves to the purpose, by Latin labels out of scripture: at the bottom is the said king at divine service in his cross-barred pew; the priest, in his pulpit, praying, and almost all the congregation turned towards the king, and crying *vivat rex*. On the back of this frontispiece, are the names of all the books in the *Bible*; Then a kalender: an almanac for 19 years: an exhortation to the studye of the holy scriptures. &c. The sum and content of the holy scripture, &c. A prologue, expresynge what is meant by certain signes and tokens set in the *Bible*: the succession of the kynges of Judah and Jerusalem, declaring when, and under what kynges every prophet lyved: lastly, with what judgment the bokes of the *Olde Testament* are to be read. After these chapters begins the first book of Moses, which is followed by the rest; which are adorned, in many places, with wooden cuts. The title of the *New Testament* is—*The New Testament in Englyshe; translated after the Greke: Contayning these Boke, &c.* Around it is a broad border, representing, in wooden cuts, the principal stories in the said *Testament*, as the salutation, the nativity, &c. At the end are two tables; the one, to the epistles and gospels, usually read in the church, after Salisbury use; and the other, a table of the epistles and gospels, which are red on divers saintes dayes in the year. The whole book concluding with these words:—*The Ende of the New Testament, and of the whole Byble; fynished in Apryll, anno. 1539.*

1539, May 13. A bill was brought into parliament vesting in the crown all the property of the monastic institutions. By a late visitation, fresh crimes had been produced against the religious houses; so that the severity of the king was conducted with such seeming justice and success, that within twelve months after the passing of the act, the greater monasteries shared the fate of their predecessors. The monasteries visited amounted to six hundred and forty-four,

of which twenty-eight had abbots who enjoyed seats in parliament. Ninety colleges were demolished in several counties; two thousand three hundred and seventy-four chantries and free chapels, and one hundred and ten hospitals. The revenue of these establishments amounted to £161,000, which was about a twentieth part of the national income.

A few instances will serve to show the wealth of the greater monasteries. Fountains abbey, in Yorkshire, at the time of the dissolution, was one of the most opulent, for its revenues were estimated at £998 6s. 8½d. per annum, according to Dugdale: to £1073 0s. 7½d. according to Speed: to £1125 18s. 1½d. according to Burton. In plate, to the value of £708 5s. 9½d. and of cattle, 2356 oxen, cows, and calves; 1326 sheep; 86 horses; and 79 swine; and the domains of the house annually produced 117 quarters of wheat; 12 quarters of rye; 134 quarters of oats; and 392 loads of hay.\*

St. Mary's abbey, at Reading, in Berkshire, was endowed for two hundred Benedictine monks. At the dissolution of the religious houses, the revenues of this monastery were found to be no less than £1,938 14s. 3d. according to Dugdale; but £2,116 2s. 6d. according to Spelman. The poor and travellers of all sorts were so well entertained from the funds of this abbey, that, according to William of Malmesbury, more money was spent in hospitality than expended on the monks.

Hugh Farringdon, the abbot at this period, refusing to deliver up his abbey to the visitors, was attainted of high treason, on some charge trumped up against him; and, in the month of November, 1539, with two of his monks, named Rugg and Ocioin, was hanged, drawn, and quartered, at Reading. This was on the same day on which the abbot of Glastonbury suffered the like sentence, for a similar provocation.

The annual revenues of St. Osyth, in Essex, at the time of the surrender, was £758 5s. 8½d. according to Speed; or £877 7s. 2d. according to Dugdale. The abbot, and eighteen canons subscribed to the king's supremacy, by which may be conjectured the extent of this priory.

\* The character of the last abbot of this celebrated monastery may be judged of by the following letter of one of the visitors sent by Henry VIII., addressed to lord Cromwell.

Please your worship to understand that the abbot of Pontayns hath so greatly dilapidate his house, wasted ye woods, notoriously keeping six women, and six days before our coming he committed theft and sacrilege, confessing the same; for at midnight he caused his chapleyn to stole the keys of the sexton and took out a jewel, a cross of gold with stones, one Warren a goldsmith of the Chepe was with him in his chamber at the hour, and there they stole out a great emerde with a ruby, the sayd Warren made the abbot believe the ruby was a garnet, and so that he paid nothing, for the emerde but twenty pounds. He sold him also plate without weight or ounces. Subscribed your poor priest and faithful servant R. Layton. From Richmond (in con Ebor) the 30th Jan.

The abbot at this period, according to Willis, was William Thurst, Burton calls him Thirake, admitted B.D. at Oxford anno 1523, created abbot 1526, and hanged at Tyburn Jan. 1537. As he suffered in company with persons concerned in the insurrection in Yorkshire, called the pilgrimage of grace, wherein, among other things, a restoration of monasteries was insisted on, it is likely he was concerned in that affair.

Martin Luther speaking of the monasteries, says, "the reformation will cause the downfall of all monastic institutions; and similar abominations, which, under the mask of godliness, have been only intent on accumulating wealth; it must be considered that these lands are the result of universal robbery. It could be wished that monasteries had never existed; but since they do exist, it is best to let them decay, or accelerate their fall. In order to place the true christian doctrine on a permanent and profitable foundation, so that the inward, no less than the outward man, may feel the beneficial effects of liberty of conscience, it would be necessary to establish schools upon a rational plan."

A modern writer, in defending the monastic institutions, thus observes: "The evil that men do lives after them, the good is often interred with their bones." How truly have the long ages of opprobrium been heaped on the heads of the "idle and voluptuous clergy" proved the truth of the poet's adage! It is clear that in the then state of the world, their institutions were well adapted, and powerful instruments of good. Let the works of their own hands speak for them. The temples reared to God were the means of improving the capabilities and enlarging the minds of men. Those splendid structures which show the purity of design, the grandeur of conception, and the amazing skill with which every detail was executed, are monuments of men filled with high imaginings, endowed with refined tastes, and really devoted to the adorning of their country, and improving the condition of their countrymen. The monks always had the good taste to build their monasteries in a neighbourhood remarkable for beauty, and buried in the thickest foliage from the stranger's eye, but opening on wide lawn ground, and commanding long vistas in the immediate distance;—the church tower looking over tree-tops to rock or mountain, which might warn of coming danger; even the domestic buildings were seated with a sunward aspect; the grounds were laid out in gardens, and the forest cleared so as to make the alternate copse and pasture, is always an object of the deepest interest to those who have the qualities of contemplation, who love retirement, and who "look through nature up to nature's God."

Where is the record of one man who sought instruction of these monks and it was denied him? Whose soldiers were earlier in the field in defence of their country? What sages sat more worthily in council for the honour and prosperity of England than the soldiers and the sages of the church? Where were lands tilled as theirs were? Where were the arts of peace encouraged, and the labouring hind and herd protected as they were on the lands of the church? Where are the hospitium for the traveller, the maison-dieu for the afflicted, the spital for the lame and the cripple, and the lazar for the sick or plague-stricken? Is the daily dole delivered at the gates of the abbey to the neighbouring poor? Is there a place of prayer at all times open for the devout

and the sorrow-stricken? May the peasant take his penny to the abbey and bring away seven flaggons of home-brewed beer for it? Are tithes less rigorously exacted by the lay impropiator\* of the present day, as in the days of the monks? Are the burgesses of towns and the freemen of the dale free as they were before the reformation, from poor rates, or other private taxes? The cup of reviling has been poured from many sources; but one ingredient—knowledge—has been wanting, or the bitter draught would have been sweetened. The men who establish soup kitchens for the relief of hunger and poverty, give clothes and blankets for the comfort of the aged and infirm, endow almshouses for the deserving poor, and erect hospitals and dispensaries for the cure of sickness, and the removal of those infirmities which flesh is heir to, such men are the active, useful, avowed monks of the present day. If then, the moral culture, the corporeal comfort, and the political dignity of the mass of the people be not cared for by those who enjoy that property which was left distinctly for their use, than they were in the days of the children of "darkness, ignorance, and superstition," titles we too often hear the monks branded with, surely, it is time to enquire, how the good of the old system might be restored and engrafted on the good of the present system, while the evils of both were rigidly uprooted.

In toiling through books and manuscripts, not in expectation, but with a bare hope of discovering a few facts respecting manners in the olden time, the mind glooms on the supposition that stores of information perished with the destruction of the religious houses in the reign of Henry VIII. He who "neither spared man in his rage, nor women in his lust," spared not the literary collections in the libraries of the church. For though it appears that Henry directed a

commission to Leland, the antiquary, to search for and preserve such works belonging to the dissolved monasteries and colleges, as might rescue remarkable English events and occurrences from oblivion, and though Leland acquainted Henry, that he had "conserved many good authors the which otherwise had been lyke to have perished, to no small incommode of good letters; of the which," he tells him, "part remayne in the most magnificent lybraries of your royal palaces; part also remayne in my custodie;" yet he expressly recites, that one of his purposes was to expel "the crafty coloured doctryne of a rowt of Romaine bysshoppes;" which too plainly indicates that he "conserved" but little concerning ancient customs. Strype who praises Henry's commissioners to Leland, afterwards breaks out, saying, "But great pity it was, and a most irreparable loss, that notwithstanding this provision, most of the ancient manuscript histories and writings of learned British and Saxon authors were lost."

Libraries were sold by mercenary men for any thing they could get, in that confusion and devastation of religious houses. Bale, the antiquary, makes mention of a merchant that bought two noble libraries about these times for forty shillings; the books whereof served him for no other use but for waste paper; and that he had been ten years consuming them, and yet there remained still store enough for as many years more. Vast quantities and numbers of these books, banished with the monks and friars from their monasteries, were conveyed away and carried beyond seas to booksellers there, by whole ship loadings; and a great many more were used in shops and kitchens. It is not surprising, then, that so little remains from those immense collections, or rather it is wonderful that so much should have escaped the general devastation. Yet, in the economy of the Reformation, the ruthless deed was, perhaps, an essential preparation for the mighty knowledge that submerged the superstition of a thousand years.

In England, as the reformation gained ground, and the Bible was permitted to be publicly read, mysteries and moralities gradually yielded to the purer and more rational instruction of the scriptures themselves, as rendered accessible to the people by vernacular translations. The inconsistent Henry VIII. in the same law by which he forbade Tindall's English Bible, decreed that the kingdom should be purged and cleansed of all religious plays, interludes, rhymes, ballads, and songs, which are equally pestiferous and noysome to the peace of the church. We have already adverted to the *mysteries* and *moralities*, as illustrative of English manners and the state of knowledge among the people, and we cannot do better in the present place than take another example as marking the spirit of the age. The church of Rome now began to "totter to its fall," and the heads of the monastic establishments discovered that some sort of concession was necessary to enable them to retain their influence over the people. This was, to a cer-

\* It might have been reasonably expected that, at the time of the dissolution of monasteries, the clergy would have received back those revenues which, being originally vested in them for religious purposes, had been subsequently appropriated by the monks. When Henry VIII. suppressed the monasteries, their incomes from the great tithes were seized upon by his courtiers; and these persons and their successors, by inheritance or purchase, constitute the 759 lay impropiators, who make a traffic of these ecclesiastical concerns.

On the subject of tithes, the following information will be of service to the reader:—For the first 800 years of the Christian era, tithes were given purely as alms. We are informed by Saint Jerome, Bernard, Chrysostom, Wiclif, Hus, and many ancient historians, who uniformly agree, that tithes at first were purely voluntary.

In Burn's *Ecclesiastical Law* is the following:—About the year 794, Offa, King of Mercia, (the most potent of all the Saxon kings of his time in this island,) made a law, whereby he gave unto the church the tithes of all his kingdom; which was done to expiate for the death of Ethelbert, king of the East Angles, whom, in the year preceding, he had caused to be murdered.

Others say, that tithes on all the land in England were granted to the clergy, in 885, by Ethelwite, on his return from a pilgrimage to Rome.

St. Augustine says, "If we (the bishops) do possess any thing privately which doth suffice us, the tithes, or alms, are not ours, but the goods of the poor, whose stewards we are; except we do challenge to ourselves a property, by some damnable usurpation."

Eusebius says, "If thou dost possess any thing more than extreme necessity doth require, and do not help the needy, thou art a thief and a robber."

tain extent, effected by allowing them to take as food for their merriment even the very feasts and ceremonials of the church itself. The same thing had even been done at earlier periods, but never before to the same extent. In an illuminated manuscript in the Bodleian library there is a representation of the fool's dance from a religious mummerly held at Christmas. At the mummeries practised by the lower classes of the people on these occasions, such persons as could not procure masks rubbed their faces over with soot, or painted them; hence Sebastian Brant, in his *Skip of Fools*, alluding to this custom, says—

"The one hath a visor ugly set on his face,  
Another hath on a vile counterfeit vesture.  
Or painteth his visage with fume in such case,  
That what he is himself is scantily sure."

It appears that many abuses were committed under the sanction of these disguisements; and for this reason an ordinance was established, by which a man was liable to punishment who appeared in the streets of London with "a painted visage." In the third year of the reign of Henry VII. it was ordained that no persons should appear abroad like mummers, covering their faces with vizors, and in disguised apparel, under pain of imprisonment for three months. The act enforced the penalty of twenty shillings against such as kept vizors in their houses for the purpose of mumming.

1539. Having in the early part of this work treated on the apparent origin of the Newspaper, (see *Acta Diurna*, page 34) we have to encounter an immense interregnum, before we can again trace the object of our inquiry. About this period, the republic of Venice, being engaged in an important war with the Turks, the expedient was resorted to of supplying the inhabitants of the city with occasional accounts of the naval and military operations of the republic, by means of written sheets, which were deposited at particular places, where they were accessible to any one desirous of learning the news, upon the payment of a small piece of coin, called the *gazeta*, a name which, by degrees, was transferred to the newspaper itself.\* That jealous government, however, would not permit printed intelligence

to be circulated, and the Venetian *gazeta* continued to be distributed in manuscript, at a period when printing had been invented upwards of a century. The extension of this species of knowledge at length excited the jealousy of the holy see; for, in the time of pope Gregory XIII. written newspapers having appeared in several cities in Italy, they were formally prohibited in that country, by a papal bull issued by the above named pontiff.\*

In the Magliabecchian library at Florence, are to be seen thirty volumes of the *gazeta* from the commencement. In the frontispiece of each paper it is called the *gazeta* of such a year; and some of the most ancient printed newspapers may be seen, in good preservation, in the public libraries at Venice.

In Lodge's *Illustrations of History*, there is a letter from lord Burleigh, to lord Talbot, dated Oct. 23, 1580, in which he says, "I pray your lordship esteem my news as those which in Venice are fraught in the *gazeta*;" which would seem to imply a character of correctness to this ancient paper. Upon the application, however, of the art of printing to the Venetian *gazeta*, all Christendom became indebted to that republic for political information,—a circumstance which will excite the less surprise, when we call to mind, that the period under consideration, her ships traversed every known sea, and her maritime power gave her a prominent place in the list of nations.

1540. *Died*, ROBERT REDMAN, who styled himself "stationer and freeman of London." The dispute between Pinson and Redman has already been noticed, but whether it arose solely from the interference of Redman with the same line of printing as that which occupied Pinson, or whether his having assumed Pinson's device were not in a great part the cause of it, it is now difficult to determine. In 1523, Redman commenced his typographic labours by the following work entitled *Diuerſite de Courtz*, octavo. In 1527, he carried on business in the same house where Pinson had formerly resided, the George, in St. Clement's parish, without Temple-bar, which might perhaps contribute to strengthen their animosity; but to all the revellings of his antagonist, Redman's only answer, which he added to the colophons of some of his books, appears to have been in the words of St. Paul, "If God be with us, who is against us?" About 1532, it is imagined that Redman came into the possession of the whole of Pinson's business and stock in trade; but he had previously removed his sign into Fleet-street, since in a work dated April 18, 1527, he dates it "in parochia St. Dunstani." At the end of *Cocke's Art of Rhetorike*, 1532, is "imprinted at London in Flete-

\* In Biont's *Glossographia* (published at the early part of the seventeenth century), the word *Gazette* is defined as "a certain Venetian coin, scarce worth one farthing; also a bill of news, or short relation of the general occurrences of the time."

The title of their gazettes was perhaps derived from *gazetas*, a magpie or chatterer; or more probably from a farthing coin peculiar to the city of Venice, called *gazetta*, which was the common price of the newspapers. Another etymologist is for deriving it from the Latin *gaza*, which would colloquially lengthen into *gazetta*, and signify a little treasury of news. The Spanish derive it from the Latin *gaza*, and likewise their gazettes and our gazetteer for a writer of the gazette, and what is peculiar to themselves, gazettista, for a lover of the gazette.

Those who first wrote newspapers were called by the Italians *menanti*; because says Vossius, they intended commonly by these loose papers to spread about defamatory reflections, and were therefore prohibited in Italy by Gregory XIII. by a particular bull, under the name of *menantes*, from the Latin *minantes*, threatening. Manage, however, derives it from the Italian *menare*, which signifies to lead large, or spread afar.

\* Hugh Buoncompagni, pope Gregory XIII. established the Gregorian, or new style in the calendar, which commenced in Spain, Portugal, and part of Italy, on the 25th of October, accounting the 15th, 1582, (omitting ten days.) He died February 11th, 1585.

† Magliabecchi, the founder of this library, was born at Florence, in 1633: he was a great bibliopolist, and had a wonderful memory.

strete by Saint Dunstones Chyrche at the sign of the George, by me, &c. Redman's will is dated the 21st of October, 1540, and the probate on the 4th of November following, and is as follows:—"Robert Redman, stationer and freeman of London, in the parish of St. Dunstan's in the West, made his will the 21st day of October, 1540. His estates he left to his family. Forty pence to be given to the poor, at the day of his death. Elizabeth, his wife, to be sole executrix; William Peyghan, and his son-in-law, Henry Smith, to be overseers of his will; and they have for their labour at the discretion of his executrix.

The number of works printed by Redman amount to seventy-six, chiefly law books. In 1540, he printed the *Byble in Englyshe*, folio; and in the same year, the *Byble in five parts or volumes*, 16mo. And in 1538, an edition of the *English New Testament*, 4to. *Cum privilegio ad imprimendum solum*.

The principal device used by Redman, was that which we have given in the account of Pinson, page 247 *ante*, but somewhat improved. He had likewise an engraving of his sign.

ELIZABETH REDMAN the widow of the above, who afterwards carried on his typographical profession. Her maiden name was Pyckerynge, and she was subsequently married to Ralph Cholmondeley, Esq. It is not known how long she continued to print; seven works bear her imprint, and her devices were the same as those used by her husband.

Matthew Cramer, a printer at Antwerp, executed the *New Testament in English*, with cuts.

1540. The earliest specimen of copper-plate printing known in this country, is found in a work entitled the *Byrth of Mankynd*, otherwise called the *Woman's Book*, dedicated to queen Catharine, and printed by Thomas Raynald, in this year, with many small copper engravings, without name, in 4to.\*

THOMAS RAYNALD was an ingenious printer, who resided in the parish of St. Andrew, in the Waredrop or Wardrobe; but in 1549, he kept a shop at the sign of the Star, in St. Paul's church yard. It has been imagined that he was a physician, and the author of this celebrated work.

The art of engraving upon copper must have travelled so slowly into England, that Sir John Harrington, in his translation of *Ariosto*, published in the year 1591, informs us, "that he never but once saw pictures cut in brass for any book except his own, and that book was Mr. Broughton's treatise on the *Revelations*; the others which he had seen in England with pictures, were Livy, Gesner, Alciat's *Emblems*, and a book *de spectris*, in Latin; and in the English tongue, the *Chronicles*, the book of *Hawking*

and *Hunting*, and *Whitney's Emblems*; but that the figures in these books were cut in wood." He further observes, that according to Bagford the rolling-press was first brought into England by John Speed, who procured one from Antwerp in the year 1610; but that Sir John Harrington had seen pictures cut in brass in England in 1591; Bagford must have been mistaken, or some other machine must have been used for the same purpose. Prints are to be found almost as soon as printing; but it must be observed, they are only cut in wood; the printers themselves using such for their devices and rebuses. Caxton's *Golden Legend*, printed in 1473, has in the beginning a group of saints, and many other cuts dispersed through the body of the work. The second edition of the *Game of Chess*, and the *Death of Arthur*, has also cuts. Wynkyn de Worde, prefixed to the title of his *Statutes*, 1491, a plate with the king's arms, crests, &c. The same printer exhibited several books adorned with cuts. The subsequent printers continued to ornament their books with wooden cuts. One considerable work, published by John Rastell, called the *Pastyme of the People*, 1529, and Rastell's *Chronicle*, were distinguished by prints of such uncommon merit for that age, as to have been ascribed to that celebrated artist, Hans Holbein. Grafton's *Chronicle*, printed in 1569, contained many, as those of William I. Henry VIII. queen Elizabeth, and others which are recorded by Ames. But though portraits were used in books, Mr. Walpole, in his *Catalogue of Engravers*, observes, that he could find no trace of single prints being wrought off in that age. Those which composed part of the collection of Henry VIII. were probably the productions of foreign artists. The same author further says, that it was not till Raphael had formed Marc Antonio, that engraving placed itself by the side of painting.

1540. The *Oratorio* commenced with the priests of the Oratory, a brotherhood founded at Rome, in this year, by St. Philip Neri, who in order to draw youth to church, had hymns, psalms, and spiritual songs, or cantatas, sung either in chorus, or by a single favourite voice. These pieces were divided into two parts, the one performed before the sermon, and the other after it. Sacred stories, or events from scripture, written in verse, and by way of dialogue, were set to music, and the first part being performed, the sermon succeeded, which the people were induced to stay and hear, that they might be present at the performance of the second part. The subjects in early times were the good Samaritan, the Prodigal Son, Tobit with the angel, his father, and his wife, and similar histories, which by the excellence of the composition, the band of instruments, and the performance, brought the *Oratory* into great repute; and hence this species of musical drama obtained the general appellation of *Oratorio*. Dr. Burney says, it is certain that the modern tragedy is taken from the mysteries, and that the *Oratorio* is only a mystery, or morality in music.

\* T. F. Atkinson, Esq. of Oak House, near Manchester, has a curious old portrait in his possession with the following inscription underneath:—

IVSTVS LIPSIVS ICAIVS WAS THE GLORY OF HIS TIME,  
THE FIRST INVENTOR OF PRINTING AT THE ROTULING PRESS  
AGED 35.

R. Gaywood, fecit. P. Stent, exe. No date.

After diligent search no information can be obtained of this worthy, to whom we are so much indebted.

1540, Aug. 23, *Died*, William Budæus, or Bude, whom Erasmus calls the prodigy of France. He was born at Paris, in 1467, and having spent the principal part of his youth in dissipation, he began at the age of twenty-four to entertain a love of literature, and devoted himself to study with the greatest zeal, in particular to belles lettres, to mathematics, and to Greek. He was so indefatigable at his studies, that even on his wedding-day, he spent three hours at his books. In 1522, he published his excellent treatise *De Asse et Partibus ejus*, and *Commentaries on the Greek Language*, which not only acquired him great celebrity during his life, but immortalized his memory. By his influence the college royal was founded. He had seven sons and four daughters, educated by himself and wife. She was one of those rare women, who, whilst they sedulously attend to domestic concerns, take every opportunity to cultivate their own minds. The same genius, the same inclinations, and the same ardour for literature, eminently appeared in Budæus and his wife. He was sometimes so absorbed in his studies as even to neglect his own safety. Being one day informed, while in his library, that his house was on fire, he coolly said, "Tell my wife of it, for I never meddle with domestic affairs."

Budæus gave strict orders that his funeral should be celebrated without pomp. The observance of this charge gave rise to the following epigram, in the way of *questions and answers*, of Melin de St. Gelais:

- Q. Whom now extinct do countless followers mourn?  
A. Alas! Budæus, on the bier extended.  
Q. Why are the fane's knell-waiving sounds forborne?  
A. On wider flights his fair fame is suspended.  
Q. On torches why no liberal sums expended,  
As custom bids, and holy funeral rite?  
A. 'Tis by the solemn veil of night intended,  
To mark the extinction sad of Gallia's light.

After the decease of Budæus, the President de S. Andre bought his library, and added it to his own. It subsequently passed into the hands of the Jesuits of the college of Clermont, who retained it till they quitted France. Afterwards the books which they had collected or possessed were entirely dispersed.

It has been remarked by Mr. Wotton, that no age was so productive of learned women as the sixteenth century. Speaking of the flourishing condition of learning in that century, he says, it was so modish, that the fair sex seemed to believe that Greek and Latin added to their charms, and that Plato and Aristotle untranslated were frequent ornaments of their closets. "One would think by the effects, that it was a proper way of educating them, since there are no accounts in history of so many great women in any one age, as are to be found between the years fifteen and sixteen hundred." Erasmus, also, describing those times, says, "Scena rerum humanarum invertitur: monarchi literas nesciunt, et fœminæ libris indulgent.—Bellum est cum sexum ad prisca exempla sese postliminio recipere." "The scene of human affairs is changed: the monks

are ignorant of literature, and women are fond of books.—It is a pleasing circumstance, that the female sex should at length have recourse to the ancient examples." Learning was then held in such high estimation, that several great men were desirous that their daughters should be possessed of it, as well as their sons. The examples of King Henry VIII., in the education of the princesses Mary and Elizabeth, and of Sir Thomas More with regard to Mrs. Roper, are thought to have chiefly contributed to the introduction of this custom. There can be no doubt but that the conduct of persons so illustrious would have much effect upon the sentiments of our countrymen, and be productive of imitation. But, besides this, there was a concurrence of other causes; such as the recent origin of printing; the curiosity hence excited in the human mind; the admiration with which the ancient writers, so lately brought to light, were contemplated; and the distinguished honour that arose from literary pursuits. In short, the general spirit of the age nourished the principle of training up women in learning. Nor was a slight degree of learning deemed sufficient for them. They were rendered complete mistresses of the Greek and Latin, as well as of the modern languages. Their reading was not confined to the classic authors, but comprehended the fathers of the church. They could write Greek epistles, and compose Greek verses. It should be remembered, however, that the literature of the women of this period extended but to a few persons, and those only of considerable rank, the generality of the female sex being in a state of ignorance. There was by no means that diffusion of knowledge, that cultivation of mind, that taste for books, which we now meet with in almost every company of ladies. Neither do we find that the learned women of the sixteenth century produced such works as have continued to be read much by posterity. The most important production of any of Sir Anthony Cooke's daughters,\* was lady Bacon's translation of bishop Jewel's apology; and yet, who but an antiquary would now seek for it, or give himself the trouble of perusing it. If we come down to later times, we shall be sensible that, independently of poetry, the learned women of the sixteenth century have been far exceeded by the ingenious ladies of the present age, both in the general and extensive utility of their writings, and in the elegancies of composition. We pretend not to enumerate all those whose works will be read and admired by succeeding generations; but it is impossible, while we are treating on such a subject, to forget the names of Cockburn, Rowe, Montagu, Carter, Chapone, More, Barbauld, Seward, Burney, Williams, Smith, Baillie, Porter, Mitford, Martineau, Hall, Hemans, Howitt, Landon, Norton, Blessington,

\* To the life of sir Anthony Cooke, preceptor to King Edward VI., in the fourth volume of the *Biographia Britannica*, Dr. Kippis has added a note, in which he gives a particular account of sir Anthony's four celebrated daughters.

Gore, and many others who deserve to be held up to the admiration of succeeding generations, and justly form the boast of Great Britain.

There is a remark to be made concerning the difference between the literature of the ladies of the sixteenth century, and that of the women of more recent times. The former entered deeply into the study of the ancient languages, while the latter, beside acquiring a skill in the modern tongues, especially the French and the Italian, have paid their principal attention to the cultivation of general knowledge. Some of them, however, have been no small proficient in the learning of antiquity.

Another circumstance observable in the learned ladies of the sixteenth century is, that they were most eminent for their piety. Religion was deeply impressed upon their minds, and, agreeably to the fashion of the times, religion was almost the sole topic of their writings. It is pleasing to reflect, that the best female authors of the present day are not inferior to them in pious and virtuous principles and conduct.

1540. The spirit of persecution raged not only in England, but in almost every part of Christendom. One or two instances of the severity with which those were treated who sold or dispersed the scriptures in France, will exhibit in its true light the antipathy of superstition and intolerance, over truth, and a desire to obtain that knowledge which maketh us wise unto salvation.

In this year, William Hussen, an apothecary of Blois, was detected, in the city of Rouen, distributing small pamphlets, explaining the tenets of the reformed church, and exposing the Romish superstition. Being apprehended at Dieppe, doing the same, he was taken back to Rouen, where he confessed that he was both author and distributor of the books in question. This confession occasioned him his condemnation, when he was executed in the following manner. His tongue being cut out, his hands and feet were tied behind him, and he was drawn up by a pulley to a gibbet, and then let down into a fire kindled beneath, in which situation he called upon the Lord, and soon expired.

Another victim to bigotry, was a poor bookseller, who resided at Avignon, and obtained his livelihood by the sale of religious publications.

At Avignon, the bishop of Rieux gave a banquet to the bishop of Aix and other prelates engaged in the violent persecution of the inhabitants of Merindola, to which the most beautiful women were invited. After the banquet, the company amused themselves with dancing, playing at dice, and similar dissipative pleasures; after which the prelates, with each a female leaning on his arm, walked up and down the streets, to pass the time till supper, when seeing a man offering obscene pictures and songs to sale, they purchased the whole of his stock, "as many as a mule could well carry." With these they entertained their female companions, at the expense of all modesty and gravity, and with most indecent levity, explained the difficult sentences which occurred in them. In the

course of their walk through the city, they met with a bookseller, who had exhibited to sale certain *Latin* and *French Bibles*. The prelates, indignant at his heretical boldness, sternly asked him, "Darest thou be so bold to set out such merchandise as this to sell, in this town? Dost thou not know that such books are forbidden?" The bookseller answered, "Is not the Holy Bible as good as those goodly pictures which you have bought for these gentlewomen? Scarcely had he spoken the words, but the bishop of Aix said, "I renounce my part of paradise if this fellow be not a Lutheran. Let him be taken and examined." Immediately a company of ruffians, who attended on the prelates, began to cry out, "a Lutheran,—a Lutheran; to fire with him,—to the fire with him;" whilst one gave him a blow, and another pulled him by the hair, and a third plucked him by the beard, that the poor man was covered with blood before he reached the prison to which they were dragging him. The next day he was brought before the judges, and examined in the presence of the bishops. Being asked, "hast not thou set forth to sale the *Bible* and the *New Testament* in *French*," he honestly acknowledged "that he had done so." It was then demanded of him "whether he did not know and understand, that it was forbidden throughout all Christendom, to print or sell the Bible in any language except *Latin*?" To which he replied, "that he knew the contrary to be true; and that he had sold many *Bibles* in the French tongue, with the emperor's privilege in them, and many others printed at Lyons, and also *New Testaments* printed by the king's privilege;" and added, that "he knew no nation throughout all Christendom which had not the Holy Scriptures in their vulgar tongue." He then courageously addressed them in the following terms: "O ye inhabitants of Avignon, are you alone in all Christendom the men who despise and abhor the Testament of the heavenly Father? Will ye forbid and hinder that which Jesus Christ has commanded to be revealed and published? Do you not know that our Lord Jesus Christ gave power to his apostles to speak all manner of tongues, to the end that his holy gospel might be taught to all creatures in every language? And why do you not forbid those books and pictures, which are full of filthiness and abomination, and which stir up the people to whoredom and uncleanness, and provoke God's vengeance and great indignation against you? What greater blasphemy can there be, than to forbid God's most holy books which he ordained to instruct the ignorant, and to reduce and bring again into this way such as have gone astray? What cruelty is this, to take away from the poor simple souls their nourishment and sustenance! But, my lords, you shall give a heavy account, who call sweet sour, and so sweet, and who countenance abominable and detestable books and pictures, but reject that which is holy." The bishops, enraged at these words, violently exclaimed, "What need have you of any more examination? Let him

be sent straight to the fire, without any more words." But Liberius, the judge, and some others, who conceived that the prisoner had done nothing worthy of death, proposed the adoption of a milder sentence, wishing only to have him fined, and to acknowledge that the bishop of Aix and his companions were the true pastors of the church. This the pious and intrepid bookseller refused, saying, that "he could not do it with a good conscience, since he had an instance before his eyes, that these bishops countenanced filthy books and abominable pictures, rejecting and refusing the holy books of God, and he therefore judged them rather to be priests of Bacchus and Venus, than the true pastors of the church of Christ." On this refusal, the bookseller was immediately condemned to be burnt; and the dreadful sentence was executed the very same day. As a token of the cause of his condemnation, two Bibles were hung about his neck one of them before, and the other behind, and he was thus led to the place of execution. Such, however, was the firmness of his mind, and the Divine support which he experienced, that with undaunted earnestness he continued to exhort the multitude, as he passed on the way to execution, to read the Holy Scriptures; and with such effect, that several became inquirers after truth.

The death of the pious bookseller created considerable emotion among the inhabitants of the city, who not only murmured at the execution of the excellent man who had suffered, but were indignant at the contempt which the prelates had shown for the Scriptures. The bishops, therefore, in order to silence the people, caused a proclamation to be made by sound of trumpet, throughout the whole city and country, "that all those who had any books, in the French tongue, treating upon the Holy Scriptures, should bring them forth, and deliver them into the hands of the commissioners appointed for that purpose, under pain of death, if any such books should be afterwards found about them, or in any way in their possession."

Another who suffered for the sake of the Gospel was *Peter Chapot*, corrector of the press to a printer at Paris. Having been at Geneva, he returned into France, with a number of copies of the Scriptures. These he dispersed among those of his own persuasion. But his zeal cost him his life; for being apprehended, on the information of John Andre, a bookseller, he was condemned, and afterwards strangled and burnt. This fanatical catastrophe took place at Paris, in 1546.

Anthony Cornellius, a lawyer of this century, wrote a small tract, which was so effectually suppressed as a monster of atheism, that a copy is now only to be found in the hands of the curious. This author ridiculed the absurd and horrid doctrine of *infant damnation*, and was instantly decried as an atheist, and the printer prosecuted to his ruin.

1540, April. ANTHONY MARLER, or MARLER, was a haberdasher by company, as appears by a

patent granted him for printing a *folio bible*.<sup>\*</sup> In the king's library, in the British museum, at the beginning of a very fine illuminated folio bible, printed on vellum, are the following words wrote, "This book is presented unto your most excellent hyghness, by your loving, faithfull, and obedient subject, and dayly orator, Anthony Marler, of London, haberdasher." His desire to oblige by this present, might probably be a means of his having the grant. See Rymer's *Foedera*, vol. 14. page 745.

1540. RICHARD BANKS was employed, as Herbert states, as a printer and bookseller for about twenty years, in various parts of London, although few books of his are now extant. In this year he received a patent for printing the *epistles and gospels*. This, says Hansard, appears to me to have been a privilege much more comprehensive in its nature than those just before noticed, and to have some analogy to that sort of property now denominated *COPY-RIGHT*, of which we may perhaps deem it the first instance. It runs thus:—"Henry the eighth, by the grace of God, king of England and of France, defender of the Faith, lord of Ireland, and in earth supreme head immediately under Christ of the church of England. To all printers of books within this realm, and to all our letters bearing or seeing, greeting. Be it known to all, that we of our especial grace have given privilege unto our well-beloved subject Richard Banks, that no person within this realm shall print any manner of books whatsoever that our said subject shall first print within the space of seven years next ensuing the printing of every such book so by him printed, upon pain of forfeiture of the same. Wherefore we will and command, that you, nor one of you, do presume to print any of the said books during the time aforesaid; as you tender our pleasure and will, avoid the contrary." The device of Richard Banks, if he used any, is not known. Few of his books are now extant: the first is dated 1525, and the last 1542. In the whole he printed fifteen books.

1541, May 6. A proclamation ordeyned by the kynges majestie, with the advice of his honourable counsaile, for the byble of the largest and greatest volume, to be had in every church before All Saints' Day. Devised the VI. day of May, the xxxiii. yere of the kynges moste gracious reygne. *Excusum per Richardum Grafton et Eduardum Whitchurch. Cum privilegio ad imprimendum solum.* Notwithstanding the former injunctions, many parish churches were yet destitute of the Bible. At the same time, the king fixed the price of the Bibles at *ten shillings* unbound, and not above *twelve shillings* well bound and clasped; and charged all ordinaries to take care that the command of the king was executed. Upon this Bonner, bishop of London, set up *six* Bibles in certain convenient places of St. Paul's church, and affixed

<sup>\*</sup> Printed by Thomas Petit and Robert Redman, for Thomas Berthelet, the king's printer.

upon the pillars to which the Bibles were chained, an admonition to the readers, to "prepare themselves to be edified thereby; to make no exposition thereupon, but what was declared in the books themselves; not to read with noise in time of divine service, or dispute and contend with each other; nor such number to meet together as to make a multitude."

1540, July 28. Thomas Cromwell, earl of Essex, beheaded on Tower Hill: he was the chief promoter both of printing and dispersing the scriptures. The fall of Thomas Lord Cromwell, earl of Essex, who from an obscure station, being the son of a blacksmith, had risen to the highest offices in the kingdom, was severely felt by the friends of the Reformation. His attachment to the Bible is said to have been greatly confirmed by an intimate acquaintance with the New Testament, having committed the whole of Erasmus's Latin translation of it to memory, during a journey to Rome! He lost the favour of Henry by the active part he took in procuring the marriage of that monarch with Ann of Cleves, and was suddenly seized as he was sitting in council, and committed to the tower. He was attainted by an act of parliament without being heard.

Immediately after the death of Cromwell, Richard Grafton was imprisoned for six weeks in the Fleet, for printing Matthew's Bible, and the great Bible without notes; and before his release he was bound in a penalty of £100, that he should neither sell nor imprint, nor cause to be imprinted, any more Bibles until the king and clergy should agree upon a translation.

The enemies of the English translation of the Bible immediately advanced, that as Cromwell had been the king's chief adviser respecting it, it ought to be regarded as set forth by a traitor;—and complained of it as being exceedingly erroneous and heretical. They further represented to the king, that allowing the people the free use of the Scriptures was the means of increasing faction and party spirit, and was injurious to the peace of the nation; that the common people disputed and quarrelled about them in taverns and alehouses, calling one another papist and heretic; and that others read them in the churches in the time of divine service, and with so loud a voice as to disturb the congregation.\* They also censured the prefaces and notes which had accompanied several of the editions.

About this time a small volume was published, under the title of the *Institution of a Christian Man*, which was received by the convocation of the clergy, and made the infallible standard of orthodoxy. In this book the points of justification, faith, free-will, good works, and grace,

were discussed in a manner somewhat favourable to the opinions of the reformers. The sacraments, which a few years before were only allowed to be three, were now increased to seven. Throughout the whole of this book the king's caprice is very discernible; and the book is in reality to be regarded as his composition. For Henry, while he made his opinion a rule for the nation, would himself submit to no authority whatever; not even to any which he had formerly established. The same year the people had a farther instance of the king's inconsistency. He ordered a new book to be composed, called the *Erudition of a Christian Man*; and, without asking the consent of the convocation, he published, by his own authority, this new model of orthodoxy. This work was printed by Thomas Berthelet; and as the end, the price is thus noticed: ~~£~~ This booke bounde in paper boardes, or in claspes not to be sold above xvid.

But while the king was thus spreading his own books among the people, both he and his clergy seem to have been very much perplexed with regard to the scriptures; and the knowledge of the people seemed to be still more dangerous than their ignorance. The mass book also passed under the king's examination; but little alteration was yet made in it. Some doubtful or fictitious saints only were struck out; and the name of the pope was erased. The latter precaution was also used with every new book that was printed, and even every old one that was sold. The word pope was carefully omitted or blotted out; as if that precaution could abolish the term from the language, or cause the people to forget that such a person existed.

Concerning the acknowledged infallibility of the popes, it appears that Gregory VII. in council, decreed that the Church of Rome neither had erred and never should err. It was thus this prerogative of his holiness became received till 1313, when John XXII. abrogated decrees made by three popes, his predecessors, and declared, that what was done amiss by one pope or council might be corrected by another; and Gregory XI. 1370, in his will, deprecates, *si quid in catholica fide errasset*. The University of Vienna protested against it, calling it a contempt of God, and idolatry, if any one in matters of faith should appeal from a council to the pope: that is, from God, who presides in councils, to man. But the infallibility was at length established by Leo X., especially after Luther's opposition, because they despaired of defending their indulgencies, bulls, &c. by any other method.

Imagination cannot form a scene more terrific than when these men were in the height of power, and to serve their political purposes, hurled the thunders of their excommunications\* over a kingdom. It was a national distress not inferior to a plague or a famine.

\* After the death of Cromwell, Bonner immediately commenced a prosecution against many persons for reading the Bibles thus set up. One of those thus accused was a young man of the name of John Porter, who was sent to Newgate, where he was loaded with irons, and fastened by an iron collar round his neck to the wall of his dungeon. Still asserting his innocence, and refusing the admonitions of the bishop, in a few days afterwards he was found dead in his cell, not without strong suspicions of being murdered.

\* Excommunication is of Hindoo origin in the Parish cate, adopted by the Jews, and from them by the Christian churches. The Greek and Roman priests, and even the Druids, had similar punishments in aid of their religion.

Philip Augustus, desirous of divorcing Jugalburg, to unite himself to Agnes de Marania, the pope put his kingdom under an interdict. The churches were shut during the space of eight months; they said neither mass nor vespers; they did not marry; and even the offspring of the married, born at this unhappy period, were considered as illicit; and because the king would not sleep with his wife, it was not permitted to any of his subjects to sleep with theirs! In that year France was threatened with an extinction of the ordinary generation. A man under this curse of public penance was divested of all his functions, civil, military, and matrimonial; he was not allowed to dress his hair, to shave, to bathe, nor even change his linen; so that upon the whole this made a filthy penitent. The good King Robert incurred the censures of the church for having married his cousin. He was immediately abandoned. Two faithful domestics alone remained with him, and these always passed through the fire whatever he touched. In a word, the horror which an excommunication occasion was such, that a courtesan, with whom one Peletier had passed some moments, having learnt soon afterwards that he had been above six months an excommunicated person, fell into a panic, and with great difficulty recovered from her convulsions.

1541. In the churchwarden's accounts for the parish of Wye, in Kent, for this year, 12d. was paid for making a desk for the bible. Leland, (1538) speaking of Wressil castle, in Yorkshire, says, "one thing I likid exceedingly yn one of the towers, that was a study, caullid paradise; wher was a closet in the middle, of 8 squares latished abonte, and at the toppe of every square was a desk ledgid to set bookes on cofers withyn them, and these semid as joinid hard to the toppe of the closet; and yet by pulling, one or al wold cum downe briste highe in rabettes, and serve for desks to lay bookes on."

That books were frequently chained to desks, we have already given many instances, and, we further learn from Wood, who in speaking of Foulis's *History of the Plots and Conspiracies of our pretended Saints the Presbyterians*, says, "this book has been so pleasing to the royalists, that they have chained it to desks in public places for the vulgar to read."

Besides the bible, we find that Erasmus's *Paraphrase of the New Testament*, Fox's *Acts and Monuments*, commonly called the *Book of Martyrs*, *Lives of the Saints*, and many other books were in like manner secured. According to Nicolas's *Test. Vetusta*, Judge Littleton, who died in 1481, (see page 167 *ante*) bequeathed "to the abbot and convent of Hales Owen, in Shropshire, a book wherein is contained the *Constitutions Provincial* and *De Gestis Romanorum*, and other treatise therein, which I will be laid and bounded with an yron chayne in some convenient parte within the saide church, at my coets, so that al preests and others may see and rede it whanne it pleaseth them."

1541. The first poem that was written in

praise of printing was by Arnold de Bergel, a printer at Mentz, entitled *Encomion Chalcographie*, 4to. containing 454 heroic verses. He indicates Strasburg as the country of the first printer, Gutenberg; or, at least, as the place where he made his first attempts. He adds, that Gutenberg worked more successfully at Mentz, with the assistance of Faust, and especially of Schoeffer, who cut the matrices for them. In Marchaud's *Histoire de l'Imprimerie*, and also in Wolfius's *Monum. Typogr.* copies of this poem are to be found.

1541. James V. king of Scotland, grants to Thomas Davidson, printer, his especial license for printing the "new actis and constitutionis of parliament maid be the rycht excelent prince, James the fyfth king of Scotis, 1540."

*The copy of the kingis grace licence and privilege, grantit to Thomas Davidson prentar, for imprinting of his graciis actis of parliament.*

JAMES be the grace of God, king of Scottis: to all and sindry, quhom it efferis. Forsamekill as it is ordanit be ws, be an act maid in plane parliament, that all our actis maid be wa be publist outhrow al our realme; and that nane our shereiffis, stewardis, ballies, prouest, and baillies of oure burrowis, suld pretend ignorance throw misknawing thairrof, that our clerk of registry and counsel, suld mak ane autentik copie of ur sik actis as concernis the commonn weil of obrealme, and extract the samin under his subscription manuale, to be imprintit be quhat prentar it sall pleis him to cheis; providing alwayis, that the said prentar sall have our special licence thairto, as in the said act at mair lenth is contentit: ¶ We heirfore hes geryn, and grantit, and be the tencour heirof gevis and grantis our licence, to oure louit Thomas Davidson, imprintar in our burgh of Edinburgh, to imprint oure saidis actis of parliament, and dischargis all vthir imprintaris, and writtaris, within yis our realme, or without, present, and for to cum, to imprint, or writ our saidis actis of parliament, or bring thaym hame to be sauld, for the space of sex zenis nixt to cum, eftir the dait of thir presentis, under the pane of confiscatioun of the samyn. Subscrivt with our hand, and gevin under our priue seill, at Edinburgh, the sext day of December, and of our regne the xxix. zear.

¶ God keip the king.

From the date of this licence it appears, that these acts of parliament were not printed till towards the end of the year 1541, and that though the frontispiece has 1540 in it, yet it would seem, that that figure had been cut before, and designed for other books, that should be printed by Davidson in that form afterwards.

1541. *The history and croniklis of Scotland*, with the cosmography and dyscription thairrof. Compilt be the noble clerk, maister Hector Boece, channan of Aberdene. Translatit laity in our vulgar and common langage be maister Johne Bellenden, archedene of Murray, and channan of Ross; at the command of the richt hie, richt, excellent, and noble prince James the

5th. of that name, king of Scottis; and imprentit in Edinburgh be me Thomas Davidsoo, prenter to the kingis nobyll grace, dwelling forens the Frere wynd. *Cum privilegio. Folio.*

1542, Henry VIII. proceeded to the further dissolution of colleges, hospitals, and other foundations of that nature. The courtiers had been dealing with the presidents and governors to make a surrender of their revenues to the king, and they had succeeded with eight. But there was an obstacle to their farther progress; it had been provided by the local statutes of most of these foundations, that no president nor any fellows could make such a deed without the unanimous consent of all the fellows. This consent would not have been easily obtained, but the parliament proceeded in a summary manner to annul all these statutes; by which means the revenues of those houses were exposed to the rapacity of the king and his favourites.

Henry also extorted from most of the bishops a surrender of their chapter-lands; by which means he pillaged the sees of Canterbury, York, and London, and enriched his favourites with their spoils. He engaged the parliament to mitigate the penalties of the six articles, as far as regarded the marriage of priests, who were now only subjected to a forfeiture of goods, chattels, and lands during life; he was still equally bent on maintaining a rigid purity in speculative principles. He had appointed a commission consisting of two archbishops and several bishops of both provinces, together with a considerable number of doctors of divinity; and by virtue of his ecclesiastical supremacy, he had charged them to choose a religion for his people. Before the commissioners, however, had made any progress in this arduous undertaking, the parliament had passed a law by which they ratified all the tenets which these divines should establish with the king's consent. One clause of this statute seems to favour somewhat of the spirit of liberty. It was enacted, that the ecclesiastical commissioners should establish nothing repugnant to the laws and statutes of the realm.

The same year the king suppressed the only religious order remaining in England, namely, the knights of St. John of Jerusalem. This order had by their valour done great service to Christendom. During the general surrender of the religious houses in England, they had obstinately refused to give up their revenues to the king; and Henry, who would endure no society that professed obedience to the pope, was obliged to have recourse to parliament for the dissolution of this order. Their revenues were large, and formed a considerable addition to the acquisitions which the king had already made.

1542, *January*. In the privy purse expenses of the princes Mary,\* is the following item:—"Was paid to the boke bynder for a boke limmed w<sup>t</sup> golde, the same geuen to the p<sup>r</sup>nce g<sup>r</sup>oe for a newyer' gifte, xxix s. In the following year, to

my ladye Herbert, a boke cou'ed wt silv' and gylt, vij s. vj d.; and in 1637, was paid for a claspe for a boke, vj s." And in the British Museum, among the royal manuscripts, is the *Old Testament, Hymns, Psalter, &c.*, formerly belonging to the princes after she became queen, bound in a truly regal style. It has thick boards covered with crimson velvet, richly embroidered with large flowers in coloured silks and gold twist. It is further embellished with gilt brass bosses and clasps, on the latter of which are engraved the arms of England.

1542. An act of parliament is passed in 1542, which declares that "It shall be felony to practise, or cause to be practised, conjuration, witchcraft, enchantment, or sorcery, to get money; or to consume any person in his body, members or goods, or to provoke any person to unlawful love; or for the despite of Christ, or lucre of money, to pull down any cross, or to declare where goods stolen be."

1542. ROBERT WYER, an early printer, who printed many books without dates. Palmer only mentions two with a date. By the number of his works, rather than by the beauty of his typography, this printer has attained to a considerable eminence in the history of the early professors of the art; yet there are comparatively few of his productions to which his name is attached. Generally speaking, his types were exceedingly rude; but some of his pieces, which are printed in the foreign secretary Gothic, and large lower case Gothic, are at least of creditable execution. His residence was at the sign of St. John the Evangelist, which he also used for a device in St. Martin's parish, in the rents of the bishop of Norwich, near Charing Cross. His employers seem to have been William Marshall, Henry Dabbe, Richard Bankes, and John Goughe. The number of his productions amount to 63. His first book is dated 1527, and the last 1542. In the whole he printed sixty-three books, and the greater portion without dates. Among them is the following title:—*Here begynneth a lyttle boke named the scole house, wherein every man man rede a goodly prayer of the condycions of women.* Within the leaf there is a border of naked women. This satire upon women is in seven line verse; the author, has shewed himself very severe on the ladies in these words:—

Trewly some men there be  
That lyue alwayes in great horroure,  
And say it goth by destenye:  
To hang or wed, both hath one houre,  
And whether it be, I am well sure,  
Hangynge is better, of the twayne,  
Sooner done, and shorter payne.

Another of Wyer's books has the following title:—*Here begynneth a lytell boke, that speaketh of purgatorye: and what purgatory is, and of the pains that be therein, and which soules do abyde therein till they be purged of synne, and which abide not there. And for what synnes a soul goeth to hell, and of the helpe that soules in purgatory may haue of their friends that be on lyne: and what pardon awayeth to mannes soule.* In verse, cum privilegio regali, 4to.

\* Edited by F. Madden, Esq., F.S.A. 8vo. London: Pickering.

The devices of Robert Wyer consisted of two or three representations of St. John the divine writing, attended by an eagle holding his ink-horn; he is seated upon a small rock in the middle of the sea, intending to represent the isle of Patmos. A high rock rises above him on the left hand, and on the right appears a city and mountains. The whole is contained in a parallelogram, surrounded by double lines, of which the outside one is the thickest, and below the cut is the following mark.

Another of his devices was the same in shape and subject, but much smaller. The saint crowned with a nimbus of glory, is there placed beneath a tree, and the eagle, with his wings spread, stands upon the broken trunk of another. The back-ground is richly stellated with clouds, rosettes, and stars cut in white. He sometimes, though rarely, used a representation of the saint without the eagle. The following is given from Horne's *Introduction to Bibliography*.

1542. A French version of the *Psalms*, or rather part of them, by Clement Marot,\* claims particular notice, not so much from its intrinsic excellence, as for its being the foundation of the psalmody adopted in the ritual of the reformed churches; and in its popular reception, strongly exhibiting the levity of the French court and nation.

The history of psalm-singing is a portion of the history of the Reformation,—of that great religious revolution which separated for ever, into two unequal divisions, the sects of Christianity. It seems, however, that this project was adopted accidentally, and was certainly promoted by the fine natural genius of Marot. In this attempt, he was assisted by Francis Melin de S. Gelay, and other learned men, from whose *prose*

translations he formed his poetical version. His first edition contained only thirty psalms, and was dedicated to his patron Francis I. He afterwards proceeded in his work till he had completed twenty more psalms, which, with the former thirty, and eight more, the translators of which were never well known, were printed at Rome, in 1542, by the command of pope Paul III.\* by Theodore Drust, a German, printer in ordinary to his holiness. This edition was printed in the gothic character, in octavo.

In one of the psalms Marot breaks forth with that enthusiasm, which perhaps at first conveyed to the sullen fancy of the austere Calvin the project he so successfully adopted, and whose influence we are still witnessing.

Thrice happy they who shall behold,  
And listen in that age of gold!  
As by the plough the labourer strays,  
And carman mid the public ways,  
And tradesman in his shop shall swell  
Their voice in Psalm or Canticle,  
Singing to solace toil; again,  
From woods shall come a sweeter strain,  
Shepherd and shepherdess shall vie  
In many a tender Psalmody;  
And the Creator's name prolong  
As rock and stream return their song!  
Begin then, ladies fair! begin  
The age renew'd that knows no sin!  
And with light heart, that wants no wing,  
Sing! from this holy song-book, sing!

This "holy song-book" for the harpsichord or the voice, was a gay novelty, and no book was ever more eagerly received by all classes than Marot's "Psalms." In the fervour of that day, they sold faster than the printers could take them off their presses; but as they were understood to be songs, and yet were not accompanied by music, every one set them to favourite tunes, commonly those of popular ballads. Each of the royal family, and every nobleman, chose a psalm or a song, which expressed his own personal feelings, adapted to his own tune. The Dauphin, afterwards Henry II., a great hunter, when he went to the chase, was singing *Ainsi qu'on vit le cerf bruyre*. "Like as the hart desireth the water-brooks." There is a curious portrait of the mistress of Henry II. the famous Diane de Poitiers, on which is inscribed this *verse of the psalm*. Diane, however, in the first stage of their mutual attachment, took *Du fond de ma pensée*, or, "from the depth of my heart." The queen's favourite was, *Ne veuilles pas, O sire*; that is, "Rebuke me not in thy indignation," which she sang to a fashionable jig. Anthony, king of Navarre, sung *Revenge moy, pren le querelle*; or, "Stand up, O Lord, to revenge my quarrel," to the air of a dance of Poitou.

Beside the poetical dedication to Francis I. Marot accompanied his version with an epistle

\* Paul III. died November 10th, 1549.

† In the curious tract already referred to, the following quotation is remarkable; the scene the fancy of Marot pictured to him, had anciently occurred. St. Jerome, in his seventeenth Epistle to Marcellus, thus describes it: "In Christian villages little else is to be heard but Psalms; for which way soever you turn yourself, either you have the ploughman at his plough singing *Hallelujahs*, the weary brewer refreshing himself with a psalm, or the vine-dresser chanting forth somewhat of David's."

\* Clement Marot was a native of Cahors, near Toulouse, and born in 1496. He was the favourite poet of France, and in the early part of his life was eminent for his pastorals, ballads, fables, elegies, epigrams, and poetical translations. He was accused before the lieutenant-criminel, on account of his irreligion, and the licentiousness of his writings, and imprisoned at Chartres. In this state of confinement he wrote his *Enfer*, a severe and pointed satire, and revised the celebrated *Roman de la Rose*. He was kept in prison till after the deliverance of Francis I. from Spain, in 1546, when he obtained his liberty; but was afterwards obliged to flee to Geneva, from whence he passed to Turin, where he died in indigence, in 1544.

*Aux Dames de France*, "to the ladies of France," in which he declares, in a spirit of religious gallantry, that his design is to add to the happiness of his fair readers, by substituting divine hymns in the place of amorous ditties, to inspire their susceptible hearts with a passion in which there is no torment, to banish that fickle and fantastic deity *Cupid* from the world, and to fill their apartments with the praises of the true Jehovah.

The universal reception of Marot's psalms induced Theodore Baza to conclude the collection, and, according to Bayle, ten thousand copies were immediately dispersed. But these had the advantage of being set to music, for we are told they were "admirably fitted to the violin and other musical instruments." And who was the man who had thus adroitly taken hold of the public feeling to give it this strong direction? It was the ascetic Calvin, by the advice it is said of Luther,\* who, from the depth of his closet at Geneva, had engaged the finest musical composers, who were, no doubt, warmed by the zeal of propagating his faith, to form these simple and beautiful airs to assist the psalm-singers, and in which all persons might join, and which would serve as a substitute for the antiphonal chanting of the Romish services, in the public service of God. At first this was not discovered, and catholics as well as Hugonots† were solacing themselves on all occasions with this new music. But when Calvin appointed these psalms, as set to music by Guillaume de Franc and others, to be sung at his meeting, and Marot's formed an appendix to the catechism of Geneva, this put an end to all psalm-singing for the catholics. Marot himself was forced to fly to Geneva from the fulminations of the Sorbonne, and psalm-singing became an open declaration of what the French called *Lutheranism*, when it became with the reformed a regular part of their religious discipline. At length, the repeated remonstrances of the clergy to the king, against Marot's version, caused it to be prohibited. But the prohibition only increased the desire to possess the psalms

thus interdicted, and the printers reaped a rich harvest by the endeavour to suppress them. The psalms exhilarated their social assemblies, were commonly heard in the streets, and accompanied the labour of the artificer, so that the weavers of Flanders became noted for their skill in the science of psalmody. "This infectious frenzy of psalm-singing," as Warton describes it, under the Calvinistic preachers had rapidly propagated itself through Germany as well as France. "It was admirably calculated," says D'Israeli, "to kindle the flame of fanaticism, and frequently served as the trumpet of rebellion." A variety of popular insurrections in the most flourishing cities of the Low Countries, were excited and supported by these energetic hymns of Geneva; and fomented the fury which defaced many of the most beautiful and venerable churches of Flanders and the Low Countries.

Psalm-singing reached England at that critical moment it had first embraced the reformation; and here its domestic history was parallel with its foreign, except, perhaps, in the splendour of its success.—See Sternhold and Hopkins, under the year 1550.

1542. The noble institution by which the reign of Francis I. was distinguished, was the *Imprimerie Royale*, together with its appendage of *Typographi Regii*; an arrangement then altogether novel and unprecedented in the annals of literature. It reflects therefore, the greater honour upon the memory of Francis I. as having apparently emanated from his own enlightened views. No expedient could have been better calculated to give effect to those liberal intentions, with which the Royal College had been instituted. By an apparatus which nothing less than princely munificence could have provided, the admirable productions of classic genius and taste, and those of Greece more particularly, were now to be given to the public with a beauty of characters, and an exquisiteness of technical perfection, to which no typographer had ever yet attained, or even in imagination aspired.

The king's first care being to procure a new cast of types, worthy of the institution which he meditated, Claude Garamond, one of the ablest French artists of the time, was enjoined to engrave the poinçons, and prepare the matrices or moulds, for three (or more) descriptions or sizes of Greek: an undertaking which was accomplished with distinguished skill and success: and these were the same, which have subsequently been so well known by the denomination of *Characteres Regii*. They were followed, in pro-

\* Luther's fondness for music is universally known, and the Old Hundredth Psalm tune, which tradition attributes to him, remains a singular instance of his skill in that science. Luther notes in his *Table Book* that he invited the singers and musicians to supper, December 17, 1538. "I always loved music, whoso has skill in this art the same is of good kind, fitted for all things." The following testimony of Handel to the excellence of Luther's musical compositions, is given in a letter of Sir John Fringlie's to J. D. Michaelis, dated 1769. "The late Mr. Handel, that celebrated musician, told me, that Luther had even composed the music of the Psalms and Hymns, and which he said was so excellent in its way, that he had often borrowed from it, and inserted whole passages in his oratorios."

† Hugo Aubriet, who by merit had gained the esteem of Charles V. of France, was invested with the dignity of provost of Paris, when Charles VI. mounted the throne: by the care he took for the maintenance of good order, and suppressing the scandalous enormities of the members of the university of Paris, they caused him to be committed by false witnesses as an heretic, and would have burnt alive if the court had not interfered. He was, however, imprisoned, and compelled publicly to ask pardon on his knees. It is from this worthy provost of Paris that the Protestants have been called Hugonots, to signify the enemies of the church.

\* Francis I. died in the month of March, 1547, in the fifty-third year of his age, and had reigned thirty-two years and eight months. It has been remarked that Charles V. and Francis I. were opposite in every thing. The first began with being rigorous against Protestants, and ended with being indulgent; the second, originally indulgent, thought it expedient at length to become severe; for upon one occasion his zeal became so animate as to draw from him that memorable declaration, "that even if one of his own members were infected with heresy, he would not hesitate to cut it off."

cess of time, by others for the Latin, both Roman and Italic, together with the necessary implements for their multiplication. M. Fournier, speaking of the Fonderie du Roy as that of the greatest antiquity, which was in his time existing in France, says it is the same which thus had its commencement under the auspices of Francis.

M. de Guignes, in his historical Essay on the Greek characters of Francis I., pronounces them to have been engraven with so much elegance, that it would be difficult, even at present, to form any equally beautiful. That king, he says, (after Belon,) who loved the arts, and was an especial admirer of grand designs, having collected around him able artists of every description, had projected a colossal statue of Hercules, of the height of fifty-two feet and upwards; which from having had cast, he was prevented by death only: the model still remaining at Paris. But M. de Guignes thinks that Francis erected a monument, if less gigantic, yet better calculated to record his name to posterity, in these beautiful Greek characters, which he caused to be engraved by Garamond.

By the liberal provision of such an apparatus, and by the discreet example which Francis I. gave, in the selection and appointment of the most learned and skilful typographers, as his *Impressores Regii*, the honours annexed to the office, and the remunerations assigned them, he made every reasonable provision both for the technical beauty of the intended impressions, and the accuracy of their texts; anxious that they should in all respects prove worthy of his Royal Institution. With the like view, as we have already intimated, and as many writers attest, he omitted no possible means of procuring authentic manuscripts of classical, and more especially of Greek authors: having caused them to be diligently sought after in Greece and Asia; purchased such as could be bought, and procured transcripts of others. The distinction of "*Regius in Grecis Typographus*" was first conferred on Neobarbas, who received in consideration of it an annual stipend of one hundred gold crowns. But, as during the short official career of that printer the arrangements of the king's typographical establishment were not completed, we shall find that the advantage of appearing with genuine brilliance in that character was reserved for Robert Stephens.

To have laid the groundwork of the College Royal, says M. Gaillard, is sufficient to establish the glory of Francis I. though he had not the happiness of perfecting his extensive projects. He left indeed, much for his successors to perform; but had the credit of indicating to them what they ought to do. Francis having constructed no edifices for the royal professors, they gave their lectures in different colleges of the university. Henry II. assigned them those de Treguier and de Cambray. Henry IV. a little before his decease, had resolved upon proceeding with the intended erections, and named commissioners for that purpose. Louis XIII. in 1610, executed the design; and it is to him,

says the same author, that we owe the edifice, which now exists under the name of the College Royal.

The services rendered by Francis I. to the cause of elegant literature may here be added. Several times during his reign he confirmed and renewed the privileges of the *imprimeurs* and *libraires* of the university. He instituted the office of superintendent of the royal library of Fontainebleau; which, under the title of *Bibliothecaire du Roy*, was first conferred upon Budæus, and afterwards upon Peter du Chastel. He is said to have taken a remarkable pleasure in inspecting the process of printing; and one day having visited the office of Robert Stephens, who happened to be employed in correcting a proof, would not interrupt him; but waited till he had finished.

In this reign also, the taste seems to have been introduced for gilding the edges of the leaves of works of importance, *BINDING* them *ORNAMENTALLY*, and sometimes distinguishing them with the arms, devices, mottoes, and names of the owners. Sometimes they were covered with velvet, as may be seen from specimens still remaining in the cabinets of the curious. As the impressions of books were now greatly multiplied, and private individuals began to form libraries, the practice became also prevalent of decorating books, by gilding them in compartments, on the outside of the bindings, *upon the side*. On the same part were formed scrolls or labels, on which were inscribed the titles of the respective works, because they were then arranged upon the sides, and not after the manner usual at present. One of the most zealous collectors of those times was Monsieur Grollier, who had been honoured with the character of ambassador of Francis I. at the court of Rome. He was at great expense in binding and gilding. His library consisted of about three thousand volumes, variously decorated and ornamented, and inscribed—

"JOANNIS GROLLIERI ET AMICORUM,"

showing that he wished his books to be used by his friends as well as himself. Of the care his friends took of them, the still perfect state of the bindings amply testifies. Grollier is considered to be the introducer of lettering pieces between the bands of the back.

His library was preserved at the Hotel de Vic. till the year 1675, and then publicly sold. Many of Grollier's books are to be found in Mr. Cracherode's collection in the British Museum. They are well and firmly bound. A succession of plain lines, forming divers compartments, executed with much precision, and attention to proportion, appears nearly on the whole.

Cotemporary with Grollier, another patron of the name of Maioli, is well known, from his bindings, though of his personal history no traces are left. The decoration of his bindings also consists of designs in compartments, and bear his name like Grollier's, thus—

THO MAIOLI ET AMICORUM.

An Italian edition of the *Psalms of David*, 4to. 1534, once belonging to the library of Maioli, formerly possessed by Mr. Singer, bears on the reverse side of the binding the following motto—

"INIMICI. MEI. MEA. MICHI. NON. ME. MICHI."

Amongst the German binders, the name of Gaspar Ritter stands as one of the most skilful artists of the sixteenth century.

1543. An act of parliament, allowing of the bible in the vulgar tongue, in this year, copied out of the registers of parliament, in the publick archives at Edinburgh.\*

Anent the writting gevin in be Robert lord Maxwell, in presens of my lord governour, and lordis of Articklis, to be avisit by thaim, giff the samin be resonable, or not, of the quhilk the tenor followis.

It is statute, and ordanit, that it sal be lefull to all our sovirane ladyis leiges to have the haly writ, to wit, the New Testament and the Auld, in the vulgar tounge, in Inglis, and Scottis, of an gude and trew translation, and that thai sal incur na crimes for the heffing and reding of the samen; providing always, that na man dispute, or hald opinizeonis under the pains conteinit in the actis of parliament. The lordis of Articklis beand avisit with the said writting, finds the samin resonable, and therefore thinkis that the samin may be usit amongis all the leiges of this realme of our vulgar tounge, of an gude, trew, and just translation, because there was na law shewn, nor product in the contrar; and that none of our soverane ladyis legiges incur ony crimes for baifing, or reding of the samin, in form as said is, nor sall be accusit therefore in time coming; and that na personis dispnte, argou, or hold oppunioonis of the samin, under the saidis painis conteinit in the foresaidis actis of parliament.

1543, Jan. 28. Richard Grafton was in so much favour, that we find in Rymer's *Fædera* a patent of the above date, as follows:—

"*Pro divino servicio, de libris imprimendis.*"

"Henry the Eighth, by the grace of God, &c. to all pryncers of bookes within this our realme, and to all other our officers, ministers, and subjectes, theis our letters patents hering or seing, greting. We do you to understand, that wherein tymes past it hath been usually accustomed, that theis bookes of divine service, that is to sey, the masse book, the grail, the antyphoner, the himptuall, the portaus, and the prymer, both in Latyn and in Englyshe of Sarum use, for the province of Canterbury, have been prynced by strangers in other, and strange countreys, partly to the

great losse and hynderance of our subjectes, who both have the sufficient arte, feate, and treade of Printing, and by imprinting such bookes myght profitably, and to thuse of the commonwelthe, be set on worke, and partly to the setting forth the byshopp of Rome's usurped auctoritie, and keeping the same in contynuall memorye, contrary to the decrees, statutes, and lawes of this our realme; and considering also the greute expences and provision of so necessary workes as these arre, and yet the same not a little chargeable, and to thintent that hereafter we woll have theym more perfectly, and faithfully, and truly done, to the high honour of Almighty God, and safeguard and quyetnes of our subjects, which dayly doo, and further may incur no small parill and daunger of our injunctions, proclamacions, and lawes, by reason of not obliterating the seid name, and usurped power and authoritie of the byshopp of Rome as aforesaid: We of our grace especiall have graunted, and geven privilege to our wel-biloved subjects, Richard Grafton and Edward Whitchurch, citezeins of London, that they and their assignes, and noon other person nor persons, saving the said Richard and Edward, and their assignes only, have libertie to prynte the bookes abovesaid, and every sorte and sortes of theym, whiche either at this present daye arre in use, or hereafter shall be auctorised for Sarum use, within any parte of oure realmes or domynions, and that no manor of person shall prynte within the space of seven yerres next ensuing the printing of every such booke or bookes, so printed by our seid subjects, and either of them; or of their assignes or any of them. Wherefore we woll and commaunde you, that ye noon of you presume to prynte any of the bookes, that our seid subjects shall have prynced as aforesaid, during the seid time of this our privilege, upon payne to forfeyte to our use all suche bookes, whersoever the same shall be founde, emprynted contrary to the tenour and fourme of this our privilege. In witness whereof, &c. witness our self at Westminster the twenty-eight daye of Januarye."

1543, January 22. In the parliament which met on this day, the Romish party prevailed, and passed an act, by which it was enacted, "That all manner of bokes of the olde and newe Testament, in English, of this (Tyndall's) translation, should be by authoritie of this act clearly and utterly abolished, extinguished, and forbydden to be kept and used in this realme, or els where, in anie the king's dominions." But other translations were allowed to remain in force, provided the annotations or preambles were "cut or blotted out, so as not to be perceived or read;" which was also enjoined under pain of forfeiting *forty shillings* for every Bible retaining them. It was likewise enacted, "That no manner of person or persons, after the first day of October then next ensuing, should take upon him, or them, to read, openly to other, in any church, or open assembly, within any of the king's dominions, the Bible, or any part of Scripture, in English, unless he was so appointed thereunto

\* This act is not printed among the laws and acts of parliament collected by Sir Thomas Murry from the public records of Scotland, and printed at Edinburgh, 1699. James Watson, in his preface to his *History of Printing*, 1715, says that the first English Bible was in folio, and was not printed till 1576. But, says Ames, what prevented the Scotch having the scripture in the vulgar toogoe, after the granting of this license, cannot be explained.

by the king, or by anie ordinarie. Provided, that the chaucecllor of England, capitaines of the warres, the king's justices, the recorders of anie citie, borough, or town, the speaker of the parliament, &c. which heretofore have been accustomed to declare or teache any good, vertuous, or godly exhortations in anie assemblies, might use anie part of the Bible or Holie Scripture as they had been wont; and that every nobleman and gentleman being a householder, might read, or cause to be read, by any of his familie servants in his house, orchardes, or garden, and to his own familie, anie text of the Bible or New Testament; and also every merchant-man, being a householder; and any other persons other than women, prentices, &c. might read to themselves privately the Bible, &c. But no women, except noblewomen and gentlewomen, who might read to themselves alone, and not to others, any texts of the Bible, &c., nor artificers, prentices, journeymen, serving-men of the degrees of women or under, husbandmen, nor labourers were to read the Bible or New Testament in English to himself or to any other, privately or openly."

1543, Feb. 14. The parliament of Paris caused the *Institutiones Religionis Christiane* of Calvin, to be publicly burned at Paris. "Nothing," observes M. Gaillard, "can be more impressive, or, to use his term, 'plus séduisant,' than the preface to this work. It seems dictated by reason and humanity, and is composed after the model of the ancient apologies for the Christian religion. 'Nothing,' he adds, 'can be more ingenious than the use which he makes of the fathers of the church, whether to represent their doctrines as favourable to the reformation, or to vindicate that measure, where it seems to differ from them. This book of *Institutes* has method, uniformity, and integrity; it forms a complete body of doctrine; which is a quality perhaps not to be found either in any single treatise of Luther, or in the entire collection of his writings. Calvin's *Institutes*, therefore, is one of those works in which the reformation exults, not without reason." The *Institutes* have far more elegance and moderation than those of Luther; though Calvin did not assuredly, on all occasions, avoid that grossness of epithet and coarseness of expression, which are so conspicuous in the polemical writings of the age.

1543. JOHN GOWGHE, GOUGH, or GOUGH, printer, stationer, and author, resided at the sign of the Mermaid, in Cheapside, next to St. Paul's gate, and most probably at the same house as that which had been occupied by John Rastell, see page 262 *ante*, and afterwards he removed to Lombard-street. Many of his books were printed for him by John Meylor and John Nicholson. In the *Primer of Salisbury Use*, 1535, and the *Almanack for xx years*, beginning 1533, the press work and punctuation are peculiar to himself. In 1536, he printed the *Door of the Holy Scrip-*

*ture*, with a preface by the printer, the king's licence to Gough, to print any book translated or compiled by him. This book was prohibited among many others by the king's injunctions. In 1543, he printed the *christian state of matrimony*, in twelves, and which was his last work.

1543. This year was remarkable for the commencement and earliest effort of Greek typography in England, if we may rely on the testimony of Fabricius; who furnishes the following notice and remark: "Jo. Chrysostomi Homilium II. (altera in 1 Cor. x. altera in 1 Thess. iv.) nunc primum in lucem editæ. Gr. Lat. interprete Joanne Cheko Cantabrigiensi. Lond. Ap. Reg. Wolfium, 1543. Hic est primus liber Græcis typis in Anglia excusus." *Vid. Maittaire, Ann. Typogr.* vol. III. p. 345. (*Bbli. Græca*, vol. VIII. p. 570.)

1543, May. Nicholas Copernicus published his *System of Astronomy* at Nuremberg, but died a few hours after it was finished. The British museum contains the original work of Copernicus on the Solar System. It is a small folio of 196 pages, full of diagrams, and well printed, at the expense of Cardinal Schonbergus.

John Field printed in London a forgotten work on the *Copernican System*, in 1556 thirteen years after.

1544. JOHN BYDDELL, a printer and bookseller, whose name is sometimes spelled Bedel, also the appellation of Salisbury; but why he did so, neither Ames nor Herbert could ascertain. We learn from the colophon of the *Lyf of Hyldebrande*, printed in 1533, 8vo. that it was *imprinted by Wynkyn de Worde, for John Byddell, otherwise Salisbury*. He appears to have sold books as early as 1535, if not previous; and his first residence was at the sign of our Lady of Pity, next on Flete Bridge, but he afterwards removed to the Sun near the Conduit, perhaps the old dwelling of Wynkyn de Worde, for whom he was an executor, and which is more particularly noticed at pages 258, 259, *ante*.

The first *English Primer* reprinted was executed by John Byddell, and entitled *A goodly prymer in English, newly corrected and printed, with certeyn godly meditacions and prayers added to the same, very necessarie and profitable for all them that ryght assuredly understand not the Latine and Greke tongues*. From Sir Thomas More's answer to Tindall, we may infer the translator of this book to be George Joy: "The psalter was translated by George Joy the preste, that is wedded now, and I here say the *Prymer* to, wherein the seven psalms be set in without the lateny, lest folke shold pray to sayntes. And the dirige is left out cleane, lest a man myght happe to pray theron for his father's soule.

The title is over the king and queen's arms crowned quarterly, and on the back of the leaf the picture of Time, Truth, and Hypocrisy curiously done.

At the end of the book this following patent: Be it known to all men by these presents, that it is prohibited by our sovereigne lorde the king, by his letters patentes, to all printers, booksellers,

\* Cowel says, *gomen* were officers in the king's family in the middle place betwixt *serjeants* and *groomes*.

and merchants, and all others, that (without licence had of hym, that at his costes and charges printed this boke) they in no wyse do print, or utter in sale, or otherwyse at any place with in our sayd soverayne lordes dominions, this booke entituled and called Thenglyshe primer, at any tyme within six years next after the prynting hereof, as they will answer at theyr perylles, and auoyde the penalties mentioned in the privilege hereunto graunted.

Imprinted at London in Flete strete by John Byddell, dwellyng at the signe of the Sonne, next to the Conduit, for Wylliam Marshall, the yere of our lorde God m.d.xxxv. the xvi. daye of June.

The principal device used by Byddell was an upright parallelogram, contained within one line, and consisting of a large ill-drawn figure, representing his sign of the Lady of Pity. She is delineated as an angel with out-stretched wings, holding two elegant horns or torches; of which that on the left hand is pouring out a kind of stream terminating in drops, and is marked on the side with the word Gratia, in a thick black letter: the right hand horn contains fire, and is lettered Charitas. The lower ends of these horns are rested by the angel upon two rude heater shields, surrounded by double lines, on the left one of which is engraven ¶ Johan Byddell, Printer, in small broken black letters, and on the other is the annexed mark. Round the head of the figure are the words, "Virtus beates efficit," engraven in rude black characters.

Byddell also used the above mark, cut on a black ground; and he sometimes added to his large device the letters I and B, enclosed by flourishings, with his name at full length placed at the bottom of the whole.

1544, In this year was printed at Basil a very rare work, with this title:—*Pasquillorum, Tomi Duo*.<sup>\*</sup> The first containing the verse, and the second the prose pasquinades or satires which

<sup>\*</sup> The statue of Pasquin (from whence the word *pasquinade*) and that of Marforio are placed in Rome in two different quarters. Marforio is an ancient statue of Mars found in the Forum, which the people have corrupted into Marforio. Pasquin is a marble statue, greatly mutilated, supposed to be the figure of a gladiator. To one or other of these statues, during the concealment of the night, are affixed those satires or lampoons which the authors wish should be dispersed about Rome without any danger to themselves. These satirical statues are placed at opposite ends of the town, so that there is always sufficient time to make Marforio reply to the gibes and jeers of Pasquin in walking from one to the other.

had appeared at Rome; and formed an ingenious substitute for publishing to the world, what no Roman newspaper would dare to print.

Misson, in his *Travels in Italy*, gives the following account of the origin of the name of the statue of *Pasquin*:—"A satirical tailor, who lived at Rome, and whose name was *Pasquin*, amused himself by severe raillery, liberally bestowed on those who passed by his shop; which in time became the lounge of the news-mongers. The tailor had precisely the talents to head a regiment of satirical wits; and had he had time to *publish*, he would have been the Peter Pindar of his day; but his genius seemed to have been satisfied to rest crosslegged on his shopboard. When any lampoons or amusing bon-mots were current at Rome, they were usually called, from his shop, *pasquinades*. After his death this statue of an ancient gladiator was found upon the pavement of his shop. It was soon set up, and by universal consent was inscribed with his name; and they still attempt to raise him from the dead, and keep the caustic tailor alive, in the marble gladiator of wit.

Sallengre, in his *Literary Memoirs*, has given an account of this work; his own copy had formerly belonged to Daniel Heinsius, who, in two verses written in his hand, describes its rarity and the price it cost.

Roma meos fratres igni dedit, unica Phoenix  
Vivo, aureisque venio centum Heinsio.

"Rome gave my brothers to the flames, but I survive, a solitary Phoenix. Heinsius bought me for a hundred golden ducats."

This collection contains a great number of pieces, composed at different times, against the popes, cardinals, &c. They are not indeed materials for the historian, and they must be taken with grains of allowance. We find sarcastic epigrams on Leo X., and the infamous Lucretia of Alexander VI.: even the corrupt Romans of the day were capable of expressing themselves with the utmost freedom. Of Alexander VI. we have an apology for his conduct.

Vendit Alexander claves, altaria, Christum,  
Emerat ille prius, vendere jure potest.

"Alexander *sells* the keys, the altars, and Christ; As he *bought* them first, he had a right to *sell* them."

On Lucretia:—

Hoc tumulo dormit Lucretia nomine, sed re  
Thais; Alexandri filia, sponsa, nurus!

"Beneath this stone sleeps Lucretia by name, but by nature Thais, the daughter, the wife, and the daughter-in-law of Alexander!"

Leo X. was a frequent butt for the arrows of Pasquin:—

Sacra sub extrema, ad forte requiritis, hora  
Cur Leo non potuit emere; vendiderat.

"Do you ask why Leo did not take the sacrament on his death-bed? How could he? He had sold it!"

Many of these satirical touches depend on puns. Urban VII. one of the *Barberini* family, pillaged the padtheon of brass to make cannon, on which occasion Pasquin was made to say:—

Quod non fecerunt Barbari Rome, fecit Barberini.

On Clement VII. whose death was said to be occasioned by the prescriptions of his physician:

Curtius occidit Clementem, Curtius auro  
Donandus, per quem publica parva salus.

"Dr. Curtius has killed the pope by his remedies: he ought to be remunerated as a man who has cured the state."

The following, on Paul III. are singular conceptions:—

Papa Meduseum caput est, coma turba Nepotum:  
Perseu crede caput, Cæsaries peritit.

"The pope is the head of Medusa; the horrid tresses are his nephews! Perseus, cut off the head, and then we shall be rid of these serpent-locks."

Another is sarcastic—

Ut cænerent data multa olim sunt Vatiibus æra:  
Ut taceam, quantum to mihi, Paule, dabis?  
"Heretofore money was given to poets that they might star: how much will you give me, Paul, to be silent?"

This collection contains, among other classes, passages from the Scriptures which have been applied to the court of Rome; to different nations and persons; and one of "*Sortes Virgilianæ per Pasquillum collectæ*,"—passages from Virgil frequently happily applied; and those who are curious in the history of those times will find this portion interesting.\*

1544. *The Statutes in English*, from the time of Henry III. to 19 Hen. VII. inclusive, chronologically arranged, were printed by Thomas Berthelet, in one volume, folio. It has not been satisfactorily ascertained that any complete chronological series of the statutes from Magna Charta to 1 Edward III. either in the original language or in English, or that any translation of the statutes from 1 Henry III. to 1 Henry VII. had been published previous to this edition by Berthelet; though some books refer to editions by Berthelet, as those of 1529 and 1540.

The *Great Boke of Statutes* commences with 1 Edward III. and ends with 34 Henry VIII. It is entirely in English. It appears to have been published at different times, in separate parts; and it seems not unlikely that the earliest part may have been published previous to the English edition printed by Berthelet in this year, from which it differs in some particulars: of such difference one instance is the insertion of cap. 7, of 2 Richard II. stat. 1, respecting pope Urban, which is omitted in Berthelet 1543, and subsequent editions; from whence it seems probable that this part was published before the severe prohibitions, by the acts of Henry VII. against acknowledging the papal power.

It is to be observed, that the several printed editions differ materially from each other in the text of the statutes previous to Henry VIII. The copy of the statute of Gloucester, 6 Edward I. in the editions printed by Tottell in 1556 and 1587, and by Lord Coke in his *Second Institute*, varies most materially, not only from that in the earlier printed editions by Poynton in 1508 and 1514, and by Berthelet in 1531, but also from that in the edition by Marshe in 1556,

the same year in which the first edition by Tottell was printed. The copy of this statute, printed by Hawkins from the Statute Roll in the Tower, varies as well from those printed by Tottell and Lord Coke, as from those by Poynton, Berthelet, and Marshe. This instance is mentioned, as the statute of Gloucester is the earliest now existing on any statute roll.

It is moreover ascertained, that no one complete printed translation of all the statutes previous to Henry VII. exists: some which are omitted from Berthelet, 1543, and the other early editions, including that called Rastall's, 1618, and in editions since published: on the contrary, several parts of the statutes from 1 Edward III. to 1 Henry VII., translations of which are inserted in Berthelet, Rastall, and other editions, are omitted, and merely abridgments thereof given, in Pulton and others.

To show the progress of the English language, we cannot do better than give a brief abstract of the *Original Language of the Charters and Statutes*.\* The language of the charters and statutes, from the period of the earliest now given, 1 Henry I. to the beginning of the reign of Henry VII. is Latin or French. From that time it has been uniformly English. The petitions, or bills, on which the statutes were founded, began to be generally in English early in the reign of Henry VI.

The charter, dated 5 November, 25 Edward I. is in French; as is also the duplicate of that charter, dated 10 October, and entered on the Statute Roll 25 Edward I.

The statutes of Henry III. are almost entirely in Latin. Some legislative matters, not in the printed collections, are entered on the Patent Rolls in French.

The statutes of Edward I. are indiscriminately in Latin or French; though the former language is most prevalent.

The statutes of Edward II. are, like those of Edward I. indiscriminately in Latin or French; but the latter language prevails more than in the statutes of Edward I.

The statutes of Edward III. are more generally in French than those of any preceding king; yet some few are in Latin. The statutes of Richard II. are almost universally in French; those of the sixth and eighth years are in Latin. The statutes of Henry IV. with the exception of chapter 15 of the statute 2 Henry IV. which is in Latin, are entirely in French; as are those of Henry V. with the exception of the short statutes 5 and 7 Henry V. which appear in Latin.

The earliest instance recorded of the use of the English language in any parliamentary proceeding, is in 36 Edward III. The style of the roll of that year is in French as usual, but it is expressly stated that the causes of summoning the parliament were declared "en Anglois." A petition from the "Folke of the Mercerye of

\* For the introduction of these *Satires* into England, see the year 1589, *post*.

\* From the Report of the Commissioners for executing the measures recommended by the House of Commons for examining and collecting the Public Records.

London," in the tenth year of the same reign, is in English; and it appears also, that in the 17th year the Earl of Arundel asked pardon of the Duke of Lancaster by the award of the king and lords, in their presence in parliament, in a form of English words. The cession and renunciation of the crown by Richard II. is stated to have been read before the estates of the realm and the people in Westminster Hall, first in Latin and afterwards in English, but it is entered on the Parliament Roll only in Latin. And the challenge of the crown by Henry IV. with his thanks after the allowance of his title, in the same assembly, are recorded in English; which is termed his maternal tongue. So also is the speech of sir William Thirnyng, the Chief Justice of the Common Pleas, to the late king Richard, announcing to him the sentence of his deposition, and the yielding up, on the part of the people, of their fealty and allegiance. In the sixth year of the reign of Henry IV. an English answer is given in a petition of the Commons, touching a proposed resumption of certain grants of the crown, to the intent the king might the better live of his own. The English language afterwards appears occasionally, through the reigns of Henry IV. and V.

In the first and second and subsequent years of the reign of Henry VI. the petitions or bills, and in many cases the answers also, on which the statutes were afterwards framed, are found frequently in English; but the statutes are entered on the roll in French or Latin. From the 23d year of Henry VI. these petitions or bills are almost universally in English, as is also sometimes the form of the royal assent; but the statute continued to be enrolled in French or Latin. Sometimes Latin and French are used in the same statute, as in 8 Henry VI.; 27 Henry VI.; and 39 Henry VI. The last statute wholly in Latin on Record is 33 Henry VI.; the last portion of any statute in Latin is 39 Henry VI.

The statutes of Edward IV. are entirely in French. The statutes of Richard III. are in many manuscripts in French, in a complete statute form; and they were so printed in his reign and that of his successor. In the earlier English editions a translation was inserted, in the same form; but in several editions, since 1618, they have been printed in English, in a different form, agreeing, so far as relates to the acts printed, with the enrolments in Chancery at the chapel of the Rolls. The petitions and bills in parliament, during these two reigns, are all in English.

The statutes of Henry VII. have always, it is believed, been published in English; but there are manuscripts containing the statutes of the first two parliaments, in his first and third year, in French. From the fourth year to the end of his reign, and from thence to the present time, they are universally in English.\*

\* These charters are preserved in the following places: Canterbury, Durham, Lincoln, Exeter, and Rochester cathedrals; British Museum; Bodleian Library, and Oriel college, Oxford; and Trinity college, Dublin.

1544. John Day and William Seres printed the *Pentateuch*, "after the copy that the king's majesty had set forth," in small twelves.

1544. Roger Ascham mentions one Garrett, "our books-bynder," as being resident at Cambridge about this time. Speaking of Erasmus's custom of riding on horseback for exercise, after "he had been sore at his booke," says, "as Garrett, our booke-bynder, verry oft told me."—Ascham's *English Works*.

1545. JOHN MALER, MAYLER, MAYLEST, or MAYLART, for he spelt his name all these ways, was a grocer by company, a scholar and a zealous man for the reformation, since in 1541, he was questioned for railing at the mass, for calling the sacrament of the altar "a baken God," and for saying that the mass was called miss beyond the seas, because that all is amiss in it. His residence was at the White Bear, in Botolph lane, near Billingsgate.

In 1539, the *primer in English*, done by John Hilsey, bishop of Rochester; at the end is said to be printed by Maylart. In 1540, *Novum Testamentum Latinum*, printed in a very good Roman letter, with parallel places in the margin, and the leaves numbered, some Hebrew and Greek printed in the notes. After the errata, a short admonition, and concludes, *Londini, anno 1540, mense Februario. Excudebat Johannes Mayler. Cum privilegio ad imprimendum solum*. At the end, a small tract on *justification, free-will, and predestination*, in ten leaves. Quarto.

Mayler printed in the whole twenty-one different works, but none after 1545.

1545. Grafton printed king Henry VIIIth's *Primer*, both in Latin and English, with red and black ink, for which he had a patent which is inserted at the end of the work, expressed in much the same term words as the one of 1543.

1545. Henry VIII. permitted his subjects to use an English *Form of public Prayer*, and ordered one to be printed for their use, entitled *The Primer*, said to be "set furth by the king's majestie and his clergie, to be taught, lerned, and red; and none other to be used thorowout all his dominions." This little book, important as the forerunner of the performance of the public religious service in English, contains, beside prayers, several *psalms*, with *lessons* and *anthems* taken out of the old and new testament, verbally translated from the Latin vulgate.\*

1546. Henry VIII. issued another proclamation, by which he prohibited having or reading Wiclif's, Tindall's, and Coverdale's *Bibles*, or using any other than what was allowed by parliament, under the "penalty of imprisonment and corporal punishment, at the king's pleasure, and being fined by his majesty, or four of his council." Thus the reading of the scriptures was more strictly forbidden than before; and the people were as uncertain as ever what the trans-

\* A copy of this rare book was once the property of sir John Clark, priest of the chapel at Leedsbridge, and founder of the school, as appears from the following autograph note in the Kalendar:—"This day I begao the schole at Leeds, July 4. 1563."

lation was which was permitted by the act. Strype says this prohibition was occasioned by the contests and clamorous disputes of the people with each other; but a much more probable and powerful cause is assigned by archbishop Newcome, who attributes it to the increasing strength of the Romish party, and the abatement of the king's warmth for the reformation.—*Lewis*.

One of the most eminent scholars of his time was sir Thomas Elyot, author of several small treatises, but his principal work is entitled the *Governor*, which, says Strype, was designed to instruct men, especially great men, in good morals, and to reprove their vices. Henry VIII. employed him in several embassies, and also read and much liked sir Thomas Elyot's treatises, and was particularly pleased with his endeavours to improve and enrich the English language. It was observed by his majesty that throughout the book there was no new term made by him of a Latin or French word, and that no sentence was hereby rendered dark or hard to be understood. Sir Thomas also translated several Greek works, and published *Dictionarium Latino Angli.* which was the first *Latin and English Dictionary* in this country. Sir Thomas Elyot died March 26, 1546.

1546. The following singular note was made by a poor shepherd, in a square leaf of Polydore Virgil's works on the *Invention of Things*, printed by Richard Grafton, 1546: "At Oxforde the yere 1546, browt down to Seynburie by John Darbye, price 14d. When I kepe Mr. Letmyer's shype I bout thys boke when the testament was oberagatyn that shepherdis might not red hit, I prey God amende that blyndness. Wryt by Robert Wyllyams keppung shepe uppon Seynburie hill, 1546."

1546, Feb. 18. Died, Martin Luther. There is probably no period more interesting, or important, in history, than that which is comprised in the biography of this celebrated man. The exactions of the Roman pontiffs, the lax discipline of the Popish clergy, the distresses of the people, and that spirit of scriptural and general investigation which the revival of learning and the invention of the art of printing had created and confirmed, all tended to aid the progress of that important religious reformation.

He was born at Isleben, in Saxony, on November 10th, 1483, of humble and obscure descent, and he distinguished himself at a very early period by his energy and abilities. He studied first at Magdeburg, from whence he was removed to Eysenach, a city of Thuringia, where he remained four years, and entered in 1501, the University of Erfurt, going through the usual courses of logic and philosophy.

At the age of twenty, he took his master's degree, and, in compliance with the wishes of his parents, commenced the study of the civil law. His mind, very much alive to serious sentiments, was, however, considerably affected and influenced by the death of a companion by his side, in a violent thunder-storm; and this, together with his naturally ardent and enthusi-

astic temper, induced him to retire into a convent of Augustinian friars; nor could the entreaties of his friends divert him from a course, which he thought his duty to his Creator compelled him to adopt. Here he soon acquired great reputation for his learning, and having also found a copy of the Bible in the library of his monastery, he gave up all other pursuits for its constant study.

The great progress which he made, and the name for sanctity and erudition which he had acquired, induced Frederic, elector of Saxony, to appoint him professor of philosophy and theology, in the university he had just founded at Wittemberg on the Elbe. In this manner he was employed, when the sale of popish indulgences was published in 1517.

Pope Leo X., impoverished by his extravagance, had recourse to this method of raising money, to continue the building of St. Peter's at Rome, which had been commenced by Julius II. Albert, elector of Metz, and archbishop of Magdeburg, was commissioned to effect their sale in Germany; and he employed for this purpose John Tetzel, a Dominican friar of dissolute habits, who boasted he had power to sell pardons, "not only for sins past, but for sins to come." The warm and impetuous temper of Luther, excited by the circumstance, did not suffer him to continue a silent spectator of this delusion. From the church of Wittemberg he denounced it; examined the arguments on which it rested, and pointed out the danger of relying for salvation upon any other means than those appointed in the revealed word of the Almighty. He was immediately opposed in these opinions by Tetzel Eckius, a celebrated divine of Augsburg, and Prierias, a Dominican friar.\*

The tardy attention of Leo X. was now attracted to the dispute; he cited Luther to appear at Rome, but finally granted his request to be heard in his defence, against the accusation of heresy, before cardinal Cajetan, at Augsburg, in October, 1520. The result may be imagined. Men rarely admit the wisdom of an inferior, or the truth of tenets opposed to selfish interest. Cajetan debated but to condemn, and desired Luther to retract the errors he had preached. Assured of the elector's protection, and confident in his cause, Luther immediately refused; nor could the remonstrance of Cajetan, nor the subsequent present of the "*Consecrated Rose*"

\* Luther, an Augustine monk, exclaimed against the Romish church, because the exclusive privilege of selling indulgences was not confined to his order. Had the Dominicans enjoyed no share of this spiritual license to swindle, 'tis more than probable that the reformation of religion would not have taken place so soon.—*Zimmermen*.

"Who is Luther?" said Margaret, governess of the Netherlands. The courtiers around her replied, "He is an illiterate monk." "Is he so?" said she, "I am glad to hear it; then do you, gentlemen, who are not illiterate, who are both learned and numerous, do you, I charge you, write against this illiterate monk. This is all you have to do. The business is easy; for the world will surely pay more regard to a great many scholars, and great men, as you are, than to one poor illiterate monk." *Dr. Knorr*.

to Frederick, by the pope, induce him to withhold that support, which, both from policy and principle, he had bestowed.

Luther's doctrines were now rapidly spread, and readily received: many great and learned men assisted and encouraged him; among others, Philip Melancthon, Andrew Carolostadius: and even Erasmus secretly admitted the truth of the tenets he had not the courage to avow. In 1519, Luther had disputed again with John Eckius, at Leipsic, upon the doctrines of purgatory, indulgences, and the supremacy of the pope; a dispute which tended but to confirm each party in their views, and increase the interest of the controversy. Such was the progress he had made, when Charles V. arrived in Germany, who, finding it politically expedient to secure the pope's friendship, determined on the sacrifice of Luther. A safe pass, under the emperor's hand, was consequently forwarded to him, with a summons to appear at the diet held at Worms, in March, 1521. With this Luther did not hesitate to comply: in vain his friends urged the danger; reminded him of the fate of John Huss, condemned, under similar circumstances, to death. Superior to the fears of a similar result, he boldly declared, "I am lawfully called to appear in that city, and thither I will go in the name of the Lord, though as many devils as there are tiles on the houses were there combined against me." At his appearance on this memorable occasion, princes and personages of the highest rank treated him with every demonstration of respect. He replied with firmness to the charges, and refused to retract, even although many of the diet were willing to proceed to his immediate execution.

A few days after he left the city, Charles issued his edict, excommunicating him as an heretic, and requiring all persons to concur in seizing his person as soon as the term of his safe conduct was expired. Luther was, however, saved by the elector, who contrived his seizure and detention in the strong castle of Wartburg, where he remained in security till the spirit of persecution was in some degree subdued. In this interval, he replied to the university of Paris, and Henry VIII. of England, who had received the title of *Defender of the Faith*, for his answer to Luther's work, *Of the Captivity of Babylon*. After leaving his retreat in 1522, he completed his translation of the Bible in the German tongue, which was read with wonderful avidity by persons of all ranks, and, until the year 1524, he continued, by publications of every description, to undermine the power and examine the opinions, of the church of Rome.

For the purpose of engaging in the important labour of translation, he had previously devoted some time to the study of the Hebrew and the Greek. His skill in German is universally admitted. And with a view to extensive circulation among the lower orders, Luther took care that the form of the edition should be cheap, and by publishing them separately, sold them at a very low rate.

Different opinions have been formed of the style and correctness of Luther's version of the Bible, and it might be expected that his adversaries would endeavour to depreciate his version yet even the papal historian, Maimbourg, acknowledges, that Luther's translations of the Old and New Testament were remarkably elegant, and in general so much approved, that they were read by almost every body throughout Germany.\* Women of the first distinction studied them with indefatigable diligence, and steadily defended the tenets of the reformer against bishops, monks, and catholic doctors. The dialect of the translation became the literary language of the most elegant German writers, and has maintained its superiority to the present time. The chief coadjutors of Luther in the laborious task of translation, and in the subsequent revisions, were Philip Melancthon, John Bugenhagen or Pomeranus, Justus Jonas, Casper Cruciger, and Matthew Aurogallus. The corrector of the press was George Rorar, or Rorarius.

Clement VII.† who had now succeeded to Adrian and Leo in the papal chair, with a view of avoiding the demands of the Germans for a general council to terminate the dispute, in-

\* Concerning the execution of these editions of Luther's Bibles, Mr. Dibdin in his *Biblioth. Spencer*, vol. i. p. 62, observes, "they are a magnificent production; being printed in a large type, with jet black ink, upon stout excellent vellum, and having a great number of capital initials, spiritedly cut in wood, which contain historical or other subjects, treated of in each chapter. They have signatures, catch-words, and paginary numbers." Respecting the edition of 1539, Luther wrote to his friend Forstner on the 26th September of that year, in which he thus expresses his desire: "I hope the Anhalt noblemen and gentlemen will take care that there be at least three copies of this edition printed upon vellum; for each of which it may be necessary to procure 246 calves skins, formerly to be procured for 60 florins, but now indeed at four times that price."

An edition of Luther's German translation of the Bible, so far as had then appeared, including the whole, except the Prophets, was printed at Nuremberg, by Pypus, in 1524, folio. A copy of this early edition is in the magnificent library of Lord Spencer.

Of the later editions, that of 1641 was the one upon which Luther bestowed the greatest care in revising and correcting. It was printed in 2 vols. folio, and ornamented with wood-cuts. An unique copy upon vellum, of this edition, was purchased by George Hibbert, Esq., for £99 1s. 6d., at the sale of the rare collection of books of Jas. Edwards, Esq., of Manor House, Harrow on the Hill.

The king of Wurttemberg's library, at Stuttgart, contains many of the rarest editions of Luther's Bible, among which we notice the following in folio, viz., the New Testament, without date, but known to be the first edition of 1523; two editions of the Pentateuch, without date, said to be of the year 1529, the books of Job, Psalms, Proverbs, Ecclesiastes, and Song of Solomon, 1524; the Prophets, 1529; the first edition of the whole Bible, 1534; (the third part of the Old Testament wanting); several other of the rarest editions, viz., 1536, 1536, 1539, 1541, 1543, 1543, all printed at Wittenberg, by John (Hans) Luft. There are also in the same valuable collection, three editions of the Prophecy of Habakkuk, all dated 1526, 4to., but differing from each other in the translation; two of Jonah, of the same date, in 4to., differing from each other in the translation; one of Daniel, 1530, 4to.; and also Jonah and Habakkuk, 1535, 4to.; beside many other rare editions of the whole, or part of Luther's German translation of the Bible, printed during his life.

† Clement VII. died September 26th, 1524. The election of pope Clement VII., Julius de Medici, 1523, to the disappointment and deep resentment of Wolsey, was an event which led to and established our reformation.

structed cardinal Campeggio, an artful man, to appear as his nuncio at the diet of the empire, assembled at Nuremberg. Campeggio, while craftily condemning the vices of the inferior clergy, earnestly exhorted the diet, in a long discourse, to execute the former decree which had been passed relative to Luther; but his opinions were coldly received, and they separated without enjoining any additional severities against him or his party. In the year 1524, he renounced the monastic habit, and the year after married Catherine à Boria, a nun of noble family, who had abjured the vows in 1523, and whom he had intended to marry to Glacius, a minister of Ortamunden. This step led to the bitterest opposition, both from his opponents and supporters; certain, however, of the correct motives of his conduct, he bore their reproaches with his usual fortitude. She died December 27th, 1552. In the church of Torgua her tombstone is still to be seen, on which is her effigy of the natural size.

In 1546, Luther having gone to his native city of Isleben to settle a dissension among the Counts of Mansfeld, he was seized with inflammation in the stomach, which put an end to his life, in the sixty-third year of his age.

The following brief notices of Luther's learned coadjutors in the great work of translating the scriptures, may not prove unacceptable.

The amiable and learnedly profound Philip Melancthon was born at Bretten, a small town in the palatinate of the Rhine, in 1497, and died at Wittemberg, April 19, 1560. His works were collected by his son-in-law, Casper Peucer, and printed at Wittemberg in 1601, in 4 vols. folio.

John Bugenhagen was born in Pomerania June 24, 1485. He was the author of *Commentaries* on several parts of the *old and new testament*, and of some smaller works. He died April 20, 1559.

Justus Jonas, was the intimate friend of Erasmus, Luther, and Melancthon. He was born at Northausen, in Thuringia, June 5, 1493. He wrote *Annotations upon the Acts of the Apostles*, printed at Basil, 1525, 8vo.. He was also the author of a *Defence of the Marriage of Priests*, and several other tracts. He died October 9, 1555.

Casper Cruciger, whose extensive and multifarious learning rendered him the able advocate of the Lutheran doctrines, was a native of Leipsic, where he was born January 1, 1504. His incessant application and exertions probably hastened his end, since he died in 1548, when only in the forty-fifth year of his age.

Matthew Aurogallus, a native of Bohemia, was a divine of Wittemberg, eminent for his knowledge of the Latin, Greek, and Hebrew tongues. He died in 1543.

George Rorarius, or Rorarius, the learned corrector of the press at Wittemberg, born October 1, 1492, was a clergyman of the Lutheran church. He not only carefully guarded against typographical errors, in the editions which he superintended, but after the decease of Luther, added

several marginal notes. He also enlarged Caspar Cruciger's edition of Luther's *Exposition of St. Peter's epistle*, from discourses which he had heard delivered by Luther; and assisted in editing other works of the great reformer. On the removal of the public library from Wittemberg to Jena, he was appointed librarian. He died April 24, 1567, in the sixty-fifth year of his age. He had been amanuensis to Luther.

Luther was likewise occasionally assisted in his translation by John Forster, the author of a valuable *Hebrew Lexicon*, printed at Basil, in 1557, folio. Forster was born at Augsburg in 1495. He taught Hebrew at Wittemberg, where he died in the year 1556.

Bernard Ziegler, professor of theology at Leipsic, also contributed his aid. He died in 1556, aged sixty. He was the author of some theological works, now almost forgotten.

1546, July 16. Anne Askew, an accomplished protestant lady, after being put to the torture, was this day burned for heresy. It is remarkable that her husband was accuser, the lord chancellor Wriottesley, extortioner, and sir Martin Bowes, the lord mayor, her incendiary.

1546, August 3. STEPHEN DOLET, an eminent latin scholar, poet, orator, and printer, was condemned to the flames as an heretic, or rather, says Niceron, as an atheist, and the sentence was carried into execution upon this day, in the city of Paris. He was first strangled, and afterwards burned; and thus perished, at the age of thirty-seven years, a victim to intolerance, protesting in his latter moments, that "*his works contained many things which he had never understood.*" What an emphatic declaration! What a warning to the living! He perished on the anniversary of the martyrdom of St. Stephen; and just before strangulation, is said to have exclaimed:—"O, my God, whom I have so often offended, be merciful; and thou, holy mother, and holy St. Stephen, intercede for me, I pray, at the throne of grace!" The secret history of this blood-thirsty transaction is yet to be revealed. From all that can at present be collected, the jungles of Dolet were his murderers!

Stephen Dolet was a native of Orleans, or its vicinity, and born about the year 1509. His family was respectable. Some have pretended that he was a natural son of the duke de Valois, afterwards Francis I., but he was never recognised as such, and Niceron has observed that the date of that king's birth, 1494, renders such a story improbable. At the age of twelve he was sent to Paris, and Nicolas Beroaldus became his preceptor in rhetoric. Subsequently he studied several years at Padua, under the tuition of Simon Villanovanus: after whose decease he accepted the office of secretary to the French ambassador at Venice.

Having been advised to study jurisprudence at Toulouse, he was chosen orator of a youthful club; and in that character indulged himself in certain caustic reflections on the authorities of Toulouse, calling them ignorant and barbarous.

Another student warmly espoused the cause of the city. This led to replies and rejoinders, and at length to the imprisonment of Dolet. After a month's confinement he was expelled from Toulouse. This happened in 1533.

In 1534, he came to Paris, and published some works: returned to Lyons in April, 1536; but in the year following, having killed a man who attacked him, was obliged to have recourse to flight: came again to Paris, implored the king's pardon, and obtained it. Dolet laments this event in several passages of his Latin poems.

Soon afterwards, he is found again at Lyons, in the character of a printer; and the first production of his press was the collection of his own poems: *Carminum Libri IV. 4to, Lugduni, 1538*. About this time he married; and in 1539, had a son named Claude, whose birth he commemorates in some verses which he printed that year.

Though few of the incidents of his life are known, it would appear from some lines of his *Second Enfer*, that he was imprisoned twice at Lyons, and once at Paris, after his incarceration at Toulouse, and before that final one at Paris which preceded his condemnation. The occasions of these successive imprisonments are unknown; but it is supposed, his satirical and overbearing temper had made him many enemies; and that they, availing themselves of the freedom with which he had spoken on religious subjects, took occasion to bring him into trouble. It is certain at least, that upon a religious charge he was imprisoned at Paris in 1544; but on that occasion he obtained his liberation, as we have before shown, through the kind offices of Pierre du Chastel, then bishop of Tulle.

That Dolet should have exposed himself to martyrdom by the rash profession of atheistical sentiments, seems very incredible. But if his case involved a question of heterodoxy with respect to the religious disputes of the time, it is extraordinary that he met with as little commiseration from the reformed, as from his catholic persecutors. Niceron considers that well known punning story as an invention "apres coup:" that when the victim, on his way to the scene of punishment, observed the popular signs of compassion, he exclaimed:

"Non dolet ipse Dolet, sed pia turba dolet."

upon which the confessor who attended him, said:

"Non pia turba dolet, sed dolet ipse Dolet."

Calvin is reported to have described this unfortunate man as an impious wretch and an atheist. Theodore Beza, when he composed his *Juvenalia*, thought and spoke more charitably of him. But he suppressed this liberal testimony in the later editions of his poems.

Niceron has specified at least twenty-four distinct works by Dolet, many of which are in the French tongue, and several of a religious com-

plexion; which may serve further to annul the charge of atheism or impiety. Dolet seems to adopt the language of decided fatalism: Maittaire finds not that he maintained otherwise any infidel tenets; says that in his instructions to his son he inculcates the being of God, the immortality of the soul, and the hope of heaven, together with pure moral precepts: that he seems to have in some respects differed from the church of Rome: and to have been an advocate for the perusal of the scriptures in the vernacular tongues.

This singular, mysterious, and ill-fated scholar, says Greswell, exercised at Lyons the profession of an "Imprimeur," but the productions of his press are comparatively few, and of rare occurrence. His *insigne typographicum* or mark, bears an obscure allusion to his name: a hand furnished with an axe, and hewing a knotty block of wood, which is marked by a line: "manus dolabra stipitem nodosam et informem ad amussim dolans," (says Maittaire,) with the legend: "Scabra et impolita ad amussim dolo atque perpolio:" and generally "ad finem libri," the same device, with the name "Doletus," and this motto: "Durius est spectare virtutis quam incognitæ conditio."

1547, Jan. 15. On this day was beheaded on tower hill, in the prime of life, Henry Howard, earl of Surry, "a man," observes sir Walter Raleigh, "no less valiant than learned, and of excellent hopes." He excelled in all the military exercises of the age; he encouraged literature and the fine arts, both by his patronage and example. He cultivated the friendship of learned men, particularly Erasmus, sir Thomas More, and sir Thomas Wyatt, the elder. He was universally acknowledged to be the most gallant man, the most polite lover, and the most accomplished gentleman of his time. His poetical talents have been celebrated by Drayton, Dryden, Fenton, and Pope. He was a great refiner of the English language, and is much celebrated for the sweetness and harmony of his numbers.

The first English blank verse\* ever written appears to have been the translation of the first and fourth books of the *Æneid*, by lord Surry, which was printed shortly after his death, under the title of the *Fourth Boke of Virgill, intreating of the Love betwene Æneas and Dido; translated into Englishe, and drawn into strange metre. London, without date, 4to. 1557*, along with the second book; but which must have been written at least ten years before. Surry most probably borrowed the idea of this innovation from the Italians; but Dr. Nott is of opinion that Surry

\* Blank verse is verse without rhyme, or the consonance of final syllables. Of this species is all the verse of the ancient Greeks and Romans that has come down to us. But during the middle ages, rhyme, however it originated, came to be employed as a common ornament of poetical composition, both in Latin and in the vernacular tongues of most of the modern nations of Europe. In the fifteenth century, when a recurrence to classical models became the fashion, attempts were made in various languages to reject rhyme, as a relic of barbarism. Thus, Homer's *Odyssey* was translated into Spanish blank verse by Gonsalvo Perez, the secretary of state to the emperor Charles V., and afterwards to Philip II.

could not have seen Trissino's poem,\* as it was not printed till after his death, though written many years before. Roger Ascham in his *Schoolmaster*, expressly commemorates this translation of Surry's as the first attempt to write English verse without rhyme. The first who imitated Surry in the new kind of verse which he had introduced was, according to Warton, Nicholas Grimalde, or Grimalde, some of whose poetical compositions were first printed in the same volume in which Surry's translation from Virgil appeared. "To the style of blank verse exhibited by Surry," says Warton, "he added new strength, elegance, and modulation." The next thirty years may be said to have naturalized the new mode of versification in the language.

The earl of Surry was the son of Thomas, second duke of Norfolk, and of Elizabeth, daughter of Edward Stafford, duke of Buckingham. He received his education at Windsor with Henry Fitzroy, duke of Richmond, natural son of king Henry VIII. He gave early indications both of genius and valour; and becoming violently enamoured of lady Elizabeth Fitzgerald, daughter of Gerald Fitzgerald, earl of Kildare, and whom he celebrated by his poetical abilities, under the name of Geraldine. In 1544, he was made field-marshal of the English army in France; and, having greatly distinguished himself there, was after the taking of Boulogne, being then knight of the garter, constituted the king's lieutenant, and captain-general of all his army, within the town and county of Boulogne. By some ill success he fell into disgrace. This disgrace, however, he soon repaired; but he could never after regain the king's favour, "in whose eyes," observes Mr. Walpole, "a moment could cancel an age of services." The enemies of the Norfolk family inspired the king with apprehensions of the ambitious designs of the duke of Norfolk and his son; and the designs of their enemies were greatly advanced by dissensions in the Norfolk family, which had become obnoxious to the king from the late incontinence of Catha-

rine Howard, the queen, who was beheaded. From these motives, therefore, private orders were given to arrest father and son; and accordingly they were arrested both on the same day, and confined in the tower. Surry, being a commoner, his trial was more expeditious; and as to proofs, there were many informers base enough to betray the intimacies of private confidence, and all the connexions of blood. His own sister, the duchess dowager of Richmond, enlisted herself among the number of his accusers. The charges brought against him were trifling and inconsistent. Against his accusers, all his answers were needless; for neither parliaments nor juries, during the reign of Henry VIII. seemed to be guided by any other proofs but the will of the crown. Notwithstanding his eloquent and spirited defence, the monster's heart was hardened against every tender impression, ordered him for execution. He was first buried in the chapel of the tower, and afterwards in the reign of James I. his remains were removed to Farmington, in Suffolk, by his second son, Henry, earl of Northampton.

It is said, that one of the courtiers having asked the king why he was so zealous in taking off the earl of Surry; "I have observed him," said the king, "to be an enterprising youth; his spirit was too great to brook subjection; and, though I could manage him, yet no successor of mine would ever be able to do so; for which reason I have dispatched him in my own time."

The following small poem is exhibited as a specimen of the versification of the ill-fated Surry:

ON THE DISCONTENT OF MEN, IN EVERY AGE  
AND CONDITION OF LIFE.

Laid in my quiet bed, in study as I were,  
I saw within my troubled head a heap of thoughts appear,  
And every thought did show so lively in mine eyes,  
That now I sigh'd, and then I smil'd, as cause of thoughts  
did rise.  
I saw the little boy, in thought how oft that he,  
Did wish of God to scape the rod, a tall young man to be.  
The young man eke, that feels his bones with pains oppress,  
How he would be a rich old man, to live and lie at rest.  
The rich old man that sees his end draw on so sore,  
How he would be a boy again, to live so much the more.  
Whereat full oft I smil'd, to see how all these three,  
From boy to man, from man to boy, would chop and  
change degree.  
And musing thus, I think, the case is very strange,  
That man from wealth, to live in woe, doth ever seek to  
change;  
Thus, thoughtful as I lay, I saw my withered skin,  
How it doth show my dented Jews, the flesh was worn so  
thin,  
And eke my toothless chaps, the gates of my right way,  
That open and shut, as I do speak, do thus unto me say:  
The white and hoarish hairs, the messengers of age,  
That show like lines of true belief, that this life doth assuage,  
Bids thee lay hand, and feel them hanging on thy chin.  
The which doth write to ages past, the third now coming in:  
Hang up, therefore, the bit of thy young wanton time,  
And thou, that therein beaten art, the happiest life deduce.  
Whereat I sigh'd, and said, Farewell my wonted toy,  
Truss up thy pack, and trudge from me to every little boy;  
And tell them thus from me, their time most happy is,  
If to their time they reason had, to know the truth of this.

A bill of attainder was found against the duke of Norfolk; as it was thought he could not so easily have been convicted on a fair hearing by his peers. The death-warrant was made out, and immediately sent to the lieutenant of the

\* Warton observes, "in the year 1528, Trissino published his *Italia Liberata di Goli, or Italy Delivered from the Goliath*, an heroic poem professedly written in imitation of the *Iliad*, without either rhyme or the usual machineries of the Gothic romance. Trissino's design was to destroy the *terza rima* of Dante. This statement is allowed to stand uncorrected in the last edition of Warton; but in fact Trissino's poem was not published till it appeared in three volumes, the first printed at Rome, in 1547, and the second and third at Venice, in 1548. Another work in blank verse, by the same writer, however, his tragedy of *Sesostriade*, celebrated as the first regular tragedy which appeared in the Italian language, was printed in 1536. It was first represented at Rome in 1515. In 1516 the tragedy of *Reverendia*, also in blank verse, by Trissino's friend, Rucellai, was recited at Florence in the presence of pope Leo X., and was printed at Siena in 1525.

In the French language, in like manner, various writers have one after another attempted to write verse without rhyme. Among those who are said to have composed in this fashion are Jodelle and De Balif, who were two of the celebrated flock of poets that adorned the age of Francis I. and Charles IX. Afterwards Nicholas Rapin, who lived in the reign of Henry IV., repeated the same attempt, and, in the opinion of the cardinal du Perron, with more success than De Balif. Still more recently French blank verse was written by De la Motte le Vayer, in the age of Louis XIV.

tower. The duke prepared for death ; the following morning was to be his last ; but an event of greater consequence to the kingdom intervened. and prevented his execution—the death of the king. During his imprisonment in the tower, he sent a petition to the lords, in which he requests to have some of the books that are at Lambeth ; “ for,” adds he, “ unless I have books to read here I fall asleep, and after I am awake again, I cannot sleep, nor have done these dozen years. That I may hear mass, and be bound upon my life not to speak to him who says mass, which he may do in the other chamber whilst I remain within. That I may be allowed sheets to lie in ; to have license in the day-time to walk in the chamber without, and in the night be locked in, as I am now. I would gladly have license to send to London, to buy one book of St. Austin, *de Civitate Dei* ; and one of Josephus, *de Antiquitatibus* ; and another of Sabellius ; who both declare most of any book that I have read, how the bishop of Rome, from time to time, hath usurped his power against all princes, by their unwise sufferance.”

1547, Jan. 28. Died, Henry VIII. king of England. Some kings have been tyrants from contradiction and revolt ; some by being misled by favourites ; and some from a spirit of party ; but this king was cruel from a depraved disposition alone ; cruel in government, cruel in religion, and with regard to his domestic concerns, history scarce affords his parallel. And it must not be forgotten that he, who insisted on such rigid fidelity from his wives,\* was himself the most faithless of mankind. Sir Walter Raleigh, says of Henry VIII. that if all the patterns of a merciless prince had been lost to the world, they might have been found in this one king.

The king had been for some time approaching fast towards his end ; and for several days all those about his person plainly saw that his death was inevitable. His monstrous corpulency, which rendered him unable to stir, made him more furious than a chained lion. He had been very stern and severe ; he was now outrageous. In this state he had continued for nearly four years before his death, the terror of all, and the tormentor of himself ; his courtiers having no inclination to make an enemy of him, as they were more ardently employed in conspiring the death of each other. In this manner, therefore, he was suffered to struggle, without any of his domestics having the courage to warn him of his approaching end : as more than once, during this reign, persons had been put to death for retelling the death of the king. At last, sir Anthony

Denny had the courage to disclose to him this dreadful secret ; and, contrary to his usual custom, he received the tidings with an expression of resignation. His anguish and remorse were at this time greater than can be expressed : he desired that Cranmer might be sent for ; but before that prelate could arrive he was speechless. Cranmer desired him to give some sign of his dying in the faith of Christ ; he squeezed his hand, and immediately expired, after a reign of thirty-seven years and nine months, in the fifty-sixth year of his age. He was born at Greenwich, June 28th, 1491.\*

His character is portrayed in the following lines by a writer of the eighteenth century ; he says that Henry was a king

“ Whom we find  
A man to every vice inclined,  
Revengeful, cruel, bloody, proud ;  
Unjust, unmerciful, and low ;  
For in his wrath he spared no man,  
Nor in his lust spared any woman ;  
Was never rul’d by any law,  
Nor Gospel valu’d be a straw,  
Unless when interest spur’d him on,  
And then a zealot—only then,  
Counsel he scorned, slave to his will,  
Impenitent of any ill ;  
In short, he was close swaddl’d in  
The whole black catalogue of sin ;  
In sin confin’d, and drown’d in sense,  
An impious, sacrilegious prince.”†

Notwithstanding the inconsistency of Henry’s conduct with regard to the reformation, archbishop Newcome enumerates *fourteen* editions of the whole bible, and *eighteen* editions of the new testament, besides several editions of distinct parts of the scriptures, printed during his reign. It is pleasing to reflect that the great bulk of the people sought after the scriptures with eagerness, and read them at every risk of personal danger ; and the free use of them at length became a mark of honourable distinction to the higher classes. Many of the clergy have taken some pains to vindicate the character of this brutal tyrant, as if his conduct and the reformation had any connexion with each other. There is nothing so absurd as to defend the one by the other ; the most noble designs are brought about by the most vicious instruments.‡

The only historian deserving of notice in this reign, was Edward Hall, who was sometime recorder of London, where he died in the year 1547. He wrote an account of the wars between the houses of York and Lancaster, which he dedicated to Henry VIII.. If the reader desires to know what sort of clothes were worn in each king’s reign, and how the fashions altered, this is the author for his purpose. In other respects his information is not very valuable.

In an inventory of Henry VIII.’s wardrobe, &c. made by virtue of a commission under the

\* Married to Catharine of Arragon, June 8, 1509, divorced May 23, 1533 ; she died at Ampthill, Bedfordshire, in 1536. Married to Anne Boleyn April, 1533, crowned May 31, in the same year, and beheaded May 19, 1536. Married to Jane Seymour, Mar 23, 1536 : she died in two days after the birth of her first child, afterwards Edward VI., October 24, 1537. Married to Anne of Cleves, January 6, 1541 : Henry called her a great “ Flander’s mare,” from whom he was divorced : she died July 15, 1557. Married to Catharine Howard, August 8, 1540 : she was beheaded February 13, 1543. Married to Catharine Parr, July 12, 1543 : she died September 5, 1548.

\* In the household regulations of Henry VIII. it was a rule that “ no herald, minstrel, falconer, or other, do bring to the court any boy, or rascal ; nor keep lads, or rascals in court to do their business for them.”

† *England’s Reformation, from the time of king Henry VIII. to the end of Queen’s Plot, a poem in four cantos, adorned with copper-plates. By Thomas Ward, London, 1747.*

great seal of England, dated September the 14th, 1547, the following notices occur: "A Masseboke covered with black velvet, a little boke of parchment with prayers covered with crymson velvet. Also in one deske xxxj bokes covered with redde; and in another deske, xvj bokes covered with redde." A folio in the library of the late Mr. Heber formerly belonged to Henry VIII. displayed a great variety in the binding, with the portrait of the monarch painted in the centre of each side, all in good keeping and well executed. Several books in the British museum, but particularly those once the property of archbishop Cranmer, prove that as books became more numerous from the progress of the art of printing slowly but steadily made, the degree of labour and expense shown to have been lavished on early bindings, was only adopted for rare specimens of the works of ancient writers, or the books of the noble and the wealthy. Cranmer's books already alluded to, are bound in a plain brown calf, with the simple addition of a mitre, gilt on the back, in an extremely uneven and careless manner. Many presentation copies would be bound in a superior manner, but this shows that the generality of bindings were at this time, without much ornament with clasps. Stamped calf bindings gave place to almost as great a variety of styles in calf as are common in the present day; and of the superior kind still remain to attest the skill of the artists employed, when the cost necessary for the execution was allowed. The foundation of the royal library, may justly be attributed to Henry VIII. enriched as it was by manuscripts and books collected by Leland. The number of books preserved, and the cost and state of their embellishment, go far to clear the king from the charge of knowing of, and caring less for fine books. That his predecessor Henry VII. collected a magnificent library, the various splendid specimens that exist, bearing his arms on the bindings, is full evidence; but there can be no doubt it was considerably augmented by his son, under the skilful direction of Leland, whom Henry had appointed his librarian, and who, in his visit to the various monasteries, must have become possessed of many rare manuscripts and fine books. This is borne out by Heutzner, a German traveller, who describing the royal library of the kings of England, originally in the old palace at Westminster, but now in the British museum, which he saw at Whitehall in 1598, says, that it was well furnished with Greek, Latin, Italian, and French books, all bound in velvet, of different colours, yet chiefly red, with clasps of gold and silver; and that the covers of some of them were adorned with pearls and precious stones.—Warton.

1547. Among the early specimens of Welsh literature may be reckoned *A Dictionary of Englyshe and Welshe*, by Wyllyam Salesbury, London, 1547, 4to. Strype, in his *annals*, calls him William Salisbury, of Llanrowst, gent. and says he was joined with John Waley the printer, in a patent for seven years, to print the bible in Welsh. The *Dictionary* appears to have been

reprinted, without date by Edward Whitechurch; and again, in 1551, by Robert Crowley. A copy of the first edition is in the British museum. His *Introduction* teaching how to pronounce the letters in the Brytische tongue, was twice printed; in 1550, by Robert Crowley, and in 1567, by Henry Denham. In the latter year he published the *New Testament* in Welsh, dedicated to queen Elizabeth.

1547. WILLIAM MIDDLETON seems to have succeeded Redman in the business of printing, after his widow was married to Ralph Cholmondley; and kept the sign of the George, next to St. Dunstan's Church.

Middleton printed in the whole thirty-eight works, amongst which was John Heywood's\* *Four Ps., a very merry Enterlude of a Palmer, a Pardoner, a Poticary, and a Pedler*, brings in the Palmer relating that in his pilgrimages he has been at different parts of the world, ar<sup>n</sup> in enumerating them he says,

At Saint Botolph and Saint Anne of Buckstone

Prayne to them to pray for me  
Unto the blessed Trinitie.\*

This was either the priory of the Holy Trinity of St. Botolph without Aldgate, or our Brethren of the Holy Trinity of St. Botolph without Aldersgate. Heywood, though a stern Roman catholic, exposes with the humour of Uliespiegel the tricks played on the credulous fondness of the ignorant for reliques, and ridicules the greediness and craft of the preaching friars in their pious frauds. He makes the Pardoner produce 'the blessed Jawbone of All-halowes,' on which the Poticary swears

—by All-halowe, yet methinketh  
That All-halowe's breath stinketh.

Pardoner.

Nay sirs, beholde, heer may ye see  
The great toe of the Trinitie.  
Who to this toe any money wouth,  
And once may role it his mouth,  
All his life after, I undertake,  
He shall never be vext with the tooth ake.

By the turn given to the Poticary's answer,

\* John Heywood, commonly called "The Epigrammatist," was beloved and rewarded by Henry VIII. for his buffooneries. To his talents of jocularity in conversation, he joined a skill in music, both vocal and instrumental. His merriments were so irresistible, that they moved even the rigid muscles of queen Mary; and her sullen solemnity was not proof against his songs, his rhymes, and his jests. One of these is preserved in the Cotton MS. Jul. F. x. "When Queene Mary told Heywoode that the priestes must forego their wives, he merrily answered, 'Then your grace must allow them *lemmans* (mistresses), for the clergie cannot live without sauce.'"

"One of Heywood's works is a poem in long verse, with the following curious title: *A Dialogue, containing in Effect the Number of all the Proverbs in the English Tongue, compact in a Matter concerning Two Marriages*. All the proverbs of the English language are here interwoven into a very silly comic tale:—the idea is ingenious, and the repertory, though ill-executed, is at least curious.

But the neatest replication of this professed court-wit, seems to be recorded in *Camden's Remains*, 1605, p. 234. Heywood being asked by Queen Mary "What wind blew him to the court?" he answered, "Two specially; the one to see your majesty." "We thank you for that," said the queen; "but, I pray you, what is the other?"—"That your grace," said he, "might see me." He died 1566.

it seems likely that Heywood had in his eye the figure with the three heads in one.

*Potticary.*

I pray you turn that relique about:  
Either the Trinity had the goat,  
Or els, because it is three toes in one,  
God made it as much as three toes alone.

In another part the Pardoner relates that as soon as he found a female friend of his had gone to the infernal regions, he went after her to fetch her back:

Not as who saith by authorite  
But by the way of intreatie.  
And first to the devil that kept the gate  
I came,  
He knew me wel ———  
For oft, in the play of Corpus Christi  
He hath play'd the devil at Conventric.  
I said to this devil, good maister porter, &c.

The *Porter* introduces the Pardoner to Lucifer, who previously sends him a safe conduct under his hand, stating,

—— that he may at libertie  
Passe safe without any Jeopardie,  
Till that he be from us extinct,  
And clearly out of helles precinct.  
And, his pardons to keep in save garde,  
Me wil they lie in the rostrer's warde.

John Bouchier knyghte, lorde Berner, first "Translated out of Frenche into oure maternall Englysshe tongue" the interesting *Chronicle of Syr John Froyssart*,\* (see page 82, ante,) at the "commandement of our moste highe redouted soueraynge lord kynge Henry the VIII, kynge of Englande, &c." The first volume of this translation was imprinted at London, by Richard Pynson, 1525. This volume commences with the reign of Edward III. and ends 9. Richard II. The second containing the "thirde and fourthe boke, &c." 1525, fol. This volume begins 9. Richard II. and ends with the coronation of Henry IV. Ames and Herbert say that William Middleton printed both volumes of this translation, in a type much ruder than Pinson's. Herbert, in his *Corrections and Additions*, p. 1790, says, "There appear to have been three early (English) edition of *Froissart's Chronicle*; one by Pinson himself, another with Pinson's name, but supposed to be a pirated edition; and a third by William Middleton: of which it has been queried whether he ever printed any more than the first volume.

\* It is scarcely necessary to observe, that to the late truly respectable Thomas Johnes, Esq. of Hafod, in Cardiganshire, who for the more convenient printing of his works, erected a private press in a cottage among the hills, at the distance of one mile and a half from his mansion, and who employed the leisure afforded by an ample fortune, in pursuits which become the scholar and the gentleman, the public is indebted for very recent and interesting translations of Froissart and Monstrelet, and of other early French historians. Mr. Johnes's translations are embellished with numerous and correct engravings, after elaborate and splendid paintings and decorations found in manuscripts and early printed copies of these authors. The Hafod edition of the *Chronicle of Joinville* is dated 1807, and that of Monstrelet 1809.

A re-impression of the early English translation of Froissart appeared also at London, 1813, in two vols. 4to. printed without any change of diction, agreeably to the ancient orthography, from Pinson's edition; but contains the necessary corrections of names and places in the margin; and a *Memoir of Lord Berners* prefixed.

Middleton used two devices, of which the annexed was the smallest, and which is to be found chiefly in those works that he printed without his name. His larger device consists of a small upright parallelogram contained by a single black line, and within it a fruit tree, supporting the foregoing shield, which is somewhat more rudely cut, by a belt, and it is held up by a male and female figure bearing wands, the lower parts of which terminate in the legs of goats and the tails of dragons. Round the bottom of the trunk of the tree is a scroll of three folds, on which is engaven WYLYAM MYD-DYLTON in Roman capitals.

William Middleton.\*

1547, RICHARD LANT, stationer, dwelt in the Old Bailey, in St. Sepulchre's parish; also in Aldersgate-street. He lived to become one of the company in this year. Ames finds but little of him, except in a private book, entitled *A Declaration of Bishop Bonner*, 1541, *ad imprimendum solum*. This Richard Lant is much spoke against in the course at the Romish Fox, by John Harryson, as setting his name to this notable work, not as the maker, but as the putter forth of it by hys prynt, and adds, "He is well contented to be under that vengeance which hangeth over Babylon, to get a little money, &c. And whereas he hath joynd his prynces auctoryte unto that, *ad imprimendum solum*, to bring hym also under the same curse of God, he hath playd no honest manny's part, no more than hath some other of his fellowes, &c." The following is the work referred to.

1545. *The reuynge of the Romishe fox, otherwyse called, The examination of the hunter, devised by Steuen Gardiner. The seconde course of the hunter at the Romishe fox, and hys advocate, and sworne patron, Steuen Gardiner, doctor and defender of the popis canon law, and hys ungodly ceremonies.* Rede in the last lefe, the xii articles of bisshop Steuens new popish *credo*. Dedicated to king Henry VIII. by William Wraghton. Ends: "Imprynted have at Winchester, anno domini 1545. 4 nonas Martii. By me Hanse Hit prik."

\* It was a custom of the early typographers to attach to their works some device, and where a play could be made upon the name he had a rebus.

Camden, in his *Remains*, edition London, 1629, 4to. says that this species of picture writing, (referring to Rebuses,) was brought from Picardy, in France, after the victories of king Edward III. and that they were so entertained here, although they were most ridiculous by all talents, by the learned and unlearned, that he was nobody that could not hammer out of his name so invention by this witract, and picture it accordingly; whereupon, who did not busie his brain to hammer his device out of this forge.

This book was really published by William Turner, under the assumed name of Wraghton; and Dr. Cotton is decidedly of opinion, that the book in question was not printed at Winchester, or indeed in any part of England. The types are of Swiss make, similar to those of the first edition of Coverdale's Bible; the spelling is not English; the sentences printed in Roman letter and on the title-page are made up with the Gothic *w* and *y*. Turner, the author, was at this time an exile on the continent on account of his religion, and had dated his first *Hunting of the Romishe Foze*, from Basil, only two years before. The phraseology of the colophon also deserves examination. It is evident that the expression *Imprinted here*, is of German or Dutch origin, not of English: at Winchester may mean against the bishop of Winchester." (Gardiner): the printer's christian name is not John but Hans (the German for John), and *hit-prick* is a name which perhaps the author assumed for the sake of shewing that he had not failed in his object, but had succeeded in *hitting the prick*, or mark. *Hit-pricke*, i. e.  $\delta$   $\rho\theta\upsilon$   $\sigma\kappa\alpha\tau$   $\tau\upsilon\chi\acute{o}\nu$ . This rare and curious volume may be seen in the Bodleian library.

Lant was committed to ward for printing the *Epitaph upon the Death of the moost Excellent and our late vertuous Queen Marie, deceased*, without date. He had also a privilege from the stationers for printing the following ballads, which were licenced to William Ryddall:

1. Godly lammes used in the Church.
2. Who are so merry as they of low estate.
3. The prouerb is true yt weddinge is destinye.
4. The Robbery at Gaddes hill.
5. Holde the Acher faste.
6. Be merry good Jone.
7. The pangs of Loue.

The following are two other works printed by Richard Lant, both without date:—

*The A, B, C, with the Pater-noster, Ave, Crede, and Ten Commaundementes in Englysshe, newly translated and set forth as the kynges most gracyous commaundement.* It begins with five different Alphabets, and Gloria Patri; then, the Pater-noster, &c. grace before meat and after. It contains but one sheet. Quarto.

A copy of verses, beginning:

Western Will to Camell, and for himself alone,  
Although he leudly lust, to knyt up three in one,  
When calmly blowes the winde, and seas but by the mone,  
And cloude appereth none, to threaten from above  
Unwelcome change of wether, with rage of stormes loud,  
He mistes their mantels spreade, the sonne away to shroude,  
The Maister idle sytte, and shipboyes stee the sterne,  
The course so rarelesse is, he lust it not gouerne, &c.

Containing only two leaves, and at the end signed, W. Watreman, 172 lines. Folio.

1547. HENRY SMYTH resided in St. Clement's parish, at the sign of the Holy Trinity without Temple Bar, in 1540. Ames states he was son-in-law to Robert Redman. He printed seven books, amongst which was an edition of Littleton's *Tenures*, 1545, octavo. *Iustice of Peace*, 1545, octavo; and the others also chiefly on law.

WILLIAM FOLLINGHAM, or FOLLINGTON, lived at Holy Well, in Shoreditch, where he printed for Richard Banks. All that is known of his productions is an exceedingly rare work entitled *Anatomy of a Hande*, &c. 1544, twelves.

1557, Feb. 3 *A Hundreth good Pointes of Husbandrie.* By Thomas Tusser. Imprinted at London, in Flete Strete, within Temple Barre, at the Signe of the Hand and Starre, by Richard Tottel.

The first edition has these lines in the title page, which do not appear in the subsequent ones:

"A hundreth good pointes of good husbandry,  
Maintaineth good household with huswifry,  
Housekeeping and husbandry, if it be good,  
Must love out another as cosines in blood;  
The wife too must husband as well as the man,  
Or farewell thy husbandry, do what thou can."

The original letter from the author, "To the right honourable, and my speciall good lord and maister, the lord Paget," differs so exceedingly in the subsequent editions, that the curious reader will not be displeased at seeing it as it was first printed.

"The trush doth teach that tyme most serve  
However man doth blase his myode,  
Of thynges most lyke to thyrve or sterve,  
Much apt to judge is often blynde,  
And therefore tyme it doth behoofe  
Shall make of trowth a perfect prooffe.

Take you, my Lord and Mayster then  
Unless mischaunce mischaunceth me,  
Such homely gift of your owne man,  
Synce more in Court I may not be;  
And let your praisse worne heretofore,  
Remayne abroad for evermore.

My serving you thus understando,  
And God his helpe, and yours withall,  
Dyd cause good lucke to take myne hande,  
Erecting one most like to fall.  
My serving you, I know it was,  
Enforced this to come to passe.

But synce I was at Cambridge tought,  
Of Court ten yeres I made a say;  
No musike then was left unsought,  
A care I had to serve that way;  
My joy gan sake, then must I chaunge  
Exposed myrth for musike straunge.

My musike synce hath been the plough,  
Entangled with some care among;  
The gayn not great, the payn enough.  
Hath made me synge another song.  
And if I may my song avowe,  
No man I crave to judge but you.

Your servant,

Thomas Tusser.

The first eighteen lines are an acrostic, and form the words, THOMAS TUSSEAR MADE ME.

Dr. Johnson derives the word *Acrostic* from the Greek, and says it is a poem in which the first letter of every line being taken, makes up the name of the person or thing on which the poem is written. Mr. D'Israeli observes, that no ingenuity can make an acrostic ingenious. This is nothing more than a mechanical arrangement of the letters of a name, and yet this literary folly long prevailed in Europe.

In the above poem, we meet with perhaps the first exhibition of didactic poetry in this country.

It has more of the simplicity of Hesiod than of the elegance of Virgil. Indeed, the *Five Hundred Points of good Husbandrie*, is so destitute of poetical ornaments, that its sole value arises from its being a genuine picture of agriculture, the rural arts, and the domestic economy and customs of our ancestors.

1547, Feb. 9. Henry VIII. was succeeded on the throne by his only son, Edward VI. now in the ninth year of his age; and on this day was crowned with great state at Westminster. To illustrate the manners of the times, we extract a few notices of the pageants which were displayed as he proceeded through the city to his coronation: The crafts and aldermen stood arrayed in order; priests and clerks, with their crosses and censers, censed him as he passed: tapestry, arras, and cloths of gold and silver, were hung on the houses, and rich streamers and banners floated in the air. The procession was very splendid. In various parts of the city were goodly pageants and devices, and therein goodly melody, and eloquent speeches of noble histories. The conduit in Cheapside ran wine, and was richly garnished; near it stood four children, as Grace, Nature, Fortune, and Charity, who, one after the other, made speeches. On a stage, at the foot of the conduit, St. George stood in complete harness, with a page also harnessed, holding his spear and shield, and a fair maiden holding a lamb in a string; near them was a child richly apparelled, to pronounce a Latin oration, and St. George was to make one in English, but, for lack of time it could not be done, his grace made such speed: howbeit, there was a song. When the king came to St. George's church, in St. Paul's churchyard, there was a rope stretched from the battlements of St. Paul's, and with a great anchor, fastened a little before Paul's house-gate. When the king approached, there came a man, a native of Arragon, lying on the rope, his head forward, casting his arms and his legs abroad, running on his breast on the rope from the battlements to the ground, as it had been an arrow out of a bow. Then rising from the ground, he went to the king, and kissed his foot, and after certain words to his highness, departed, and went upwards upon the rope till he came over the midst of the church, and there having a rope about him, he played certain mysteries on the said rope, as tumbling, casting one leg from another, tying himself by the right leg a little beneath 'the wrist' of the foot, and hanging a while recovered himself upon the rope, unknot the knot, and came down again, which staid the king's majesty, with all the train, a good space of time. Eight French trumpeters blew their trumpets after the fashion of their country, and besides them were a pair of 'regalles,' and children singing to them. The company then proceeded in goodly order till they came to Westminster, to abide the coronation.

The original book upon which all our kings, from Henry I. to Edward VI. took the coronation oath, is now in the library of a gentleman in Norfolk. It is a manuscript of the four evange-

lists, written on vellum; the form and the letters nearly approaching to Rotals. It appears to have been written pared for the coronation of Henry original binding, which is in a perfect consists of two oaken boards, nearly an in-fastened together with stout thongs of and the corners defended by large l brass. On the right hand side (as th-opened) of the outer cover is a crucifix double gilt, which was kissed by the ki their inauguration, and the whole is together by a strong clasp of brass fi: broad piece of leather, nailed on with two large brass pins. 46 II

Edward VI. in the first year of his reign, granted to Grafton a special patent for the sole printing of all statute books. This is the first patent that is taken notice of by that diligent and accurate antiquary, sir William Dugdale.

About the same time, by an order of Edward VI. the statutes were repealed which prohibited the translation and reading of the scriptures. Injunctions were also issued, and sent into every part of the kingdom, enjoining "that within three months a *Bible* of the largest volume, in *English*; and within twelve months *Erasmus's Paraphrase of the Gospels* should be provided and set up in some convenient place in every church, the charges to be borne by the parson and the parishioners equally. It is supposed that this translation fixed our language.

1547, Nov. 25. Henry II. son and successor to Francis I. ordered the faculty of theology at Paris to examine the Bibles published by Robert Stephens;\* he issued the following inquisitorial edict, respecting all religious publications printed or sold by the French booksellers. "We forbid all booksellers and printers, under pain of confiscation of body and goods, to print, or cause to be printed, to sell, or publish, any books concerning the Holy Scriptures, or those which have been brought from Geneva, Germany, and other foreign countries, unless they have first been seen and examined by the faculty of theology of Paris: nor may any printer or bookseller sell, or expose to sale, any books of Holy Scripture with comments or scholia, except the name and surname of the author be expressed or placed at the beginning of the book; and also the name and sign of the residence of the printer: nor may any printer print in secret or hidden places, but in his proper office, in some public place, that every one may be answerable for the work he prints. We also forbid all persons, of whatsoever rank or condition, to retain in their possession any books mentioned in the *Catalogue of Books*, condemned by the said faculty of theology."

1547. FRANCIS STEPHENS (the eldest son of

\* After the death of Francis I. and the censure passed upon his editions of the scriptures, Robert Stephens withdrew to Geneva, where he published an *Apology*, in defence of himself, against the censures of the doctors of the Sorbonne; and continued to publish a variety of learned works till his death.

Henry Stephens, see page 226 *ante*) was employed in printing with his step-father, Simon de Colines. He was a "libraire juré" of the university of Paris, and is supposed to have rendered himself conspicuous as a typographer about the year 1537, at which period he occupied the premises which had formerly been the residence of his father. He frequently employed the press of Francis Girault. Maittaire doubts whether Francis Stephens exercised the typographical profession beyond the year 1547; and that his impressions, both in the roman and italic, are pleasingly executed, generally accurate, and now seldom met with. No impressions by this printer, executed entirely in the Greek language, are met with, excepting his *Psalter* of the year 1542, and his *Hora Virginis*, of the year 1543. His other impressions amount to about ten in number.

The insigne, or mark, peculiar to Francis Stephens, is a *tripos*, placed upon a pedestal. From the *tripos*, or vase, issues a *vine shoot*. Underneath is represented a closed *book*, on which the *tripos* stands; and on a base or pedestal, beneath the whole, these words frequently appear inscribed: *κλιον λαλον η σιγον, Plus olei quam risi*." Sometimes is found the addition of the following distich and adage in Greek:

Transient the rose's bloom! when past and gone,  
Seek you the flower!—you'll find the bush alone.

Of all things, the most difficult is to please every body.

Sometimes after the example of his father, he exhibited the arms of the university of Paris.

1548. ROBERT COPLAND, stationer, printer, bookseller, author, and translator, who seems to have resided entirely at the Rose Garland, in Fleet-street. The will of Wynkyn de Worde, and the prologue to William Copland's edition of the *Knyght of the Swanee*, printed in quarto, without date, are sufficient proofs of this printer's typographical instructor, although Mr. Bagford states, without naming his authority, that he was a servant to William Caxton. Herbert seems inclined to believe that Robert Copland was enabled to commence business as a typographer by a bequest from one William Copland, tailor, and king's merchant to Henry VIII. who died in the year 1515, in which year Robert's eldest book now extant was printed; but there is not any thing known as to what degree of consanguinity might exist between them. It is supposed that Robert Copland died about the end of 1547, or the beginning of 1548; being at his decease the oldest printer in England. William Copland, the subject of the next notice, and Robert both used the same marks and letter, and printed so many books without dates, that it is impossible at this time to distinguish their works separately. The first work of Robert's was the *Justice of peas*, 1515, quarto. In 1521, he printed the *mirrour of the church of saynt Austyn of Abyngdon*, with a *petytyon of Robert Copland, printer*. In 1531, he printed the *prymr of Salisbury*, in twenty-one leaves. In 1540, the *maner to live*

*well, devoutly, and salutary every daye, for all persons of mean estate, compyled by maistre Johan Queinen, doctour in divinite at Paris*. Translated out of French into Englyshe by Robert Copland, printer. *The hye way to the spyttell house*. With a wooden cut of Copland between a porter and a beggar, over each their names are cut. It is a dialogue in verse, and begins with, *The prologue of Robert Copland, compylar and pryncer of this booke*, and ends, *Levy of the auctor*, thus:—

Go lytel quaire to every degree,  
And to thy mater desyre them to loke,  
Desyryng them for to pardon me,  
That am so bolde to put them in my boke.  
To eachen vyce I the undertoke,  
Dyseyning no maner of creature:  
I were to blame, yf I them forsoke:  
None in this world of welth can be sure.

He printed the *Introduction of Knowledge*, by Andrew Borde, physician, which treateth of the natural disposition of an Englishman, and of the money then used. In it is a cut of an Englishman, somewhat resembling Henry VIII. but naked, holding a piece of cloth over his arm, and a pair of shears in his other hand, with the following lines, expressing the fickle disposition of the English:

"I am an Englishman, and naked I stand here,  
Musing in my mynde, what rayment I shal were;  
For now I were thyne, and now I wyll were that,  
Now I wyt were, I cannot tell what,—&c."

The devices of Robert Copland were three in number, all of which alluded to the roses that he bore in his sign. The principal one, was an upright parallelogram surrounded by a single line, within which appear a flourishing tree springing out of the earth, and supporting a shield suspended from its branches by a belt, and surrounded by a wreath of roses. On the left hand side is a hind regarant collared by a ducal coronet, standing as supporter; and on the right hand is a hart in a similar position, and with the same decorations. On the outside of the parallelogram are four loose pieces placed in a square at a little distance from it. They are black, and are each ornamented with a rude scroll cut in white bearing upon them the following text, cut in a very thick black-letter. On the top one is ¶ *Melius est*; on the right hand one *nomen bonum*; on the bottom one, *q. diuise*; and on the left hand one, *multe*. Prov. xxii; That is to say, *A good man is better than much riches*. Prov. xxii. v. 1.

WILLIAM COPLAND is supposed to have been the son of Robert, mentioned above, others conjecture that he was his younger brother, and his partner. The character of their typography is very similar, they having both of them evidently used the same rude types; which in all probability descended from Robert to William Copland, who is imagined to have worked in the office of the former until his death, which has already been noticed. Few circumstances exist of the life of William Copland; but those which are to be found state that he was one of the

stationers' company, in the charters of which (1556) his name is to be found. His property may be estimated by his voluntary contribution of xli pence to the hospital of Bridewell, and ijs. viid. as a benevolence to his own corporation. The books of the stationers' company shew that he was thrice fined for printing without a licence, a thing not uncommon in his time. The residence of William Copland, as it has already been stated, was in Fleet-street, at the sign of the Rose Garland; but after the year 1533, his dwelling is not mentioned in his dated colophons, although in his books, the time of his printing of which is unknown, mention is made of Lothbury, and the Three Crained wharf, but they afford no information. William Copland is supposed to have died between July, 1568, and the same month in the following year; for one of the entries in the account of the warden of the stationers' company for the year 1568-9, is "Paid for the buryall of Coplande vjs. Robert Jones who had been bound to him as an apprentice for ten years, had served six of them only at his decease. He printed sixty-one books on his own account, some of which were printed for Richard Kele, at the eagle in Stockis market; and others for Abraham Vele, at the Lamb, in St. Paul's church yard, Thomas Petyt, at the Maiden's head, in Paul's church yard, Thomas Peter, Richard Juge, at the Bible, in St. Paul's church yard, Robert Stoughton, at the Bishop's Mitre, in Ludgate, and John Wryght, at the Rose, at the North door of St. Paul's.

WILLIAM COPLAND printed an edition of *The Knight of the Swanne*, 4to. without date. *Here begynneth the history of the noble Heylas, knyght of the swanne, newly translated out of the Frenshe in to Englishe at thynstygacyon of the pryncesse and illustrious pryncce, lorde Edeuerde duke of Buckyngham.*" Beneath this title is a cut of the knight in a ship drawn by a swan. The preface states that the above-mentioned duke of Buckingham "cohorted Copland's mayster Wynken de Worde to put this sayd vertuous hystorye in prynte...and for this purpose bath soughte and founde a true approued copye enprynted and corrected in the French language, &c."

Panzer does not indicate a single French impression of this romance. The book concludes, "Thus endeth the life &c of the moste noble and illustrious Heylas, knyght of the swanne, with the byrth of the excellent knight Godfrey of Boulyon one of the nine worthyes and the last of the three crysten. Jmprinted, &c." A copy of this work on vellum, with figures, 1512, is noticed by Ames.

Andrew Borde, physician, mentioned in the notice of Robert Copland, was born at Pevensey, in Sussex, and brought up at Oxford; but before he took a degree there, he entered himself a brother of the Carthusian order; of which growing tired, and having a rambling head and an unconstant mind, he travelled through and round about Christendom, and out of Christendom. On his return he settled at Winchester, where he practised with success. In 1541 or 42,

he was at Montpellier, and probably took his doctor's degree there, for he was soon after incorporated in the same degree at Oxford. At length, after many rambles to and fro in this world, he was made a close prisoner in the wards of the Fleet, in London. Though the reason of his confinement is not discovered here, he died in April, 1549, his will being dated the 11th, and proved the 25th of that month.

Anthony Wood, says that our author, Borde, was esteemed a noted poet, a witty and ingenious person, and an excellent physician of his time.

1548, NICHOLAS NAILLE, a bookseller of Paris, with several other persons, were martyred by fire, for professing the reformed religion. One of them was a tailor, for working on a *saint day*. The king, Henry II. was present.

Their bodies scorching flames endure,  
The soul's salvation to secure;  
Martyrs, like gold, are tried in fire,  
And purify as they expire.

1548. JOHN HERTFORD, HERFORD, or HERFORD, for he spelled his name variously, has already been noticed as reviving the art of printing at St. Albans, and who is supposed by Ames and Herbert to have been the earliest typographer of that place, after a space of forty-eight years, or from 1480, until 1534. About the time of the reformation, Herford came to London and resided in Aldersgate-street, where he printed for many persons besides himself. He printed in the whole, during his residence in London, nineteen works, amongst which is found an edition of the *New Testament*, 1548, 24mo. and the *Pistels and Gospels*, without date, 4to.

The widow of John Herford continued the business, and printed three works: the *Incarnation of Christ*, 1549, 16mo; *Certaine Psalmes*, 1550, 8vo; and the *censure and judgment of the famous clark Erasmus of Rotterdam, whyther dyscourment betwene man and wyfe stondesth with the law of God, with diuers causes wherefore it is permitted, with the mynd of the old doctours, &c.* printed for Robert Stoughton.

There was a WILLIAM HARFORD, or HERFORD, who exercised the typographic art in London at this time, and who is supposed to have been a relative, if not the son of John Herford. He printed two works, the first in 1555, and the last in 1559.

1548. About this year, ROGER CARR printed *Herman archbishop of Colen, Of the right institution of baptism; also a treatise of Matrimony and Burial of the Dead.* By Wolph. Musculus.\* Translated by Richard Rice, in octavo; and perhaps he printed *Five Sermons of Bernardine Ochine of Sena: Godlye fruitful, &c.* Translated

\* Musculus, it is well known, was one of the most celebrated divines and reformers of the 16th century, and a man of great application and deep learning. Whilst a lad, he was employed by Bucer as his scribe; and afterwards becoming a preacher, he engaged in the cause of the Reformation with courage, and in many places with great success; he was entrusted with many very important ecclesiastical deputations.

out of Italen into Englishe Anno Do. mdxlviii. Imprinted by R. C. for William Beddell at the sygne of the George, in Pauls church yerde. octavo.

1548. IPSWICH has something singular in the history of its early typography, no fewer than three printers having been at work here during the reign of king Edward VI. Books executed by each of them yet remaining; but all of these with the exception of perhaps one, are of the same year, 1548, and we possess nothing from Ipswich, either of an earlier or later date during that century. The printers were John Oswen, (who it is said was patronised by cardinal Wolsey) John Overton, and Anthony Scoloker, who appear to have settled here nearly at the same time, and to have quitted the place also together. One of them, John Oswen, went immediately to Worcester; but of the other two Herbert observes that nothing more is known, either of their types or themselves.

JOHN OSWEN printed seven books at Ipswich, who added, Imprinted at Ippyswiche, by me Jhon Oswen. *Cum priv. ad imprimendum solum.*

JOHN OVERTON printed only one book, which he dedicated to Edward VI., and has the picture of John Wiclif and his own; printed in Roman letter, and some peculiar initials.

1548. ANTHONY SCOLOKER resided in St. Botolph's parish, without Aldersgate; also in the Savoy rents, near Temple Bar, and afterwards at Ipswich. He translated Viret's *Collection of scriptures, serving for exposition of the Lord's Prayer* out of French; the *Ordinary for all Faithfull Christians*, out of Dutch; and, *A briefe sum of the Bible*, out of German. Ames conjectures that he printed *The complaint of Roderick Mors*. He printed the following with Will. Seres, which are entered under his name, as, *A Boke made by John Frith*, &c. *The Practyse of Prelates*, &c. *A notable collection of places of Scripture*, &c. *A breife Chronycle concerning Sir Johan Oldcastell*. *A Goodly Dialogue*, &c. *A Right Goodly Rule*, &c. 16mo. No dates, *Prayse and Commendacions*, &c. 16mo. *Institution of Baptisme*, 16mo. *The olde Faith*, &c. 16mo. *Order of Matrimony*, &c. 16mo. *Ordinarye of Christians*. *Pyers Plowmans Exhortation*, 8vo.

At Ipswich, Scoloker printed three books, one of which, the *Sermons of Bernard Ochinus*, may be seen in the library of Trinity college, Dublin: a perfect and fine copy. Another is entitled, *A iust rekenyng, or accompt of the whole number of the yeres, from the begynnyng of the world, unto this present yere of 1547. A certayne and sure declaration, that the world is at an end*, &c. *Of the last day of iudgment, or day of dome, and how it shall come to passe. Translated out of Germaine tonge, by Antony Scoloker*. 6 day of July 1547.

The elegant device used by Scoloker, the original motto to which, shows the point of it:—"Proue the spyrites whether they be of God, Jhon ye liij. i. Reg. viij. d. Ma. vij."—since the word of God is there represented as a touchstone,

on which the worth of the spirit is being proved, under the form of a coin, perhaps from the figure upon it, of that species called crosses.

1548. WORCESTER received the art of printing by John Oswen, from Ipswich. In the roll's chapel, is a licence granted by Edward VI. to John Oswen, of the city of Worcester, and his assigns, to print and reprint, &c. every kind of book, or books, set forth by his majesty, concerning the service to be used in churches, administration of the sacraments, and instruction of his subjects of the principality of Wales, and the marshes thereunto belonging, &c. for seven years, prohibiting all other persons whatsoever, from printing the same. He printed till 1553, in which year, being the 7th of Edward VI. he was appointed printer for the principality of Wales, and the marshes thereunto belonging.

1548. The first printed edition of the *Ethiopic New Testament* was executed at Rome, in 4to. by the brothers Valerius Doricus and Ludovicus of Brescia, under the superintendence of Peter, or Tesfa Sion Malezo, a native of Ethiopia, with the assistance of his two brothers. In the following year, the *Epistle of St. Paul* were published separately. They are said to be full of errors, chiefly from the unskilfulness of the printers: "They who printed the work could not read," says Peter, in his Latin preface, "and we could not print; therefore they helped us, and we helped them, as the blind helps the blind."

1549. WILLIAM BALDWIN is supposed by Anthony Wood to have been a west countryman, who studied at Oxford, and who, after leaving the university became a schoolmaster and a minister. He seems to have been one of those scholars who engaged in the work of printing to forward the reformation; and he was employed by Whitechurch, very possibly as a corrector of the press, although he afterwards qualified himself for the office of a compositor. His original works are said to have been some dramas, now either lost or unknown; but in 1547, Whitechurch first printed a treatise on *Moral Philosophy*, which was compiled by him, and which was afterwards several times republished. In 1549, Baldwin printed *Balades of Salomon*, 4to.

William Baldwin used for his device a hand holding a caduceus, having at top an open book, over which is a dove with wings extended, and under it *Love and Lyve*, in a small compartment. A scroll issues from each of the serpents mouths, the one with *Nosce te Ipsum*, the other with *Ne Quid nimis*. Under the serpents is his name, BAL on one side, and WIN on the other, with the middle letter D on the caduceus. The whole contained in a parallelogram, with this motto about it, *Be wise as Serpentes, and Innocent as Doves*. Matthew x.

1549. WILLIAM HYLL, or HILL, lived at the sign of the Hill, in St. Paul's church yard, at the west door of the church. He is said to have left off printing in this year, and turned binder, having been fined one shilling, in 1556, for binding primers in parchment, contrary to the company's orders. He printed six works.

1549. WILLIAM TILLY resided in St. Anne and Agnes parish, in Aldersgate-street, where he printed the *New Testament*, in quarto.

1549. *The Byble, that is to say, all the Holy Scripture, in which are conteyned the Olde and Newe Testaments, truly and purely translated into Englysh, and nowe lately with great industry and diligence recognised. Imprinted at London, by John Daye, dwelling at Aldersgate, and William Seres, dwelling in Peter Colledge.* MDXLIX. Folio. This is the first edition of Edmund Beke's Bible, who has subscribed his name to the dedication to Edward VI. from which the following curious passage is taken: "Let this book be a perpetual president and a patron of all law and lawyers; a jewel of joy for all that by your grace's commission are constituted and placed in office or authority. Then will they of good will and not for love of lucre, or great fees, execute their office. Then will the minister of justice hear the small as well as the great; the cause of the orphan, the widow, and the poor, should come before them. Then should the overlong and great travail, the immoderate expenses and costes which the poor man daily sustaineth in his endless suits, pierce and move their stony hearts with pity and compassion. Then should neither God's cause, nor the poor man's matter, have so many put off, so many put by's and delays. Then, if there were any bribery, or bolstering bearing of naughty matters it should shortly appear. Then your grace's chancellors, judges, and justices, and such as intermeddle with the lucrous law, would dispatch more matters in one term than they have hitherto done in a dozen."

In 1549, the third year of Edward VI. a proclamation was issued, printed by Grafton, for abolishing and putting away divers books and images, which passed into an act of parliament, in the following words:—

"Whereas the king's most excellent majesty hath of late set forth, and established, by authority of parliament, an uniform, quiet, and godly order of common and open prayer, in a book intituled, *The Book of Common Prayer and Administration of the Sacraments, and other Rites and Ceremonies after the Church of England, to be used and observed in the said Church of England, agreeable to the order of the Primitive Church, much more comfortable unto his loving subjects than other diversity of service, as heretofore of long time hath been used, being in the said book ordained, nothing to be read but the pure word of God, or which is evidently grounded thereon, &c.*" It then proceeds to order the abolishing of all other religious books, as they tend to superstition and idolatry; and commands all persons to deface and destroy images of all kinds that were erected for religious worship, under a penalty for any to prevent the same. In this proclamation are the following clauses: "Provided always that this act, or any thing therein contained, shall not extend to any image or picture, set, or engraven upon any tomb in any church, chapel, or church-yard, only

for a monument of any dead saint." It was also enacted, that the people might still keep the primers set forth by the late king Henry VIII. provided they erased the sentences of invocation, and names of popish saints. This act was repealed by queen Mary, but king James I. re-established it. The first impression of the *Liturgy, "after the use of the church of England,"* was published by Grafton and Whitchurch, under royal authority, folio. There are copies bearing the dates of May, June, December, and other months in the same year; and there are occasional variations in such copies, which cannot at present be accounted for. The names of the above printers are inserted separately, it being presumed that each shared the expense and profit of the work. *At the end is printed this:—*"The king's majesty, by the advice of his most dere uncle the lord protector, and other his highness counsaill, straightly chargeth and commandeth, that no manner of persone sell this present book, unbouind, above the price of two shyllinges and two pence, and the same bounde in paste or in bordes, in calves leather, not above the price of four shyllinges the piece. God save the kyng."

John Oswen, who had removed from Ipswich to Worcester, printed in 1549, the text of the *Common Prayer*, as extant in Grafton and Whitchurch, rather omitting and abridging than substituting alterations. An order affixes the price of the work, (as printed at the end of it) at ii shillings and two pence y piece, unbouind. And the same bounde in paste, or in boards, not above the price of three shyllinges and eyght pence the piece: the printing is of dismal execution.

Grafton's impression was sold at the same price as Oswen's, when unbouind; but, bounde in paste or boardes,\* covered with calues leather, not above the price of iiiii shyllinges the piece.

The compilers of the *Common Prayer Book* were:—Drs. Cranmer, archbishop of Canterbury; Goodrick, bishop of Ely; Skip, bishop of Hereford; Thirlby, bishop of Westminster; Day, bishop of Chichester; Holbeck, bishop of Lincoln; Ridley, bishop of Rochester; May, dean of St. Paul's; Taylor, dean of Lincoln; Heyns, dean of Exeter; Redman, dean of Westminster; Cox, almoner to king Edward VI.; Robinson, archdeacon of Leicester.

In consequence of the above act of Edward, for destroying books, the libraries of Westminster and Oxford were ordered to be ransacked, and purged of "all books called Antiphoners, Misales, Grailes, Processionals, Manuals, Legends, Pies, Portuasses, Primers in Latine and English, Couchers, Journals, Ordinals, or other books or writings whatsoever, heretofore used for the service of the church, written or printed in the Englishe or Latine tongue, other than sett forth by the king's majesty—for the first offence, 10s.; second, four pounds; and third, imprisonment

\* The most ancient mode of binding books was in thin wooden boards, many are still remaining in that material. Folds of paper were afterwards pasted together for covers, and this substance, though so different from the former, preserved the name of boards, being called pasteboards.

during the king's pleasure:"—in consequence of which great devastation was made even in useful literature. The visitors who were appointed to superintend these literary confiscations are not named, but they were to deliver the garniture of the books, being either gold or silver, to sir Anthony Ancher; many of them being plated and clasped with gold and silver, and curiously embossed, and consequently were destroyed for the sake of their rich bindings and ornaments; many of astronomy were supposed to be magical, and destroyed on that account; while the members of the university, unable to put a stop to these ravages, trembled for their own safety. Popular rage exhausted itself on illuminated books and manuscripts, and any that had red letters in the title pages, or otherwise decorated, was sure to be thrown into the flames as a superstitious one; and were sure marks of being papistical and diabolical.

At Oxford, a large fire was kindled in the market-place, when some of the members of the university designating the conflagration by the appellation of "*Scotus* his funeral." And thus an almost inestimable collection both for number and value were either thrown away, or used for the vilest purposes, or else were turned into bonfires, or given to bookbinders and tailors for the use of their trade. We still find such volumes mutilated of their valuable bindings, gilt letters, and elegant initials. Many have been found enclosed in walls,\* buried underground, or left neglected in cellars or garrets, having been forgotten; what escaped the flames were obliterated by the damp; such is the deplorable fate of books during a persecution.

The duke of Somerset, who was protector of the king, had long been reckoned a secret partisan of the reformers; and, immediately on his elevation to this high dignity, began to express his intentions of reforming the abuses of the

ancient religion. Under his direction, and that of Cranmer, therefore, the reformation was carried forward and completed. The only person of consequence who opposed the reformers was Stephen Gardiner,\* bishop of Winchester; and, to the eternal disgrace of their own principles, the reformers now showed that they could persecute as severely as their opponents had formerly persecuted them. Gardiner was committed to the Fleet prison, where he was treated with great severity. He was afterwards sent to the tower; and having continued there two years, he was commanded to subscribe several articles, among which was one confessing the justice of his imprisonment. To all the articles but the last he agreed to subscribe; but that he would not agree to. He was then committed to close custody, and remained a prisoner during the reign of Edward VI.; his books and papers were seized; all company was denied him, and he was not even permitted the use of pen and ink. The bishops of Chichester, Worcester, and Exeter, were in like manner deprived of their offices; but the bishops of Landaff, Salisbury, and Coventry, escaped by sacrificing the most considerable share of their revenues. The reformers, however, were not contented with these severities. A commission was granted to the private and others, to search after all anabaptists, heretics, or contemners of the new liturgy. Among the numbers who were found guilty upon this occasion, was Joan Boucher,† and some time after, Van Paris, a Dutchman, was condemned to death for Arianism. He suffered with so much fortitude, that he carressed the fagots that were consuming him.

About this time, a rebellion was raised by the

\* Stephen Gardiner, was born at Bury St. Edmund's, in Suffolk, in the year 1483. He was the illegitimate son of Dr. Woodville, bishop of Salisbury, and brother of Elizabeth, queen of Edward IV. He was educated at Cambridge; was secretary to cardinal Wolsey, and acquired the confidence of Henry VIII. He wrote a work entitled *De Verbe Obedientie*, in defence of Henry's supremacy, for which he was promoted to the see of Winchester. He was chancellor of England during Mary's reign. His conduct towards the Protestants was cruel and sanguinary. He was a learned man, but of little principle, crafty and ambitious. A biographer of a singular cast, who wrote about a century after Gardiner's death, gives as a part of that prelate's original character, in the following original terms:—"His reservedness was such, that he never did what he aimed at, never aimed at what he intended, never intended what he said, and never said what he thought; whereby he carried it so, that others should do his business when they opposed it, and he should undermine theirs when he seemed to promote it. A man that was to be traced like the fox, and read like Hebrew, backward; if you would know what he did, you must observe what he did not."

† Joan Boucher, generally called the *Maid of Kent*, was burnt at the stake for heresy, May 2, 1556, by those who had narrowly escaped a similar death in the preceding reign, and actually suffered under the sway of Mary. She was a great dispenser of *Tindal's New Testament*, and was a great reader of scripture herself. She used for the more secrecy, to tie the books with strings under her apparel, and so pass with them into the court, at London, and so became known to several ladies of quality, and particularly with Anne Askew. Her death, and that of George Van Paris, a Dutchman, form a very heavy accusation against archbishop Cranmer, for whom no excuse can be pleaded. It is related that king Edward refused to sign the warrant, and actually shed tears when compelled by the importunities of Cranmer.

adherents of the old religion, in Cornwall, Devonshire, and other parts of England. Among other articles, the malcontents required, that, *the mass should be celebrated in Latin*; and that *the bible in English* should be suppressed; to which an excellent and powerful reply was drawn up by archbishop Cranmer, in which he successfully defended the use of the *Bible* and *Liturgy* in the mother tongue. From another of the articles proposed by the rebels, we obtain the curious information, that so late a period as this reign, the *Cornish* language continued to be very generally spoken in Cornwall, and was given as a reason for rejecting the *English* church-service, and requesting the *Latin*.

1549. The first edition of Sternhold's version of a portion of the *Psalms*, which was printed by Edward Whitchurch, with the following title:—*All such psalms of David, as Thomas Sternholde late grome of the kinges majestyes robes, did in his lyfe time drawe into Englyshe metre*. This book is dedicated to Edward VI. by the author, and seems, therefore, to have been prepared by him for the press.\*

1549. CANTERBURY received the art of printing about the close of the reign of Henry VIII. John Mychell is the only printer whose name is recorded, and his first dated book, as given by Herbert, is of this date. He resided in St. Austin's, where he printed a *Chronicle, cum privilegio ad imprimendum solum*. Not more than eleven or twelve of these early Canterbury books are known.

1549. Robert Stephens has the honour of the invention, if it be entitled to such a name, of subdividing the larger divisions, or chapters of the *New Testament* into verses. A great part of this undertaking he is said to have performed on horseback, while on a journey from Paris to Lyons. This invention proved so generally acceptable, and obtained so great authority, that all editions of the *New Testament* were in a manner superseded, which did not conform to this device of Robert Stephens.

In 1551, Robert Stephens reprinted the *New Testament* in Greek, in two volumes, (or parts) placing the Greek text between the vulgate Latin, and the version of Erasmus, and affixing a number or cipher to every verse. He followed the same plan in his impression of the *Old Testament* of 1557. These were the earliest impressions of the scriptures in which Chevillier had seen the verses distinguished by figures: an

example soon generally followed; with this difference however, that in the bibles and new testaments of Robert Stephens, and those of the ministers of Geneva and Basil, all these verses begin a new line: a form which is not observed in the bibles of Sixtus V. and Clement VII. excepting in the book of Job, the Psalms, and Proverbs. Chevillier further observes, that from the time of Robert Stephens, the holy bible has been usually printed with Arabic ciphers, to distinguish the verses; but Faber Stapulensis had already introduced them into his *Psalterium Quincuplex*, printed in 1509, and 1513, by Henry, the father of Robert Stephens; and Richard de Mans, a Franciscan of Paris, had edited the *Psalter* in like manner, in 1541; and Chevillier has no doubt that Robert Stephens had taken the idea from these impressions; but adds that Faber Stapulensis caused the first letter of every verse in his psalter to be printed in red ink, a plan which was followed by Genebrard in his *Psalterium*, 8vo. Paris, 1581. But this singularity Robert Stephens did not think it proper to adopt.

1549. *Died*, DANIEL BOMBERG, commonly called the star of Hebrew printers. He was a native of Antwerp, but settled at Venice, where he commenced the art of printing. Having learnt Hebrew of Felix Pratensis, a converted Jew, he printed several editions of the *Hebrew Bible*, the most celebrated of which were those which he published with the Targums, Rabbinical commentaries, and Masorah. The first edition of Bomberg's *Great, or Rabbinical Bible*, was commenced in 1517, and finished on the 27th of November of the ensuing year, 1518. This edition, however, was not held in estimation by the Jews, on account of what they regarded as the apostacy of the editor, Felix Pratensis. Another and improved edition, in 4 vols. folio, was published by Bomberg in 1525—1526, who employed R. Jacob ben Chaim, a learned Jew, of Tunis, as editor. A still more ample and complete edition was printed by him in 1547—1549, 4 vols. fol. under the inspection of Cornelius Adelkind, another erudite Jew, with a curious preface by the former editor Jacob ben Chaim, of which a Latin translation is given in Kennicott's *Dissertations on the state of the printed Hebrew Text*, Diss. II. pp. 229—244. Oxon. 1759. Dr. Adam Clarke (*Gen. Pref. to Comment.* p. iv.) characterises this edition as "the most useful, the most correct, and the most valuable Hebrew Bible ever published." In 1520, Bomberg began an edition of the *Talmud*, which he finished after some years, in 4 vols. fol. This he reprinted twice, and each edition is said to have cost him 100,000 crowns. As a printer, he was highly zealous for the honour of his art, spared no cost in embellishments, and is said to have retained about 100 Jews as correctors of his press, the most learned he could find. In printing only, he is thought to have expended in the course of his life, four millions, others say three millions of gold crowns; and Vossius seems to think, that he injured his fortune by

\* Sternhold, according to Wood's conjecture, was born in Hampshire. Hollinshead says, at Southampton; but R. Atkins, in his *History of Gloucestershire*, expressly affirms that he was born at Aute, a parish about twelve miles from Gloucester, and adds that his posterity turned papists, and left the place. Having passed some time at Oxford, he became groom of the robes of king Henry VIII., who bequeathed him 100 marks. He was continued in the same office under king Edward VI. He appears to have been a man of sincere piety, and a steadfast adherent to the principles of the Reformation; and undertook his translation of the Psalms as an antidote to the profane and wanton songs of the courtiers, hoping they would sing them instead of their licentious sonnets, as appears from the title-page of his version, which has been continued in all the printed copies. He died in 1549, having lived only to verify fifty-one of the psalms.

his liberality. But Bomberg was not the only Christian who engaged in publishing *Hebrew Bibles*: the Stephenses of Paris, the Giunti of Venice, Frobenius of Basil, and others of less note, printed various editions, though none of them can be compared with Bomberg for the number of impressions which issued from his press, or the general services which he rendered to Hebrew literature.

A pretty correct idea may be formed of the progress of Biblical typography, during the early part of the sixteenth century, by referring to Panzer's *Annales Typographici*.

1549. Mexico has ever been regarded as the first spot on which the art of printing was exercised throughout all the vast dominions of the newly-discovered world. The precise time, mode, and circumstances of its introduction have not been investigated with successful accuracy. Thomas, the only professed historian of American typography, merely states that a printing-press was established in the city at some period previous to the year 1569; and the earliest specimen of Mexican printing known to him was a *Spanish and Mexican Vocabulary* in folio, printed in 1571. A copy of this curious volume is preserved in the Bodleian library, among the various and rich collection of the learned John Selden: where also are to be found two other volumes printed at Mexico, which precede by four years that which has hitherto been considered the earliest specimen. The first of these as-yet-undescribed moreaux is entitled, *Doctrina Christiana en lengua Castellana y capoteca; compuesta por el muy Reverendo padre Fray Pedro de Feria, provincial de la Orden de Sancto Domingo, en la provincia de Sanctiago de la nueva Hispana. En Mexico, en casa de Pedro Ocharte. M.D.LXVII. Años*. The volume contains one hundred and sixteen leaves of text, besides eight of prefatory matter, and is licensed for the press by the archbishop of Mexico. The other work bears for its title, *Incipiunt Horæ Beate, Virginis, secundum ordinem*, 1567. This volume contains thirty-nine leaves, on the first and last of which, as well as on several others, there are wood-cuts.

A work still earlier than either of these three occurs for sale in Messrs. Longman's Catalogue of books for 1820 and for 1822, where it is entered as *Fr. Bartholomæi a Ledesma de VII. novæ legis sacramentis summarium. Mexici, Antonius de Espinosa, 1566, 4to*. In Marsden's Catalogue of Dictionaries and Grammars, (London, 1796, 4to.) three books printed at Mexico at a period still more remote are set down. Marsden owns, however, that he had not himself seen them, nor does he refer to any collection in which they may be found.

Antonio, in whose elaborate work, *Bibliotheca Hispana*, a great deal of information is to be found respecting Mexican typography, notices in various parts of his book no fewer than forty-eight productions of this press; to the earliest of which, namely, *Doctrina Christiana in lingua Mexicana, ab Alphonso de Molina*, he assigns the date 1546, (found to be a misprint for 1564,) which is followed by other publications of the

years 1555, 1556, 1565, &c. In Sotuellus' enlarged edition of the *Bibliotheca Scriptorum Societatis Jesu*, composed by Ribadeneira, will be found notices of many books printed in this city, (as also in Lima and other places,) several of which are entirely passed over in silence by Antonio.

Dr. Cotton says, a publication which I understand has been recently imported into England, and one copy of which has been deposited in the Bodleian library, bids fair to bring us nearer to a right apprehension of the hitherto-undiscovered epoch of the birth of typography on the continent of America, than any which was previously known: it is the *Bibliotheca Mexicana*, written by J. J. Eguiara et Eguren, comprising an account of the authors and learned men of Mexico, as also the proceedings of three or four of the earliest Mexican councils, holden during the XVIth century.

From an attentive perusal of this volume I gather, (says Dr. Cotton, from whom this article is taken,) that for the commencement of its acquaintance with the advantages of typography, Mexico is indebted to the exertions of its first viceroy, Antonius de Mendoza, who arrived in the year 1535, to occupy his exalted station. He appears to have been a man whose mind was steadily directed to the advancement and improvement of the people committed to his care; and his esteem for literature is seen in the petition forwarded by him to the emperor Charles V. for the foundation of an university in the new world, the prayer of which was duly carried into effect by an edict issued by the emperor in the year 1551. Previously to this, however, the historian remarks, that Mendoza had taken care that the art of printing should be brought from the old world into the new, and had established the first printer in his capital of Mexico. "Prius vero disertissimus homo curaverat typographiam in novum hunc orbem ex antiquo deferri, primumque typographum Mexici instituit, cujus formis multi statim libri excudi cæperunt." p. 221. The name of this printer we discover from one of his colophons to have been *Joannes Paulus Brisensis, or Lombardus*, a native, it seems, of Brescia, in Italy. In this account Gonzales, a Spanish writer, is corrected for having asserted that printing was in use at Mexico in 1532. Before the removal of the viceroy to the government of Peru, an event which took place in the year 1551, he caused to be printed *Ordinationes legumque collectiones pro conventu juridico Mexicano*, a folio volume, executed by Joannes Paulus in 1549, which therefore at present claims the honour of being the first book ever printed on the shores of the new world! "But where," a man may feelingly exclaim, "where is so interesting and valuable a relic to be now found? has it never stept beyond the confines of its native country? or, if a single copy has chanced to be conveyed to Europe, does it still slumber amid the dust and gloom of the Escorial? or, still unhappier, has it gone the way of every

copy of its elder brother the *Mentz Donatus*, of which scarcely a fragment, a *ci git*, remains to bless the eyes and empty the pockets of the curious and keen collector?"

The viceroy's volume was speedily followed by others in tolerable succession; but these are almost wholly unknown to gratify the taste of the curious in such matters.

1550. SIMON COLINEUS, or DE COLINES, independently of his preeminence as an early typographer, is entitled to our notice on account of his affinity to the family of the Stephenses. La Caille and Peignot say, that he first practised the art of printing at Meaux, and executed there an impression of *Jacobi Fabri Commentaria in quartum Evangelia*, 1521, in folio; and that in the same year he also printed at Paris a work in folio. Having married the widow of Henry Stephens, he continued to send forth various impressions of more or less importance from the same office, probably till the year 1524. But in the course of that year it appears he changed his establishment; and according to Panzer, his new office was distinguished by the sign of the Golden Sun. Colines went far beyond his predecessor (Henry Stephens) to establish his claim to the character of a learned printer; for though he necessarily rendered his press subservient to the literature of the times, and consequently gave birth to various works which are now consigned to oblivion; yet when left to the exercise of his own choice, he evinced a degree of taste and judgment, strikingly superior to those of his cotemporaries. His very numerous impressions of the best Latin classics, and the equal novel and surprising beauty of their execution, are decisive proofs of such superiority. They are generally executed on a uniform and convenient plan; the greater part of an octavo form; yet all with regard to type and arrangement, so legible, and so agreeable to the eye, that scholars of any age may peruse them with pleasure. By such services, this judicious printer evidently contributed in a most important degree to the advantage of the university of Paris; and gave an example to Robert Stephens in particular, which must have had a powerful influence in forming the taste of that young and afterwards eminently distinguished typographer, and in awakening the zeal which he so remarkably evinced for the dissemination of classical literature. Simon de Colines appears to have given to France the first example of the use of *italic* type. He procured for himself a species of *italic*, larger, bolder, and fuller than that of Aldus Manutius, and used it solely in many of his impressions; namely, in several Latin prose works, and in all the Latin poets printed by him, (his *Virgilius* of 1526 excepted, which is roman type) also in the few works which he gave in his native tongue. Maittaire doubts whether Colines used the *italic* type before the year 1528; and prefers the characters of Colines to those of Aldus Manutius: observing, however, that he sometimes employed an *italic* of an inferior description. In the eyes of all admirers of early typography,

are the beautiful and rare impressions of Colines in the Greek character; which in no less than the roman, he has left convincing evidences of that original and enterprising genius, which prompted him as an artist to aim at a degree of excellence, before entirely unknown in France. Bibliographers have been long accustomed to limit the number of Colines's Greek impressions to five distinct works only; but, says Mr. Greswell, the number may be extended to no less than fourteen, including his repeated editions of Euclid, and several books of a grammatical description. Of the beauty and fine proportion of these Greek impressions, an adequate idea can be formed only from the inspection of copies which have been well preserved, and have escaped the too frequent mutilations of the binder's knife; which remark may with equal propriety be applied to the impressions of other early artists. The press of Colines was much occupied by works relating to the Lutheran controversy, which in his time excited great commotions in the university of Paris. Being a *libraire jure* he was employed to print the *decreta* or acts of the Sorbonne. Maittaire distinguishes several folio impressions of Colines, as highly magnificent; and also commends the taste which he displayed in decorating his impressions with appropriate engravings; in the titles especially.

The most frequent *insigne* or mark used by Colines, was the bold figure of Time, with which many of his impressions are decorated. Maittaire thinks that he borrowed this *insigne* from a cotemporary printer, Regnaud Chaudière, whose family certainly used a similar mark and motto; but perhaps they may rather be said to have inherited it from Simon de Colines. These printers were in some instances professionally connected. Regnaud Chaudière moreover received in marriage the daughter and only child of Colines: Claude Chaudière, the issue of that marriage, exercised the same profession and became his heir; and, he had, says La Caille, for his mark, the figure of Time, with this motto, *Virtus sola aciem retundit istam*. Colines may be presumed to have printed no less than five hundred distinct editions. The last mentioned by Maittaire is *Nov. Testamentum Latine, form. min.* 1550. *apud hæredes Simonis Colinei*.

The following are brief notices of some of the early Parisian Greek printers who flourished about this period:—

PIERRE VIDOUVE of Verneuil. This early Parisian Greek typographer was considered as a person of learning and eminence. He executed for Gilles de Gourmont a singularly curious impression of Aristophanes, in the year 1528; and in 1538, he executed for Jean Petit and Denis Lecuyer, the work of Guillaume Postel, intitled *Linguarum XII. characteribus differentium Alphabetum*, &c. La Caille says, "this was the first book printed in oriental character; which, however, says Mr. Greswell, as far as relates to the Hebrew, is an incorrect assertion. The mark of Pierre Vidouvé was a figure of Fortune; with the words, *Par sit fortuna labori*.

ANTOINE AUGEREAU (Augurellus) is occasionally found in connection with Jean Petit, Simon de Colines, and others. That he printed with very handsome types both Greek and Latin, Maittaire says the impression of *Herodi Operum & Dierum Græce*, 8vo. 1553, (which has a Latin preface by Melancthon) is a proof. La Caille ranks Augereau amongst the improvers of the roman characters.

PETRUS GAUDOUX was one of the several printers whose names occasionally appear united with that of Vascosan. The device of Pierre Gaudoul is a Hand holding a burning Lamp: "*dextra ardentem lampada sursum gerens*," with the artist's initials P. C. and the motto "*Ita motus ad vendentes, et emite vobis*," Matth. xxv. and beneath, "*Sic luceat lux vestra*" Matth. v. His commencement in the profession must be dated about the year 1535.

JOANNES LODOICUS, a German by birth, a native of Tiel in Gueldre, whence his surname Tiletanus, whose commencement Maittaire erroneously dates from the year 1537, soon became distinguished for great diligence and accuracy. He is said to have been an elegant Latin scholar, and to have written commentaries on Quintilian. Conradus Neobarus, who afterwards became the first typographus regius, was for some time his assistant. His impressions were (considering the duration of his practice of the art) rather numerous. His Latin characters, both roman and italic. His prefaces evince great erudition. The insigne of Lodoicus is thus described by Maittaire: "*Bine manus junctæ teneo erectum CADUCEUM papaveribus & spicis crinatum, cum literis J. L.*" Sometimes he exhibited "*ECHENEIDA telo transfixam*," with the "*Matura*." He died about 1547.

CONRADUS NEOBARIUS was admitted a *libraire* *jure* in 1538, by a very honourable address from the "Recteur" of the university. Maittaire says, scarce any typographer practised the art for so short a period, and attained so much credit in it. He probably did not execute more than six or seven Greek works. He died in the year 1540. Henry Stephens composed several *epitaphia* in honour of his memory.

The mark of Neobarus was a brazen serpent upon a cross: *serpens aneus in patibulo sive signo T erectus, cum his aliquando cocibus TYP. SAL. i. e. typus salutis vel Salvatoris*.

Neobarus married a sister or near relative of Jacobus Tusanus: a union which may be considered as a kind of pledge of his own literary character, and as an occasion of his advancement to the dignity of typographus regius. His widow afterwards subscribed herself Emonday Tusana.

Tusanus, the author of the *Greek Lexicon* which bears his name, was considered by his countrymen as the ablest of their Greek scholars, after Budæus.

JACOBUS BOGARDUS an early Parisian printer, many of whose productions, both in Greek and Latin, are extant, and are conspicuous for the elegance of the characters. About the year 1546, he undertook an impression of the *Lexicon*

*Græco-Latinum* of Tusanus, but died before it was completed. He was the nephew of Charlotte Guillard. He generally used the *insigne* of Neobarus.

JOANNES ANDREAS another early Parisian printer, and who was a violent anti-reformist *Libraire*. Robert Stephens speaks of him in terms of unqualified disapprobation; and from other testimonies it appears he was employed by Pierre Lizet president of the parliament, as a spy, for the detection of Calvinists; and in 1546, procured the arrest of Pierre Chapot, a bookseller at Geneva, but employed at Paris as a corrector of the press,—see page 279 ante.

JEAN JUDET, also a *Libraire*, deserves a honourable record for his opposition to Andre, and whose charitable officiousness in warning the "heretics" of the plans laid for their detection at length brought him to the stake.

THOMAS RICHARD was probably a descendant of John Richard, who is mentioned as a Parisian printer of the preceding century. There were others of the name at various periods; of William Richard who practised the art about the year 1563, his mark being "a hen," with the words in *pingui Gallina*. Thomas Richards made his first appearance as a Greek printer, at Paris in the year 1548.

MICHAEL FEZANDAT commenced his labours as a typographer by a beautiful impression of *Horæ in laudem B. virginis Mariæ, secundum consuetudinem Romanum*, Gr. Lat. 16mo. 1548. This impression of the *Horæ*, &c. is executed en rouge et noir, and ornamented with wood cuts elegantly designed. Fezandat had the reputation of a skilful printer, but works exhibiting his name are few. His impressions generally bear as a mark the Viper which settled on the hand of St. Paul, with the words *Si Deus pro nobis, quis contra nos*; which afterwards became the distinction of Michael Sonnius.

BENEDICT PREVOST has the character of an ingenious and able printer. La Caille attributes to him *Chrysostomus in Psalmos*, 8vo. 1545. His *Nov. Test. Gr.* 16mo, is a handsome and esteemed volume: and no less so in its kind is his impression (Gallice) of *L'Histoire de la nature des Oiseaux*, par Belon, folio, 1555, adorned with fine engravings.

MARTIN LE JEUNE distinguished himself in the art somewhat more than three years, by elegant impressions in Hebrew, as well as in Latin and Greek. He used the insigne of Neobarus. Some assert that he had possession of the "Typographia" of Robert Stephens after his migration to Geneva: but the correctness of that assertion is questioned by Maittaire.

SEBASTIAN NIVELLE was conspicuous as well for the beauty of his impressions, (which Baillet says, were also very exact and in great request,) as by the length of time during which he exercised the profession. His daughter was the mother of Sebastian Cramoisy, "Typographus Regius;" who inherited the establishment of his grandfather, and adopted his *insigne*: and first appeared in the profession in the year 1609.

We have already noticed the mode of *punctuation* used by the early printers, (see p. 157, *ante*) and also the improvements which Aldus Manutius bestowed upon it. The following statement will show the further progress which was made in these *helps* to reading!—

In Bale's *Acts of English Votaries*, black letter, printed in 1550, is the first appearance of the *colon*: and so warily put in by the printer, that it is conjectured that it was not in common use. But in an edition of the *Governor*, by sir Thomas Elyot, printed 1580, the *colon* is as frequently introduced as any other stop; but there is neither *semicolon* or *admiration*.

In the *Catechism* set forth by Edward VI. and printed by John Day, in 1553, is a note of *admiration* as follows; "Master, oh the unthankfulness of men! but what hope had our first parents, and from thenceforth the rest whereby they were relieved." There is no other stop of the like kind in the book.

In Hackluyt's *Voyages*, printed in 1599, is the first appearance of the *semicolon*; and, as if the editors did not fully apprehend the propriety of its general admission, it is but sparingly introduced—but no *admiration*.

1550. GUALTER, or WALTER LYNNE, was a scholar, an author, and a printer, he dwelt on Sommer's Key, near Billingsgate; it is said that he also kept a shop at the Eagle, next St. Paul's school. He continued in business from 1548 to 1550, and executed fourteen different works. Lynne's device consisted of the annexed figures.

1550. RICHARD CHARLTON practised the art. JOHN WYER lived in Fleet-street, a little above the conduit, and whose only work appears to have been *Ymage of both churches*, 1550, 8vo.

1550. The first edition of the *whole bible* in the Danish language was printed at Copenhagen, by Ludowich Dietz, of Rostock, who had rendered himself celebrated by his masterly execution of Luther's bible, in the *Low Saxon* language. There had, indeed, been a printing office established at Copenhagen as early as 1493; Gothefridus de Ghemen was the printer. And though the Copenhagen press had received several improvements and enlargements subsequent to its first erection, it was, nevertheless, found to be inadequate to so stupendous a work as that of printing the *whole bible*. In 1546, the paper destined for the work arrived, (most probably from Holland) at Elsinore, and in order to meet the expenses of it, together with those connected with the printing, a tax of two rix-dollars was levied on every church in Denmark. In was not, however, till 1550, that the bible was com-

pleted. The title of the bible is, *Bibla, det er den gantske, &c. BIBLA*, i. e. the whole of the Sacred Scripture translated into Danish. "The Word of God abideth for ever." Isaiah xl. Printed in Copenhagen, by Ludowich Dietz, 1550. Some have supposed that Dietz was sent for at the instance of Bugenhagen, but in the appendix to the *Low Saxon* new testament, which he printed in 1553, he mentions Dr. Maccabæus\* as his particular friend and patron. It also appears from the same appendix, that Dietz was well rewarded by the king, for his pains, for which he there thanks him, and praises his laudable undertaking.†

1550. The first English Concordance of the whole Bible was the production of John Merbecke, organist to the royal chapel at Windsor, printed with this title: *A Concordance, that is to saie a worke wherein by the ordere of the letters A. B. C. ye maie redely finde any worde conteigned in the whole Bible, so often as it is there expressed or mentioned*, folio, black letter. It was dedicated to Edward VI. The account which Merbecke gave of his undertaking, to the bishops and others who summoned him before them, and condemned him, is so interesting, and exhibits him as a shining instance of indefatigable diligence, that we shall give it nearly in his own words. "When Thomas Matthewes bible came out first in print, I was much desirous to have one of them; and being a poor man not able to buy one of them; determined within myself to borrow one amongst my friends, and to write it forth. And when I had written the five books of Moses in fair great paper, and was entered into the book of Joshua, my friend master Turner chanced to steal upon me unawares, and seeing me writing out of the bible, asked me

\* John Maccabæus, or M'Bee, was a native of Scotland, and descended from an ancient and noble family. His true name was *Maculpine*, of the celebrated clan Alpine. Having embraced the principles of the reformation, he was obliged, in 1532, to flee into England, where he was entertained by bishop Shaxton, and also gained the esteem of lord Cromwell. He married Agnes Machisoo, who was of Scotch extraction. From England he passed over to the continent, and for some time resided at Wittenberg, where he formed an intimate friendship with Luther and Melancthon, the latter of whom gave him the name of *Maccabæus*, from the similarity between his character and circumstances, and those of the ancient Jewish champions. Christian III. invited him to Denmark, and made him professor in the university of Copenhagen. His general character for piety and learning, occasioned his appointment as one of the translators of the Danish bible. After labouring for many years in the cause of truth, he was called to his eternal reward, December 6, 1557. He left a son, Christian, who became president of the college of Sorø, in Zealand, and canon and archdeacon of Lundon. Maccabæus and Miles Coverdale were brothers-in-law.

† The number of copies printed of the Danish bible, amounted to three thousand. When they were ready, a bookbinder was procured from Lubek, who engaged to deliver two thousand copies bound in whole leather, with clasps, within a year and a day, for two marks Danish per copy, beside lodging, as appears from a royal brief given at the royal palace, Copenhagen, the 8th of July, 1556. The price at which copies were sold was three rix-dollars each. It forms a middle sized folio, consisting of 1690 pages, and is tolerably well printed on good strong paper.—The first Danish version of the *New Testament* was made by Hans Mikkelsen, who is sometimes called John Michelsen. At the end there is a notification stating it to have been printed at Lelpak, by Melchior Lotther, the Monday preceding St. Bartholomew's day, A. D. 1534.

what I meant thereby? And when I had told him the cause; tush, quoth he, thou goest about a vain and tedious labour. But this were a profitable work for thee, to set out a Concordance in English. A Concordance, said I, what is that? Then he told me it was a book to find out any word in the whole bible by the letter, and that there was such a one in Latin already. Then I told him I had no learning to go about such a thing. Enough quoth he for that matter, for it requireth not so much learning as diligence. And seeing thou art so painful a man, and one that cannot be unoccupied, it were a good exercise for thee." He accordingly borrowed a Latin Concordance, and had gone through the letter L, when he was apprehended, imprisoned, and and all his papers seized. He was arraigned, for that he had with his own hand gathered out of divers men's writings, certain things, that were expressly against both the mass, and the sacrament of the altar. He was arraigned and condemned with three others, namely, Anthony Persone, priest; Robert Testwood, singing man; and Henry Filmer, tailor; on account of the six articles in the year 1544; the three last were burned at Windsor; but the innocence of Merbecke gained him the king's pardon. When he was set at liberty, as his papers were not restored to him, he had his Concordance to begin again; which, when completed, he showed to a friend, who promised to assist him in having it presented to the king, in order to have it published by his authority; but Henry VIII. died before that could be brought about. When Edward VI. was settled on the throne, Merbecke consulted Grafton, concerning the printing of it, "who" says he, in his introduction, "seeing the volume so huge and great, said,—the charges of imprinting thereof would not only be importunate, but the books when finished would bear so excessive a price, as few should be able to attain unto them; wherefore, by his desire, I yet once again a new writ out, the same in such sort as the work now appeareth." Merbecke was brought up to the study of music, and was admitted to the degree of bachelor of music at Oxford, in 1549, and early in the following year, he published the *Booke of common praiser*, with musical notes to the pieces, prayers, and responses, which was likewise printed by Richard Grafton.

There are only three or four sorts of notes used. The first note is a strene note, and is a breve; the second a square note, and is a semy breve; the third a pycke, and is a mynymme. And when there is a pryke by the square note, that pryke is halfe as much as the note that that goeth before it; the fourth is a close, and is only used at the end of a verse. The whole is filled with chaunting notes on four red lines only.

Dr. Burney, in his *History of Music*, vol. ii. has given a considerable extract from Merbecke's cathedral service printed with the common prayer in 1550. Merbecke was living when Fox wrote his *Acts and Monuments*. See the curious account of his examination in that work.

It was at this time that metrical psalmody, as it is still practised in our parochial churches, had its beginning, or at least became general in England. Whatever objections may be made to the manner of singing which was then introduced, it was upon a level with the taste of the nation in other respects. Parish churches had hitherto used the plain chant, as well as cathedrals. It has not perhaps, been remarked, says D'Israeli, that psalm-singing, or metrical psalms, degenerated into those scandalous compositions which, under the abused title of *hymns*, are now used by some sects, many of which abound with ribaldry, obscenity, and blasphemy. These are evidently the last disorders of that system of psalm-singing which made some religious persons early oppose its practice. Even Sternhold and Hopkins, says honest Fuller, found their works afterwards met with some frowns in the faces of great clergymen. Warton regards the metrical psalms of Sternhold as a puritanic invention, and asserts, that notwithstanding it is said in their title-page that they are *set forth* and allowed to be sung in all churches, they were never admitted by lawful authority. They were first introduced by the Puritans, from the Calvinists of Geneva, and afterwards continued by connivance. To trace the history of modern metrical psalmody, we must have recourse to Bayle, who, as a mere literary historian, has accidentally preserved it. It is indeed strange, that Calvin, while he was stripping religion not merely of its pageantry, but even of its decent ceremonies, that this levelling reformer should have introduced this taste for singing psalms in opposition to reading psalms. "On a parallel principle," says Warton, "and if any artificial aids to devotion were to be allowed, he might at least have retained the use of pictures in the church." But it was decreed that statues should be mutilated of "their fair proportions," and painted glass be dashed to pieces, while the congregations were singing psalms! Calvin sought for proselytes among "the rabble of a republic, who can have no relish for the more elegant externals." But to have made men sing in concert, in the streets, or at their work, and, merry or sad, on all occasions to tickle the ears with rhymes and touch the heart with emotion, was betraying no deficient knowledge of human nature.

1550, Feb. Died, Martin Bucer, one of the most eminent scholars of the age in which he lived. Bucer was born in 1491, at Schelestadt, near Strasburg, a town of Alsace, in the modern French department of the Lower Rhine. His real name was Kuhorn (Cowhorn), which, according to the pedantic fashion of his time, he changed into a Greek synonym, calling himself Bucer. He received his education at Heidelberg. Some tracts by Erasmus and others,

and, yet more, some by Luther which fell in his way, induced him to adopt the opinions of the latter in 1521. For twenty years he taught divinity at Strasburg. At the diet of Augsburg, in 1548, he vehemently opposed the system of doctrine called the *Interim*, which the emperor Charles V. had drawn up for the temporary regulation of religious faith in Germany until a free general council could be held. It was opposed equally by the Romanists and by the reformed; but the emperor urged its acceptance so fiercely, that Bucer, after having been subjected to much difficulty and danger, accepted an invitation from Cranmer to fix his residence in England.

On his arrival in England, he was appointed to teach theology at Cambridge, and appears to have been much admired and respected. When Hooper accepted the bishopric of Gloucester, but refused to be consecrated in the episcopal vestments, Bucer wrote a most convincing but moderate treatise against this fastidious reluctance; and on the review of the Common Prayer Book, he expressed his opinions at large, that he found all things in the service and daily prayers clearly accordant to the Scriptures.

Bucer died at Cambridge, and was buried in St. Mary's with great honour, his remains being attended by full 3,000 persons jointly from the university and the town. A Latin speech was made over his grave by Dr. Haddon, the public orator, and an English sermon was then preached by Parker, afterwards archbishop of Canterbury.

An amusing story, recorded in the *Life of Bishop Jewell*, shows both the gentleness of Bucer's disposition and malice of his opponents. Catherine duchess of Suffolk having two sons at Cambridge, and herself occasionally residing within its precincts, had sent Bucer a cow and a calf towards the maintenance of his family. The good-natured man was fond of these beasts, and often visited them in their pasture, an innocent recreation, which gave occasion to a report among his adversaries that the cow and calf were magic spirits which instructed him in what he was to read in the schools. On hearing this rumour, he by no means gave up his customary attention to his favourites, but once pointing them out to a friend, he observed with a jesting tone, 'Behold, these are my masters, from whom I have learned what I teach others; and yet they can speak neither Latin nor Greek, Hebrew nor German, nor talk to me in any other language.'

During the reign of Mary, five years afterwards, when inquisitors were sent to Cambridge, the corpses of Bucer and of Fagius were dug up from their resting-places, fastened erect by a chain to stakes in the market-place, and disgustingly burned to ashes; their names at the same time, were erased from all the public acts and registers as heretics and deniers of the true faith; and this violence to their memories continued till Elizabeth became queen.

Bucer wrote both in Latin and in German, and so largely that it is thought his works, if collected, would amount to eight or nine folio volumes. He was thrice married, and his first

wife, by whom he had thirteen children, was a nun, perhaps selected by him, not very judiciously, in imitation of Martin Luther.\*

1550. *The Vision of Piers Plowman*,† now first printed by Robert Crowley, dwelling in Ely rents in Holburne, anno Domini 1505. (a mistake for 1550.) *Cum privilegio ad imprimendum solum*. The printer's address to the reader concludes with the following remarks:—*"This writer, who in reportynge certayne visions and dreames, that he fayned himself to have dreamed, doeth mooste christianlye enstructe the weake, and sharply rebuke the obstinate blynde. There is no maner of vice, that reigneth in any estate of men, which this wryter hath not godly, learnedlye and wittilye rebuked. The English is according to the time it was wrotten in, and the sence somewhat darcke, but not so harde, but that it may be understande of such, as will not sticke to breake the shell of the nutte for the kernelles sake, &c.* Contains 117 leaves. Quarto."

1551, Feb. 1. In the fifth parliament of queen Mary, held at Edinburgh, on this day, an act was passed for a censorship on the press, "under the following words:

*Item, For-sa-meikle as there is diverse prenters in this realme, that dailie and continually prentis buikes concerning the faith, ballattes, sanges, blasphemationes, rimes, alsweill of kirkmen, as temporal, and others tragedies, alsweill in Latine, as in English tounge, not scene, viewed, and considered be the superiours, as apperteinis to the defamacion and sclander of the lieges of this realme, and to put ordour to sik inconvenientes; it is devised, statute, and ordained be the lord governour, with advise of the three estates of parliament: That na prenter presume, attempt, or take upon hand to prent any buikes, ballattes, sanges, blasphemationes, rimes, or tragedies, outhir in Latine, or English tounge, in any times to cum, unto the time the samin be scene, viewed, and examined be some wise and discret persons, depute thereto be the ordinares quhat-sum-ever; and there after ane licence had and obtained fra our soueraine ladie, and the lord governour for imprinting of sik buikes; under the paine of confiscacion of all the prenters gudes, and banishing him of the realme fo ever.*

\* A very interesting collection of tracts relative to the life, death, burial, condemnation, exhumation, burning, and restoration of Martin Bucer, was published at Strasburg, in Latin, by his friend Conrad Hubert. It contains, among other matters, the Greek and Latin *Epicidia*, which the members of the university, according to custom, placed on his coffin; and also the *Encomia*, written when he and Fagius were posthumously reinstated in their academical honours. Each of these testimonies of honour fills more than fifty pages.

† Robert Longland was the author of the poem called the *Vision of Piers Plowman*, was a secular priest, and a fellow of Oriel college, Oxford. He flourished about 1530. This poem, says Warton, contains a series of distinct visions, which the author imagines himself to have seen while he was sleeping on Malvern Hills, in Worcestershire. It is a satire on the vices of almost every profession; but particularly on the corruptions of the clergy, and the absurdities of superstition. These are ridiculed with much humour and spirit, couched under a strong veil of allegorical invention.

1551. Richard Grafton printed the following proclamations:—

March 9. For forbidding the eating of flesh in the tyme of Lent, and other days prohibited.

This proclamation was to abstain from flesh on Fridays and Saturdays: exhorted on the principle, not only that "men should abstain on those days, and forbear their pleasures and the meats wherein they have more delight, to the intent to subdue their bodies to the soul and spirit, but also for *worldly policy*. To use *fish* for the benefit of the commonwealth, and profit of many who be *fishers* and men using that trade, unto the which this realm, in every part environed with the seas, and so plentiful of fresh waters, be increased the nourishment of the land by saving flesh."\*

April 28. For the reformation of vagabonds, sellers of newes, sowers of seditious rumours, players, and printers without licence, unless allowed by his majestie, or six of his privy council under their hand, and divers other disorderly persons.

May 22. Concerning casters, and spreaders abroad of slanderous and seditious billes.

May 30. For the prices of victuals. In this year alehouses were first licensed. Both ale and alehouses are mentioned in the laws of Ina, king of Wessex.—See page 42 ante.

In one proclamation the king denounces to the people "those who despise the sacrament by calling it *idol*, or such other vile name.

Another is against such "as innovate any ceremony," and who are described as "certain private preachers and other laicemen who rashly attempt of *their own and singular wit and mind*, not only to persuade the people from the old and accustomed rites and ceremonies, but also themselves bring in *new and strange order according to their phantasies*. The which, as it is an evident token of pride and arrogancy, so it tendeth both to confusion and disorder."

Another proclamation, to press "a godly conformity throughout his realm," where we learn the following curious fact, of "divers unlearned and indiscreet priests of a devilish mind and intent, teaching that a man may forsake his wife and marry another, his first wife yet living; likewise that the wife may do the same to the husband. Others that a man may have *two wives or more* at once, for that these things are not prohibited by God's law, but by the bishop of Rome's law; so that by such evil and phantastical opinions some have not been afraid indeed to marry *two wives*."

The proclamations of every sovereign would characterise his reign, and open to us some of the interior operations of the cabinet. The despotic will, yet vacillating conduct of Henry VIII. towards the close of his reign, may be traced in the proclamation to abolish the translations of the scriptures, and even reading of bibles by the

people; commanding all printers of English books to affix their names to them, and forbidding the sale of any English books printed abroad.—(See p. 256, ante.) When the people were not permitted to publish their opinions at home, all the opposition flew to foreign presses, and their writings were then smuggled into the country in which they ought to have been printed. Hence many volumes printed in a foreign type at this period are found in our collection.

The proclamations of Edward VI. curiously exhibit the unsettled state of the reformation, where the rites and ceremonies of catholicism were still practised by the new religionists, while an opposite party, was resolutely bent on an eternal separation from the church of Rome.\*

The catholics, in their expiring cause, took refuge in the theatre, and disguised the invectives they would have vented in sermons, under the more popular forms of the drama, where they freely ridiculed the chiefs of the *new religion*, as they termed the Reformation, and "the new Gospellers," or those who quoted their Testament as an authority for their proceedings.

On the side of the Reformed we have no deficiency of attacks on the superstitions and idolatries of the Romish church; and Satan, and his only son Hypocrisy, are very busy at their intrigues with another hero called "Lusty Juventus," and seductive mistress they introduce him to, *Abominable Living*: this drama was printed and published at this period. It is odd enough to see quoted in a dramatic performance chapter and verse, as formally as if a sermon were to be performed. There we find such rude learning as this:—

Read the V. to the Galatians, and there you shall see  
That the flesh rebelleth against the spirit

or in homely rhymes like these—

I will show you what St. Paul doth declare  
In his epistle to the Hebrews, and the X chapter.

In a proclamation of this period, the king charges his subjects that they should not openly or secretly play in the *English tongue* any kind of *Interlude, Play, Dialogue*, or other matter set forth in *form of Play*, on pain of imprisonment, &c.; so that we may infer that the government was not alarmed at treason in Latin.

\* These proclamations, or royal edicts, in our country, were never armed with the force of laws—only as they enforce the execution of laws already established; and the proclamation of a British monarch may become even an illegal act, if it be in opposition to the law of the land. Once indeed it was enacted, under the arbitrary government of Henry VIII., by the sanction of a pusillanimous parliament, that the force of acts of parliament should be given to the king's proclamations. Royal proclamations, however, in their own nature are innocent enough; for since the manner, time, and circumstances of putting laws in execution, must frequently be left to the discretion of the executive magistrate, a proclamation that is not adverse to existing laws need not create any alarm; the only danger they incur is that they seem never to have been attended to, and rather testified the wishes of the government than the compliance of the subjects. They were not laws, and were therefore considered as sermons or pamphlets, or any thing forgotten in a week's time! It seems that our national freedom, notwithstanding our ancient constitution, has had several narrow escapes.

\* Bishop Burnet, in his *History of the Reformation*, vol. II. p. 96, folio, has made a just observation on religious laws.

These dramas curiously exemplify that regular progress in the history of man, which has shown itself in the more recent revolutions of Europe: the old people still clinging, from habit and affection, to what is obsolete, and the young ardent in establishing what is new; while the balance of human happiness trembles between both.

1551. DUBLIN, the capital of Ireland, received the art of printing. Mr. Ames observes, that Ireland was one of the last European states into which the art of printing was introduced; the earliest book at present known being an edition of the *Boke of Common Prayer and Administration of the Sacraments, and other Rites and Ceremonies of the Church*. folio. It is a verbal reprint of the *Common Prayer* of Edward VI. of 1549, and bears for colophon, *Imprinted by Humfrey Powell, printer to the Kynges Maieste, in his Hyghnesse realme of Ireland, dwellinge in the citee of Dublin in the great toure by the Crane. Cum privilegio ad imprimendum solum, anno Domini M.D.L.I.* Powell continued to exercise the printing business in Dublin for fifteen years or more, during which time he removed from the river side to a more southern residence, in St. Nicholas-street. His productions are certainly most creditable to the early Irish press. A fine and perfect copy of Powell's first production, may be seen in the library of Trinity college, Dublin. Before his residence in Dublin, Powell practised the art of printing in London, in the years 1548 and 1549, and dwelt above Holborn conduit, where he printed four works. He was a member of the stationers' company, and his name is inserted in their charter of 1556.

1551, April 18. Nicholas Udall, had a patent granted him to print the works of Peter Martyr, and the English Bible in any size for seven years. Nicholas Udall, was successively head master of Eton and Westminster schools, and who early in life, had been a dramatic author, and produced a drama entitled *Ralph Roister Doister*, and which is strongly contended is the first approach to any thing like a regular comedy in our language. Udall likewise produced the verses for a pageant on the entrance of Anne Boleyn into London. The editor of the new edition of Dodsley's *old plays* first established the intimate connexion between N. Udall and *Ralph Roister Doister*.

1551. WILLIAM BONHAM was one of the original members of the ancient stationers' company, of which he was also one of the last wardens, serving that office with Thomas Berthelet, who died before their charter was granted, as Bonham did soon after. He first resided at the King's Arms, and afterwards at the Red Lion, in St. Paul's church yard; and his earliest work is supposed to have been an impression of Chaucer's works in connection with John Reynes. There are also attributed to him an edition of the English Primer, with the *Epistles and Gospels*, 1542, 4to. *Chronicle of Fabyan*, 1542, 2 vols. folio. *The Byble*, 1551, folio.

1551. ANDREW HESTER was more a bookseller than a printer, dwelling in St. Paul's church

yard, at the sign of the White Horse. He sold the *Primers* composed by John Hisley, bishop of Rochester, in 1539, and printed by Wayland. *The whole Byble*, 1550, 4to. printed for him: no printer's name. *A Preservative*, &c. 1551, 8vo.

1551. THOMAS PETIT resided in St. Paul's church yard, at the sign of the Maiden's Head, where he printed several law books, although he was not king's printer, nor does it appear that he had any exclusive patent for it, other printers also infringing on the patent right at the same period. Ames was of opinion that this person was related to John Petit, a printer at Paris.

An edition of the Bible was printed for him by Nicholas Hill, in this year.

He printed in the whole twenty-five works.

Petit used the above monogram in a rich Ionic architectural compartment, the shield being supported by cupids, with angels on the sill.

1550, THOMAS GAULTIER. *The New Testament in Englishe, after the Greeke translation annexed, with the traslation of Erasmus in Latin, &c. In officina Thomae Gualtier, pro I. C. Pridie kalend, Decem.* Octavo.

1551. *The newe greate abredgement, briefly conteynyn, all thactes and statutes of this realme of England, until the xxxv. yere of the reigne of our late noble kynge of moste worthye and famous memorye Henry the VIII. (whose soule God pardone) newly reuysed, tralye corrected and amended, to the greate pleasure and commoditie of all the readers thereof.* It has the compartment used by Edward Whitechurch. Octavo.

1551. STEPHEN MIERDMAN. *A new herball, wherein are conteyned the names of herbes in Grecke, Latin, Englysh, Duch, Frenche, and in the potecaries, and herbaries Latin, with the properties, degrees, and naturall places of the same, gathered and made by William Turner, phisicion unto the duke of Somerset's, grace. And are to be sold by John Gybken.* Folio.

1551. JOHN CASE dwelt in Peter-college rents, and published the following works:

*French Hooide, and new apparel for ladies and gentlewomen, wherunto is added, a frouse paste to lie in a nights.* Octavo.

*Poor Shakerley his knowledge of good and evil, called otherwise ecclesiastics: by him turned into meter.* Printed by R. Crowley for him. Octavo.

*Certaine chapters of the proverbs of Salomon drawn into metre by Thomas Sternholde, late grome of the kynoges magesties robes.* Printed for William Seres. Cum privilegio, &c. 12mo.

1551. The first drinking ballad of any merit, in the English language, appeared in this year. It has a vein of ease and humour superior to what might have been expected in these times; and it may be considered as the parent of many pleasing compositions, which have highly contributed to convivial entertainment. This ballad opens the second act of *Gammer Gurton's Needle*, a comedy written and printed in the above year, and which was soon afterwards acted at Christ's college, Cambridge. It is the first English play which was neither *mystery* nor *morality*, and which handles a comic story with some disposition of plot, and some discrimination of character. The jocularity of it sometimes rises above buffoonery; and the author displays powers of mind, which, in a more polished age, would have enabled him to appear with no small credit.

Poetry, during this period, was often satirically employed upon religious subjects; and among the vehicles of controversy between the papal and protestant communions, popular ballads and the stage made no inconsiderable figure. The ballad of *Luther, the pope, a cardinal, and a husbandman*, which was written in this year, was in defence of the reformation, and is not destitute of spirit, the characters of the speakers being tolerably supported. Another which appeared about the same time, was a lively satire on the English bible, the vernacular liturgy, and the book of Homilies. A poem called the *Pore Help*, was a lampoon against the new preachers, in the style. Other pieces of the like kind might be specified, but they are foreign to our purpose.

The poetical annals of Edward VI. are marked with metrical translations of various parts of scripture. Of these the chief is the versification of the *psalms* by Sternhold and Hopkins; a performance to which importance has been annexed in consequence of the religious circumstances wherewith it is connected, but which is entitled to no regard from its own merit. Wyatt and Surry had before translated some of the *psalms* into metre; but Thomas Sternhold was the first whose metrical version of them was used in the church of England. His coadjutor, John Hopkins,\* was rather a better poet than himself. His other assistants were Thomas Norton, and W. Wyttingham, afterwards dean of Durham. The spirit of versifying the *psalms*, and other parts of the scriptures were generally diffused at the beginning of the reformation; and among the rest that employed themselves this way, were William Hunis,† a gentleman of the chapel under Edward VI. William Baldwin, Francis Seager, and Matthew Parker, afterwards archbishop of Canterbury. Another contributor to the metrical theology was Robert Crowley, an Oxford divine, and who afterwards was engaged in the bookselling and printing business in London;

and another still more extraordinary one was Christopher Tye, a doctor of music at Cambridge. Tye projected a translation of the *Acts of the Apostles* into familiar metre, of which he completed only the first fourteen chapters. The *Book of Kings* had before been versified by another hand. Dr. Tye carried his absurdity so far as to set his version to music; and his *Acts of the Apostles* were sung for a time in the royal chapel of Edward VI. Even this good young king himself is to be ranked among the religious poets of his own reign.

King Edward VI. stands in the list of royal authors, and he is justly entitled to that distinction. Considering the time in which he lived, and the early period of his death, his journal of his own reign, his remains, and his other compositions, display such a promise, and, indeed, such a possession of abilities, as add greatly to the regret arising from the recollection of his premature decease.

Among the noble writers of the age, must be placed Edward Seymour, duke of Somerset.\* His principal title to this honour is founded on one or two religious pieces, which were penned during his troubles. Another monument of the protector, is Somerset House in the Strand, which is a compound of the grecian and gothic mode of building.† But the greatest honour which is due to this eminent nobleman, is his moderation and prudence in advancing the reformation. Edmund lord Sheffield is said to have composed a book of sonnets, in the Italian manner. Henry lord Stafford, and Francis Hastings, second earl of Huntingdon, exerted their talents only as translators.

About the commencement of this reign, we find a poet of the name of Kelton, who wrote the *Chronicle of the Brutes*, in English verse.—The subject was not a bad one, if the writer had been capable of enriching his genealogical and historical materials with any brilliancy of imagination.

Amongst the writers of this period Polydore Virgil stands in the first rank. He was born at Urbino, in Italy, and came to England in the beginning of Henry VIII's reign. He continued in England till 1550; when being of an advanced age, Edward VI. permitted him to retire to his own country, without forfeiture of his English benefices, being archdeacon of Wells, &c. He wrote in elegant Latin; and his most celebrated work is the *treatise de Inventoribus Rerum*. His *History of England* is considered very inaccurate. He is accused of detailing inaccurately even the affairs of Henry VIII. in whose reign he wrote. Wheat says his inaccuracy was occasioned by his ignorance of the English language.

\* Edward Seymour duke of Somerset, was beheaded on Tower Hill, January 23, 1552, in the midst of a vast concourse of the populace, by whom he was beloved. On the 10th of September, 1547, the duke of Somerset obtained one of the most finished victories on record, against the Scots, at Pinkie, near Musselburgh. The Scots were led by the earl of Arran.

† John of Padua is supposed to have been the architect.

\* John Hopkins was admitted A.B., at Oxford, in 1544, and is supposed to have been afterwards a clergyman of Suffolk, where he is said to have kept a school. He was living in 1556. He versified fifty-eight of the *psalms*, which are distinguished by the initials of his name.

† Died at Westminster, June 6, 1597.

1551. The following extracts are from the edicts of Chasteau-Briant, passed in this year by Henry II., king of France:

"We forbid printers to print, or sell any books of the Old or New Testaments, newly translated, or any part of them; or any of the ancient doctors of the church, without being first seen by the faculty of theology."

"We forbid all our courts of parliament, masters of the requests, and other keepers of the seals of the chanceries, presidial judges, and others our officers and magistrates, to give any licenses to print books, until those who require them have obtained certificates from the faculty of theology, that the books have been seen and approved, which certificates shall be placed, with the licenses, at the commencement of the books."

"The deputies shall retain the copy of the books thus approved by them, signed by the petitioning bookseller, to whom the license shall be granted by the deputies without any fee."

"We forbid [testamentary executors] to proceed to the sale of books which concern the holy scriptures, until they have been first visited by the deputies."

"No hawkers shall be permitted to sell any books, whether great or small, coming from Geneva; or any other books of ill fame, under pain of their confiscation, and of all the other merchandise carried with them by the hawkers, who shall be punished according to their quality, and which the judges shall see done."

The same edict ordains, "that wherever there is a university, the faculty of theology shall, twice a year at least, visit the booksellers' shops, and the printing-offices; and where there is no university, the booksellers' shops, and the printing-offices; shall be visited by deputies."—"That at Lyons, the visitation shall be made thrice in the year, by two persons deputed for that purpose, one of them by the archbishop, the other by the chapter and senechal;" and "That booksellers shall keep catalogues of all the books which they have on sale."

HENRY BEARSIIUS OF VEKENSTEL, a celebrated printer and mathematician of Louvain, published tables of the longitudes and latitudes of the planets, about 1528, and continued to exercise the art of typography until this period.

1552, Aug. 29. Printing introduced into the university of ST. ANDREW'S. Herbert, on the authority of Dr. Mackenzie, cites that well known book, the *Complaint of Scotland*, printed here in 1548. But, since the *Complaint* is not known to have any title remaining, archbishop Hamilton's *Catechism*, of 1551, may pass for the earliest St. Andrew's book now known. John Hamilton,\* archbishop of St. Andrew's, invited John Skot, a printer of London, to settle at St. Andrew's for the express purpose of printing a *Catechism*, with the following title:—*John Hamilton archbishop of St. Andrew's, primate of the kirk of Scotland, his catechism—Prentit at Sanct Andrews, by the command and expensis of the maist reverend father in God, Johnne, archbishop of sanct Andrews and primate of the hoil kirk of Scotland*

*the xxix day of August, the year of our lord M.D.LII.* It is a handsome quarto of 410 pages numbered, black letter.

The archbishop undertook the work for the common use of the Scottish clergy, and seems to have induced some of the ablest to compile it; and the curates were enjoined to read a portion every Sunday and holiday to the people. "It is," says bishop Keith, "a judicious commentary upon the Commands, Lord's Prayer, Magnificat, and Ave Maria; and the author shows both his wisdom and moderation in avoiding to enter upon the controverted points." Of this rare *Catechism* see a long and interesting account in M'Crie's *Life of John Knox*, vol. i. p. 405.\*

JOHN SKOT, who is mentioned above, is supposed by Ames, to have learned the art of Wynnyn de Worde or Richard Pynson, on account of the similarity which appears in the engraving of their devices. The colophons of his books make mention of several places where he resided: as in the *Body of Polycye*, his imprint is, *London without Newgate in Saynt Pulker's parysh. 1521.* The *Rosaty*, printed in *Farster lane in saynt Leonardes parysh, 1537.* *Nychodemus Gospell, London in Poules chyrche yarde, without date.* He printed thirteen books while he resided in London.

John Scot or Skot for he spelled his name both ways, used three devices, one of which was his own, and is given above; and two he adopted and altered from Denis Roche, a French printer who flourished about 1490.

1552. Stephen Jodelle, a native of France, seems to have been the first person in that country who had a tragedy represented of his own invention, called *Cleopatra*—it was a servile imitation

\* Archbishop Hamilton was a natural brother of the regent Arran. He was translated from the see of Dunkeld to the primacy of St. Andrew's, after the murder of cardinal Beaton, in the year 1546. He adhered to Mary, in opposition to the regent Murray, who dethroned her. He attended her to the Solway, and after all was lost, at the battle of Langside, near Dumbarton, which was fought on the 13th of May, 1568, waded into the river, and seizing the bridle of her horse, the archbishop conjured Mary Stuart not to trust her person in England. He owed her security to the strong castle of Dumbarton, wherein he was found, when this fortress was surprised by his enemies. "By them," says Keith, "he was hanged publicly on a gibbet, in the town of Stirling, on the first day of April, 1570." This act is one of those blots in the reformers of that country, which, according to Dryden, "Nor death itself can wholly wash their stains."

of the Grecian tragedy; but if this did not require the highest genius, it did the utmost intrepidity; for the people were through long habit, intoxicated with the wild amusement they amply received from their farces and moralities.

The enthusiastic fondness of the populace for such extravagant productions may be presumed, from the multiplied impressions of them which distinguish the annals of the Parisian gothic presses. Amongst other countries, Italy and England also, it is well known, had their "Rappresentazioni," or their mysteries and moralities; which were spectacles of no less interest and importance to our own progenitors. For more than a century they maintained the same influence over the vulgar mind. These and other theatres were abolished by the state on the 17th Nov. 1548: which, says De Bure, involved in a correspondent destruction a very considerable portion of the printed copies of these dramas. The general contempt he adds, which the licentiousness of many of them occasioned for nearly a century afterwards, consigned them to disregard and oblivion. The consequence of this and such causes was, that notwithstanding the original multiplicity of impressions, copies of most of them became so uncommon, that their present rarity is not exceeded by that of any other description of works.\*

1552. *Died*, Hans (John) Holbein, who was no less a finished artist than Albert Durer, and besides being celebrated as a painter, designed and engraved on wood with incredible delicacy. On the walls of a church yard at Basil, in Switzerland, Holbein painted the famous *Dance of Death* after the disaster of a plague anterior to his time. In 1538 it was printed at Lyons, small 4to, forty-one cuts.† Holbein came to England in the reign of Henry VIII. who liberally patronized him on the recommendation of sir Thomas More. He painted a number of portraits and historical pieces.

The other painters of this reign were Marc Willems, a native of Antwerp; John Bossam, an Englishman, and who does not appear to have had encouragement equal to his merit; and Guillam Stertes, who was painter to Edward VI. and who received fifty marks (£33 6s. 8d.) for the execution of three great pictures; two of

which were of his majesty, and the third of the earl of Surry. The last is supposed to have been taken after the death of that nobleman.

The value of money, and the increase of our opulence, might form, says Dr. Johnson, a curious subject of research. In this reign Latimer, preaching before the king, mentions it as a proof of his father's prosperity, that though but a yeoman, he gave his daughters five pounds each for their portion.

1553, July 6. *Died*, King Edward VI. in the sixteenth year of his age, and the seventh of his reign, greatly regretted by all, as his early virtues gave a prospect of the continuance of a happy reign. This prince was solemnly struck with the feeling that he was not seated on a throne to be a trifler or a sensualist: and this simplicity of mind is very remarkable in the entries of his *Diary*,\* which he wrote with his own hand, and conveys a notion that precocity of intellect, which would not suffer his infirm health to relax in his royal duties. He died at Greenwich, and was buried at Westminster.

The hopes which had been entertained of the progress of the Reformation under this youthful and amiable monarch, were, to the great grief of the nation, disappointed by his premature death. During his last sickness, he settled the crown on lady Jane Grey, his cousin, married to lord Guildford Dudley. On his death, this lovely and learned female, who was then about eighteen years of age, and versed in the Hebrew, Chaldee, Arabic, Greek, Latin, French, and Italian languages, was, in opposition to her own wishes, proclaimed queen. Her regal splendour was sustained only for a few days. Mary obtained the throne, and lady Jane Grey and her husband were beheaded on Tower-hill, February 12th, 1554. The evening before she suffered, she sent her sister, Lady Katherine, a letter, written on the blank leaf of a Greek Testament; and which is so excellent in its sentiments, and so clearly exhibits the piety of

\* Marcus Antoninus's celebrated work, entitled *Of the things which concern himself*, would be a good definition of the use and purpose of a diary. Shaftesbury calls a diary, "A Fault-book," intended for self-correction; and a colonel Harwood, in the reign of Charles I. kept a diary, which in the spirit of the times he entitled "Sillies, Infirmities, and Passages of Providence." Such a diary is a moral instrument, should the writer exercise it on himself, and on all around him.

One of our old writers quaintly observes, that "the ancients used to take their stomach-pill of self-examination every night. Some used little books, or tableta, which they tied at their girdles, in which they kept a memorial of what they did, against their night-reckoning." We know that Titus, the delight of mankind, as he has been called, kept a diary of all his actions, and when at night he found upon examination that he had performed nothing memorable, he would exclaim "Amici! diem perdidimus!" Friends! we have lost a day!

It is always pleasing to recollect the name of Alfred, and we have deeply to regret the loss of a manual which this monarch, so strict a manager of his time, yet found leisure to pursue: it would have interested us much more even than his translations, which have come down to us. Alfred carried in his bosom memorandum leaves, in which he made collections from his studies, and took so much pleasure in the frequent examination of this journal, that he called it his *Hand-book*, because, says Spelman, day and night he ever had it in hand with him.

\* These mysteries were theatrical representations of subjects in the Old and New Testament, which originated in the enthusiasm of crusaders and fanaticism of pilgrims. It was usual for the pilgrims on their return to travel in companies, and stop in the public places of towns to recite the songs which they had composed in their journey; in which some parts of the life and passion of Christ were generally introduced. A troop of these, fantastically dressed, with hats and cloaks, covered with cockle shells, excited the pity of some citizens of Paris, to raise a fund for the purchase of a theatre, where they could have these amusements on holidays, which soon produced a regular theatrical society, under the name of "*Confreres de la Passion de J. C.*" They sometimes gave public invitations to any who chose to act a part in them.

† Fac-similes of "The Bride," "The Nun," and "The Knight," are given by Mr. Dibdin and Mr. Otley; the design and execution are most beautiful. Mr. Otley, who possesses a copy of the first edition of the work, describes it as printed with the greatest clearness and brilliancy of effect, on one side of the paper only.

its author, that we insert the following extract :

"I have here sent you, my dear sister Katherine, a book, which although it be not outwardly trimmed with gold, or the curious embroidery of the artfullest needles, yet inwardly it is more worth than all the precious mines which the vast world can boast of," &c.\* A copy of this letter in the British Museum, varies a little from the above:—"I haue sent yo good sust. K. a booke wh although it be not outwardly rimid with gold," &c.

From this, and the great love of books which lady Jane Grey is known to have had, it may be pronounced all but certain that she was accustomed to employ some of the leisure she possessed in the embroidery of the covers of them.

Lady Jane Grey was as much superior to Mary in abilities and learning, as she was in the virtues of her character. The story of her being found by Roger Ascham, in the fourteenth year of her age, reading the *Phædo* of Plato, is too well known to be repeated. She was, indeed, a most accomplished and extraordinary princess; and it will ever be reflected upon with sincere concern, that she should be cut off in the bloom of life, in consequence of the crooked politics of her father-in-law, John Dudley, duke of Northumberland.†

1553. On the death of king Edward VI., Richard Grafton, in consequence of being king's printer, was employed to print the proclamation, by which lady Jane Grey was declared successor to the crown, by virtue of the measures that had been concerted by her father-in-law, the duke of Northumberland; but on queen Mary's accession to the throne, Grafton though he had done no more than discharged the duty of his office, lost a debt of £300, which was owing to him from the crown at the time of king Edward's death, and was immediately deprived of his patent, and John Cawood put in his room. The reason of this deprivation, as it is given in the patent granted to his successor, was, his having printed the proclamation for declaring lady Jane Grey queen of England. This, it seems, was considered as nothing less than high treason in those days. Besides the loss of his debt and patent, he was prosecuted and imprisoned six weeks in the Fleet prison. Whether this prosecution was carried on against him on account of the above proclamation, or for printing the Bible in English, is not so evident. His reformation principles, of which he could not give greater proof than by encouraging the English Bible, might excite the disgust against him;

though the affair of the proclamation was made the handle, as the more plausible and political pretence. During his confinement, or at least while he was out of business, he employed himself in writing. The subject upon which he fell was the *History of England*; an abridgement of the chronicles which he put together; but it was not printed till 1562.

On the accession of Mary to the throne she immediately issued a proclamation for restricting the liberty of the press, and condemning all plays and interludes intended to satyryze the practices of the catholic church; and endeavoured by the most vigorous measures to re-establish the old religion, and the suppression of the reformation.

1553, Dec. 29. John Cawood had a patent in the following words:—

"The queen, to all whom it may concern, sends greeting. Know ye, that of our special favour, &c. for the good, true, and acceptable service of our beloved John Cawood, printer, already performed, by these presents for us, our heirs, and successors, we do give and grant to the said John Cawood, the office of our printer of all and singular our statute books, acts, proclamations, injunctions, and other volumes and things, under what name or title soever, either already or hereafter to be published in the English language. Which office is now vacant, and in our disposal, forasmuch as R. Grafton, who lately had and exercised that office, hath forfeited it by printing a certain proclamation, setting forth that one Jane, wife of Guilford Dudley, was queen of England, which Jane is indeed a false traitor, and not queen of England; and by these presents we constitute the said John Cawood our printer in the premises, to have and exercise, by himself, or sufficient deputies, the said office, with all the profits and advantages anyway appertaining thereto, during his natural life, in as ample manner as R. Grafton or any others have, or ought to have, enjoyed it heretofore.

"Wherefore we prohibit all our subjects, whatsoever and wheresoever, and all other persons whatsoever, to print, or cause to be printed, either by themselves or others, in our dominions, or out of them, any books or volumes, the printing of which is granted to the aforesaid John Cawood; and that none cause to be reprinted, import, or cause to be imported, or sell within our kingdom, any books printed in our dominions by the said John Cawood, or hereafter to be printed by him in foreign parts, under the penalty of forfeiting all such books, &c.

"And we do grant power unto John Cawood, and his assigns, to seize and confiscate to our use all such books, &c. as he or they shall find so prohibited, without let or hindrance; and to enjoy the sum of £6 13s. 4d. per annum during life, to be received out of our treasury. And whereas our dear brother Edward VI., &c. did grant unto Reginald Wolf the office of printer and bookseller in Latin, Greek, and Hebrew; we, out of our abundant grace, &c. for ourselves, heirs, and successors, do give and grant to the said John Cawood the said office, with the fee of

\* A copy of the first edition of lady Jane Grey's letter was sold at the sale of Sir M. Sykes, for £10 10s. This edition was not known to lord Orford. It has the following title:

"A moaste frutefull, pithye, and learned treatise, how a Christian man ought to behave himself in the danger of Death; and how they are to be relieved and comforted whose deare frenodes are departed oute of this world, moast necessarye for this our unfortunate age and sorrowfull dayes." Black letter, 8vo., without date, and no printer's name, which was no doubt concealed, on account of the above exhortation at the end.

† Beheaded on Tower Hill August 21, 1553.

16s. 8d. per annum, and all other profits and advantages thereto belonging, to be entered upon immediately after the death of the aforesaid Reginald, and to be enjoyed by him during his natural life, in as full and ample manner as the said Reginald now has, and exercises that office, &c. Given at Westminster, 29 Dec. 1553."

1553. The copie of a pistol or letter sent to Gilband Potter, in the tyme when he was in prison, for speaking of our most true queene's part the lady Mary, before he had his ears cut off the 13th of July.

1553. GEORGE JOYE, or JOY, otherwise Clerke or Clark, was, according to Bale, born near Newnham abbey, in Bedfordshire. He studied at Cambridge, and was some time fellow of Peter-house college. He appears to have resided abroad for a number of years, and to have written several works there and likewise been the corrector of the Dutch press. (See pp. 236 and 250 ante.) Fuller says, "Notwithstanding many machinations against his life, he found his coffin where he fetched his cradle—being peaceably buried in his native country, 1553. His name appears to the colophon of *A Contraye Consultation*, 1541.

1553. ROGER MADELEY. Of this printer Ames found only a copy of verses, intitled: *An invective against treason*. In two columns on a half sheet, signifying the joy of the people, &c. on the 19th of July, 1553. At the end, *Finis qd. T. W. Imprinted at London by Roger Madeley, and are to be sold in Pauls church yarde, at the asyme of the Starre*. Folio.

1553. JOHN TURKE dwelt in Paul's church-yard, at the signe of the Cocke; and was of the stationers' company, in 1556.

*A sheet almanack and prognostication for the year of our lord 1551, Simonis Hweringii, Saelidenis, doctor in physick and astronomy, at Hagenaw.*

1553. WILLIAM RIDDEL was probably John Day's servant. Some have thought the name fictitious. He printed *Two epistles, wherein is declared the brainrick headiness of the Lutherans*, &c. Translated by Henry lord Strafford. 16mo.

1553. The *whole Bible*, by Miles Coverdale dedicated to Edward VI. printed by Richard Jugge, in folio. The character of this bible, and the form of the points, seem to be foreign. It is called in the title, the *whole bible*, probably because the apocryphal books, omitted in the former edition, are inserted in this. The price affixed to the *new testament* with notes, printed by Jugge, 4to, was 22 pence per copy in sheets.

1553, Oct. 27. The fate of Michael Servetus, who was burnt to death by a slow fire, is an awful instance of the truth, that the spirit of persecution was not only exercised by the adherents of the Romish church, but infected even those who were resisting the passive authority, and enduring the privation of intrepid defenders of the gospel. The history of this learned and unfortunate man is well known. He was born at Villanueva, in Arragon, in 1509, but was educated at Paris, where he took the degree of

doctor in medicine. The singularity and boldness of his opinions created him enemies, he therefore left Paris, and went to Lyons, where he was employed by the Frelons, who were eminent printers, as corrector of the press. From Lyons he removed to Charliu, and from thence to Vienne, at the request of Peter Palmer, archbishop of that city, who honoured him with his friendship, and gave him an apartment in his palace. His literary connections led him to make frequent visits to Lyons, where he revised an edition of Pagninus's Latin translation of the Bible, which was printed in 1542, by Caspar Trechsel, for Hugo de la Parte. Servetus accompanied the text with scholia, or notes, in which he defended a number of Socinian positions; and prefixed a preface, in which he concluded that the prophecies of Scripture have no reference to Christ, but in a secondary sense. For this work he is said to have received five hundred livres from the booksellers who employed him. His *Notes on the Bible*, and his other anti-trinitarian writings, caused him to be arrested and imprisoned at Vienne. He, however, escaped out of prison; and designing to settle at Naples, and exercise his profession of medicine, imprudently visited Geneva in disguise. Calvin no sooner heard of his arrival than he denounced him to the magistrates as an impious man, and a propagator of doctrines dangerous to salvation. In consequence of Calvin's representation he was imprisoned, and afterwards, being brought to trial, was condemned to be burnt alive. The dreadful sentence was executed on this day. "He was upwards of two hours in the fire, the wood being green, little in quantity, and the wind unfavourable."

Petrus Angelus Manzolius, probably an Italian who flourished about this period, wrote a poem, which he termed the *Zodiac of Human Life*; he divided it into twelve parts, each being inscribed with the name of one of the twelve signs, the grand object of which is, to teach men the road to present and eternal happiness. The many sarcasms entertained in this work against the pope, the cardinals, and the church of Rome, caused the Catholics to place it in the first rank of heretical books in the *index Expurgatorius*. Had the author lived long enough, he would have been burnt alive; for the Catholics took up his body from the grave, and to punish the author for what he had written against them, reduced it to ashes. The poem is really a fine one, and deserves to be more generally known. *Bibliographical Dictionary*, printed by J. Tomæsius, 1666. 16mo.

1553, Pope Julius III.\* by an edict ordered inquiry to be made after the Talmudical volumes of the Jews;† and all the copies that could be

\* Jean Marie du Mont, pope Julius III., died March 23, 1556.

† The *Jerusalem Talmud* was printed at Venice, by Daniel Bomberg, about 1523, in one vol. folio, and afterwards with marginal notes at Cracow, in 1699. The *Babylonish Talmud* has been printed several times; at Venice, in 1620, folio; and in quarto, at Amsterdam, in 1644.

met with, in all the cities of Italy, to be seized and burnt, whilst they were celebrating the feast of Tabernacles in September of this year; when, according to the calculation of the Inquisition, 12,000 volumes of the *Talmud* were committed to the flames by order of Julius's successor, Paul IV. *Leusdeni Philolog.*

1554. GEORGE WILLER, whom some improperly call Viller, and others Walter, a bookseller at Augsburg, who kept a large shop, and frequented the Frankfort fairs, first fell upon the plan of causing to be printed every fair a catalogue of all the new books, in which the size, and printers' names were marked. Willer's catalogues were printed till the year 1592, by Nicol Bassæus, a printer at Frankfort. Other booksellers, however, must have soon published catalogues of the like kind, though that of Willer continued a long time to the principal. In all those catalogues, which are in quarto, and not paged, the following order is observed. The Latin books occupy the first place, beginning with the protestant, theological works, perhaps, because Willer was a Lutheran; then come the catholics; and after these books of jurisprudence, medicine, philosophy, poetry, and music. The second place is assigned to German books, which are arranged in the same manner.\*

1554, May. GREENWICH. A small tract published during the reign of queen Mary, purports to have been printed here: it is entitled, *A faythfull Admonycion of a certen trewe pastor and prophete sent unto the Germanes, &c. now translated into Inglyssh, &c. 12°*. At the end, on signature K. iii. we read, *Imprynted at Grenewych by Conrade Freeman, in the month of May 1554.* But the types, spelling, &c. all prove the volume to have been executed in Switzerland or the Low Countries. A copy of it may be seen in the Bodleian library.—*Dr. Cotton.*

1554, July 25. Queen Mary was married to Philip of Spain.† In the grand marriage procession, which took place in the city of London, they passed the conduit in Gracechurch-street, which was finely painted, and on which were represented the nine worthies, of which king Henry VIII. was one. He was painted "in harness," having in one hand a sword, and in the other a book, on which was written *Verbum Dei* (the word of God,) which he was delivering

to his son Edward. This representation occasioned the painter considerable trouble, for the bishop of Winchester sent for him, and calling him *villain* and *traitor*, angrily told him, that he had summoned him by order of her majesty, and that he should rather have put the book into the queen's hand, for she had reformed the church and religion, with other things, according to the pure and sincere word of God. After making an apology, the painter was ordered to deface the book and its title, and then dismissed. This order the painter executed so completely, that Fox remarks, "that fearing lest he should leave some part of the book, or *Verbum Dei* in king Henry's hand, he wiped away a piece of his fingers withall."

1554. CHRISTIAN WECHEL, a celebrated printer at Paris, and the father of a family of printers, is said to have become professionally known about the year 1522. Between that period and 1554, he executed numerous impressions, in the French, Latin, and Greek, and some also in the Hebrew language. He first practised the art under the distinction of the *Scutum Basiliense*, or arms of Basil, which was perhaps his native city; and afterwards *sub Pegasus*, which became the hereditary device of the family.

Each book of Wechel's *Grammatica Græca* of Gaza, anni 1629, is printed separately, with a distinct title. At the end of the fourth book, a specimen is given of the Greek and Latin text in double columns in the same page, after the plan of Conrad Gesner; which method, as Maittaire observes, was not yet common in French impressions. Christian Wechel gave to the public many of the *Opuscula* of Galen, as well in the original Greek as in different Latin versions. He was remarkable for publishing select parts of Greek authors of every description, which he thought promoted the sale. He was esteemed by Erasmus, some of whose works he first introduced to the public. Gesner inscribed to him the thirteenth book of his *Pandects*, Tiguri, 1548. He deems him worthy of being numbered among the most renowned typographers of his age. Wechel is also said to have been brought into trouble in 1534, for having sold a treatise of Erasmus, *De eo interdicto carniæ*, which had been censured by the divines of Paris. He exercised however his profession at Paris apparently with success, till the year 1554, as we have said: and then died, leaving his establishment to Andrew his son.

1554. In the Oppenheimer library is a book executed at Adrianople, a fine city of European Turkey, executed by the Jews. The publication of the scriptures either in the original languages, or in more modern versions, was not confined to those states in which Christianity was the acknowledged religion of the land, since we find the Jews who had been driven by persecution to take refuge under infidel governments, establishing printing presses in various places, particularly at Constantinople and Thessalonica. In 1522, Samuel ben David Nachmias, a cele-

\* In Beckmann's *History of Inventions*, vol. iii. pp. 125—135, is an interesting account relative to book catalogues.

† In 1555, John Wayland printed *The account of the arrival, and landing, and most noble marriage of the moile illustre pryncce Philippe, pryncce of Spaine, to the most excellent princes Mary queene of England, sol-mnisated in the cite of Winchester; and how he was receyved and installed at Windsor, and of his triumphing entrie in the noble cite of London, &c.* The following is a description of the prince from the above work:—"Of visage he is well favoured, with a broad forehead, and grey eyes, straight nosed, and manly countenance. From the forehead to the point of his chynne, his face groweth small, his pace is princely, and gait so streight and upright, as he loseth no inch of his height, with a yallowe berde; arme, legge, and every other limbe to the same, as nature cannot worke a more parfitte paterne; and as I have learned, of the age of xxviii years, whose majesty I judge to be of a stoute stomake, pregnant witted, and of most jentel nature."

brated printer of Constantinople, published the Hebrew *Pentateuch*, *Megilloth*, and *Haphtaroth*,\* with the *Targums* and *Jewish Commentaries*, in folio. In 1546, a *Polyglott Pentateuch*, in folio, was printed in the same city, by Eliezer Berab Gerson Soncinatis. It contained the Hebrew text, the Targum of Onkelos, the Persic version of R. Jacob F. Joseph Tayos, or Tusensis, the Arabic version of Saadias Gaon, and the rabbinical Commentary of Rashi, or R. Solomon ben Jarchi. The book of Exodus of this Polyglott, bears date 1545. In 1547, there was another *Polyglott Pentateuch* published from the same press, with the Hebrew text; the old Spanish version for the refugee Spanish Jews; the modern Greek, as used by the Caraites of Constantinople, who do not understand Hebrew; and the Targum and Commentary, as in the former editions. In 1516, the *Pentateuch* and *Megilloth*, in Hebrew, with the *Targum* and *Rabbinical Commentary*, were printed at Thessalonica; in 1517, *Job*, in Hebrew and Chaldee; in 1522, and several times subsequently, the *Psalms*, in Hebrew, with *Rabbinical Commentaries*; and in 1535 the *Prior Prophets*, (as the Jews denominate Joshua, Judges, Samuel, and Kings, with the *Commentary* of R. Kimchi. Le Long (edit. Marsh) mentions some few other portions of the Hebrew Scriptures published by the Jews of Constantinople and Thessalonica, about the same time.

1554, July. A goodly letter sent too the fayethfull in London, Newcastle, Barwyke, and to all other within the realme of England, that love the comminge of oure Lorde Jesus, by Jhon Knox. Imprinted at Rome before the castle of S. Angel, at the sign of saint Peter, in the moneth of July, in the year of our Lord 1554. A confession and declaration of praiers added thereto, by Jhon Knox. H. Singleton's rebus at the end. 12mo.

In the same year we find an admonition by M. John Knox to the faithfull. Printed at Ralykow, the 20th day of July. Cum privilegio, ad imprimendum solum. Twelves.

1554. We have already noticed (page 83, ante) that by the authority of the lord mayor and court of aldermen, the stationers were formed into a guild, or fraternity, and had their ordinances made for their good government of the fellowship, as appears by a memorial presented by the company to the lord mayor and court of aldermen, in 1645; in which they state that their brotherhood, or corporation, had then been governed by wholesome ordinances for the space of two hundred and forty years. Thus constituted, they regularly assembled under the

government of a master and two wardens. Their first hall was in Milk-street;\* but in 1550, it appears that the company had begun to turn their thoughts to a removal of their hall, and to a more substantial incorporation, for in that year the following memorandum stands in the front of the earliest book of these records that is preserved: "Anno, 1550, the 13 of Marche, Master Sholmley,† of Lincolne's-inne, promised to be of counsaill with the company of stationers, when they should conveniently desire it."

St. Peter's college, the place fixed on for their new hall, was probably obtained for them by Mr. Seres, who occupied a part of it. The company purchased the site; and, about 1553, adapted the old building to their own purposes. The chapel was converted into an armory and a warehouse. It is supposed that Peter's college stood on the spot now occupied by the garden of the deanery of St. Paul's, at the south-west corner of the church yard.‡

The fitting up of the new hall (which was a large building) was defrayed by the voluntary subscriptions of the several members. Among other benefactions, sixteen glazed windows were contributed; and also the wainscoting both of the parlour and the council-chamber.

A Benevolence was collected, in 1554, towards "the charges of the hall;" and in an "Account of money received and paid by John Cawood and Henry Cooke, from Dec. 9, 1554, to July 18, 1557," are these entries:

"Item, receyved in monye at the gerynge up of Mr. Barthelette and Mr. Bonham thayre accumps, at the hands of the collectors, LVIII. vd. ob."

Several sums were also received for the occasional use of the hall for different public purposes.

1554-5. "Item, receyvdy, the viii daye of January, of the Wardmothe Inquest of Castell Baynard Warde, for occupyng the hall, 4s." [This sum in subsequent years was 20s.]

"Item, receyvdy for occupyng the hall at a wedding, 3s. 4d.½"

Another Benevolence, in 1554, towards "the Corporation;" to which Mr. Dockwra, then master, contributed 40s.; Mr. Cawood, 20s.; Mr. Cooke, 35s.; Reginald Wolfe, 20s.; and Mrs. Toye, 20s.

The building, when fitted up, consisted of a

\* The company still possess two houses in Wood-street, and three in Friars-alley and Clement's-court, in Milk-street, built after the fire of London, on the site of their original hall.

† Ralph Cholmondy, esq. who married Elizabeth Redman, widow of Robert Redman, of whom see 176 ante.

‡ Stowe, speaking of this part of London, says, "Then was there the Stationers' Hall, lately builded for them, in the place of Peter's College; where, in the year, 1541, the 4th day of January, five men were slayne by the fall of earth upon them, digging for a well."—Nichols.

§ Many curious particulars relating to the uses made of Stationers' hall, may be found in Malone's *Life of Dryden*; and at the commencement of the last century, concerts were frequently given in it, similar to those now common in Hanover-square and other places. Numbers of funeral feasts and convivial meetings have besides been celebrated and held there, exclusive of those peculiar to the company.—Nichols.

\* The *Megilloth* is the term applied by the Jews to that portion of the sacred writings which includes Ruth, Esther, Ecclesiastes, Lamentations, and Solomon's Songs, the *Haphtaroth* are fifty-four chapters or lessons selected out of the Prophets, and read in the synagogues by the Jews, on their sabbaths and other festivals.—See Kennell's *Dissertations*, Diss. 2, pp. 517, 518.

† This book of Knox's must have been printed abroad, and not in Scotland, for he was not then in the kingdom, nor durst he have printed it there at that time. This place Ralykow, seems to be fictitious.

hall, sufficiently capacious for the Wardmote Inquest, a great parlour, a council-chamber (in which were nine historical paintings, and at least two portraits,) kitchen, buttery, and several warehouses; over which were rooms let out to different tenants; among whom were, in 1557,

	£	s	d.
John Pont, who paid annually .....	5	3	0
John Walley, for one chamber .....	0	15	6
William Seres, for a cellar .....	0	4	0

The records of the company contain a particular account of its furniture in 1557, for which see Nichols's *Literary Anecdotes*, vol. iii. p. 356.

1555, June 6. The following proclamation was issued against printing, vending, or possessing heretical books.

"Whereas dyvers books, filled both with heresye, sedition, and treason, have of late, and be dayly brought into this realme, out of forreigne countrys, and places beyond the seas, and some also covertly printed within this realme, and caste abroad in sundry partes thereof,—the king's and queen's majesties, doth by this thyr present proclaymation declare and publysh to all theyr subjects, that whosoever shall, after the proclaymation hereof, be found to have any of the sayd wicked and seditious books, or fynding them, do not forthwith burne the same, without shewing or readyng the same to any other person, shall in that case bee reputed and taken for a rebell, and shall without delaye be executed for that offence, according to thorder of martiall law."

Seven days after the above, the following proclamation was issued; which after reciting the substance of the statute of the second of Henry IV. enjoins:—"That no person or persons of what estate, degree, or condytion soever he or they be, from henceforthe presume to bringe, or convey, or cause to be broughte and conveyed, into this realme anye bookes, wrytynge, or workes hereafter mentyoned; that ys to saye, any booke, or bookes, wrytynge, or workes, made or sett fourth by, or in the name of Martyn Luther; or any booke, or bookes, wrytynge, or workes, made or sett forth by, or in the name of Oecolampadynus, Sivinglius, John Calvyn, Pomerane, John Alasco, Bullynger, Bucer, Melancthon, Barnardynus Ochinus, Erasmus Sarcerius, Peter Martyr, Hughe Latymer, Robert Barnes, otherwyse called Freere Barnes, John Bale, otherwise called Freere Bale, Justus, Jonas, John Hoper, Miles Coverdale, William Tyndale, Thomas Cranmer, late archebysshop of Canterburie, Wylliam Turner, Theodore Basyll, otherwyse called Thomas Beacon, John Frythe Rove; and the book commonly called *Halles Cronicles*; or any of them in the Latyn tonge, Duche tonge, English tonge, Italian tonge, or French tonge, or any other lyke booke, paper, wrytynge, or worke, made, prynted, or sett forth by any other persone or persons, conteyninge false doctryne, contrarye, and agaynste the catholyque saythe, and the doctryne of the catholyque church. And also, that no persone, or persons presume to wryte,

prynte, utter, sell, reade, or keape, or cause to be wrytten, &c. any of the sayde bookes, or any booke, or books, wrytten, or printed in the Latyn, or Englyshe tonge, concernynge the common service sett forth in Englyshe, to be used in the churches of this realme, in the tyme of Kinge Edward the VI. commonly called the *Communion Booke*, but shall wythin the space of fyfteen dayes next after the publicatyon of this proclamatyon, bring, or delyver, or cause the sayd bookes, and everye of them remayne in their custodies, and kepinge, to be broughte, and delyvered to thordynarye of the dioces, to his chauncelloure, or commssaryes, withoute fraude, colour, or deceipt, at the sayde ordynaries will and disposition to be burnte, or otherwyse to be usyde, orderyd, as by the canons, in that case lymtyed and apoynted. --- And their Majesties by this proclamatyon geveth full power aucthorytie to all byshops, and ordynaries, and all justices of peace, mayors, & c. --- and expressly commaundeth, --- that they, and everie of them, withiu their several lymtyes and jurisdictions, shall in the defaulte and negligence of the said subjects, after the sayd fyfteen dayes expyred, enquier, and serche oute the sayde bookes, wrytynge, and workes, and for this purpose enter into the howse, or howses, clossetts, and secrete places of everye person of whatsoever degree, being negligente in this behalf, and suspected to keepe anye suche booke, wrytynge, or workes, contrarye to this proclamatyon."

1555. Printing introduced into the city of WATERFOOD, in Ireland. Three specimens of early typography are assigned to this city; two of them are given by Ames, and repeated by Herbert, upon the authority of Maunsell's catalogue. The first of these three rare articles is entitled, *The acquittal or purgation of the moost catholyke Christen prince, Edward the VI. kyng of Englande, Fraunce, and Irelande, &c. and of the Chutche of Englande reformed and governed under hym, agaynst al suche as blasphemously and traittously infame hym or the sayd Church, of heresie or sedicion*: written by John Olde, an exile for the protestant religion under queen Mary. It contains signature G in eights, and has on the recto of the last leaf, *Emprinted at Vauterford the 7. daye of Novembre, 1555.*

The second is, *An Epistle written by John Scory the late bishope of Chichester unto all the faythfull that be in pryson in Englande, or in any other trouble for the defence of Goddes truthe*. This is a still smaller treatise, containing only two sheets in eights, and has no other colophon than this, *Anno. 1555.* But the letter, paper, and press-work exactly correspond to those of John Olde's work above mentioned, and the two were unquestionably executed at the same time and place. That place, however, says Dr. Cotton, was not Waterford: nor, I fear, can we claim for this city so early an acquaintance with the

\* These two books, bound in one, was sold at the sale of sir M. Sykes, for £19 19s. Copies are in the Bodleian.

mysteries of the art of printing. At what period the art was introduced, I am not prepared to say.

The third Waterford book, Dr. Cotton says, is entered in the catalogue of Trinity college library, Dublin, as follows: *Archbishop Cranmer's Confutation of unwritten verities*, 8°. Waterford, 1555. This little tract, however, Dr. Cotton further observes, is not now to be found there; having disappeared, probably, in company with several other choice books, which were purloined from the library by a confidential servant, a few years ago. For the part which the Waterford presses played during the disastrous days of 1641, the reader may refer to that year, *post*.

1556, *Died*, SEBASTIAN GRYPHIUS, a celebrated printer of Lyons, in France. He was a German, and born at Suabia, near Augsburg, in 1493. He performed the duties of his profession with so much honour as to receive the approbation of the most learned men. Gryphius is allowed to have restored the art of printing at Lyons, which was before exceedingly corrupted; and the great number of books printed by him are valued by the connoisseurs. He printed many books in Hebrew, Greek, and Latin, and his editions are no less accurate than beautiful. It was observed, that Robert Stephens was a very good corrector, Colinaeus a very good printer, but that Gryphius was both an able printer and corrector. He was succeeded by his son Anthony Gryphius, who printed a Latin Bible in 1550, with the largest types that had then been seen, in 2 vols. folio, and continued to support the reputation of the family.

FRANCIS GRYPHIUS, a brother of the above, was a printer at Paris, and no less celebrated in the annals of typography. If what Peignot says be true, Francis Gryphius did not exercise the art beyond the year 1540; consequently the *Lexicon Græco-Latinum jam recens in lucem editum*, 4to., might be his only Greek impression. Francis used in his Latin impressions the roman character, and Sebastian the italic. Their well known device was a *Griffin*.

1556, *Died*, CHARLOTTE GUILLARD. "The first woman," says Delandine, "who distinguished herself in the typographic art." She espoused successively two renowned printers; and on the decease of the latter, she personally superintended her presses; correcting the proofs of Latin works, and publishing very correct editions. Berthold Rembolt, whom we have before noticed, was her first husband. In 1520, she became the wife of Claude Chevalon, who died about 1540. Her finest works were those which she executed between 1542 and 1556. She herself testifies, in the year 1552, that she had laboured in the profession fifty years.

This heroine of the art gave an impression of the *Biblia sacra*, *Latine*, with the notes of Joannes Benedictus, and executed voluminous Latin originals or translations of the fathers. Lodovicus Lippomanus, afterwards bishop of Verona, and at length of Bergamo, having employed her to print his *Catena SS. Patrum in Generis*, anno 1546, was so well satisfied with the execu-

tion of it, that, when attending the council of Trent, he came to Paris for the special purpose of inducing her to undertake his second volume, *Catena in Erodum*; which she completed with great elegance and beauty, anno 1555. One of her most interesting impressions has escaped the notice of Chevallier and of Maittaire, viz. her fine *Norum Testamentum Gr. Lat. Erasmi*, 8vo, which she executed for Bogard in 1543. The Greek Lexicon of the professor Tusanus was at least finished by her: having been undertaken by Bogard, who, with his wife, died during the impression. Frederic Morel for some time presided as corrector of the press of Charlotte Guillard. The office "sub sole aureo" maintained its high reputation long after her decease: and in 1576, produced in five large volumes folio, the magnificent *Corpus Juris civilis*, of which Chevallier speaks in terms of the highest admiration, pronouncing it the most pleasing and finished specimen of the art that ever came under his observation.

1556. Henry II.\* of France enacted, that one copy of every book, to which the royal privilege was extended, printed upon vellum, and handsomely bound, should be deposited in the royal library of Paris. It is believed that Diana of Poitiers† suggested the idea to the king for this act. Under the reign of Henry II. it is that we must look for the celebrated bindings of France in this century. The books bound for this prince are distinguished by his insignia, or by his initial H. interwoven with that of his mistress Diana of Poitiers HD. How far the taste of Grolier may have influenced, or whether he had any direction in the binding of the books of Henry, is not satisfactorily determined. Eight hundred volumes now remain, which attest the merit of the workmen. The most splendid portion of the bindings of Henry, are those from the fine library at Arnet, erected by the accomplished Diana of Poitiers, who in her unbounded love for books availed herself of the devotion of two kings of France, to enrich her own library with the choicest treasures of theirs. When we consider the wealth she could bestow, and her influence over Henry, we need not wonder at the beauty of the bindings belonging to her library. The embellishments are in good taste, being principally composed of lines, interwoven with the initials before referred to, bows, quivers, arrows, and the crescent, emblems of the goddess Diana, whose name she bore. Of the elegance of some of her books, the binding of a copy of the French version of the *Cosmography* of Sebastian Munster, in the public library of Caen, in Normandy, remains as evidence. It is as splendid as it is curious. It contains two portraits of Henry II. and four of Holofernes on each side of the binding. In the centre of the sides are the usual ornaments above referred to, but on the back are

\* Born March 31, 1518; crowned at Rheims, July 28, 1547, died July 10, 1559, of a wound in the eye, which he received at a tournament, with the spear of the count de Montgomery.

† Born March 31, 1500; died April 26, 1566.

five portraits of Diana, in gilt, each within the bands. There are also on the sides two pretty medallions of a winged figure blowing a trumpet, and standing upon a chariot drawn by four horses, with the date 1553.

At this period, it was common to decorate, not only their common books, but books of devotion, with the portraits of their favourite minions and ladies in the character of saints, and even of the Virgin Mary and Jesus. Charles V. emperor of Germany,\* however pious he effected to be, had a missal painted for his mistress by Albert Durer, the borders of which are crowded with extravagant grotesques, consisting of apes, which were sometimes elegantly sportive, giving clysters to one another, and in more offensive attitudes, not adapted to heighten the piety of the royal mistress. This missal has two French verses written by the emperor himself, who does not seem to have been ashamed of his present.

In a missal once appertaining to the queen of Louis XII. of France, may be seen a mitred ape, giving its benediction to a man prostrate before it; a keen reproach to the clergy of those times. But this practice was particularly prevalent in the reign of Henry III.† who held the reins of government with a loose hand, and sanctioned every kind of debauchery.

The images, prints, and miniatures, with which the catholic religion has occasion to decorate its splendid ceremonies, were frequently consecrated to the purposes of love: they have been so many votive offerings worthy to have been suspended in the temple of Idalia. Pope Alexander VI. had the images of the Virgin made to represent some of his mistresses; the famous Vanozza, his favourite, was placed on the altar of Sancta Maria del Popolo; and Julia Farnese furnished a subject for another Virgin. Herne affirms, that the statues made the queen of Henry III. a model for the face of the Virgin Mary. And also, that the Virgin Mary was generally made to bear a resemblance to the queens of the age, which, no doubt, produced some real devotion among the courtiers.

The manners of our country, says D'Israeli, were rarely tainted with this licentiousness, although an innocent tendency may be observed towards it, by examining the illuminated manuscripts of our ancient metrical romances: while we admire the vivid colouring of these splendid manuscripts, the curious observer will perceive that almost every heroine is represented in a state which appears incompatible with her reputation. Most of these works, it is believed, were executed by French artists.

In remarking on the taste for the exterior decorations of books, Mr. Roscoe, in his *Life of Lorenzo de Medici*, says, "it is perhaps difficult to discover, why a favourite book should not be

as proper an object of elegant ornament, as the head of a cane, the hilt of a sword, or the latchet of a shoe.

1556. ROBERT TOYE resided at the sign of the Bell, in St. Paul's church yard, and was a member of the ancient stationers' company, though he died before they received a charter from Philip and Mary. He is thought to have died early in the year 1556, and the records of the company mention that its members "received of Mrs. toye the xij daye of february for a reward to the companye for comynge to the buryall of hyr husband Mr. Toye xii." His widow seems to have carried on his business after his decease, from the entry of several copies of ballads allowed to her, on the stationers' books, which are entitled "to John Wallye and Mrs. Toye, these ballets folowynge." She appears also to have contributed to all the company's collections for their establishment and public dinners, and to have paid for one of the glazed windows to the hall. In 1558 Mrs. Toye received a sole license to print the *Latin Catechism*: and in 1560 she presented her company with a new table cloth and a dozen of napkins, after which there is not any memorial of her until 1569, when her son Humphrey paid £4. to the stationers, as "the bequeste of Mrs. Elizabeth Toye, widowe."

Robert Toye printed fourteen works between the years 1541 and 1555.

#### BALLADS,

By John Wallye and the Widow of Robert Toye.

1. Women beste when they be at Roste.
2. I will haue a wydow yf euer I marye.
3. The Daye of the lord ys at hande.
4. A ballet of the maye.
5. Betwene a ryche farmer and his daughter.
6. Of the talke betwene ij maydes.
7. The murtherynge of Edward Duke of buckyngham.
8. A mayde that wolde mary with a seruyng man.
9. When ragynge loue.
10. Who lyne so merrie & make such sporte, as they that be of the poorer sorte.
11. An Epitaph vpon the death of kyng Edward ye xvj.
12. A ballet of good wyne.
13. Of the losse and the byrde.
14. To morrow shall be my fathers wake.
15. Of the Ryche man and poor lazarus.
16. A ballet of made by nycholes baltroppe.
17. Of wakefylde and a grene.
18. A ballet of a myner.
19. God send me a wyfe that will do as I saye.
20. I will no more go to the plough. With another new ballet annexed to the same.
21. Admonysyon to leane sweryng.
22. A ballet for my sokes.
23. In wynter Juste retourne.
24. Yf euer I mary I will mary a mayde.
25. And in those dayes the I saye then, knowes that be now wilbe come honest men.
26. Yt was a may in ago truly.
27. The Rose is from my garden goone.
28. ij ballets: Yf Care maye crye. The sorowes that doth increase.
29. Of a man that wolde be vnmarrid agayne.
30. The a b c of a preste called heugh stourmy.
31. The aged mans a b c.

1556. JOHN REYNES was an eminent printer, bookseller, and bookbinder, who dwelt at the sign of the George, in St. Paul's church yard, about the year 1527, if not previous. A few books are said to have been printed by him, and others for him; but there are many more that

\* Born at Ghent, February 24, 1500, declared emperor by the electoral voices, June 29, 1559; died September 21, 1558, and was buried in the Escorial.—Refer to Robertson's Life of this relentless foe of the Reformation.

† Born at Fontainebleau, Sept. 12, 1561; assassinated July 22, 1589.

have his marks, and pretty devices on their covers; as arms and supporters of Jesus Christ, with these words, *redemptoris mundi armi*. He was a large dealer, and bound books for others as well as himself. The time of his death is unknown; Herbert could not discover any of his works subsequent to the year 1544; but in 1557, he found that when John Cawood, the servant of John Reynes, became warden of the stationers' company, he paid "for ii new glasse wyndowes in their hall, the one for John Reynes his master, and the other for hymselfe," whence he concluded that he was deceased, and that his window was a gift or legacy to his brethren.

At the close of the wardens' accounts in July, 1561, in an inventory of the company's furniture, is "a picture of John Reynes, master to John Cawode;" also, "a picture of John Cawode," but the fate of them is unknown.

The typographical devices of Reynes were, properly speaking, two small shields with his initials and his monogram; the latter of which was as follows:

But they were commonly introduced in a large design, which he embossed upon the covers of his books, consisting of what are usually called "the arms of Christ." This design is formed of a parallelogram surrounded by double lines, and borders of scroll and ornamental work, and shaped like an arch within, under which is placed a shield charged with the emblems of Christ's passion, at the cross, inscription and crown of thorns; the hammer, nails, and pincers; the spears, sponge, and dice; the garment, money, lantern, sepulchre, &c. The escutcheon is supported by two unicorns, which stands upon a scroll bearing the motto *Redemptoris Mundi Armi*, in rude Saxon capitals. Above the shield is a very rich full-faced black helmet, surrounded by a mantling, and the pillar, scourges, and cock, as a crest. On each side of the crest are the two shields above mentioned.

These religious ensigns are to be found in very many Missals, Offices, Book of Hours, both manuscript and printed.

1556, May 4. The Company of Stationers do not appear to have had any authority granted them with relation to printed books, as an incorporated body, till they received their first charter from Philip and Mary of this day, by the title of "The master and keepers, or wardens, and commonality, of the mystery or art of the

stationers of the city of London.\* This charter was renewed by Elizabeth, in 1588; amplified by Charles II., in 1684; and confirmed by William and Mary, in 1690, which is the existing charter of the company. The powers granted to them by these charters are of such a nature as would not be very fit to be acted upon in the present times. They had the rights of the inquisition itself over all literary compositions—might search houses for any books which they deemed obnoxious to the state, or *their own interests*—might enter, as often as they pleased, any place, house, shop, chamber, or building, belonging to any stamper, printer, binder, or seller of any manner of books—might seize, take away, have, burn, or convert to their own use whatever they *should think* was printed contrary to the form of any statute, act or proclamation, made or to be made! and these odious privileges were often acted upon, as may be seen in the lives of the early printers, and in the company's accounts.

The charter was signed by the names of ninety-four members of the commonality.

THOMAS DOCKWRA, Master.

JOHN CAWOOD & HENRY COKE, Keepers or Wardens

Freemen, or Commonality:

William Bonham	William Marten
Richard Waye	Edward Sutton
Simon Coston	Thomas Parker
Reynold Wolf	John Bonham
James Hollyland	John Gough
Stephen Kevall	John Deye
John Turk	John Whitney
Nicholas Taberner	Simon Spylman
Michael Uhley, alias	William Baldwyn
Michael Lobley	William Coke
John Jacques	John Kewell
William Ryddall	Robert Brooke
John Hudson	Thomas Sawyer
John Walley	Charles Walley
Thomas Duxwell	Thomas Patenson
Anthony Smith	Thomas Merhe
William Powell	Richard Tottell
Richard Jorke	Ralph Tye
Wm. Serres, or Seres	John Burtofte
Robert Holder	William Griffith
Thomas Purfoot	Edward Broune
John Rogers	Nicholas Clifton
William Steward	Richard Harvey
Richard Patchet	James Gunwell
Nicholas Borman	Edward Cator
Roger Ireland	John Kele

Richard Harrison	John Tydale
Humphry Powell	Adam Croke, and
John Clerke	John Fox.
William Copland	

\* An original record, intituled, "Incorporatio Artis Stationers, in Civitate Londonie," is preserved in the records of the Exchequer, 2 Pars Original. 3 and 5 Philip and Mary; and in 5 Pars Original. 3 and 4 Philip and Mary, Rot. 36.

The government of the company was vested by these charters, and still continues, in a master, two wardens, and a court of assistants,\* who under their several charters pay £200 a year in pensions and charitable donations; to which much larger sums have been added by the benefactions of individual members. Their trading concerns are managed by a regular committee, consisting of nine members; namely, the master and wardens for the time being, and six other stock holders.

The expense of obtaining the charter will appear by the following extracts from their records:

The chargis layde oute for our corporation :

	£	s.	d.
Fyrste, for two tymes wrytyng of our booke before yt was sygned by the Kyng and the Quene's Majestie's Highness.....	6	18	0
Item, for the sygned and the prevy seale .....	6	6	8
Item, for the great seale.....	8	9	0
Item, for the wrytyng and insculyng.....	8	0	0
Item, for wax, lace, and examynacion .....	0	3	4
Item, for lymeyng and for the skyn.....	0	10	0
Item, payd to the screvener for wrytyng of the indentures of the surrender for the fetters of trustee unto the Master and Wardyns of this Compayne and theyre successors .....	1	0	0
	6	14	0

On this incorporation, the company obtained from the heralds' college their armorial bearings.†

In searching after the crest, says Hansard, I found that the visitation in 1604, recorded also the common seal of the company; a fac-simile sketch is here given, as entered there, although the seal used by the company is only the arms, as described below.

\* Consisting at present, March 1, of twenty-five members.—Nichols.

Mr. Nichols says, "and a court of assistants," but no such words are to be found in any one of the charters or renewals. The assistants were therefore created by one of those "ordinances, provisions, and laws," which, by clause V. of the first charter, they were empowered to make. These bye-laws are, however, kept from the commonality: they have nothing to do but to obey them.—Hansard.

† Azure, on a chevron Or, between three Bibles lying fesswise Gules, garnished, leaved, and clasped of the second i.e. the clasps downwards,) an eagle rising proper, enclosed by two roses Gules, seeded Or, barbed Vert; from the top of the chief a demi-circle of glory, edged with clouds proper; therein a dove displayed Argent; over the head a circle of the last. Crest: on a wreath, a Bible open proper; clasped and garnished Or. Motto: *Verbum Domini manet in eternum.*

1556. THOMAS BERTHELET was the second professor of typography after Richard Pynson, who enjoyed the office of king's printer, and the first for whom a patent is extant. His salary was four pounds yearly, and in his grant of arms, preserved in the herald's college, he is called "Thomas Berthelet of London, esquire, gentill-man." He died, as it has been ascertained from the stationers' company, about Christmas 1556. His residence was in Fleet-street, at the sign of the Lucretia Romana, an elegant engraving of which, with his own name upon a scroll, he used as a device. Many books were printed at his expense in Paris, and it is supposed that both he and his widow, Margery Berthelet, employed others to print for them in London. He printed or caused to be printed one hundred and forty-seven works. Thomas Powel had managed Berthelet's business for some time previous to his death, and at length succeeded him both in his dwelling and his occupation.

1556. Cardinal Pole appointed commissioners to visit the two universities, and reform them according to the views of the papal hierarchy. At Cambridge they burnt the bodies of Martin Bucer and Paul Fagius, with their books and heretical writings. At Oxford, the visitors went through all the colleges, and burnt all the English Bibles, and such books as they deemed heretical. They took up the body of Peter Martyr's wife, and buried it in a dunghill, because having once been a nun, she broke her vows by marriage, but her body was afterwards taken up again in queen Elizabeth's time, and mixed with the bones of St. Frideswide.

1556, July 31, Died, Ignatius Loyola, the founder of the order of "The Society of Jesus," whence the denomination *Jesu-ists*, or *Jesuits*; and which has been well described as "the most political and best regulated of all the monastic orders; and from which mankind have derived more advantages and received greater injury than from any other of those religious fraternities." Loyola died in the 65th year of his age, after having lived to see his society spread over almost the whole world, and possessing above one hundred colleges.

Francis Xavier, called by the Roman Catholics, "the Apostle of the Indies," was of a noble Spanish family, and born in Navarre, at the castle of Xavier, in 1506. He was the early and faithful friend and disciple of Ignatius Loyola. He died December, 2, 1552.

1557. NICHOLAS BOURMAN was an original member of the stationers' company, and one of their renter wardens, or collectors, in conjunction with Thomas Purfoot, in 1557-58. His residence was in Aldersgate-street. He printed four works.

1557. HENRY COOKE, warden of the stationers' company gave ten quires of royal paper, to make the two earliest account books, which were bound at the cost of Thomas Dowkswell. The value of the paper was 11s. 8d.

1557. Several of the learned exiles who had fled from England during the reign of Mary,

engaged in a new English translation of the Bible, and in this year published the *New Testament*, in a small 12mo., with the following title: *The New Testament of our Lord Jesus Christ, conferred diligently with the Greke, and best approved translations. Printed at Geneva, by Conrad Badius, MDLVII. 8vo.* This was the first edition in the English language which contained the distinction of verses by numerical figures, after the general manner of the Greek Testament published by Robert Stephens, in A.D. 1551, with this difference, that Stephens placed his figures in the margin, whereas, the Genevan editors prefixed theirs to the beginning of minute subdivisions, with breaks, after our present manner.

1557. The following is the expense of the first public dinner held at stationers' hall, and is thus preserved in the records of the company.

The charges of our dinner as followeth; that is to say,

	℥	s.	d.
Item, payd for 18 dosyn of breade .....	1	18	0
Item, payd for a barrill of stronge bere .....	0	9	0

Item, payd to the under coles to drinke .....	0	0	3

\* In 1559, an act was passed that the Guicenne and Gasconne wines were to be sold at eightpence a gallon; and no wines were to exceed the price of one shilling the gallon. To restrain luxury, it was at the same time enacted, that no person, except those who could expend one hundred marks annually, or was worth one thousand marks, or was the son of a duke, marquis, earl, viscount, or baron of the realm, should keep in his house any vessel of wine, for his family use, exceeding ten gallons, under the penalty of ten pounds.

	℥	s.	d.
Item, payd to water berer .....	0	3	10
Item, for 3 porters that carried over meat .....	0	0	6
Item, payd to the smythe .....	0	0	2

Item, payd for p'scan'ce .....	0	0	8
Item, payd for walters .....	0	0	0
Item, payd for epycrys 4 galons .....	0	1	3

1557. Thomas Green, a journeyman to John Wayland, printer, who lived at the sign of the Blue Garland, in Fleet-street, was imprisoned and whipt at the Grey Friars, by order of Dr. Story, for being concerned in printing a book, called *Antichrist*; he likewise confessed that John Bean, an apprentice to Richard Tottle, had also got a copy of it.

1558. JOHN WAYLAND was both a citizen and a scrivener of London, and resided at the sign of the Blue Garland, in Fleet-street, in 1541; he removed to the sign of the Sun against the Conduit. He styles himself "Allowed Printer;" Ames attributes this to his having obtained a patent from queen Mary for printing Prayer Books, &c. dated the 24th of October, 1553. Wayland took care to print this patent in several of his books; and Bagford says, he had another for seven years, dated the 26th day of July, 1557 — He printed in the whole twenty-seven works.

1558 RICHARD ADAMS was presented by the executors of Richard Kele, to be made free of the stationers' company. He printed an account in metre of the suffering members of Jesus Christ in the time of queen Mary, by Thomas Brice. Having printed it without license, he was fined *vs.* This was before Fox's account; he also printed two other works.

1558. The parishioners of Mere in Wiltshire, purchased a copy of the English Bible which cost them 16*s.* 8*d.* and, as was then common, ordered to be chained in the chancel of the church.

1558. *A spark of friendship, and warm good will; with a poem concerning the commodity of sundry sciences; especially concerning paper, and a mill lately set up neer Dartford by a high German, called Mr. Spilman, jeweller to the queenes majesty.* Dedicated to sir Walter Raleigh. London, 1558, again in 1588.

\* \* This and some other articles," Mr. Steevens facetiously observes, "will account for the following entry on the same books in the year 1566; "Item, payd for making elene the preyt, by Mr. Juge and Mr. Judson, " which conteyned 12 tonne, the 28th day of December, 4*l.* 6*s.* 8*d.*

1558, Nov. 17, *Died* Mary, queen of England, after a short and unfortunate reign of five years, five months, and eleven days, in her forty-third year, being born at Greenwich, February 8, 1516.

Notwithstanding the wretched situation of the public under queen Mary's horrid persecutions,\* which bigotry was carrying into execution, poetry assumed a higher tone. A poem was planned, though not fully completed, which sheds no common lustre on the dark interval between Surry and Spencer. This poem was entitled *A Mirror for Magistrates*,† which contains many proofs of a vigorous fancy, and many splendid passages, and in the composition of it more writers than one were concerned. Its primary inventor, however, and most distinguished contributor, was Thomas Sackville, afterward lord Buckhurst and earl of Dorset. The object of the *Mirror for Magistrates*, was to make all the illustrious but unfortunate characters in our history to pass in review before the poet, who descends, like Dante, into the infernal regions, and is conducted by Sorrow. A poetical preface, called an *Induction*, and one legend, which is the Life of Henry Stafford, duke of Buckingham,‡ were the only parts executed by Sackville. The completion of the whole was recommended by him to William Baldwin, before-mentioned, who carried it into execution with the assistance of Thomas Churchyard, Phayer, Skelton, Seagers, and Caryl. Among these finishers of the *Mirror for Magistrates*, Ferrers was the most eminent in point of abilities, but the greater number of legends were written by Baldwin. Another poet of this period was Richard Edwards, who was employed in some department about the court, and whose principal work was the *Paradise of Daintie Devices*. What chiefly entitles him to be noticed with respect is, that he was one of the earliest of our dramatic writers after the reformation of the British stage. William Forrest brings up the poets, but with no degree of splendour. He composed in octave rhyme, a panegyrical history of the life of queen Catherine, the first wife of Henry

VIII. His greatest praise was his skill in music, and his having collected the choicest compositions of his cotemporaries. The only Scotch poet we shall now take notice of, is Alexander Scot, the Anacreon of his time. If the age in which he lived be considered, his pieces are correct and elegant. He wrote chiefly upon subjects of love, and stands at the head of the ancient minor poets of Scotland.

Amongst the writers of this reign, sir John Cheke is deserving of notice. He was born at Cambridge, in the year 1514, and educated at St. John's college, where he took his degree in arts, and was appointed professor of Greek, in which station he laboured in reforming the mode of pronouncing that language. But Gardiner, bishop of Winchester, thinking the innovation was allied to heresy, prohibited any deviation from the old corruption. He became tutor to prince Edward, and provost of King's college, and received the honour of knighthood. Queen Mary sent him to the Tower for his adherence to lady Jane Grey. In 1554, he was set at liberty, and went abroad, but his estate was confiscated. In 1555 he was seized at Brussels, and conveyed to London, and committed again to the tower, where he was informed by the priests who attended him that he must either recant or burn. He had not resolution enough to endure martyrdom, and made a solemn submission in presence of the queen and the court. The shame of this preyed upon his spirits, and he died of grief, 1557. He wrote the *Hurt of Sedition against the Insurgents*, in 1549. *Epistles on the Death of Bucer*. *De Pronunciatione Græcæ potissimum Lingue Disputationes*, Basil, 1555. *De Superstitione ad regum Henricum*; and other learned works.

Thomas Wilson, originally a fellow of King's college, Cambridge, published a system of rhetoric and logic in English. He also translated the three Olynthiæ, and the four Philippics of Demosthenes, from the Greek into English.—The system of Rhetoric was first printed in the reign of Edward VI. and again in 1560. The Olynthiæ and Philippics were printed in 1570. Lond. 4to.

The foreign writers deserving of notice at this period, are John de la Casa, and Peter Aretin :

John de la Casa, who died in 1556, was accounted one of the most elegant of the Italian writers, and his Latin poetry is very fine. His principal performance is the *Galateo*, or *Art of Living in the World*; besides which, he wrote some beautiful Italian poems, the lives of cardinal Contarini and Bembo, and other works collected at Venice, in 5 vols. 4to. 1728. Casa was born at Florence, in 1503, and educated at Bologna.

Peter Aretin, called the scourge of princes, was born at Arezzo, about 1491, and died in 1556. He was so dreaded for his satirical powers, that crowned heads courted his friendship; on which he caused a medal to be struck, on one side of which he is represented with this inscription, *The Divine Aretin*, and on the reverse he is seated on a throne, receiving the

\* Amongst those who suffered in this reign, was John Rogers, a prebendary of St. Paul's, and commonly called the proto-martyr: he was burned at Smithfield, February 4, 1554. Hugh Latimer, bishop of Worcester, and Nicholas Ridley, bishop of London, were burned in the front of Balliol college, Oxford, October 16, 1554. Thomas Cranmer, archbishop of Canterbury, suffered the like fate at Oxford, March 21, 1556. John Hooper, bishop of Gloucester, where he was burnt, February 9, 1555. Petrolino Massey was burnt for heresy, at Guernsey, July 18, 1557. "The said Massey's wife, breaking violently out of the mother's womb into the fire, was taken out thereof, and presently thrown in again and burnt." Joan Waste, a poor blind woman of Derby, was burnt alive in that town, August 1, 1556, being then about twenty-two years of age.

Another victim in this reign was sir Thomas Wyatt, who joined in the efforts to place lady Jane Grey on the throne, was condemned and executed for high treason, April 11, 1554, in the thirty-fourth year of his age. He was the eldest son of sir Thomas Wyatt, the cotemporary and friend of the earl of Surry, whose poems sufficiently attest the variety and scope of his abilities; and like those of his friend Surry, are free from the slightest impurity of thought or expression. His prose is also forcible and clear, and occasionally animated and elegant. He died October 11, 1542, in the thirty-ninth year of his age.

† Printed by Thomas Marsh in the years 1559, 1563, 1571, and 1575, 4to.

‡ Beheaded at Salisbury, by order of Richard III.

oblation of princes. He wrote many obscene and irreligious pieces; but in his latter days he repented of his follies, and employed himself in writing devotional tracts.

It is generally believed, that the reformation of religion in England, was immediately succeeded by a flourishing state of letters. But this was by no means the case. For a long time afterwards, an effect quite contrary was produced. The reformation in England was completed under the reign of Edward VI.: the rapacious courtiers were perpetually grasping at the rewards of literature, which being discouraged, or despised by the rich, was neglected by those of moderate fortunes. Avarice and zeal were at once gratified in robbing the clergy of their revenues, and in reducing the church to its primitive apostolic state of purity and poverty. The ministers of this abused monarch, by these arbitrary, dishonest, and imprudent measures, only provided instruments, and furnished arguments, for restoring in the reign of Mary, that religion which they professed to destroy. In every one of the sacrilegious robberies, the interest of learning also suffered. By thus impoverishing the ecclesiastical dignities, they countenanced the clamours of the Catholics, who declared that the Reformation was apparently founded on temporal views, and that the Protestants pretended to oppose the doctrines of the church solely with a view that they might share in the plunder of its revenues. Roger Ascham, in a letter to the marquis of Northampton, dated 1550, laments the ruin of grammar school, throughout England; and predicts the speedy extinction of the universities through the rapaciousness of the courtiers. A favourite nobleman of the court occupied the deanery and treasurer'ship of a cathedral, with some of its best canonries; and in this century, it was no uncommon thing for church livings, the revenues of abbeyes, and even of bishoprics, to be given away with young ladies as a portion.

Queen Mary\* was herself eminently learned; but her accomplishments in letters were darkened or impeded by religious prejudices. At the desire of queen Catherine Par, she translated in her youth *Erasmus's Paraphrase of St. John*. Many of her letters are to be found in various publications, and particularly in Hearne's *Sylloge Epistolarum*. Mary countess of Arundel, who translated from English into Latin *The Wise Sayings and Eminent Deeds of the emperor Alexander Severus*, and from Greek into Latin, *Select Sentences of the Seven Wise Grecian Philosophers*. Lady Joanna Lumley, and lady Mary Howard, duchess of Norfolk, the daughters and co-heiresses of Henry Fitzallan, earl of Arundel. The first of them translated, from the Greek, three orations of Isocrates, and the Iphigenia of Euripides; and the other made a version, from the same language, of *Certain ingeni-*

*ous Sentences collected out of various authors*. Three sisters, lady Anne, lady Margaret, and lady Jane Seymour, wrote four hundred Latin distiches upon the death of the queen of Navarre, sister to Francis I.,\* which were translated into Greek, French, and Italian, and were celebrated abroad, long after they had been forgotten in England. Lady Elizabeth Fane may be added to the list, as having written several psalms, and pious meditations and proverbs, in the English tongue.

The books that were printed in the reign of Edward and Mary, were nearly of the same kind with those which have formerly been mentioned. Controversial works, and devotional pieces, were the principal occupiers of the press in an age which was so deeply engaged in religious inquiry. Romances and poetry were not entirely forgotten. *Cato's Moral Distichs* were published in the original, with notes, by Richard Taverner; and there were a few translations from ancient writings. It is rather a curious circumstance in the classic history of the times, that the second book of the *Eneid* was translated into Greek verse by George Etherige, a physician at Oxford, and professor of the Greek language in that university.

In so short and agitated a period, many literary foundations could not be expected; two colleges were, however, founded at Oxford:—Trinity college, by sir Thomas Pope,† an eminent citizen, and lord mayor of London, in the year 1554. The founder, in his constitution, principally inculcates the use and necessity of classical literature. St. John's college was re-founded in 1557, by sir Thomas White, alderman, and lord mayor of London, who appropriated part of the wealth accumulated by industry and success in mercantile pursuits, to the establishment of this college. The library of St. John's,‡ is one of the largest and best furnished in the university, and contains a valuable collection of books, manuscripts, and antiquarian curiosities. In spite of every obstacle, it is pleasing to reflect, that on the whole, during the reign of Mary, the light of learning continued to break in upon our island; and though it was indeed, for awhile, only the dawn of the morning, it promised to lead on to a more perfect day.

The accession of Mary to the throne revived the expectations of the Catholics, and the per-

\* Margaret de Valois died December 2, 1549. She was first married to Charles, last duke of Alençon, who died in 1555; her second husband was Henry d'Albert, king of Navarre. She stood pre-eminent both as an authoress and protector of literature, and was celebrated for her beauty and wit. Inscriptions were composed, and medals struck, to her honour.

† Died January 29, 1559.

‡ In an old account book of St. John's college, Cambridge, for the year 1559, is this entry:—"For chains for the books in the library, 3s." Again, in 1560, "For chaining the books in the library, 4s." And among the articles for keeping the university library, Male, 1583, "If any chains, clasps, rope, or such like decay, happen to be, the said keeper to signify the same unto the v. chancelour within three days after he shall spy such default, to the end that the same may be amended."

\* In the household expenses of queen Mary, March 1, 1554, a gift of fifteen shillings among the yeoman of the guard, for bringing a leak to her grace, on St. David's day.

formance of Mysteries and Miracles became again the medium of instruction. In the year 1556, a goodly stage play of the *Passion of Christ*, was presented at the Grey Friars, in London, on Corpus Christi day, before the lord mayor, the privy council, and many great estates of the realm. Strype also mentions, under the year 1557, a stage play at the Grey Friars, of the *Passion of Christ*, on the day that war was proclaimed in London against France, and in honour of that occasion. On Saint Olave's day, in the same year, the holiday of the church, in Silver-street, which is dedicated to that saint, was kept with much solemnity. At eight of the clock at night, began a stage-play of goodly matter, being the miraculous history of the life of that saint, which continued four hours, and was concluded with many religious songs.—

Again the boy bishop\* went abroad singing in the old fashion; and once more his estimation seems to have been undiminished, for on Nov. 13, 1554, the bishop of London issued an order to all the clergy of his diocese to have a boy bishop in procession; and in the same year he went about St. Andrew's, Holborn, and St. Nicholas Olave's, when he was received into the houses of many of the inhabitants, and treated with good cheer. One of the flattering songs which the boy bishop sung before the queen, and which was printed, was a panegyric on her devotion, it compared her to Judith, Esther, the queen of Sheba, and the Virgin Mary.

1558. ROGER MADELEY lived at the Star, in St. Paul's church yard. Herbert states, that he had only seen a copy of verses of his, intitled, *An invective against treason!* in two columns, on a half sheet, in 1553.

1558. ROBERT CALEY, of CALEY, is supposed to have succeeded Richard Grafton, in his house (though his office of king's printer was given to Cawood) in the Grey Friars, now Christ's hospital. He was free of the stationers' company. He and Henry Caley had a license, or patent, for printing for seven years. Twenty-one books bear the imprint of Robert Caley, from 1553 to 1558, mostly of a religious nature.

1558. *Character and Arte of short, swift, and secrete Writing by Character, invented by Timothe Bright, Doctor of Phisike. Imprinted at London by J. Windet, the assigne of Tim. Bright, 1558. Cum privilegio Regie Majestatis. Forbidding all others to print the same.* Mr. Douce, who possessed a copy of this curious and scarce little book, has observed that it is the first treatise in our own, or perhaps any other language, on the subject of short-hand writing. The author certainly claims the honour of the invention in his dedication, which is to queen Elizabeth.—See *Belo's Anecdotes*. This Timothe Bright was also the author of various other works.

1558. The first copy entered on the books of the stationers' company is "to William Pekenrynge, a ballett, called a *Ryse and Wake*, 4d." Richard Waye was then master.

1558. In the records of the stationers' company is preserved "The chargis of settinge fourthe of men to serve the queen according to our commysion."\*

1559. A collection was gathered of the company of stationers, by the commandment of the lorde maior and aldermen, for the house of Brydewell.

1559. Sunday, Jan. 15. At the coronation of queen Elizabeth, which took place on this day; her progress was marked by superb pageants. On her arrival at Temple-bar, Gogmagog and Corineus,† two giants, were seen over the gate, a lable, whereon was written, "in Latin verse, "the effect of all the pageants which the city

\* These entries, extracted by the late George Steevens, Esq., were printed in the *Illustrations of the Manners and Expenses of Antient Times in England, in the 15th, 16th, and 17th Centuries, 1797*; a work now become exceedingly rare.—Nichols.

† For an account of these worthies of the city of London see *Hone's Mysteries*, p. 262.

\* For the institution of the boy bishop, see page 60, ante.

had before erected." When she was solemnly conducted through the city of London, a boy, who personated Truth, was let down from one of the triumphal arches, and presented her with a copy of the bible, which she received in the most gracious manner, placing it in her bosom, and declaring, that, amidst all the costly testimonies which the citizens had that day afforded of their attachment, this present was far the most precious and the most acceptable. When, upon her having given liberty to the prisoners, who were confined on account of religion, she was told by one Rainsford, that he had a petition to present to her, in behalf of other prisoners, called Matthew, Mark, Luke, and John; she readily replied, that she must consult the prisoners themselves, and learn of them whether they desired that liberty which he had asked for them. Bishop Jewel, in a private letter to his friend, Bullinger, dated May 22, 1559, observes, "that queen Elizabeth refuses to be called the head of the church, as it was a title that could not justly be given to any mortal."

At length we are come to a reign of distinguished importance in the history of Great Britain. Never, perhaps, was the accession of any princess the subject of such keen and lively interest to a whole people as that of Elizabeth. For the honour of what is usually called the weaker sex, this reign was that of a woman. The first instance, and the immediately preceding instance, of female government in our country, had not recommended that part of the English constitution which rendered the crown hereditary by women; but the second amply justified this rule of succession; and shewed that a salique law\* would not universally be useful; for queen Elizabeth ruled with a wisdom and glory which few men have attained. As a woman she had many faults, but as a sovereign her splendour was truly great. Her administration of foreign affairs, in circumstances of peculiar embarrassment and danger, was wise and vigorous; and her solicitude to promote the general prosperity of her subjects was steady and persevering. In her reign the genius of Englishmen awoke from torpidity, which had too much depressed it in the preceding reigns, and displayed itself in noble exploits and manly exertions. In a variety of views, the lustre of literature in the period of queen Elizabeth was equal to its lustre in other respects. It may be truly said, that her reign was a reign of knowledge and learning, as well as of political wisdom and military glory.†

1559. JAMES BURAKL resided "without the north gate of Paules, in the corner house of Paternoster-row, opening into Cheapside." He

printed *A Godly and wholesome preservative against desperation*, &c. 8vo. Cum privilegio.

1559, June 23, Died Thomas Dockwray, who was master of the company of stationers, 1554, 1557. He gave to the company one glass window\* in their new hall, and "a sponse of sylver-parcel gilt." He was master from December, 1554 to July, 1558; and was buried in St. Faith's church, with this epitaph:

Here under this stone restythe, in the mercy of God,  
the body of Master Thomas Dockwray, Notary,  
late one of the Proctors of the arches,  
Cytesen and Stacioner of London,  
and Anne his wyffe.

Which Thomas deceased the XXIII daye of June, AN. MDLIX  
And the said Anne deceased the .... day .....  
Whose death have you in remembrance,  
calling to God for mercy.

1559, Sept. 22. Died, ROBERT STEPHENS, the celebrated printer of Paris, upon whom De Thou, the distinguished historian, passed the following merited eulogium. "Not only France, but the whole Christian world, owes more to him than to the greatest warrior that ever extended the possessions of his country; and greater glory has redounded to Francis I. by the industry alone of Robert Stephens, than from all the illustrious, warlike, and pacific undertakings in which he was engaged." He was born in the year 1503. Concerning the juvenile history of this very zealous typographer and eminent scholar, no

\* The introduction of glass windows in England, will not, perhaps, be uninteresting to many of our readers. That the use of glass, for many purposes, was known in this country long previously to the arrival of the Normans, cannot be doubted for a moment. Among the Romans, we find it principally applied in beads, urns, cups, and patera; and in one instance, probably to be assigned to the same period, we read of a glass coffin. William of Malmesbury tells us, that at Werenmouth, in the county of Durham, Benedictus Biscop built two churches, one dedicated to St. Peter, the other to St. Paul; adding, "The readers of his life will admire his industry in bringing over numbers of books, and first introducing into England builders in stone, and glass windows. Before that time, the windows had been made of fine linen, or laticed wood work. Such are the first instances of the introduction of glass into churches, although the rarity of its use for many centuries may be gathered from the following particulars: Ganton, in his *History of Peterborough*, says, that "Robert de Lindsey beautified above thirty of the windows of Peterborough cathedral with glasses, which had been before only stuffed with straw." In the computus of Bolton abbey, 1299, quoted by Dr. Whitaker, there are various charges that occur for glass windows, building, timber, &c. So late as 1483, among the privy seals of Richard III. we read of a payment of five pounds to the prior of Carlisle, which the king gave toward the making of a glass window; and the glazing of some of the windows of King's college chapel is said to have been paid for by a fine. Bishop Percy, however, from the total silence throughout the *Northumberland Household Book*, with regard to glass, was led to believe that this very beautiful and useful material, though applied to the decoration of churches, was not, even so late as the beginning of the sixteenth century, very commonly used either in the dwelling-houses of the better order, or castles. The following memoranda, if they do not militate against bishop Percy's opinion, at least add something to our illustrations on the subject:—One of the great hostels of Oxford, which were at that period little more than ordinary houses, from the circumstance of its having glass windows, was called *Glasen Hall*. We have the following anecdote in *Fabian's Chronicle*:—Speaking of the troubles of that year, he says, "The soldyours lyenge in Southwerke made many robberyes in Southrey and other places, and rowed over to Westminster, and spoyled there the king's palsey, and devoured his wyne, and brake the glasses of the windows,

\* By the salique law no female can succeed to the crown. It is in force in France, and is the subject of the present dispute in Spain.

† The reigns of Elizabeth and Anne, form the brightest annals of English literature. May the reign of Victoria I. be as resplendent in the advancement of knowledge, and as glorious and happy in the prosperity of her people. She ascended the throne upon the death of her uncle, William IV. June 19, 1837, aged 18 years and 23 days.

memorials are found. Under what tuition, therefore, he was enabled to lay the foundation of that transcendent skill in classical literature, to which, notwithstanding the disadvantages of such a period, he attained, must continue a matter of conjecture.

At the time of his father's decease, having attained the age of seventeen years, he may be supposed to have acquired considerable experience in the typographic art. In the year 1522, after the marriage of Simon de Colines with the widow of Henry Stephens, Robert had become the assistant of his father-in-law, and the director of his press.

Probably it was in the year 1524, that he became sole proprietor of his paternal "Imprimerie." In 1525, he gave the first of his impressions recorded by Panzer, viz. *Apulei liber de deo Socratis*, 8vo. He commenced the following year with an impression of *Ciceronis epistola ad familiares*, 8vo.; and from that period till about the year 1552, when he forsook his native city, the productions of his press were multiplied with increasing enterprise, activity, and perfection.

Robert united himself in marriage with Petronilla or Perrette, one of the daughters of Jodocus Badius, with whose professional merits and character the reader is already acquainted. This lady appears to have been worthy of an origin and a matrimonial connexion both so literary.

and all other necessaries to that paleys they destroyed and wasted." At a time when there were so many powerful barons rivaling their sovereign, in courtly splendour, we can hardly suppose that the best apartments of their dwellings would have windows sheltered by nothing more than lattices. That Chancer's chamber-windows were glazed, we certainly gather from his *Dreme*:

"My wyndows weretyn shet echone,  
And through the glasse the sunne yghone  
Upon my bed with bright beims  
With many glad glyd strems."

From a patent granted in the first year of Richard II. 1578, we learn that John de Brampton was not only made *glazier* to the king within his tower of London, but in all his castles and manors. A proof either that the profession was a rare one, or that Brampton was an extraordinary workman. William Harrison, the author of the *Description of England*, prefixed to *Holingshed's Chronicle*, says, "Heretofore also the houses of our princes and noblemen were often glazed with beryl (an example whereof is yet to be seen in Sudley Castle; but this, especially in the times of the Romans, whereof also some fragments have been taken up in old ruins." From Sir John Culliam's *History of Housholdes*, it should seem that so late as 1618, glass windows were a luxury not every where introduced even into the better kind of farm-houses. The fraternity of the "Glaziers and Painters on Glass," is reported by Stow to have been a society of very ancient memory. The trades seem always to have gone together, although they were not incorporated till the thirteenth year of Charles I. As a company, they had a coat of arms and crest, confirmed to them by Robert Cook, Clarendieu, 1588.

Venice, for a long time, excelled all Europe in the manufacture of glass, but it was subsequently rivalled by France. The first plates for looking-glasses and coach windows were made in 1673, at Lambeth, by Venetian artists, under the protection of the duke of Buckingham. That which is now made at Ravenhead, near St. Helen's, at Liverpool, and London, is equal or superior to any imported from the continent.

It is difficult to form any precise estimate of the value of the glass annually produced in Great Britain. It is conjectured, however, that it cannot amount to less than £2,000,000; and that the workmen employed in the different departments of the manufacture exceed 50,000.

She well understood and could converse fluently in the Latin language. That learned "Decemvirate," as it has been termed by Henry Stephens, or society of scholars, whom Robert entertained in his family, as the assistants of his labours and correctors of his press, being of different nations, and holding their common intercourse in the Latin tongue, gradually communicated a literary tinge to the whole domestic establishment; so that even the children and servants, instructed by their table-talk and social conversation, became so familiar with the Latin idiom, as both to understand and to express themselves with considerable fluency in the same language.

Some have affirmed, that it was a custom of Robert Stephens to hang up the separate leaves or sheets of his impressions, for the examination of students, in the streets and precincts of the university; and to propose a stated reward to any who should detect in them an error of the press.

In 1528, Robert Stephens was occupied in the preparation of that great original work, by which he evinced himself a profound critic and etymologist, as well as a skilful printer; I mean his *Dictionaryum seu Latina Lingua Thesaurus*. To correct the *Dictionaryum Calepini* was a task difficult, invidious, and negatory. The students of the university required a new Dictionary, more accurate, and better furnished with classical authorities. Finding no other person at once willing and competent to engage in such an undertaking, he at length consented to take it upon himself: and when he had digested a few sheets into an alphabetical form, submitted them to the examination of several learned men, by whom he was encouraged to persevere. He consequently applied himself two years to this work, day and night, with little intermission, regardless of health and domestic concerns; and by it two presses were kept in constant exercise.

His acknowledged erudition, and great professional zeal and ability, having long before attracted the royal notice and favour, Francis I. in the twenty-fifth year of his reign, and the thirty-sixth of our typographer's age, conferred upon him the honourable distinction of *Imprimer Royal* for Hebrew and Latin works: *Regii in Hebraicis et Latinis Typographi*. After the year 1538, we no longer find the mention of his officina e regione scholæ Decretorum. From the month of June, 1539, more especially, he styles himself, *Regius Typographus*, or *Librarius*: sometimes more precisely, *Regius Hebraicarum et Latinarum literarum Typographus*; very seldom omitting these honours.

As yet he had not obtained the like honourable distinction with regard to the Greek. The office of *Regius in Graecis literis Typographus* was first given to Conradus Neobarius, as we have already mentioned. Francis conferred it upon him probably about this same period; for in several of his impressions of the year 1539, he is found with this distinction. But the impressions of Neobarius were few; he died anno 1540, a victim, if we may believe Henry Stephens, to the labours of his office. Until this event took place,

the honours of Robert were confined to the title of King's printer in Hebraicis et Latinis.

Thus distinguished, he speedily commenced an impression in Hebrew of the *Twelve Prophets*, with the commentaries of R. David Kimchi, which in less than four years he completed.

The professional exertions of our distinguished typographer were now arrived at their final period; and he had the satisfaction of concluding them by the commencement, if not the completion, of three impressions, which are said to exhibit the date of 1560. In the fifty-sixth year of his age, Robert died:—rich in fame, says De Thou, abroad and at home, and in flourishing circumstances.

Janssonius ab Almelooven ascribes to Robert a numerous offspring: but in addition to Henry and Robert, he names only a third son, Francis; who, to distinguish him from Francis, the brother of Robert, is denominated Francis Stephens the Second. All the three sons of Robert became more or less conspicuous. He also left a daughter, Catherine. She was a learned woman, and had acquired the Latin language, not indeed grammatically, but by the habit of speaking it, and hearing it spoken. She was surviving in the year 1586. De Thou ascribes to R. Stephens the praise of excelling in several respects, both Aldus Manutius of Venice, and John Froben of Basil. Justly celebrated as those artists were, he considers our typographer to have surpassed them, both in judgment and accuracy, and in technical skill and elegance. With regard to the charge made against Robert Stephens of his taking the types from the royal foundry at Paris, went he settled at Geneva, both Almelooven and Maillaire consider it an absurd calumny.

The obligations of France, and the christian world in general, to this learned French printer, will be best appreciated as it respects the services rendered to Christianity, by consulting his biblical publications in Maillaire's *Historia Stephanorum*, and also Greswell's *Parisian Greek Press*.

1559. *The playmoynt of Veritie, made by John Bradford. An exhortation of Mathewe Rogers unto his children, The playmoynt of Raulfe Allerton and others, being prisoners in Lollars tower, and wyrtten with their bloud, how God was their comforte. A song of Caine and Abell. The sayinge of maister Houper, that he wrote the night before he suffered, vpon a wall with a cole, in the newe Inn at Gloceter, and his saying at his deathe.* Twelves.

1559. THOMAS GEMINIE is said to have been the first person who engraved upon copper in this country; as his name appears to the first edition of *Compendiosus totius anatomie delineato*, in 1545. He was once fined xijd. by the company for calling a brother a false knave. The lord mayor and court of aldermen having ordered a contribution for Bridewell, Geminie subscribed xxd. few members having advanced more. He afterwards became a printer, and resided in Blackfriars. He printed Leonard Digge's *Prognostication*, 1556. 4to. Geminie's *Anatomic*, 1559. Folio. Many plates.

1559. Dr. Heath, archbishop of York, sent this year, at the expense of queen Elizabeth, a large English Bible, to the dean and chapter of St. Patrick's, Dublin, to be placed on a reading desk, in the middle of the choir. He conferred the like favour on the cathedral of Christ's church. It was very observable upon this occasion, says Ware, how much all the people of the city were pleased with the prospect of having free use of the Scriptures, for they came in vast crowds to both cathedrals, at the time of divine service, to hear it read, and the curiosity of the people herein could not be satisfied until the year 1568, when John Dale, a Dublin bookseller, imported some small Bibles from London, of which, in less than two years, he sold 7000 copies.

1560, Feb. 1. The fellowship of the company of stationers were permitted, by the court of aldermen, to wear a livery gown and livery hood, in such decent and comely wise and order as the companies and fellowships of the city; and ordered to prepare them to attend the lord mayor on public occasions; and in 1564, "The livery new begone and retyred agayne, in the colors of skerlett and browne blew, worn on the feast daye, beinge the Sondaye after saynt Peter's daye."

1560. An abridgment, bref abstract, or short sume of these bookes following, taken out of the bible, and set into Sternold's meter, by me, William Samuëll, minister of Christ's churche (1 Gen. 2 Exod. &c. to the 4th book of kinges inclusive.)

Such falses as you herein shall find,  
I pray you be content;  
And do the same with will and mynd,  
That was then our intent.

The printers were outlandish men,  
The falses they be the more;  
Which are escapyd now and then,  
But herof are no store.

1560. EDWARD WHITCHURCH appears to have been brought up as a merchant, and is said to have exchanged his commercial employment, from the circumstances which have already been detailed at page 266 ante. It was supposed by Ames, on the authority of Humphrey Wanley, as cited in Lewis's *History of the translations of the Bible*, that the names of Richard Grafton and Edward Whitchurch were sometimes printed separately in the same books: but Herbert conceived, that if the copies of the *Great Bible*, in which work only he found their names so to appear, were closely examined, they would be found to be of different editions. Until 1540, or 1541, in all their joint productions, their names are printed together; but after that time, although they were still connected by some exclusive privileges, they printed each for himself, even those books for which they were united in the same patent. Few particulars of the life of Whitchurch are now known. He was presented with Grafton for an infringement of the six articles, but they were fortunate enough to escape; and at various times they received royal patents for the printing of the church service books, and primers, both in Latin and English. Ames

relates, that after the martyrdom of archbishop Cranmer,\* in 1555, Whitechurch married his widow, who had been his second wife, and to whom he was married whilst he was ambassador for Henry VIII. in Germany. The residence of Whitechurch was first at the sign of the Well and two Buckets, in St. Martin's Le Grand: secondly, on the south side of Aldermay church yard, and lastly, at the Sun in Fleet-street, over against the conduit; perhaps the dwelling of Wynkyn de Worde. One of his books is dated 1560, but nothing of him has been discovered subsequent to that period.

Whitechurch printed in the whole thirty-seven works, and affixed the above monogram to the books he printed.

\* Thomas Cranmer, archbishop of Canterbury, was born at Aslacton, in Nottinghamshire, in 1489, and educated at Jesus college, Cambridge. The opinion which he gave on the question of Henry VIIIth's divorce recommended him to that monarch, who employed him to vindicate the measure, and sent him to the foreign universities to obtain their opinion upon the point. In Germany he married a niece of Oslande, who afterwards became the wife of Edward Whitechurch, printer. In 1533, Henry VIII appointed him archbishop of Canterbury, and the first service in which he was employed, was to pronounce the divorce between Henry and Catherine, which took place at the court held in the priory of Dunstable, May 23, 1533. He furthered the reformation with zeal, tempered with judgment and moderation. Though he was esteemed by the king for his piety and integrity, he occasionally offended him by his opposition to the six bloody articles, and to the alienation of the abbey lands to secular uses. The archbishop wished to appropriate them to the advancement of learning and religion. By Henry's will he was appointed one of the regency; and as Edward VI. was brought up chiefly under the archbishop's care, the reformation in his reign assumed a consistent form: the liturgy, homilies, and articles of religion, were framed; in all of which Cranmer had a principal hand. On the accession of Mary, our prelate was condemned first for treason, and pardoned; but another charge was brought against him of heresy, and he was sent to the Tower, from whence, with Ridley and Latimer, he was removed to Oxford, to hold a public disputation. He was kept in prison three years, and after the most rigorous measures had been made use of to prevail upon him to shun his errors, more lenient ones were adopted. These were again changed, and he was removed to a filthy prison, where he suffered such uncommon hardships, that he was induced to sign the instrument of abjuration on the promise of life. But this was an act of treachery, to procure his enemies a momentary triumph. The archbishop was brought into St. Mary's church, to read his recantation in public, where, after a long sermon preached by Dr. Cole, Cranmer, instead of doing what was required, with many tears beseeched God's forgiveness for the apostacy of which he had been guilty, and exhorted the people against the errors of Rome. This greatly enraged his adversaries, who, after vilifying him as a hypocrite and heretic, dragged him to the stake, opposite Balliol college, which he approached with a cheerful countenance, and endured the fire with patience and fortitude, holding his hand in the flame, and often exclaiming, "This unworthy hand!" and raising his eyes to heaven, expired with the dying prayer of the first martyr of the Christian church, "Lord Jesus, receive my spirit!" March 21, 1555.

1561, Jan. 8. JOHN BODELEIGH, one of the English refugees at Geneva, had a patent granted him by queen Elizabeth, for seven years for the imprinting bibles in the English tongue, though his name is not found to any book.

1561, Jan. 18. The tragedy of *Gorboduc*\* or *Ferrex and Porrex*, by Thomas, lord Sackville, was represented at Whitehall; a period that has been justly named, by a pleasing female annalist, *the birth-day of the English drama*. This was the first dramatic piece of any consideration in the English language, and was written many years before Shakspeare flourished. Lord Buckhurst was assisted in it by Thomas Norton, a fellow-labourer with Sternhold and Hopkins. It originally had the title of *Ferrex and Porrex*; was surreptitiously and incorrectly printed in 1565; more completely in 1570; and again, under the title of *Gorboduc*, in 1590. It was re-published in 1736, with a preface, by Mr. Spence, by the procurement of Pope, who wondered that "the propriety and natural ease of it had not been better imitated by the dramatic authors in the succeeding age." It is to be found in the second volume of the collection of old plays, published by Dodsley.

Sir Philip Sydney, in his *Apology for Poetry*, gives the following character of this tragedy, in his lofty style: "It is full of stately speeches and well sounding phrases, climbing to the height of Seneca's style, and as full of notable morality, which it doth most delightfully teach, and thus obtain the very end of poesy." "I think that for tragedy, the Lord of Buckhurst and Maister Edward Ferrey's, for such doings as I have seen of theirs, do deserve the highest price: the Earl of Oxford and Maister Edwards (of her Majesty's chappel) for comedy and interlude.

1561. JOHN KYNGE was free of the old stationers' company, dwelt in Creed lane, and kept shop at the sign of the Swan, St. Paul's churchyard. He had license to print 1557-60, the *Defence of Women*. Adam Bell, &c. *Brevyat cronacle of the kyngs*, in 8vo: *A Jeste of Syr Gauwayne*. *The Boke of Carvynge & seyvynge*. *Syr Lamswell*. *The boke of Cokerye*. *The boke*

\* Printed by William Griffith, in 1565, with the following title:—*The Tragedie of Gorboduc, whereof three actes were written by Thomas Norton, and the two laste by Thomas Sackvyle. Set forth as the same was shewed before the queene most excellent majestie, in her highnes court of Whitehall, the 18 Jan. 1561. By the gentlemen of the Inner Temple in London. Sept. 32. Quarto.*

*Gorboduc* sold by auction, in London, by Mr. Evans, January, 1830, for £3 12s.

† In this year, (1561,) says Camden, the most beautiful spire of the cathedral church of St. Paul, London, which for a singular ornament to the city, was raised to an admirable height, namely 320 feet from the ground, and 260 from the square steeple upon which it stood, being framed with timber and covered with lead, took fire from heaven near the top, and with such violence the devouring fire descended, to the great terror of the citizens, that in five hours' space it quite consumed it, together with all the roof of the church, which was very large, and covered likewise with lead; nevertheless the arches, which were all of stone, remained untouched. But by the great bounty of the queen, (who largely supplied a great quantity of money and materials,) and by money gathered of the churchmen and others, the roof was soon repaired, only the spire is lacking.

of *nurture for mens servants*. He was fined "for that he ded prynt the *nat browne mayde* without license *ii. vjd.*" *Salomons proverbs*, 8co. *Lucas urialis*, *Nyce wanton Impaciens poeerte*. *The squire of Low degre*. A play called *Juvenius*. A book called *Albertus magnus. Lupnetts works*. *The litle herball*. *The greates Herball*. *The medynne for Horses*. He probably died about the latter end of the year 1561; for then T. Marshe had license to print the *Cronacle*, 8co. which he bought of John Kynge's wyfe.

1561. OWEN ROGERS was made free of the stationers' company in 1555, and dwelt at the Spread Eagle between both St. Bartholomew's, in Smithfield. He appears to have been a disorderly member of the company, and was often fined for printing other men's copies without license.

1561. Robert Lekprevik, a printer of Edinburgh, printed the *Mirror of ane christen*, the production of Richard Norrell, a native of Armes. 4to. This Robert Lekprevik appears to have been the principal printer in Scotland, for his press was at Edinburgh, St. Andrew's, and Strivling, and his name is affixed to a great many books. In a work which he printed at Edinburgh, in July, 1563, he laments his want of Greek characters.

1561. DIED CLAUDE GARAMOND, a French engraver and letter-founder, who was a native of Paris, and began to distinguish himself about 1510. He brought his printing types to so great a degree of perfection, that he can neither be denied the glory of having surpassed whatever had been done in this way before, nor that of not being excelled by any of his successors in the art of letter-founding. His types were in such high repute in every part of Europe, particularly the small roman, that the printers of Italy, Germany, England, and even Holland, took care, by way of recommending their works, to distinguish them by the name of Garamond's small roman.

1562. In the *black book* in Long Melford, in Suffolk, are the following entries; the church requiring to be again cleansed after the death of queen Mary.

Item. Payde to Prime for the scraping out of the payntinges all ye lengthe of the quire, *xs. viid.*

Item. Payde for the injunctions, *iiijid.*

Item. For ii bokes of prayer and of fasting, that were lately set forth, *viiiid.*

The following extracts are taken from the third volume of the *British Magazine*, p. 417, and are from the "churchwarden's accounts," of the correspondent, who says "The reformation then commencing, the altars\* in the churches were taken down, the rood-lofts removed, crucifixes, pixes, censers, chrismatories, graduals, manuals, antiphonars, were sold, and careful provision made for our 'reasonable service.'" These items relate chiefly to books.

1548. Itm. payd the hauffe to the byenge a the passary vs. i. e. Erasmus's *Paraphrase of the New Testament*.

1550. Itm. for a boke of the omylys in englysshe *xvjid.*

1553. Itm. for ij bokes of the Common prayear *vjs. iiijid.*

1557. Itm. for a peynt of malmese on Alhollandy day *ijd. ob.*

1559. Itm. for a boke of the passayres of erosemas of Rotherdame A pone the pestelle-  
*vjs. viijid.*

1561. Itm. for a paper of the x Commendements *xvjid.* Itm. for setteng it Jn wayne skott to a yonnar [joiner] *ijs. iiijid.*

1563. Itm. for a gennepore flor the cherche *ijd.* as a preservative against infection in the time of "the sicknesse."

1563. Itm. for iij yardes of browede [query, broad or embroidered?] It is conceived the latter grene clothe and a hauffe for the Comunyon table  
*xxx. jd.*

1568. Itm. for presenteng them that ded not pay ther dew to ye cherch *ijs. vjd.*

1570. Itm. for vij ballys consarneng y\* rebells to be soung *vijd.* This relates to the insurrection in the northern counties, under the earls of Northumberland and Westmoreland.

1572. Itm. for a boke of thankesgeving for vrectory of [over] y\* towrke *iiijid.* This was the great naval victory of Lepanto, which was fought on Oct. 7, 1572, when the Turks suffered a signal defeat, which was echoed over all the Christian world.

1573. Itm. payd for ij cheynes and eyes and staples flor the ij paraphrasys of Erasmus *js. xd.* The "march of intellect" since 1548 and 1559 is here very conspicuous!

1575. Itm. payd for a newe bible for the churche coste *il. viijs.*

Itm. for a book of the lives of the Saintes *js. viijid.*

1580. paid the viij of may for wyne for a greate Comunione to say *iiij* quarts and a pinte of muscadle the somma of *00 03 00.*

1581. paid the same daye [November 17, queen Elizabeth's birthday] flor ij leggs of motton and bread and drinke for the ringars their dynner the somma of *00 02 00.*

1582. the xxvjth of October sent to Mr. Jefferson the preacher where he dyed a quart of wyne *vd.*

paid for an howre glasse *xijd.*

paid for an almanack and a sand box for the churche *iijd.* The almanack cost *jd.*

1585. Item. paid for a pynte of Secke *iijd.*

1662, March 29. Philip II. king of Spain and the Netherlands, to prevent the circulation of the scriptures, or books and tracts favourable to the reformation, issued a placard, that "the officers were ordered not only to visit the houses of booksellers, but likewise diligently to take care that no pedlars went about with books for sale, and to search their packs, and among their other wares for them."—Brandt's *History of the Reformation*.

\* In my small church, (says the correspondent) there were "iij altars:" the high altar, that in our Lady's chapel, and those belonging to "the brotherhood of St. George and St. Luke."

1562. RICHARD HARRISON was an original member of the stationers' company, and doubtless one of the old livery, as he was chosen under warden in this year, without being called on the livery when new revived, or serving collector; but he died before the expiration of this year. The company attended his funeral sermon; and Mrs. Harrison gave them xs. He had license to print Cooper's *Thesaurus Linguae Romanae et Britannicae*. His residence was in White Cross-street. In 1562 he printed the *Bible*, with the following title: *The Bible in English: that is to saye, the Contentes of al the Holy Scriptures, both of the Olde and Newe Testament, according to the Translation that is required to be read in churches. Imprinted at London, in White Crosse Strete, by Richard Harrison.*

Of the rebus kind also, is the annexed device of Richard Harrison, which Camden, defines to be "an hare by a sheaf of rye in the sun, for Harrison.

1562. In a work printed in this year, mention is made of a paper mill at Fen Ditton, near Cambridge.

1562. An entire version of the *Psalter*, with tunes chiefly German, was published, and added for the first time to the *Book of Common Prayer*, with the following title: *The whole Booke of Psalms collected into English metre by Thomas Sternhold, John Hopkins, and others, conferred with the Ebreu, with apt notes to sing them withal.*

1562. The *Thirty-nine Articles* of the church of England, which were agreed upon in convocation, in this year, were confirmed by act of parliament, in 1571, were intended "for the avoiding diversity of opinions, and for the establishing of consent touching true religion." But, says an elegant writer, to avoid diversity of opinions, and to establish consent touching true religion, cannot in the nature of things be attained.

1562. ROWLAND HALL went to Geneva with several refugees at the death of Edward VI. where he printed the *Psalms* and the *Bible*. It is not known where he learnt the art of printing. On his return from Geneva he resided in Golden lane, near Cripplegate, at the sign of the Three Arrows; then removed to Gutter lane, and adopted the Geneva arms for his sign.

The Geneva arms, or as Rowland Hall called it in his sign, the Half Eagle and Key, was his device, and was doubtless taken from the sign of

his second habitation in Gutter lane, which he erected in memory of the protection he enjoyed in Geneva, during the persecution in England. His motto evidently alludes to the reformation under queen Elizabeth; he used to border his device with a translation of the motto on the Geneva arms "*Post Tenebras Lux.*" "AFTER DARKNESS LIGHT." "Sometimes," says Herbert, "he used the device of a boy in a loose garment, lifting up his right leg, his right arm winged, stretched out towards heaven; and taking his left hand from off a ball, upon the ground. In the clouds is a representation of the Deity, as a royal personage, and as saying, *Set your affections on things above, &c.* Enclosed in an oval broadways. Hall printed twenty-six works from 1559 to 1563. At the end of a book which he printed in 1563, the most ancient and learned *Play, called the Philosopher's Game*, it appears that he had a shop in Cheapside, under Bow church:—

All things belonging to this game  
for reason you may bye  
At the booke shop vnder Bowchurch,  
in Chepeside redlye.

The *Philosopher's Game*, was dedicated to lord Dudley, whose head is on the back of the title, and at the end of the *epistles* are the above lines.

1562, Feb. JAMES ROBOTHOM had a patent from queen Elizabeth, for the term of his natural life, for printing "all and every suche almanacks and prognostications, as are, or shall be tollerable, and authorised by our injunctions in the Englyshe tonge, together withe the breef cronycles." Any person infringing upon this privilege, "or to procure to be ymprinted, uttered, or solde, any almanack, prognostication, or brief chronycle, withoute the assignment of the same James Robothom, or his assignes, during his naturall lief, shall forfeit for every suche almanack, or prognostication, or brief cronycle, so printed, uttered, and solde, the somme of three shillings and four pence, of lawfull money of England.

1562. THOMAS POWELL dwelt in Berthelet's house in Fleet-street, where he appears to have done his printing. On July 21, he was made free of the stationers' company, and though not fined by them, had license for only one book.
